From BENGAL:						
On account six per cent. loan obligations, dated 30th June 1811 -				238,998	6	8
Balance of bills drawn from Bengal, on account the promissory notes issued to the Prize Agents for the Captors of Java, after deducting the advance made on this account in the preceding year; as also the amount included in the bills for interest - - - - -				87,546	6	10
£.				326,544	13	6
1816-17.						
Paid Bills of Exchange drawn on the Court:						
From BENGAL:						
On account Treasury notes, issued under Resolution of Governor-General in Council of 15th July 1813 - - - - - -				3,934	3	7
From MADRAS:						
On account second 10 per cent. loan promissory notes, of 1805-6 -				476	17	6
£.				4,411	1	1

Memorandum.—The above totals differ from the sums inserted in the Annual Accounts of Receipts and Payments under the like heads, in consequence of some of the bills from India having been drawn including both principal and interest. The payments have been correctly adjusted to their several heads, from materials received since the periods of making up the respective Annual Accounts.

CORRESPONDENCE, &c.

Extract from PAPER OF OBSERVATIONS by the BOARD; dated 24 February 1814.

"THE Board conceive it proper to come to an understanding on a very material point, which is not adverted to in the Suggestions, namely, the rate of exchange at which the payment in India is to be credited."

LETTER from *James Cobb*, Esq. to *T. P. Courtenay*, Esq.; dated at the East India House, 4 June 1814.

Sir,

IN obedience to the commands of the Court of Directors of the East India Company, I herewith transmit copy of a Report from the Committee of Accounts, dated the 13th April last; being the substance of a reply to the observations of the Right honourable the Board of Commissioners on the former Report from the Committee of Accounts, relating to the separation of Indian accounts, under the Act of the 53d of his present Majesty.

I have, &c.
(signed) *J. Cobb*, Secretary.

(Enclosure.)

Extract from the REPORT of the COMMITTEE OF ACCOUNTS; dated 13 April 1814.

"THE rate of exchange at which the amount of the several before-mentioned transactions shall be converted into the currencies of India will now be considered.

The rates heretofore used for reducing the Indian monies into sterling, have been so various and so little correspondent to the relative intrinsic values of the coins exchanged, as to produce neither accuracy in the results nor uniformity in the several accounts and statements.

As accuracy and uniformity are of primary importance in all the accounts and statements which the late Act of Parliament requires to show the future progress of the Company's affairs, it is submitted that the Indian monies be reduced into sterling in the Company's books, statements, and accounts at home, from and after the 30th April 1814, according to the intrinsic value of such monies when compared with the Mint price of the lawful currency of this kingdom, and that the sterling money of all supplies, &c. from England to India be reduced in the Indian books, statements and accounts, from the same period into the Indian monies, according to the same rule.

This

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

This procedure will certainly produce uniformity of statements, and that it will also produce accuracy of result, is presumed from the following considerations.

In this country every calculation of value and price, whether by comparison or otherwise, is referrible to the legal coin of the realm. The arguments and conclusions used by the parties in the recent discussion respecting the bullion question, however opposite, proceeded upon the Mint price of bullion, as the datum of all their calculations.

If it may then be considered, notwithstanding the derangement which has been produced by the stoppage of cash issues at the Bank, and by the great and unprecedented rise in the price of bullion, that the Mint price of bullion has been the only basis of every calculation respecting price and comparative value, it may surely be presumed that the Mint price should *undoubtedly* be the basis for valuing the Indian monies in all matters of account and statement between England and India.

If in England the public revenue and all private concerns are referrible to the coin of the realm at the Mint price, that is, at 3 *l.* 17 *s.* 10½ *d.* per ounce for standard gold, and 5 *s.* 2 *d.* per ounce for standard silver, and on this principle the value in the Indian monies should be found, of all supplies from England to India, it may be presumed that as the public revenue and all private concerns in India are referrible to the currency established by the Company's regulations, that the value of the supplies from India to England and China should be found in a similar manner, which is by reducing the Indian monies into sterling, according to the fine metal contained in these monies, and the English legal currency respectively.

During the period of the late Charter, that is, from the year 1793, the current rupee of Bengal has been considered as 16 per cent. less valuable than the sicca rupee, and at that rate the sicca rupee has been reduced in all the public accounts drawn up at this house.

The sicca rupee, by the Bengal Regulations, contains of fine silver troy grains 175.927, and according to the English Mint value of 5 *s.* 2 *d.* for 444 grains fine silver, the intrinsic value of the sicca rupee is 2 *s.* 0.566 *d.* At this rate the value of the current rupee is 1 *s.* 9.177 *d.* Of late years the current rupee has been calculated as equal to 2 *s* in the factory accounts, and in the accounts of profit and loss; and as equal to 2 *s.* 3 *d.* in the account of stock per computation.

Now the consequence of this over-valuation of the current rupee, that is the difference between 1 *s.* 9.177 *d*, and 2 *s.* has been the giving a false view, not only of the statement of account between England and India, but also a statement equally false of the profit and loss on goods exported to India, and of goods imported from India.

If, for example, 100 *l.* should be invested in metals, and charged at 2 *s.* the current rupee, the article of metals in the Indian books would be debited for 1,000 current rupees, and of course the sale proceeds beyond that sum would be considered profit; but if the cost of the metals had been reduced into current rupees, according to the intrinsic value of the sicca rupee, or 1 *s.* 9.177 *d.* the current rupee, the account in the Indian books would have been debited for 1,133 current rupees, and of course the sale proceeds must have reached beyond that sum before any profit could be stated on the sale of the article in question; so, on the same principle, any article of Indian produce invoiced at 1,000 current rupees would stand charged in the home accounts with a prime cost of 100 *l*, and of course the article must sell beyond that sum before any profit could be stated thereon; but if the prime cost in the English accounts had been calculated according to the intrinsic value of sicca rupees, or 1 *s.* 9.177 *d.* the current rupee, the article in the home accounts would have been charged with 88 *l.* 4 *s.* 9 *d.* as its prime cost, and of course a lesser sale value would show a profit thereon greater than appears according to the practice which has hitherto prevailed.

From this it is apparent that by departing from the real par value of the Indian and English currencies in the accounts and statements, and substituting an arbitrary or imaginary value, all the Company's exports, as well as their imports, have suffered a corresponding diminution in all the statements furnished from time to time. The evil of this procedure has been twofold; for, first, the exports have been charged less for prime cost in the Indian books than they should have been charged, which has shown a profit where there was none; and, second, the imports have been charged more for prime cost in the home accounts than they should have been charged, which has shown a loss where there might have been a profit.

To obviate this in future, it is submitted, that instead of continuing the present arbitrary valuation of the Indian monies, the real par value should be taken in all the future statements, which is as follows: Sicca rupee 2 *s.* 0.566 *d.*, Arcot rupee 1 *s* 11.247 *d.*, Bombay rupee 1 *s.* 11.004 *d.*

The Arcot rupee is stated for the Madras accounts, because it appears by a late communication from the Governor and Council of Fort St. George, that the silver money is intended to take place of the gold in all the accounts and statements of that presidency.

Revenue Letter from Fort St. George, 5 March 1813, paras. 92 to 96.

Extract LETTER from *T. P. Courtenay*, Esq. to *James Cobb*, Esq.; dated India Board, 30 June 1814.

Sir,

I HAVE the honour to acknowledge the receipt of your letter of the 4th instant, transmitting, by order of the Court of Directors of the East India Company, copy of a Report from the Committee of Accounts, dated the 13th April last, being the substance of a reply to the observation of the Right honourable the Board of Commissioners on the former Report from the Committee of Accounts relating to the separation of Indian accounts, under the Act of the 53d of his present Majesty.

Having

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

Having brought the said Report under the consideration of the Board of Commissioners, I am instructed to communicate to you, for the information of the Court of Directors, the decision they have thought proper to pass on the several points brought into discussion by the Committee of Accounts as objectionable.

The Rate of Exchange at which the payment of *Territorial Charges in England* should be converted into Indian Currency:

THIS very essential point not having been distinctly brought forward in the first Report transmitted by the Court, the Board, thinking it necessary to come to a right understanding on the subject, called the attention of the Court to it in the paper of observations accompanying my letter, before adverted to. The proposition now transmitted in reply has been examined by the Board with all the deliberation so highly important and extremely delicate a point requires, being fully impressed by the reflection that it is not merely a matter of account, but involves likewise considerations of policy, prudence and consistency. The Board most fully admit the propriety of the position laid down by the Court, that with a view to show the future progress of the affairs of the Company, accuracy and uniformity are of primary importance in all the accounts and statements which the late Act requires; and they are of opinion that the rate of exchange between the sterling money and the Indian currencies should be definitively fixed upon one uniform principle, because leaving the determination of it to be governed by the fluctuations of the times would be productive of confusion, irregularity and inconvenience.

Whatever opinion the Board may form as to the accuracy of the valuation of the Indian currencies in the accounts hitherto made up, and whatever weight might be supposed to attach to the reasonings now urged by the Court in support of their proposition to have recourse to a calculation according to the intrinsic value of the several coins, estimated at the Mint prices of Great Britain, it is conceived that the present occasion is the most unseasonable and unpropitious for the trial of such an experiment, as very injurious consequences may be apprehended to result from it in various ways.

The Board do not judge it necessary to enter upon a discussion of the accuracy of the calculation on the data assumed by the Court, which will involve questions of political economy of a very intricate nature; but it is the opinion of the Board, that it would be neither wise to apply the rate resulting from that calculation to the purpose now in view, nor to use the rate which would result from the calculation on the actual market price of the precious metals, and much less the rate according to the current exchanges of the day, but that it will be far more eligible, on every consideration, to continue the rate of exchange that has generally obtained and been sanctioned by the usage of Parliament, as well in fixing of salaries and in the settlement of accounts between the Public and the Company, as in the accounts that have annually been presented to, or brought to the view of Parliament for a long series of years.

The rate so used has been as follows: 2 *s.* the current rupee; 8 *s.* the pagoda; 2 *s.* 3 *d.* the Bombay rupee.

It should be added that the Court, in their Commercial Letter to Bengal of the 9th February last, para. 97, have directed the invoices of the stores exported to India (which stores are stated to form part of the Territorial disbursements in London) to be carried to account in the books at these rates; and in another commercial letter to India by the ships last despatched, the amount of Indian currency has been converted into sterling upon the same calculation.

From all these considerations, the Board have thought proper to determine that this rate of exchange, which may be considered as a medium rate, be used in the conversion of the Territorial payments in England into Indian currency.

Extract of PLAN for keeping and arranging the BOOKS OF ACCOUNT of the East India Company in *England*; that the said Books shall contain and exhibit the Accounts of the Territorial and Political Departments separately and distinctly from such as appertain to or are connected with the Commercial Branch of their Affairs. Submitted by the Court of Directors of the said Company to the Board of Commissioners for the Affairs of India for their approbation, in conformity to the provisions of the Act of the 53d of the King, c. 155, s. 64, together with the Alterations, Amendments and Additions made by the said Board, in the manner also provided in the said Act.

Suggestions.	*Remarks, Alterations, &c.*
4. That an account be opened in the ledger under the head of "Territorial Account," which will contain on the debit side the amount of all payments made in England on that account, and on the credit side the payment by India of these advances, either by issues to the Commercial Boards in India or by any other means.	Approved, on the assumption that it is combined with such arrangements of detail as shall enable the Company from time to time to furnish such distinct accounts relating to the several branches of the Political Department, both as to debts and assets, and receipt and expenditure, as are or may be required by Parliament or called for by the Board, it being understood that the accounts of the payments in England for Territorial Charges

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches

Suggestions.	*Remarks, Alterations, &c.*
	Charges to be repaid in India, according to the provision of the 54th section of the Act of the 53d, will be drawn up or calculated from the debit side of this general head; and as the rate of exchange at which the payment in sterling shall be converted into Indian currency is not provided for in the said Act, the Board deem it eligible and proper to determine that the exchange shall be at the same rates which have obtained and been sanctioned by the usage of Parliament, as well in fixing of salaries, and in the settlement of accounts between the Public and the Company, as in the accounts which have annually been presented to or brought to the view of Parliament for a long series of years, viz. 2 *s.* the current rupee, calculated at 16 per cent. less than the sicca rupee. 8 *s.* the pagoda. 2 *s.* 3 *d.* the Bombay rupee.

LETTER from *James Cobb*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 16 May 1815.

Sir,

THE Committee of Accounts in their Report to the Court of Directors of the East India Company of the 13th April 1814, recommended, that rates of exchange, founded on the par values of the Indian and English monies, should be adopted in the several accounts and statements of the Company's affairs after the 30th of the same month.

To this proposition the Board of Commissioners, in your letter of the 30th June 1814, objected, for the reasons therein stated; but as it appears to the Court that the subject is still open to discussion, and that it is of the utmost importance to the just and accurate statement of the future progress of the Company's affairs, that the rates then recommended should be finally adopted, I am directed to submit copy of a Report from the Committee of Accounts; also of a paper therein referred to, prepared on the subject, entitled "Memorandum on the Valuation of the Indian Monies in Account," containing further reasons for inducing the Board's adoption of the rates above adverted to.

I have, &c.
(signed) *James Cobb*, Secretary.

(Enclosure No. 1.)

REPORT of the COMMITTEE of ACCOUNTS.

THE Committee in their Report to the Court of the 13th April 1814, recommended that rates of exchange, founded on the par values of the Indian and English monies, should be adopted in the several accounts and statements of the Company's affairs of 30th April 1814. To this proposition the Board of Commissioners for the Affairs of India, in the letter from their Secretary of the 30th June 1814, objected, for the reasons stated in that letter; but as it appears to your Committee that the subject is still open to discussion, and that it is of the utmost importance to the just and accurate statement of the future progress of the Company's affairs, that the rates recommended in the Committee's Report of the 13th April 1814 before referred to, should be finally adopted; your Committee have read and approved a further paper prepared on the subject, which they recommend, if such paper shall meet with the approbation of the Court, be submitted to the Right honourable the Board of Commissioners, as further reasons for inducing the adoption of the rates proposed by the Court in April 1814.

The Committee, therefore, present the paper referred to, intituled, "Memorandum on the Valuation of the Indian Monies in Account," to the consideration of the Court.

East India House, 12 May 1815.

(Enclosure No. 2.)

Extract MEMORANDUM on the Valuation of the Indian Monies in Account.

THE memorandum referred to in the above Report is of considerable length, the substance of the arguments it contains is comprised in the following concluding observations:

	s.	d.
The rate at 2/6, and 12 months' date, deducting the interest, is equal to -	2	4.57
The Board's rate is -	2	3.84
Difference - -	0	0.73

or about 2½ per cent.

	s.	d.
Value, sicca, in exchange, as above - - -	2	4.572
Intrinsic value of sicca	2	0.566
Difference - -	0	4.006

or about 16⅓ per cent.

	s.	d.	s.	d.
Sicca rupee, instead of -	2	0.566	2	–½
Arcot rupee -	1	11,247	1	11½
Bombay rupee	1	11,004	1	11

The modification is proposed merely for the convenience of more ready calculation.

	s.	d.
Sicca rupee -	2	–½
Arcot rupee -	1	11¼
Bombay rupee -	1	11

"If the Board's rates are finally adopted, the following are the consequences which are likely to occur:—First, the true par of exchange will be overlooked, and so far from the rate charged in the bills for interest on the Indian debt being considered as it really is, a political rate, it may be understood as little beyond a fair commercial rate, when by the adoption of the Board's rates, the real par may be referred to those rates instead of being referred to the relative intrinsic values of the several coins exchanged. And, second, not only will the Company's commercial statements experience the deterioration before mentioned, but at the same time the amount of their gross and net revenues will experience an increase in the same ratio; from which it may be contended by those who are inimical to the Company, that as the commerce appears to be carried on at a loss, while the net revenues are increasing in amount, it would become a matter of absolute necessity to abandon that commerce altogether, and thus leave the realization of even the surplus revenue to the medium of the private trade.

"But if the Court's rates (or the modification of them in the margin) are finally adopted, the statements of revenue and charges, and commercial and political intercouse, will be formed on a principle of valuation, which will at all times show the just comparison between Indian and English money, and will exhibit in the profit and loss accounts results calculated according to the fixed values of the coins of England and India, and thus, by deductions from such values, prove how far the trade carried on by the East India Company is really profitable, and how far that profit extends.

"It may be proper also to state, in concluding these observations, that, by the adoption of the Court's rates, the very important considerations before mentioned will be accomplished, the general principle for the valuation of coins will be preserved, and the whole accounts and statements will be drawn up on principles which appear perfectly applicable to England and India, the government of both being essentially conducted by the same authorities, and each being equally under the control and direction of the same Parliament."

LETTER from *T. P. Courtenay*, Esq. to *James Cobb*, Esq.; dated India Board, 3 August 1815.

Sir,

I HAVE to acknowledge the receipt of your letter of the 16th May last, transmitting copy of a report of the Committee of Accounts of the 12th of the same month, together with a document intituled, "Memorandum on the Value of the Indian Monies in Account," which document is recommended by the said Committee to be submitted to the Board of Commissioners for the Affairs of India, as containing further reasons for the adoption of the rates of exchange proposed by the Court of Directors in April 1814, in the several accounts and statements of the affairs of the East India Company after the 30th of that month, instead of the rates directed by the Board, as signified in my letter of the 30th June following.

I am directed by the Board to request you will state to the Court, that the determination thus communicated was not passed without the most deliberate and mature consideration of the grounds upon which the Court had proposed the conversion of sterling money into the Indian currencies, at the several rates set forth in the Report of the Committee of Accounts, dated 13 April 1814.

The representation of the Court against the rates directed by the Board, as detailed in the document transmitted at the recommendation of the Committee of Accounts, has since been examined, with all the attention due to a subject which involves not only the interests of the East India Company, but those of the subjects of the United Empire at large.

The renewal of the Charter was a transaction in which Parliament and the British Government were contracting parties with the Company; the only computation of the value of the Indian coins referred to in the negotiation between the Company and the Public, or submitted to the consideration of Parliament, were those of 2*s.* the current rupee, 8*s.* the pagoda, and 2*s.* 3*d.* the Bombay rupee, and the whole arrangement must be understood to have been concluded, upon an admission of the accuracy for practical purposes of that valuation, which, from long usage even on the part of the Company, had become customary. On these principles of calculation adjustments of accounts have taken place, and payments have been made by the public to the Company to the extent of several millions; and were they now to be changed, the public might claim of the Company a revision of the accounts already settled, as well as a correction in all future payments.

A deviation from the continuance of rates so established by usage could not be justified but upon the strongest grounds of practical inconvenience; and indeed the Board entertain some doubts of their competency to sanction an alteration in a system which, for more than 20 years, has been in operation, with the approbation of Parliament, and on which the arrangements of the new Charter may be understood to rest.

From the earliest times of which the East India Company have any account, the valuation of the Indian currencies in sterling money has been much higher than their intrinsic value estimated as bullion. This enhanced value of those coins may be attributable to two causes, which by their joint operation would seem sufficiently to account for it; the one, that there has been almost constantly a balance of trade in favour of India, in consequence of which the course of exchange has been almost uniformly in favour of that country, as may be

judged

judged from the great import of bullion; the other cause appears to be the high seignorage taken in the Indian mint.

In fact it is evident, that if the coin of any country be rendered by means of seignorage of greater value than bullion in the same country, it will preserve a part or the whole of this extrinsic and additional value in other countries with which the country in which it is coined may have commercial relations, especially if the course of payments be usually in favour of the coining country.

Accordingly, in most of the common tables of coin and currency which have been published in the last century, the sicca rupee is rated at 2*s.* 6*d.*; and in no one of the accounts annexed to the memorandum is the rupee and the pagoda rated at a lower value than what is adopted by the Board, except in one or two cases of the Madras pagoda, the latest of which occurs as long ago as the year 1771.

It is however much less material to inquire, upon abstract principles, what would be the proper rates at which to fix the Indian currencies, if the question were now to be settled for the first time, than to consider what would be the inconveniences which would arise from adopting the alterations suggested by the Court.

The calculation of the result of the Company's import trade for the last 28 years is stated in an appendage to the memorandum to have been made according to the customary rates adopted by the Board, with the exception of that from Bombay, in which the rupee is rated at 2*s.* 6*d.* instead of 2*s.* 3*d.* On this calculation the profitable out-turn of the adventure has been strongly asserted on the part of the Company. Since the passing of the Act of the 53d, by which the trade with India was opened to the enterprise of private merchants, the course of exchange for bills between India and London has been considerably enhanced. Those on Calcutta from 2*s.* 2½*d.* to 2*s.* 5½*d.* the rupee, and on London from 2*s.* 5½*d.* to 2*s.* 8½*d.* at 60 days' sight, and are liable to a further increase in proportion to the demand. The Company in their commercial capacity are already in the possession of considerable advantage over the merchant, independent of the great facility and security of the extensive remittance under the arrangements prescribed by the Act. Should that remittance be allowed to be made at the rates of exchange contended for by the Court, the private merchant could not persevere in the competition without most serious hazard, and the privilege granted by Parliament would be rendered nugatory. He cannot procure funds in India, or remit funds to India by consignments or otherwise, upon any calculation founded on the intrinsic price of bullion; so that, on mercantile principles, he would in all probability be driven from the market.

The objection to the proposition of the Court as it respects the political branch of the concern, and consequently the practical inconvenience resulting from it, stands upon strong grounds.

The pay of the civil and military service is received in Indian currency, with the full understanding of its relative value to sterling, on rates which custom has rendered habitual. In the civil, the customary rate adopted by the Board is repeatedly prescribed in Acts of Parliament, and it would be unwise to make an alteration which might prove the means of furnishing grounds of claim to compensation.

The advantage stated by the Court to be derived by the Customs does not require further remark, than that the rate of exchange at which the sterling money of the invoices is converted into currency, according to the Regulations, has been the source of complaint, and orders have been sent to India for a revision.

The observations with respect to the disuse of the current rupee in the Bengal accounts is of very little consequence, for it would, if applicable at all, have been a reason for changing the Parliamentary accounts several years ago; and as to the probable disuse of the pagoda in the Madras accounts, the substitution of the Arcot rupee can be made at the customary rate of 3½ rupees per pagoda.

In reply to the objection offered by the Court to the several rates adopted by the Board, that they do not agree in comparative value, it should be observed that they are the rates in customary use between the respective presidencies and England, and it will only require in the several officers of account abroad and at home a perseverance in that necessary attention to accuracy to which they are already accustomed.

On the whole, the determination of this question must be considered to rest more upon expediency and practical convenience than upon any theory, however plausible, and particularly a theory involving the consequences which have been pointed out. The Board have, therefore, upon the fullest consideration, determined to adhere to the decision communicated in my letter of 30 June 1814, with the addition of what relates to the conversion of the Madras pagoda into Arcot rupees.

I am, &c. &c.
(signed) *T. P. Courtenay.*

LETTER from *Joseph Dart*, Esq. to *T. P. Courtenay*, Esq.; dated India House, 17 July 1816:

Sir,

I AM commanded by the Court of Directors to enclose, for the purpose of being laid before the Right honourable the Board of Commissioners for the Affairs of India, copy of a Report from the Committee of Correspondence, dated the 10th April, together with the Paper of Observations referred to therein. And I am directed to request you will be pleased to state to the Board, that in the opinion of the Court of Directors the circumstances stated in the Observations are sufficiently important to justify another application to the Board of Commissioners, for the purpose of obtaining their sanction for the adoption of the Rates formerly preferred by the Court in all the Company's statements from the 30th April 1814. And I am further directed to request you will be pleased to bring the enclosed Papers before the Board as early as may be convenient. I have, &c.

(signed) *J. Dart*, Ass^t Sec^y.

(Enclosure, No. 1.)

REPORT of the Committee of Correspondence; dated 10 April 1816.

A Paper of Observations on Mr. Courtenay's "Letter of the 3d August 1815, respecting the Rates of *Exchange of Indian Monies in Account*" having been laid before the Committee by the Chairman, and the Committee having approved the same, beg leave to lay it before the Court, and to submit that a copy of the Paper be transmitted to Mr. Courtenay in a letter from the Secretary.

(Enclosure, No. 2.)

OBSERVATIONS on Mr. Courtenay's Letter of the 3d August 1815, respecting the Rates of Exchange of Indian Monies in Account.

Letter from Mr. Courtenay, 13 June 1814.

The Board, by this Letter of their Secretary, confirm their former decision respecting the rates of 2*s* the current rupee, 8*s* the pagoda, and 2*s*. 3*d*. the Bombay rupee. But the Board agree to the Court's proposition for reducing the pagoda into Arcot rupees, at the rate of 3½ rupees for one pagoda.

The Board object to the alteration proposed by the Court, principally for the following reasons:

1st.—The public might claim of the Company a revision of the accounts already settled, as well as a correction in all future payments.

2d.—It is doubted whether the change could be admitted, without the sanction of Parliament.

3d.—Indian monies, from the Company's earliest accounts, have been rated higher than their intrinsic value, partly from the balance of trade being in favour of India, and partly from the high seignorage charged in the Indian mints, which together tend to preserve that extrinsic and additional value in other countries.

4th.—If the rates proposed by the Court were allowed, the Company would obtain such an advantage as would probably drive the private trader out of the market, which is contrary to the intentions of Parliament.

5th.—The effect the change would produce respecting the Political Branch of the Company's affairs, "stands upon strong grounds."

6th.—The change might give rise to claims for increased allowances from the civil and military servants of the Company.

Previous to offering any remarks on these several points, it appears proper to notice, that in the observations on the Court's recommendation for valuing the Indian monies in account according to the relative quantity of fine metal in those monies, and in the legal coins of Great Britain, the Board have uniformly called that recommendation a "theory," and have treated it as being contrary to practical convenience. It may perhaps be allowed again to observe, that it is not only the true theory on which all calculations of exchange should proceed, but it is also the mode in universal practice for finding the par rates of exchange; and it is from the par rates so formed, that the amount of the deviation, in what is called the course of exchange, is calculated, by which the difference above or below par is found, and from which the favourable or unfavourable operation of the course of exchange is deduced.

In respect to the *first point* it may be remarked, that the Court could have no objection to a revision of the accounts already settled with the public, at least so far as regards the rate of exchange, which is the only question now under consideration, because the presumed equity of the case, as well as the practice lately adopted, leave the Court no apprehension of sustaining any loss on that account. *First*, as to the presumed equity of the case, the accounts referred to were for advances by the Company in India for His Majesty's service there, which advances were repaid in London, at certain rates of exchange.

Appx. to 4th Report in 1812, No. 26, p. 497.

The amount drawn on the Company from 1794-5 to 1806-7, was 9,137,527*l*., and the expense to the Company, beyond the rates charged to the public, was 254,072*l*. or 2.78 per cent.

It is presumed that whatever might have been the principle on which the rates of exchange were founded, for reducing the advances in India into sterling, that the Company were justly entitled to be repaid in England a sum equal to the expense they incurred in providing those advances for the public service in India; but in the accounts referred to, the rates used for charging the public with the advances in India were nearly 3 per cent. less than the average rates paid by the Company for bills drawn on them from India. The principle above stated was however partly recognised in the settlement of the accounts referred to, as the Company were allowed to charge the public interest according to the average rates the Company paid for money raised in India during the period comprehended in those accounts.

Appx. to 3d Report, No. 17, p. 395.

In the same period the advances in India for the public service were admitted by the House of Commons to amount to 5,010,702*l*.

1st Report, 1808, p. 5, and 39 to 40; and 3d Report above, p. 395.

And *second*, as to the practice lately adopted. It may be presumed the Board have seen the justice of the conclusion, that if interest was allowed according to the rate paid, so should the advances of principal be repaid in the same manner. This has been fully recognised in the late agreement with His

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

His Majesty's Government, for the payment in England of advances made in India. These advances are to be furnished from the cash remaining in the Indian treasuries, in consequence of the interest on the Indian debt being taken out by bills drawn on England at the rate of 2*s.* 6*d.* per sicca rupee. And upon this principle it has been agreed that the advances to the public service in India should be repaid in England at 2*s.* 6*d.* per sicca rupee also. This equitable agreement seems to have been overlooked by the Board in the late letter of their secretary, otherwise it could not have escaped notice, that so far as regarded advances in India, the sum to be repaid on that account should in all cases be regulated by the sum it cost the Company to supply such advances, without any reference to the rates used in the accounts and statements. In either view, therefore, it is presumed a revision of the rates used in the accounts already settled between the public and the Company could not be objected to by the Court, should the Board think such revision necessary, as it is clear by the mode recently adopted for the settlement of future accounts, that such revision would be in favour of, and not against the Company.

As to the *second point*, it is to be presumed that Parliament would not withhold its sanction to any measure which was founded on principles so agreeable to general usage, as those which the Court have recommended.

The *third point* embraces two distinct considerations, *First*, the supposed effects of the balance of trade, and *Second*, the supposed effects of the Indian seignorage on the coinage. On the first consideration it is with much deference observed, that the Board appear to have overlooked the manner in which the trade with India was conducted, at least so far as that trade is supposed to affect the rates of exchange used in the early part of the Company's affairs. The trade with India was carried on at the beginning of the last century, principally by goods and bullion consigned to the several factories, the bills drawn on England being granted more in the nature of indulgences to the Company's servants, than as the means for carrying on the trade. The bills paid in the early part of the last century were in the proportion of about one-tenth to the goods and bullion sent out, as shown in the margin. After the year 1735 the proportion of bills drawn to goods and bullion sent out increased, but so far from this increase operating in the way supposed by the Board, it is worthy of particular notice, that taking Bengal as an example, even from the year 1724, the rates for bills declined from about 2*s.* 7½*d.* to about 2*s.* 2½*d.* to 2*s.* 3*d.*, which was the rate in 1760. From 1761 to 1766 the rate was 2*s.* 4*d.*, and from that period the rate declined to 2*s.* 1*d.* and 2*s.*, which were the rates from 1771 to 1790. In 1786 and 1787 some part of the Indian debt was paid by bills drawn at 1*s.* 8*d.*, and 1*s.* 11*d.* per current rupee. For some time after the Company became possessed of the Dewannee, the Indian revenues provided a part of the Europe investments. In this case so far from those investments representing any balance in favour of India, the part provided by the revenues was in fact so much of the balance of the annual tribute due from India to the Company as the sovereigns of the country. It is well known that for some years after the Dewannee, owing to a mistaken policy, the Company refused to take the savings of their servants in India for bills on England, and that in consequence those savings were advanced to the Foreign European Companies, to the great detriment of the Company's affairs. It is equally well known that the rates of exchange granted at that time by the Foreign Companies did not proceed on the real, or the supposed real value of the Indian monies, compared with the European monies with which they were exchanged; but those rates were fixed according to the demand for goods in Europe, and of course according to the demand in India for funds to purchase such goods, and according to the quantity of the funds in the hands of individuals requiring remittance to England through the medium of the trade of the Foreign European Companies, all other means of remittance except that of the coins of the country being closed by the policy before mentioned.

From 1705-6 to 1734-5. The average annual value of goods and stores exported by the Company was -

	£. 101,296
The average annual value of bullion was - -	455,312
	£ 556,608
And the average annual amount of bills paid from 1705-6 to 1734-5 was	53,992

This period is taken, because it is the period in which the rates used in the home accounts, as stated in the memorandum forwarded by the Court, were the highest in the whole series of more than 100 years referred to on that occasion.

Note.—It was not till 1787 the Bengal rupee was reduced in any of the home accounts from 2*s.* 6*d.* to 2*s.*; it was not till 1735 that the pagoda was reduced from 9*s.* to 8*s.*; and from 1712 to 1739 the Bombay rupee was charged at 2*s.* 6*d.*, after that at 2*s.* 5*d.* and 2*s.* 6*d.*; and from 1789 at 2*s.* 3*d.*; from 1705 to 1712 the Bombay rupee was charged at 2*s.* 3*d.*

On the second consideration, respecting the supposed effects of the seignorage charged in the Indian mints, it is observed by the Board, "In fact it is evident that if the coin of any country be rendered, by means of seignorage, of greater value than bullion in the same country, it will preserve a part or the whole of this extrinsic and additional value in other countries with which the country in which it is coined may have commercial relations, especially if the course of payments be usually in favour of the coining country." This observation is not quite free from ambiguity; as it is stated, if coin is rendered more valuable by seignorage than bullion, &c., without stating in what manner the supposed extrinsic value is given by the mere charge of seignorage. In India it appears to have been the practice to deduct from the number of the pieces coined a certain portion out of every 100 or 1,000 for the charges of the respective mints. According to the late Lord Liverpool, it appears to have been the practice in some countries (European) to retain the seignorage by a reduction in the standard of the coin. Now, in either of these cases, it is clear such charge cannot add to the real value of the coin; it certainly does increase the expense of fabrication, and so far, where payments are to be made, the cost of the coin will be increased; but it appears to be quite contrary to the principles of the circulation of money, that such increased cost of fabrication should give any increased value to the coin so charged with that cost, in any other country than that where it circulates as

Letter from Lord Liverpool to the King, p. 154.

"It is and has long been a dispute among the writers on coins, whether the charge of fabricating coins, and even a seignorage payable to the sovereign, should not be taken out of our coins, as is practised in most foreign countries; and many eminent men have differed on this point. I incline to think that the charge of fabrication should not be taken from those coins, which are the principal measure of property and instrument of commerce, and still less any profit derived from seignorage payable to the sovereign."

the legal currency. Perhaps Lord Liverpool's authority may be quoted in this case also.

P. 154.

"Because the merchants of foreign nations, who have any commercial intercourse with this country, estimate the value of our coins only according to the intrinsic value of the metal that is in them, so that the British merchant would in such case be forced to pay, in his exchanges, a compensation for any defect which might be in these coins, and he must necessarily either raise the price of all merchandize and manufactures sold to foreign nations in proportion, or submit to this loss."

To ascertain what rupee was used in the home accounts for the Bengal factory, and the manner in which sterling money was converted into Indian currency, the books of that factory, from 1710–11, have been investigated, and the following is the result: In May 1710, there was a batta of 12 ½ per cent. added on the currency used in the books, in which the value of bullion from England was charged, without it being stated whether that currency was the current or sicca rupee. In August 1710* it was charged at 13 ½ per cent.; and in November 1711, it was charged at 16 per cent. In February 1712, it is expressly stated that the silver received from England was valued at 211. 4 sicca rupees for every 240 sicca weight; this produce being carried out in rupees, and to that amount 16 per cent. being added for batta. †The bills drawn on England are stated in rupees, and the number of rupees so stated is carried out without any batta being added thereto. It is not till the year 1719-20 that any entry in the Bengal books can be found for showing the whole operation of the manner in which the bullion received from India was carried to account and issued. It appears that it was the custom to divide the invoice sterling value of the bullion received by 2 *s.* 6 *d.*, and then to carry out that produce as the cost in rupees. In its issue, the bullion in sicca weight was charged at so many sicca rupees for every 240 sicca weight, the number of sicca rupees varying with the standard fineness of the bullion sent out. In 1719-20 the variation was from 207 to 213 ½ sicca rupees for every 240 sicca weight of the several parcels of silver contained in the invoices of that year. As 209 appears to have been considered the equivalent for standard bullion, the difference was 17 ¾ against the Company in this exchange, if the intrinsic value of the sicca is compared with the fine silver in 240 sicca weight of standard bullion; therefore the sum divided between the native mint and the native merchant appears to have been at the rate of about 8 ½ per cent.

* Bengal Journal, 1710–11, p. 7.
— — p. 15.
— 1711–12, p. 69.
— — p. 162.

† Bengal Journal, 1711–12, p. 107.

Extract, Fort William Journal, Aug. 1719, p. 14.

"Sold for ready money, to defray expenses, three chests of Mexico dollars, at 207 sicca rupees for 240 sicca weight, that being the price the Shroffs give for siver in payment of bills of exchange, or ready money, though we make our merchants take it at 209 sicca rupees for 240 sicca weight."

	Troy Grains.
One sicca weight - -	179.67
240 - ditto - -	43,120.80

43,120.80 Troy grains, standard silver, = 39,886.74 Troy grains, fine silver.

One sicca rupee contains 175.927 Troy grains of fine silver; therefore 240 sicca weight of standard silver = 226.72 sicca rupees.

Given for 240 sicca weight 209; difference 17.72 or 8.4 per cent.

It may then be presumed evident that the value of the rupee was charged, not according to the intrinsic value of the Bengal currency, compared with sterling money, nor according to any supposed reference to the balance of trade, but according to the value which the native merchants put upon the bullion received from Europe when exchanging it for the coin of the country, by which they exacted the difference before stated.

In the *fourth point*, it is stated that if the rates were conceded, the private trader, on mercantile principles, would be driven from the trade, and the privilege granted by Parliament become nugatory.

At present the private trader appears to possess some considerable advantages in the prosecution of his commerce with India, when contrasted with the situation of the Company in that respect. The private merchant is engaged in a trade of remittance, or very nearly so; his outward cargoes being, in general, but of inconsiderable value; his adventure, in fact, commences in India, and is carried on, generally speaking, by capital originating in India, and requiring remittance to England. The amount of his trade may be supposed to be regulated by the state of the European markets; and, in general, he has the prospect of realizing his returns in about 12 months from the purchase of the goods in India. If therefore under these circumstances he can obtain what he considers a fair mercantile profit on his commerce, he will continue it. And if, on an average of years, he should find that it does not produce him a fair mercantile profit, he may either diminish the amount of his trade or discontinue it altogether, according to his own views of the expediency of the case.

The Company's trade, in fact, commences in England, because the amount of that trade is regulated according to the Act of the 53d. By the sums paid in England for charges on account of India, and for goods sent there, and calculating from the purchase of the goods, and payment of the charges, to the realization of the home cargoes, the Company's returns, upon an average, cannot be effected at less than about two and a half or three years. The Company also are compelled to invest their funds in goods to the amount of the Indian charges paid in England, whatever may be the state of the European markets, because they have no other means of obtaining repayment of those charges but through the medium of their investment. But however the question of comparative advantage between the Company and the private trader may stand so far as regards the circumstances of their commerce, there can be no doubt that the rates used in the Company's accounts for exhibiting the state of their commerce, cannot influence the private trader, because the Company's rates can neither increase nor diminish the amount of his profits.

As to the *fifth point*, which relates to the effect the rates proposed would have on the political branch of the Company's affairs, the consideration of this question is involved in the observations hereafter stated respecting the importance of the change proposed to the future progress of the Company's affairs.

The *sixth point*, respecting any supposed claims of the Company's servants, requires but a very a very few words. The alteration in the rates in the Company's accounts would have no influence on the metallic value of the India coins, in which the salaries of the Company's servants are paid, neither would such alteration have the least effect on the exchangeable value of those coins in India; and as long as the interest of the Indian debt shall be remitted at 2*s.* 6*d.* per sicca rupee, and the opportunity of remittance through the private merchant continues, the Company's servants, under those circumstances, would obtain for their Indian monies a rate in exchange precisely on the same principles as at present, without that rate being influenced by the statements in the Company's books or accounts.

The foregoing observations, in reply to the Board's objections to the adoption of the rates proposed, are submitted with much deference; and it now remains to advert to the importance of the reduction proposed in the rates of exchange as it respects the interest of the proprietors of East India stock.

By the late Act of the 53d, the dividends to the proprietors, in fact, depend upon the state of the Company's profit and loss accounts; in this view it matters not to what amount the sales may extend, if the result of those sales is not sufficient, after defraying all commercial charges, to produce a sum equal to the payment of the dividends. If, under the operation of the late Act, the private merchant should find that encouragement for extending his commercial transactions the advocates for throwing open the trade taught the British public to expect, there can be no doubt that, under those altered circumstances, the profit on the Company's Indian trade, if indeed any should appear while the present rates exist, would be so much reduced as hardly to deserve notice; in which case the Indian trade would be carried on merely to replace the outlay in England for Indian political charges, and for the cost of military and other stores, without adding anything to the items for providing for the proprietors the dividends on their stock. This is a consideration of great moment, because, in the case supposed, the proprietors could only look for their dividend to the profits of the China trade; in which, under the present circumstances of a general European and American peace, there is every reason to presume, some reduction will take place. There is no probability of any export trade in tea to the continent of Europe during peace; and there is reason to apprehend some reduction in the home consumption of tea, from the temptation the high duty on that article holds out to the contraband dealer. As there is no prospect of an increase in profit, on a decreased sale, in the case supposed, so, if to the reduction in the Indian profits should be added any considerable reduction in the China profits, a deficiency might soon occur in the accounts, and thus prevent a dividend being declared to the full extent of 10½ per cent. Any reduction of the dividend that can be justly avoided is much to be deprecated, because there is hardly even a supposable case in which, under the most favourable circumstances, the proprietors can expect an increase to the rate of 10½ per cent. in future years, so as to equalize any supposed reduction in that rate from the operation stated, Parliament having so completely appropriated the profits that there is no probable expectation of any profits so extensive as to offer such a reduction of the Home and Indian debts as would allow of any increase to the dividend within the term of the present Charter. So long as the Company's affairs proceeded on the principle of complete unity, in their character as merchants and sovereigns, it was of no very material importance, in respect to the payment of the dividend to the proprietors of East India stock, whether the rates used in the home accounts, for converting the Indian monies into sterling, were a little over or a little under their real comparative intrinsic values; because, upon an average of years, it was found that the rates used, though above their real values, produced a sufficient profit for all the purposes required under those circumstances. But since the separation made by Parliament in the character of the Company, as contradistinguished by the terms Commercial and Political, which separation affects the whole conduct of their affairs since the month of April 1814, it is of the utmost importance to the proprietors of East India stock that the whole of the Company's transactions, whether commercial or political, should be finally brought to account on accurate and just principles.

It is only from the use of the rates contended for that the Company can expect any increase, either to the amount of their Europe investments, or to the ultimate profit and loss on the whole of their trade, so as to counteract the probable decrease on those accounts as before stated; because there can be no expected increase to the Indian trade from an increase in the amount of political charges paid in England, or of military or other stores sent from England. So far as the political charges of India, &c. paid in England, are concerned, the Board feel an interest to prevent any increase on that account, with a view to general economy, and for the purpose of preventing the Political branch from becoming indebted to the Commercial branch of the Company's affairs; and so far as regards the goods exported for sale, the Court are equally interested in narrowly watching any increase on that account, as it is the net out-turn of those goods in India for which the Commercial branch will ultimately obtain credit, and not the mere invoice value of the goods. The rates proposed by the Court, if adopted, would be another motive for the greatest caution in the future exports, as the cost, when reduced into Indian currency, would be increased in the ratio of the reduction in the exchangeable value of the currency; therefore it would require a greater sale value to induce any increase in the consignments for sale in India.

In a letter from the Board of the 30th June 1814, it is stated as follows:

"The Board rely that the utmost attention be paid, that the indents from India for stores be limited to the annual demands of the service as far as prudent and practicable, so that expense be not incurred by a mere accumulation in the arsenals. Economy in the purchases is evidently an essential point of attention."

Upon the whole, then, if there is good reason to expect that, on the before stated principles, the probable future scale of the Indian and China investments, combined with the operation of peace-charges, may exhibit an annual profit in the home accounts equal to the dividend and all charges, it may be presumed an object sufficiently important to justify another application to the Board, for the purpose of obtaining their sanction for the adoption of the rates proposed by the Court in all the Company's statements from the 30th April 1814.

East India House, April 1816. (signed) *Joseph Thompson.*

LETTER from *T. P. Courtenay*, Esq. to *James Cobb*, Esq.; dated India Board, 15 August 1816.

Sir,

IN reference to your letter of the 17th ultimo, transmitting copy of a Report from the Committee of Correspondence, together with the Paper of Observations referred to therein, respecting the rates of exchange of Indian monies in account, I am directed by the Commissioners for the Affairs of India to inform you, for the further information of the Court of Directors, that after giving to the subject the most serious consideration, they do not think it expedient or proper to reverse the decision of the late Board, as communicated in my letter of 30th June 1814 and 3d August 1815.

I am, &c.

(signed) *T. P. Courtenay.*

LETTER from *Joseph Dart*, Esq. to *T. P. Courtenay*, Esq.; dated at the East India House, 15 January 1824.

Sir,

THE alterations which have been made in the rate of exchange, at which bills are drawn on the Company in discharge of interest on the registered debt of India, as well as that at which bills are drawn in the Company's favour, in reimbursement of supplies to His Majesty's service, have directed the serious attention of the Court of Directors to the propriety of altering the rates of exchange observed in transactions between the Territorial and the Commercial branches of the Company's affairs; and I have the honour, by command of the Court, to request that you will submit to the consideration of the Board of Commissioners for the Affairs of India, the following observations and suggestions upon that important subject.

In the year 1814 the Board, in virtue of the authority vested in them by the Act of the 53 Geo. 3, c. 155, s. 64, directed, that in transactions between the Territorial and the Commercial departments the following rates of exchange should be observed; viz. 2 *s.* the current rupee; 8 *s.* the Pagoda, and 2 *s.* 3 *d.* the Bombay rupee.

To those rates the Court objected, and they proposed instead thereof that the Indian monies should be reduced into sterling in the Company's books at home, according to the intrinsic value of such monies, when compared with the mint price of the lawful currency of this kingdom, and that the sterling money of all supplies, &c. from England to India, should be reduced in the Indian books into the Indian monies, according to the same rate.

After much discussion, the Board, on the 15th of August 1816, apprised the Court that it was not thought expedient or proper to reverse the former decision.

It is not the intention of the Court now to contend for the particular principle then urged, but as the rate of exchange between England and India has materially varied since the last decision of the Board, and as the circumstances occasioning that variation have been deemed sufficient to justify and call for an alteration in other established rates, the Court are persuaded that the Board will concur in the propriety of bringing the subject again into discussion.

A main feature of the financial arrangements of the Act of 1813 was the separation of the Political from the Commercial accounts of the Company, but as sums were required in England to defray territorial charges, and sums were required in India to provide commercial investments, the Act directed that a sum equal to the actual payments in England on account of Territorial charges, (after deducting the amount of commercial expenditure in India,) should be generally set apart out of the Territorial revenue for the purpose of investment or remittance, at the option of the Court.

The payments in England being made in sterling, and those in India in sicca rupees, the question is, at what rate shall the currency of the one country be converted into the currency of the other?

Upon this question it appears to the Court that it was the obvious intention of the Legislature that sums paid from commercial funds in England for the territorial purposes of India, should be considered as so much remitted from England to India.

The Company, in its commercial character, disburses monies in England for the Company in its territorial character, and those monies being required in India for commercial purposes, the Territorial should repay to the Commercial Branch a sum *equivalent* to the disbursements in England.

But if in these transactions a higher value be affixed to the coin of India, relatively with that of England, than is justified by the mercantile exchange, it is clear that the Commercial branch instead of receiving the equivalent, sustains an actual loss arising out of its advances to the Territorial branch.

This is the present practical effect of the rates in use, the sicca rupee being valued at nearly 2 *s.* 4 *d.*, whereas its worth in remittance from England to India since 1816, according to the best information which the Court have been able to obtain, has scarcely averaged 2 *s.*, and does not at this time exceed 1 *s.* 9 *d.* The Court readily admit that if a demand had

Rates of Exchange between the Territorial and Commercial Branches.

had been made upon the market for a remittance to India to the extent of the sums advanced from the Commercial branch, the rate of exchange would to some extent have been thereby enhanced; but after making all reasonable allowance on that account, the Court are of opinion that taking the average since 1814, the Commercial branch has under the operation of the prescribed rates sustained a considerable loss, to which it is apprehended the Legislature had not the most distant idea of subjecting it.

It may also be observed, that by converting the invoice value of the Company's exports into the currency of India, at the rate prescribed by the existing Regulations, a fallacious view is given in the India books of the out-turn of the exports. Indeed, so long as those rates are continued, the Court submit that the annual result of the transactions of the Commercial branch, relatively with those of the Territorial, must be delusive, and thus the great object of Parliament in prescribing the separation of accounts is defeated.

But there is another ground upon which the Court conceive it to be of great importance that the accounts should be correctly stated.

The dividend of the Company is by law payable out of their commercial profits, and therefore it is unfair to the proprietors of India stock, and inconsistent with the law, that those profits, and consequently the capacity to pay the dividend, (without having recourse to the contingent means of a territorial surplus,) should be liable to be affected by an excessive valuation of the coin of India, in repayments from the Territorial to the Commercial branch.

But waiving all considerations of fairness and equity, there still appears no reason whatever for benefiting the Territorial funds by the continuance of these rates of exchange. The surplus of the Company's commercial profits is applicable only to the redemption of the bond debt at home, and the registered debt in India, and thus ultimately the Territorial Department would, in a regular course, derive the benefit which it now derives in the shape of exchange, whilst at the same time, by a correct computation of the rate of exchange, the actual results of the two branches under the separation prescribed by the Legislature would be more accurately ascertained.

Referring to the former discussion of this subject, the Board will observe that it was argued that practical inconvenience might result from departing from a standard of valuation which had existed for many years.

Whatever might at that time have been the force of this and of other objections which were then urged, the Court conceive that they have been removed by recent financial arrangements.

Previously to the last Charter Act, in the transactions between India and England, in which the Company were concerned, a high valuation was affixed to the rupee which could not have been justified except at times in which the balance of trade was considerably more in favour of India than it now is, or is likely again to be. The change of circumstances in the trade with India since 1813, has materially affected the mercantile exchange, and has also led to a necessary alteration in the rate observed by the Company, the value of the sicca rupee in the remittances of interest upon the debt of India having been reduced from 2 *s.* 6 *d.* to 2 *s.* 1 *d.*, and a similar reduction having been recently agreed upon in the rate at which bills are drawn by King's officers in India, in repayment of advances made by the Company to His Majesty's service there.

Old established rates of exchange have therefore been departed from for reasons which are equally applicable to all questions of exchange or remittances between England and India; and with respect to any injurious tendency that might be anticipated from an official alteration in the valuation of the rupee, it is obvious that all inconvenience of that kind has been already sustained in the alteration in the exchange at which interest on the debt is remitted.

The Court trust that enough has been offered to show the propriety of a revision of the rates prescribed by the Board in 1814, and if it shall be admitted, as the Court think it must, that Parliament intended that the sums disbursed in England for the Territorial branch should be employed in India to commercial purposes, the inference would seem irresistible that those sums ought to be repaid in India at the rate at which they could have been remitted.

In accordance with these views, the Court beg leave to submit, for the consideration and approbation of the Board, that from and after the 1st of May 1823 the rate of exchange in repayments to the Commercial Department of sums disbursed in England for the Territorial Department, be governed by the actual ratio current between England and India; and that to prevent the confusion of repeated fluctuations, an arrangement be adopted upon a principle similar to that agreed upon for the supply of funds to His Majesty's service, viz. that the rate for each official year should be fixed (in reference to the actual rate) in the month of December, by the Court of Directors, subject to the approbation of the Board.

I have, &c.

LETTER from *T. P. Courtenay*, Esq. to *J. Dart*, Esq.; dated at the India Board, 18 February 1824.

Sir,

I am directed by the Commissioners for the Affairs of India to acknowledge the receipt of your letter of the 15th instant, calling the attention of the Board to various observations and suggestions of the Court of Directors in reference to the rates of exchange observed in

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

transactions between the Territorial and Commercial branches of the affairs of the East India Company, and proposing that an alteration should be made in those rates from and after the 1st May 1823, in order to assimilate them to the actual mercantile rates current between England and India.

The Board conceive that the Company, in their commercial capacity, are justified in considering sums advanced annually from the commercial funds in England as an amount to be applied in India to commercial purposes, and that the conversion of these sums into the Indian monies should be effected at rates of exchange, by which the Commercial branch will not sustain a loss.

But if it is considered by the Court that the Legislature intended the repayments in India to be made at rates of conversion corresponding with the "mercantile exchange," or "at the rate at which they could have been remitted" to India, the Board direct me to observe that that rate was not proposed in the years 1814, 1815 and 1816, when the same subject was fully discussed. At that period a proposition of a very different nature, having reference to the intrinsic value of the precious metals, was brought forward. Whatever may be the average of the mercantile rates which have prevailed, the commerce of the Company enjoyed for several years the advantage arising from the difference in its favour of the medium rates adopted by the Board as compared with those rates; and it would seem scarcely reasonable that an alteration should now be made, because for a time the rates prescribed by the Board have become less favourable.

It appears to the Board, however, by no means clear that the mercantile exchange of the day describes the rate at which the sums in question could be remitted to India. The Court admit, that a demand upon the market for means for the remittance of those sums to India would, to some extent, have affected the exchange; but it may be fairly assumed, that the actual remittance from year to year through any other channel than the Territorial branch of funds to the extent of a million and a half sterling, and frequently of a much larger amount, must be effected on terms widely different from the rates of exchange that may exist between England and India.

From the accounts lately furnished of the present state of the Company's finances, both abroad and at home, it would appear unnecessary at present to enter into the question of the security of their dividends.

The Board cannot coincide with the views of the Court in considering the question of exchange as one comparatively unimportant, on reference to the final appropriation of the surplus commercial profits of the Company, since the same argument would go to release the Board and the Court from that strict attention to the separation of the Territorial and Commercial Accounts, which, as adverted to by the Court, the Legislature has clearly prescribed in reference to the present relation of the Company to the Territory.

Upon the whole view of the subject, the Board do not discover in the observations of the Court sufficient ground to induce them to concur in the proposition contained in your letter.

I have, &c.
(signed) *T. P. Courtenay.*

LETTER from *Joseph Dart*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 18 March 1824.

Sir,

I HAVE laid before the Court of Directors of the East India Company your letter, dated the 18th ultimo, and I am commanded to address to you their concern at the intimation which it conveys, that the Board of Commissioners for the Affairs of India do not discover sufficient ground to induce them to concur in the proposition contained in my letter of the 15th January last, viz. that from and after the 1st of May 1823, the rate of exchange in repayments to the Commercial Department of sums disbursed in England for the Territorial Department, be governed by the actual rate current between England and India, and that to prevent the confusion of repeated fluctuations, an arrangement be adopted upon a principle similar to that agreed upon for a supply of funds for His Majesty's service, viz. that the rate for each official year should be fixed (in reference to the actual rate) in the month of December by the Court of Directors, subject to the approbation of the Board." The Court remark, however, with much satisfaction, that the Board have recognized the principle, "that the Company in their commercial capacity are justified in considering sums advanced annually from the commercial funds in England, as an amount to be applied in India to commercial purposes, and that the conversion of these sums into the Indian monies should be effected at rates of exchange by which the Commercial branch will not sustain a loss;" and as a just application of that principle is the utmost for which the Court have any desire to contend, they persuade themselves, that although the Board do not concur in the specific proposal which has been submitted to them, yet that an arrangement may be adopted, founded upon the principle in which the Board and the Court are agreed.

It is observed in your letter, that "whatever may be the average of the mercantile rates which have prevailed, the commerce of the Company enjoyed for several years the advantage arising from the difference in its favour of the medium rates adopted by the Board, as compared with those rates, and it would seem scarcely reasonable that an alteration should now be made, because for a time the rates prescribed by the Board have become less favourable." The Court admit, that in some of the years which have elapsed since 1814, the rates prescribed

Rates of Exchange between the Territorial and Commercial Branches.

scribed by the Board operated beneficially on the Commercial branch; in other of those years, however, the effect was the reverse; such fluctuations were the natural result of a fixed rate of exchange, computed upon the principle of its being the medium between the maximum and the minimum of the actual rates contemplated at the time of fixing it. The practical effect, therefore, of the arrangement prescribed by the Board cannot be fully ascertained by an examination of the accounts of any particular year or years, but can only be correctly known by an average of the accounts of several years, and from the best information which the Court have been enabled to obtain, they are fortified in the conviction expressed in my letter of the 15th of January, "that taking the average since 1814, the Commercial branch has, under the operation of the prescribed rates, sustained a considerable loss."

But even were the fact assumed by the Board correct as respected not only one or more years, but the whole period since 1814, the Court must still be permitted to differ from the Board in their inference, "that it would seem scarcely reasonable that an alteration should now be made, because for a time the rates prescribed by the Board have become unfavourable."

If experience has shown that the prescribed rates have led to incorrect results, the propriety of revising them cannot surely be made to depend upon the effects which an erroneous practice may have had upon either the Territorial or the Commercial branch. Those effects might possibly call for a revision of the accounts retrospectively, but could never justify the continuance of an incorrect system.

But further, if since the system was adopted, circumstances affecting the exchange between England and India have materially varied, it will hardly be contended that because a rate of exchange fixed under other circumstances has had a particular effect at a particular period, no alteration should be made in that rate to adapt it to the altered state of things.

Such an argument would be quite inconsistent with the proceedings of the Board and the Court, in adapting to the present state of the exchange the rates observed in the reimbursement of funds supplied for His Majesty's service in India, and in the remittance of interest on the registered debt.

Suppose that in the discussion regarding the supply of funds for His Majesty's service, when, in consequence of the fall of the exchange, it was proposed by His Majesty's Government that a reduction should take place in the rate of exchange at which bills were drawn in repayment of advances made in India, the Court had objected, (and the objection would have been perfectly consistent with the fact), upon the ground that in one or more of the years since the former arrangement was adopted, the Government had benefited at the expense of the Company, would the objection for an instant have been admitted? But far from urging such an objection, the Court at once felt the propriety of a revision of the arrangement, and consented that the advances should be repaid at a rate to be annually fixed in reference to the current rate.

The Court apprehend that it has escaped the Board's notice, that when the rates in question were prescribed professedly as medium rates, the actual rate had fluctuated between 2 *s.* 9 *d.* and 2 *s.* 3 *d.* the sicca rupee; that the fluctuation for a considerable time past has been between 2 *s.* 1 *d.* and 1 *s.* 9 *d.*; and consequently, that the prescribed rate of 2 *s.* the current rupee, being upwards of 2 *s.* 3 *d.* the sicca rupee, has ceased to be a medium rate. Hence it is clear, that should the Board determine still to preserve the principle of a medium rate, an alteration in the amount of the rate is indispensably necessary.

The Board observe, that it is "by no means clear that the mercantile exchange of the day describes the rate at which the sums in question could be remitted to India. The Court admit that a demand upon the market for means for the remittance of those sums to India would, to some extent, have affected the exchange; but it may be fairly assumed that the actual remittance from year to year through any other channel than the Territorial branch, of funds to the extent of a million and a half sterling, and frequently of a much larger amount, must be effected on terms widely different from the rates of exchange that may exist between England and India."

Upon this observation the Court remark, first, that it relates not to the principle of their proposal, but to the degree in which it should be applied; and secondly, that if the transaction were solely one of commerce, it must be admitted that the augmented demand for remittance would materially affect the market rate; but it has possibly not occurred to the Board that the Territory requires a remittance to England from India to the extent that the Commerce requires a remittance from England to India, and therefore that the effect upon the market would be nearly balanced.

Let it be supposed that the Territorial and Commercial branches were entirely unconnected. In that case the Territorial would remit, through private channels or by a consignment of bullion, the funds required for disbursement in England, and the Commercial branch would adopt the same mode of providing such funds as might be required for commercial purposes in India beyond the proceeds of exports. If the amount remitted by the Territorial branch to England were the same as that remitted by the Commercial branch to India, (and this is practically the effect of the existing arrangement), there would be no variation in the balance between the countries, and consequently the operation would not materially, if at all, affect the market rate of exchange.

The Board further observe, from "the present state of the Company's finances both abroad and at home, it would appear unnecessary at present to enter into the question of the security of their dividends;" but if, as the Court apprehend to be the case, the funds from which the dividend is by law payable are subjected to loss by the observance of an arbitrary

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

arbitrary and erroneous rate of exchange, the present capacity of those funds to pay the dividend, notwithstanding such loss, cannot possibly afford any argument why the error should not be corrected, and the proprietors of East India stock possess the full amount of security intended for them by Parliament.

Upon the concluding observation of your letter I am instructed to state, that the Board are under a misapprehension in supposing that the Court consider "..the question of exchange as one comparatively unimportant in reference to the final appropriation of the surplus commercial profits of the Company;" or that they have any wish to depart from strict attention to the separation of accounts prescribed by the Legislature. On the contrary, the object of the Court in this discussion is to impress the Board with the importance of the question of exchange, and to persuade them to admit of the correction of an erroneous system; and in adverting to the final appropriation of the commercial profits of the Company, the Court's intention was merely to show that the correction of that system would not ultimately affect the Territorial branch; or, in the words used in my letter of the 15th of January last, that "the Territorial Department would, in a regular course, derive the benefit which it now derives in the shape of exchange;" and further, that by a correct computation of the rate of exchange, the actual results of the two branches, under the separation which Parliament has directed, would be more accurately ascertained.

After the most deliberate attention which the Court have been enabled to pay to this subject, they are strongly confirmed in the propriety of the alteration which they have proposed in the rate of exchange observed in transactions between the Territorial and Commercial Departments. They trust that the statements now offered will remove the objections urged in your letter to that proposal; and that upon re-consideration the Board will consent to the adoption of it. At the same time, should the Board be of opinion that the Commercial branch may be secured from loss in these transactions in a mode less objectionable to the Board than that which has been suggested, the Court trust that they shall be favoured with a communication explanatory of the Board's sentiments to that effect.

I have, &c.

(signed) *J. Dart*, Secretary.

LETTER from *T. P. Courtenay*, Esq. to *J. Dart*, Esq.; dated India Board, 6 August 1824.

Sir,

I AM directed by the Board of Commissioners for the Affairs of India to acknowledge the receipt of your letter dated 18th March last, relative to the rate of exchange for the conversion of the Indian monies into sterling in the accounts between the Territorial and Commercial Departments, in reply to my letter of 18th February last, which stated that the Board did not discover sufficient ground to induce them to concur in the proposition of the Court.

On reference to former proceedings, it will be seen that this subject has been repeatedly and maturely considered by successive Boards. The attention of the Court was first drawn to the question of exchange between the two departments in the observations upon the proposed plan for the separation of the accounts of the Company during the period of the new arrangement then about to commence, which accompanied my letter of the 24th February 1814. The Court proposed, on the 4th June following, the adoption of the intrinsic value in bullion of the Indian monies in *all* the accounts and statements required by the Act. The decision of the Board was communicated by my letter to Mr. Cobb, dated 30th June 1814, that the rates of exchange should be definitively fixed at 2*s.* the current rupee, 8*s.* the pagoda, and 2*s.* 3*d.* the Bombay rupee; and that they should not be left to be governed by the fluctuations of the times, which decision became part of the amended plan prepared agreeably to the 64th section of the Act.

A further representation on this subject was made by the Court in the letter from Mr. Cobb, dated 16th May 1815; but the Board thought fit to confirm their former decision by my letter to Mr. Cobb, dated 3d August following.

Upon the appointment of a new Board application was again made by the Court, by Mr. Dart's letter of 17th July 1816, for a revision of the Board's determination.

My reply, dated the 15th August 1816, stated that the Board "did not think it expedient or proper to reverse the decision of the late Board."

I am directed by the Board to acquaint you, for the information of the Court, that after the most mature deliberation upon the proposition now made by the Court for adopting rates governed by the mercantile exchange of the day, they are decidedly of opinion that no alteration should take place in the rates of exchange established at the commencement of the present arrangement with the Company, and contained in the amended plan for the separation of their Territorial and Commercial accounts, which accompanied my letter of 30th June 1814.

I am, &c.

(signed) *Thomas P. Courtenay.*

Rates of Exchange between the Territorial and Commercial Branches.

LETTER from *J. Dart*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 14 October 1824.

Sir,

IN reference to your letter of the 6th August, stating, in reply to that which by command of the Court of Directors of the East India Company I had the honour to address to you on the 18th March last, that the Board of Commissioners for the Affairs of India are decidedly of opinion that no alteration should take place in the rates of exchange established at the commencement of the present arrangement with the Company, and contained in the amended plan for the separation of their Territorial and Commercial accounts, which was approved by the Board on the 30th June 1814, I am commanded to transmit to you, for the purpose of being laid before the Board, a Minute of the Court, containing a formal Protest, which on the 25th August last they unanimously resolved to record against the decisions passed by the Board on this subject, and to which all the Directors have subscribed their names, with the exception of the Honourable William Fullarton Elphinstone, who has for some time been prevented by severe indisposition from attending the meetings of the Court.

I have, &c.
(signed) *J. Dart*, Secretary.

Mem.—Copy of the Protest of the Court, referred to in the foregoing letter, has been printed in the Appendix to the First Report of the Select Committee of 1830, No. III. p. 98.

Extract LETTER from the Right hon. Lord *Ellenborough* to the Chairman and Deputy Chairman of the East India Company, dated India Board, 13 October 1829.

YOU observe that every depression in the rate of exchange must necessarily augment the cost to the Company in realizing in England the sum expended on the Territorial account. Undoubtedly it would have that effect if the remittances of the Company were made in bills; but those remittances being made in goods, they are not directly affected by the rate of exchange, although that rate will probably on an average of years so far correspond with the profit to be realized by remittances as to mark in some measure by its variations the changes which may occur in the amount of that profit.

Until the year 1818–19 the remittance made by the Company in goods was more favourable than that made by means of bills; and in three out of the 10 years since 1819–20 it has likewise been more favourable Taking the average of the whole period, the articles through which the remittance has principally been effected, namely, raw silk and indigo, have realised a rate exceeding that realised by bills.

Until 1819–20 the rupee remitted directly from India in goods produced more to the Commercial branch than had been advanced by it for the Territorial branch, according to the rate of exchange between the two branches of your accounts fixed by the Board in 1813–14. And here I must observe, that in speaking of loss or profit on remittance from India, you always speak as if the whole of that remittance were made directly in goods from that country, throwing out of consideration the sums, now, indeed, small in amount, which are at a rate of exchange fixed every year, repaid to the Company by the King's Government in England for advances made for the King's service in India, and further neglecting to advert to the circumstance that a very large portion of that remittance, calculated by you at one million a year, is made through China, and comes to this country with all the large and certain profit secured to the Company by the monopoly of the China trade. If at the commencement of the present Charter, two crore and 40 lacs of rupees would produce 3,000,000 *l.*, the exchange fixed by the Board must at that time have been extremely favourable to the Commercial branch[*]; and while bullion can be remitted by the Company at a charge of five per cent, and by individuals at a charge of eight per cent.[†], and while a remittance in bullion at the latter rate is less favourable than a remittance in bills, I cannot allow that it could be fairly assumed in argument, that a disbursement in India of three crores and a half of rupees is now required to effect a remittance of 3,000,000 *l.*, even were it necessary, as it is not, to make the whole remittance directly from India.

Extract LETTER from the Chairman and Deputy Chairman of the East India Company to the Right hon. Lord *Ellenborough*; dated East India House, 12 November 1829.

THE Court cannot close this letter without remarking upon the statements and observations which your Lordship has incidentally made respecting the effect of the rates of exchange prescribed by the Board as a part of the plan for the separation of the Territorial and Commercial branches of the Company's affairs, and against which the Court have frequently and earnestly remonstrated.

The object of Parliament in directing the separation was, that the financial results of the Territory and the Trade might be distinctly and accurately exhibited, but this object is altogether defeated by the use of the arbitrary and erroneous rates of exchange.

Advances are made for the use of the Territory out of the Commercial funds in England, which advances are by law repayable in India, to be there used by the Commercial branch as the Court may direct; but by the observance of the Board's rates a portion only of the sums

---

[*] Profit in India on a payment of three millions, 18,62,068 rupees.

[†] A remittance of 3½ crores, at a charge of 8 per cent, would produce 3,295,938 *l.*

Rates of Exchange between the Territorial and Commercial Branches.

sums advanced is repaid. An example shall be given which will show to your Lordship how the system works.

The Company pay annually to the King's Government 60,000*l.* for half-pay and pensions of His Majesty's forces serving in India, which sum is by law chargeable on the Territorial revenues.

The said sum of 60,000*l.* is paid in the first instance out of the Company's Commercial funds in London, and the Indian Territory repays it with the sum of 5,17,241 sicca rupees, that being the amount in the currency of India, at the rate prescribed by the Board, of 2*s.* the current rupee, calculated at 16 per cent. less than the sicca rupee. The sum of 5,17,241 sicca rupees if remitted to England would produce, at the rate of 1*s.* 9.07*d.* per rupee, (that being the average of the aggregate of the Company's remittances from India, whether by goods, bullion or government bills, in the last three years,) 45,409*l.*, thereby occasioning a positive loss to the Commercial funds upon this transaction of 14,590*l.* Hence it is clear, that where the law has provided for the charge upon the Territory of 60,000*l.* per annum, the Territory pays no more than 45,409*l.*, and that the Commercial branch is made to pay the difference.

We earnestly invite your Lordship's attention to this part of the subject, with the view to the correction of a system so opposed to sound principle and to the spirit of Parliamentary enactments. It matters not, in the Court's judgment, whether the practice has at particular periods been favourable to the Territorial or to the Commercial branch: the rates have been, and are untrue, either as medium or as actual rates; and therefore the Court submit, that it is due to both branches of the Company's affairs, and to Parliament, that the error should be corrected and the accounts readjusted upon sound principles for the whole period since the separation took place.

Extract LETTER from the Right hon. Lord *Ellenborough* to the Chairman and Deputy Chairman of the East India Company; dated India Board, 8 January 1830.

I HAVE the honour to acknowledge the receipt of your letter of the 12th November last, in which you advert to the fixed rate of exchange observed in the accounts between the Territorial and Commercial branches of the Company's affairs, and propose that what you consider the error in that rate of exchange should be corrected, and the accounts readjusted upon sound principles for the whole period since the separation between them took place.

Before I advert to the proposition with which your letter concludes, I must notice the incorrectness of the example adduced by you to show the working of the system you desire to change.

You suppose the sum of 60,000*l.* paid from Commercial funds in England on the Territorial account, to be repaid in India with 5,17,241 sicca rupees, at the fixed exchange of 2*s.* the current rupee, and these rupees to produce when remitted to England no more than 45,409*l.*, thereby occasioning a positive loss to the Commercial funds upon this transaction of 14,591*l.*; but I am again obliged to call to your recollection, that in calculating the out-turn of the rupee remitted from India, you still overlook the fact, that about two-fifths of your remittances from India have been made through China, with all the profit secured to the Company by the monopoly of that trade.

Three-fifths of the 5,17,241 rupees which are by the supposition received in India would, according to your calculation, founded upon the average aggregate remittance direct from India during the last three years, produce only 27,246*l.*, but the remaining two-fifths remitted through China would, at the average rate at which bills have been drawn from Canton upon the several Indian governments during the same period, produce 35,574*l.*, and these sums would together make 62,820*l.*, thereby occasioning a positive gain to the Commercial funds by this transaction of 2,820*l.*

In July 1823 the Court proposed that after the 1st May in that year a new rate of exchange should be adopted between the Territorial and Commercial Departments. You now go further, and propose that the accounts between the two departments should be readjusted on "sound principles" from 1814; but even were the Board disposed to consider such an arrangement, which would commence by unsettling the accounts for more than 15 years, there would surely be not a little difficulty in determining what were the "sound principles" upon which they ought to be readjusted.

In 1814 it was the opinion of the Court, that the sound principle was to be found in the conversion of the currencies of India and of England into each other, according to their intrinsic value, at the price of the London Mint.

In 1823 the Court no longer contended for that principle, but discovered an "irresistible inference" that the sums advanced in England ought to be repaid in India at the rate at which they could have been remitted; yet at the same time seeing the "confusion of repeated fluctuations" to which such an arrangement would lead, they suggested, as a corrective, that the rate of exchange for each official year should be fixed in the month of December.

The established rate of exchange exhibits the revenues and charges of India as they have been represented to Parliament for 41 years; and it is not at the moment when the whole state of your affairs is coming under the consideration of the Legislature, and within a few years of the expiration of the Charter, that I should consider myself justified in departing from the principle adhered to by all my predecessors; unless you should be able to show, that under the present circumstances of your trade the practical working of the existing system produces effects to which it has not led at former periods, and which are not in accordance with the clear intention of the Legislature.

Appendix, No. 20.

Rates of Exchange between the Territorial and Commercial Branches.

Extract LETTER from the Chairman and Deputy Chairman of the East India Company, to the Right hon. Lord *Ellenborough*; dated 11 February 1830.

WE have had the honour to receive and to lay before the Court of Directors of the East India Company your Lordship's letter of the 8th ultimo.

Upon the subject of the rates of exchange, which the Board directed to be observed "as part of the plan for the separation of the Territorial and Commercial branches of the Company's affairs," your Lordship is pleased to express a disposition to revise these rates, if it can be shown that "the practical working of the existing system produces effects to which it has not led at former periods," and which are not in accordance with the clear intentions of the Legislature.

The Court beg leave to observe, that if the rates in question had been computed upon any principle which the Court could have considered sound and accurate, they most assuredly would not at any time have remonstrated against the use of them, whatever might have been the financial exigency of the Commercial branch.

In urging so repeatedly an alteration of the rates, the Court have been mainly influenced by the conviction which they still feel, that so long as the rates now in use continue to be observed, the Act of the Legislature, which requires the Court to place before Parliament the real situation of the Company's affairs in the separate departments of Territory and Trade, must be defeated.

The necessity for a revision of this subject has of late years indeed become the more imperative, in consequence of the serious and progressive reduction of the net proceeds of the Company's sales, arising out of the general depreciation of every kind of produce.

In the first five years of the present system of accounts, there remained, after paying all charges, including the dividend to the proprietors, an average commercial surplus of 777,441 *l.* per annum. In the two succeeding periods of five years, the averages of the surplus were 409,090 *l.* and 269,447 *l.* respectively; and in the last year of the latter period the surplus was no more than 62,895 *l.*

Such results are, however, arrived at after using the rates prescribed by the Board, and as those rates far exceed the mercantile exchange, the apparent surplus is much less than it has usually been. Your Lordship is aware that the Court are advised by their late standing Counsel, that they are not legally required to observe the Board's rates in their accounts sales; but that such accounts may be made up at the mercantile exchange. The effect of this alteration will be, that the apparent will correspond with the real amount of sale proceeds; and which, in that case, there can be little doubt will still leave a considerable surplus after satisfying all commercial obligations.

The Court are fully aware that the observance of different rates in the accounts between the Territory and Commerce, and in the accounts sales, will cause a discrepance which it would be very desirable to avoid; and the Court trust, that in the statement which they have now made of the falling off of the Company's commercial profits, and of the necessity of observing, in the computation of those profits, correct rates of exchange, instead of those prescribed by the Board, your Lordship will see ground for allowing such an alteration as will do justice to the Commercial branch, by securing it from loss in its transactions as agent for the Territorial branch.

The Court cannot admit the charge of inconsistency implied in your Lordship's letter. True it is that their proposal in 1814 had reference to the *bullion* value of the coins, and that of 1823 to their *exchangeable* value; but the former proposal contemplated a *permanent* rate, whilst the object of the latter was a rate to be *annually* settled; besides which, your Lordship will perceive, on referring to the correspondence, that the Court maintained their first proposal until it received the Board's final rejection; and that the second proposal was subsequent on the Board's own proceedings, in sanctioning an alteration in the old rates of exchange as applicable to His Majesty's Government, in their accounts with the Company, after they had themselves assigned the observance of the old rates in those accounts as one of the grounds for rejecting the Court's first proposal.

Neither do the Court partake of the apprehension which your Lordship expresses, that there would be difficulty in determining upon a sound principle for the adjustment of this question; and they think that by referring to the last plan for the supply of funds for the King's service in India, adopted in communication with the Board, your Lordship will discover an apt precedent in the words used by the Lords of His Majesty's Treasury as the ground of the alteration then made, viz. "That the public may derive the full benefit of the actual rate of exchange."

The Court cannot but hope that your Lordship will settle the present question, by extending that principle to the transactions between the Territorial and Commercial branches of the Company's affairs.

CORRESPONDENCE, &c.

Extract REPORT of a Joint Committee of Treasury and Accounts of the Court of Directors of the East India Company; dated 23d January 1818.

TWO articles are introduced in these accounts which the Committee deem necessary to discuss at some length. The first is, the charge of interest on the balance due from the Territorial branch of the Company's affairs to the Commercial branch.

The Act of the 53d directed that the transactions respectively of the Territory and Commerce should thereafter be kept distinct; and by the 56th section, it was provided that a sum equal to the payments from the Commercial funds at home on account of Territorial charges should be annually applied in India to investment, or remittance to England.

The balance of payments at the close of the year 1814–15, after giving credit to India for the net advances to the Commercial department, was 711,560 *l.* against the Territory; and at the close of the year 1815–16 the balance was increased to 775,721 *l.* Indian interest, at the rate of 6 per cent., has been charged and added to the Commercial profit. This charge against the Territory for interest on the balance the Committee deem to be correct; and as the balance is a debt repayable in India, the Committee think it proper also that the Indian rate of interest be charged.

Extract LETTER from *Thomas Peregrine Courtenay*, Esq. to *James Cobb*, Esq.; dated 17th February 1818.

Charge of Interest on Balance due from Territorial to Commercial Branch.

2d. THE interest on the balance due from the Territorial branch at the close of the years 1814-15 and 1815-16, not invested for consignment to England, conformably to the provisions of the Act of the 53 Geo. 3. The principle of the charge has not yet been submitted to the Board. The Board desire that an account may be forthwith prepared, exhibiting in detail the manner in which the alleged balance in each year was produced, and the grounds upon which interest thereon is proposed to be charged by the Commercial to the Territorial department.

Extract LETTER from *Joseph Dart*, Esq. to *Thomas P. Courtenay*, Esq.; dated 12th August 1818.

Vide Appendix 5 to Appendix 19.

THE accounts exhibiting in detail the manner in which the balance due from the Territorial branch is produced, are herewith transmitted (No. 1.) The grounds upon which interest is proposed to be charged by the Commercial to the Territorial department are chiefly as follows:

The Act of the 53d directed a separation of the accounts of the East India Company into the two branches of Territory and Commerce. An exposition of this Act was transmitted to India in a despatch from the Public department, dated 6th September 1813.

The 18th paragraph of this letter states, that "we (the Court) cannot more distinctly explain our views of the sections of the Act which have now been brought under notice, (namely, the 55th and 56th sections), than by observing, that although the management of the whole, as one concern, remains with us, it is requisite that the Political branch should be considered as an affair of Government, the Commercial as that of a mercantile transaction, and by debiting and crediting in account the transactions between them in advances and supplies as if they were absolutely distinct and separate concerns; so that accounts of receipt, expenditure and balance may be duly rendered by each respectively in the way required by Parliament."

It will be observed, that in this despatch the Commercial branch of the Company's affairs is directed to be considered in the light of a mercantile transaction. The Court apprehend that the charge for interest on any balance resulting from such transaction is in strict conformity with the mercantile principle. The Board itself has, in fact, recognised the application of this principle in the approbation of certain paragraphs contained in a Commercial despatch to Bombay, under date the 9th April 1817.

In that despatch the Bombay government was instructed as to the mode of stating the accounts respectively between the Territorial and the Commercial departments; the 7th paragraph of which is as follows:

"We also desire that the charge for interest (interest contained in invoices from Europe) be omitted, for although in the adjustment of payments between the Commercial and Political branches, the charge for interest will justly attach on the balance of those payments, yet this charge must be founded on a general balance of the disbursements respectively made at all the presidencies of India as well as from our home treasury."

The Court are of opinion also, that the charge for interest, and the rate of that interest, may be upheld by another consideration.

By the 56th section of the 53d it is provided, that a sum equal to the payments from the Commercial funds at home, on account of Territorial charges, should be annually applied in India to investment or remittance to England.

In the transactions of the years 1814-15 and 1815-16, the Territory has not fulfilled these directions; a large balance is due to the Commerce, and to the extent of that balance has the Territorial branch been saved the necessity of borrowing money in India.

It must also be recollected that the competency of the Indian governments to repay the advances made from the Commercial branch has been, and may again be, materially circumscribed by the disbursements of those governments on account of His Majesty's service. These disbursements carry interest, for which interest the Territory obtains credit; and if the balance due to the Commercial branch did not bear interest, that branch would suffer at a time when funds of a sufficient magnitude to liquidate its demands on the Territory were running at an Indian interest on the public account.

Extract PAPER of OBSERVATIONS which accompanied Mr. *Courtenay's* Letter to Mr. *Dart*, dated 30th April 1823.

ACCOUNT No. 1, contains another item which the Board cannot admit without question; this is the charge for "interest on the balance of the account current between the Territorial and Commercial branches." In carrying into execution the 64th section of the Act of 1813, the Board have not, as yet, admitted a charge of this nature; but whatever may be ultimately arranged respecting it, the charge is obviously inadmissible in its present form, among *payments actually made*, and itself subject with them to the charge for interest, so that interest upon interest is claimed.

The rate at which interest is charged, being the Indian rate upon advances made in England, is equally objectionable.

Appendix, No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

Extract LETTER from *Joseph Dart*, Esq. to *Thomas P. Courtenay*, Esq.; dated East India House, 18th September 1823.

Objections of the Board:	*Observations of the Court in reply thereto:*
THE Board object to the charge for interest on the balance of the account current between the Territorial and Commercial branches, as not yet admitted in carrying into execution the 64th section of the Act of 1813, obviously inadmissible in its present form, among *payments actually made*, and subject with them to the charge of interest, so that interest upon interest is claimed. The Indian rate upon advances made in England is equally objectionable.	IN a letter addressed to the Board by order of the Court, and dated the 12th August 1818, the question of interest upon the balance due from the Territory to the Commerce, and the rate of such interest, was very fully discussed; and as, during a period of five years, no refutation of the argument used in that letter has been urged, the court concluded that the Board admitted their validity: to that letter the Court beg leave to refer the Board on the present occasion. With respect to the Board's objection that this charge is inadmissible among *payments actually made*, the Court reply, that the mode of stating the account is in strict conformity with the mercantile usage; for as, by the 56th section of the Act of the 53d, the account of Territorial charges must be taken to be adjusted annually; and moreover, as it has not been denied that interest is fairly chargeable upon the balance of the account, if this interest is not discharged when due, it becomes to all intents and purposes a further loan, and necessarily augments the principal of the debt.

LETTER from *Thomas Peregrine Courtenay*, Esq. to *Joseph Dart*, Esq.; dated India Board, 15th March 1824.

Sir,

According to the intimation contained in the observations which accompanied my letter of 1st December last, I am directed by the Commissioners for the Affairs of India to reply to that part of your letter of the 12th August 1818 which relates to the charge of interest on the balance due by the Territorial to the Commercial branch of the affairs of the East India Company.

Although, according to the letter of the Act of the 53d of the late King, c. 155, no provision is made for the liquidation by the Territory in subsequent years of any deficiency in the annual repayment of Territorial charges defrayed in England, the Board, in reference to the spirit of the Act, have no hesitation in admitting the claim of the Commercial branch to the eventual repayment of such charges, and have accordingly sanctioned observations to that effect in the Court's despatches to their Indian governments.

On similar grounds the Board will not object to the charge of interest due, either to the Commerce or to the Territory, provided that it is calculated on such principles, and at such rate, as they can approve.

The rate adopted by the Court is the Indian rate of 6 per cent., but the Board conceive that, in reference to advances made in this country, the English rate of interest is the only one applicable to the case, and that which accords with the mercantile principle contended for by the Court. If the Company have been put to any expense for the provision of the necessary funds, that expense must have been incurred in England, and cannot have been affected by any saving that may be supposed to accrue to the finances in India, as argued in your letter; neither would it be equitable that the Territory should be placed in a more unfavourable situation than if that branch had actually borrowed money in this country for the liquidation of demands here chargeable upon it.

A question will next arise as to the rate to be adopted as the English rate. Taking into consideration the terms upon which money has been raised in the market for several years past, the Board are of opinion that the maximum rate of 5 per cent. could not be admitted, but they would not object to acquiesce in the rate of interest which has been allowed by the Company at the corresponding periods upon their bond debt in England.

They cannot, however, admit the principle adopted by the Court, whereby compound interest is charged; compound interest was not allowed to the Company in the account with His Majesty's Government, neither would it be admissible in private mercantile transactions.

The Board conceive, therefore, that simple interest should be calculated in a separate account, in the manner adopted with regard to the account with Government, as contained in the Appendix to the Reports of the Committees of the House of Commons in 1805 and 1808.

In the observations which accompanied my letter of 30th April last, as well as in my letter of 23d April and 7th May last, relative to the Territorial finance draft to Bengal, No. 232, an objection was made to the admission of such a charge as that now under discussion among *payments actually made* on account of the Territory; and the Board continue to be of opinion, that whenever the charge is introduced, either in the Company's

accounts,

Charge of Interest on Balance due from Territorial to Commercial Branch.

accounts, or in despatches to the Indian governments, it should be confined to the general account between the Territorial and Commercial branches. The Board's objection will thus be obviated, and the principle contended for by the Court effectually preserved.

I have, &c.
(signed) *Tho. Per. Courtenay.*

LETTER from *Joseph Dart*, Esq. to *Thomas Peregrine Courtenay*, Esq.; dated East India House, 25th March 1824.

Sir,

I AM commanded to acknowledge your letter of the 15th instant, containing the Board's observations on the charge of interest on the balance due by the Territorial to the Commercial branch of the affairs of the East India Company.

Previously, however, to observing upon the principal object of your letter, the Court deem it proper to advert to that part of it which incidentally alludes to the absence of a provision in the Act of the 53d of His late Majesty for liquidation by the Territory, in subsequent years, of any deficiency in the annual repayment of Territorial charges defrayed in England.

It appears to the Court, from the preamble of the 56th section of that Act, that the main object of that section was to protect the Commercial funds of the Company from embarrassment; and, in view to that object, the direction for annual repayment of Territorial charges is plain and positive. If, therefore, from any cause, one possibly of great accommodation to the Territory, the annual payment has not been fully made, the Court conceive that the liquidation of the arrear cannot become matter of doubt, without frustrating the palpable intention of the Act.

With respect to the main subject of your letter, as the Board sanction the charge for interest on the balance of the account between the Territory and the Commerce, it is unnecessary to advert to that point. But the rate of interest, and the mode of calculation, introduced into the accounts transmitted by the Court, are objected to. The Court, therefore, will shortly state the reasons which influenced them in adopting the mode of calculating the interest comprehended in those accounts

It appeared to the Court, that as, by the 56th section of the Act, the repayment of Territorial charges was to be made *annually in India*; if for the advantage of the Territory the demand was forborne, the Commercial branch should be regarded as a lender of so much capital in India, and became entitled to the ordinary remuneration for its use. The finances of India, on various occasions since 1814, have derived considerable advantage from the use of this Commercial fund. In the absence of that fund the Indian governments would at times have been constrained to borrow to a much larger extent, and at a higher rate of interest than has been charged in the accounts with the Commerce. In the year 1818, indeed, when a considerable sum was due to the Commerce, the Indian government raised money for the public service, paying an interest, in effect, of more than 13 per cent. for the first year.

Nor has the allowance of six per cent. interest been an adequate recompence to the Commerce. In more than one instance have the advantages for investment been suspended at a time when Indian imports met a ready and profitable sale in England.

In 1815-16, also, the Court were constrained to supply the Canton Treasury with bullion from England, at high prices, and consequent great sacrifice, when a large debt was owing by the Territory to the Commerce.

The Board observe, that it would not be equitable to place the Territory in a more unfavourable situation than if that branch had borrowed money in England. This alternative, however, could not have been adopted, without a special legal provision; and the Court's arguments are grounded on the law as it at present exists.

With respect to compound interest, the Court, in their letter of the 18th September last, have in effect contended, that upon the adjustment of an account in which, amongst other things, interest is charged, if the balance be not liquidated, the interest contained in that balance will form a portion of a new debt, and thus constitute capital on which interest will be chargeable on a subsequent adjustment. This practice is constantly admitted in private mercantile transactions in this country, nor is it opposed to the practice of India itself, as will appear by reference to a Bengal Regulation of 1793, (No. XV. s. 7,) in which compound interest is distinctly recognised.

The Board have adduced the example of the Government accounts as adverse to the principle of compound interest; alleging, that in their view, simple interest should be charged in the manner adopted with regard to the account with Government, as contained in the Appendix to the Reports of the Committee of the House of Commons in 1805 and 1808. But it cannot have escaped the Board's recollection, that upon the final adjustment of the Government account in 1822, it was contended, on the part of the Crown, with the view to abate the Company's claim, about 450,000*l.*, that a balance should be struck as on the 1st January 1812; by which operation the higher rate of Indian interest would be saved to the Public, and with which they had been charged in the account submitted by the Company's officers, such account having been formed upon the principle recognised in 1805 and 1808. It is quite obvious, therefore, that the balance of the Government account, thus ascertained, to the 1st January 1812, would carry interest to the period of the final adjustment; and as far as interest constituted a part of that balance, compound interest became a necessary consequence.

Many

Appendix, No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

Many instances, also, in the Company's transactions, may be enumerated, in which a compound interest has been allowed. It may be merely requisite to advert to the Company's separate fund, as recognised in 1793, and the more recent recognition in the calculations of the Carnatic fund. The Court have thus thought it right to state the grounds and arguments by which, in their opinion, the introduction of an Indian rate of interest into the accounts between the Territory and the Commerce may be justified; and although the Court think the Board's arguments for a different principle do not successfully combat the Court's views, they yet do not hesitate to acknowledge that it is a point on which a difference of opinion may very fairly be entertained. Considering therefore that the Legislature, in directing a separation of accounts, still preserved a community of interest between the two branches of the Company's affairs, and, moreover, being desirous that this long protracted discussion should be brought to a termination, the Court will accede to the principle of adjustment proposed by the Board in your letter of the 15th instant, as far as regards the rate of interest; viz. that interest be charged upon the annual balance due from the Territorial to the Commercial branch, at the rate payable upon the Company's bond debt in England, at the several annual periods since 30 April 1814, when the balance shall be struck; but with respect to its compound operation, the Court must still contend, that unless the annual repayments by the Territory to the Commerce shall in the first instance be applied to discharge the interest annually accruing on the account, such interest shall be held to augment the principal of the debt, to carry interest upon the subsequent adjustment.

I have, &c.
(signed) *J. Dart.*

LETTER from *T. P. Courtenay*, Esq. to *Joseph Dart*, Esq.; dated India Board, 17th April 1824.

Sir,

I AM directed by the Commissioners for the Affairs of India to acknowledge the receipt of your letter, dated 25th ultimo, in reply to my letter of 15th ultimo, which stated the principles on which the Board thought it right to admit the charge of interest on the amount due from the Territorial to the Commercial branch of the affairs of the East India Company.

The Board cannot concur in the reasoning of the Court in favour of the Indian rate of interest, and the charge of compound interest; and in reference to the latter, conceive that the instances adduced of that mode of charge do not bear upon the case in question. In respect to the rate, they are relieved from the necessity of further discussion by the concession made by the Court at the close of your letter.

It is now understood that the rate of interest payable on the Company's bonds in England, at the close of each official year, will be the rate applied to the account between the Territorial and Commercial branches. But, in respect to compound interest, the alternative proposed by the Court would subject the Territorial branch to an equal amount of charge, in a different form; and the Board continue to be of opinion, that the interest on the account for past years should be calculated separately, upon the principle adopted in the account with His Majesty's Government; they are also of opinion, that in future the accounts may be adjusted soon after the expiration of the year in which the advances and repayments are respectively made.

According to the principle above referred to, interest for the past should be calculated from the middle of each year, which the Board are inclined to think, as the above advances are made from time to time through the whole year, would be the more correct mode of calculation.

The Board are further of opinion, that no interest should be allowed upon sums due from the Territory to the Commerce; repayment of which, though the Territorial funds are sufficient to make it, is delayed by the want of a Commercial demand for it. If cash, properly belonging to the Commercial branch, lies idle in the Treasury at Calcutta, the Commerce and not the Territory ought to sustain the loss.

With these qualifications, the Board are ready to concur in the Court's propositions.

I am, &c.
(signed) *T. P. Courtenay.*

LETTER from *J. Dart*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 17th June 1824.

Sir,

YOUR letter, dated 17th April last, conveying the Board's further observations upon the proposed charge of interest on the amount due from the Territorial to the Commercial branch of the affairs of the East India Company has been laid before the Court of Directors.

The Court see, with regret, that the arguments contained in my letter of 25th March last, and in those previously addressed to the Board upon the same subject, have failed in obtaining the Board's concurrence in the mode of charging the interest on the balance of the account current between the Territory and the Commerce.

It has not been denied, that by the 56th section of the Act of the 53d of the late King, the adjustment of the advances was to be an annual adjustment; by the 18th paragraph of the

Appendix No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

the Court's circular letter to India of the 6th September 1813, (an alteration introduced by the Board) the future operation of the two branches were directed to be viewed, the Territorial branch as an affair of Government, the Commercial branch as a mercantile transaction.

The advances, therefore, from the Commerce to the Territory, are to be annually adjusted, and to be treated as a mercantile transaction; and the Court must repeat their conviction, that the proposed introduction of compound interest in the accounts between the Territory and the Commerce is strictly conformable to mercantile usage in England, under the circumstances in which the account is directed to be adjusted.

They think that they have also proved that this principle of adjusting accounts is not irreconcilable with Indian practice, and has been adopted in several cases.

In the instance adduced by the Board as an example of a contrary practice (the adjustment of the Government account) it appears that the mode of settlement, as contended for by the Government itself, was made upon grounds which distinctly recognised the principle of a compound calculation of interest.

The Court must further observe, that in all cases in which the Commercial branch may be compelled to increase, or has been prevented from reducing, its debts at interest, in England, through the failure of the Territory in making the necessary repayments, the mode of adjustment contended for by the Board would be obviously inequitable.

The interest on the money borrowed in such cases, on the Territorial account, must be periodically provided for out of Commercial funds, whilst the return, on the principle assumed by the Board, is to take place at no certain or definite period.

The Court, therefore, under all these circumstances, cannot abandon their opinion as to the mode of stating the accounts between the two branches in respect to interest, as contended for in their several letters to the Board of 18 September 1823, and 25 March 1824.

Adverting to the period of the year from which interest shall be held to commence, the Court see no objection to the adoption of the Board's suggestion, that it be calculated from the middle of each year.

With regard to the concluding paragraph of your letter, which states "that no interest should be allowed upon sums due from the Territory to the Commerce, repayment of which, though the Territorial funds are sufficient to make it, is delayed by the want of a Commercial demand for it. If cash, properly belonging to the Commercial branch, is idle in the Treasury at Calcutta, the Commerce and not the Territory ought to sustain the loss," the Court must observe, that considering that the Commerce is annually called upon to make advances for the Territory, without reference to the competency of employing the amount of such advances when repaid in Commercial investment, the equity of causing an accumulation of Commercial capital to remain unproductive is not apparent to the Court. The question, however, cannot have any practical operation on the occurrences of past years. The Territory, as has been observed in my letter of 25th March last, has on many occasions withheld the issue of funds to the Commercial branch, when profitable sales might have been made in Europe; nor has the Territory, it is apprehended, ever yet been, nor is it at the present moment, in a state entirely to liquidate the balance due to the Commerce, without creating fresh Territorial debt in India. The demands of Commerce, under the existing difficulties of making remittances, are not likely to effect any material reduction of this balance; if, therefore, the Territory hereafter shall be in possession of funds which may be made applicable to Commercial demands beyond the amount required by the Commercial branch, and if the Board shall still maintain the opinion stated in your letter, the balance ought to be placed at the disposal of the Company's commercial servants in India, so as to afford the opportunity of its being employed in any manner that may guard the Commerce from the loss arising by so much of its capital remaining unproductive.

I have, &c.
(signed) *J. Dart.*

LETTER from *T. P. Courtenay*, Esq. to *Joseph Dart*, Esq.; dated India Board, 30th November 1824.

Sir,

IN reference to the correspondence which has passed between the Board and the Court of Directors, in respect to the charge of interest on the amount due from the Territorial to the Commercial branch of the concerns of the East India Company, I am directed by the Commissioners for the Affairs of India to transmit, for the information of the Court, copy of a Case, with the joint opinion of His Majesty's Attorney and Solicitor Generals, relating to the subject.

I am, &c.
(signed) *T. P. Courtenay.*

(Enclosure.)

CASE.

PLEASE to refer to stat. 53 Geo. 3, c. 155, sections 1, 55 and 56, and also s. 64.

A plan for the separation of the Political, or Territorial, from the Commercial accounts of the Company, was adopted and acted upon soon after the passing of the Act, in conformity with the 64th sect., *vide* printed paper left herewith.

See Appx. No. 1.

The

Appendix, No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

The Company have from year to year made certain payments from their Commercial funds at home on account of Territorial charges, as contemplated in the 56th sect., which charges consist of the following heads:

Pay, &c. to officers of the Company's forces on furlough or retirement.

Passage of military to India.

Political freight and demorage, or charge of freight, &c., incurred on account of the Territories.

Interest and sinking fund on loan from the Public in 1812 (by Act 52 Geo. 3, c. 135).

Political charges general, or charge of the Company's home establishments, &c. incurred on account of the Territories.

Expenses on account of St. Helena and other Settlements.

Stores exported for Territorial purposes.

Payments on account of King's troops serving in India.

Bills of exchange for payment of interest of India debt, &c. &c.

Orders have been addressed by the Court of Directors to their governments in India from year to year, to issue certain sums from the revenues of India, in repayment of the above advances, for investment or remittance, according to the directions of the 56th sect.; but it has occurred in some years, from the existence of war in India, or other causes occasioning urgent demands upon the resources of the governments there, in others from the want of sufficient orders as to the amount or mode of investment or remittance, that the sum paid from the Commercial funds at home for Territorial charges has not been fully issued, as directed by the Act.

The deficiency in the repayment of Commercial funds by the Territorial department has been carried forward from year to year, and a considerable balance is consequently exhibited in the Company's accounts as due to the Commercial branch of their affairs. For the discharge of this deficiency or balance, provision is not made in express terms by the Act, but, without its liquidation, the financial arrangements enacted by the Act will be materially impeded. Payment of this balance from the Territorial revenues is now claimed by the Company, together with interest on the accumulated balance arising from year to year.

Doubts have arisen whether, under the 56th section, the balance above described can be legally charged upon the Indian revenues of following years, and whether, if it is so chargeable, it is competent to the Court of Directors to order, or the Board to sanction, the payment of interest thereon.

Your opinion is requested,

1st. Whether the deficiency of issues from the Territorial revenues in one or more years, in repayment of Territorial charges defrayed from Commercial funds at home, can be legally discharged out of the revenues of following years?—And if it can be so discharged,

2d. Whether interest thereon, howsoever it may be calculated, can be paid from the Indian revenues, consistently with the provisions of the Act of the 53d Geo. 3, c. 155, especially the 56th section?

1st. We are of opinion that the deficiency of the sums issued from the Territorial revenues, in former years, for repaying the Territorial charges defrayed from the Commercial funds, may be made good out of the Territorial revenues of subsequent years.

2d. We think that interest cannot be paid upon such deficiency.

LETTER from *Joseph Dart*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 7 July 1825.

Sir,

I HAVE received the commands of the Court of Directors of the East India Company to acknowledge the receipt of your letter, dated the 30th of November last, transmitting, by direction of the Board of Commissioners for the Affairs of India, copy of a Case, with the joint opinion of His Majesty's Attorney and Solicitor Generals, upon some of the questions which have arisen in the course of the correspondence which has passed between the Board and the Court, relative to the charge of interest in accounts between the Territorial and Commercial branches of the Company's concerns.

The Court direct me to observe, that they perceive with satisfaction that upon the first point submitted to His Majesty's law officers, the opinion delivered is in accordance with the view of the subject previously taken by the Court, and with the practice which has been observed in framing the accounts between Territory and Commerce.

With reference to the terms in which the opinion of His Majesty's Attorney and Solicitor Generals is expressed upon the second point submitted to them, the Court have thought it right to direct that a Case should be prepared for the opinion of the Company's standing counsel. Copy of this Case, and of the opinion of Mr. Serjeant Bosanquet thereon, I am directed to transmit to you for the information of the Board of Commissioners for the Affairs of India.

I have, &c.
(signed) *J. Dart*, Secretary.

Charge of Interest on Balance due from Territorial to Commercial Branch.

(Enclosure.)

OPINION of Mr. Serjeant *Bosanquet*, on the legality of charging Interest on the Balance due from Territory to Commerce; dated 20 June 1825.

AFTER attentively considering this case, the correspondence therein referred to, and the answer of the Attorney and Solicitor Generals to the questions submitted to them, I am humbly of opinion, that a charge of interest upon the account from time to time becoming due from the Territorial to the Commercial branch of the Company's affairs, on account of sums paid out of Commercial funds for Territorial purposes, may lawfully be admitted in the statement directed to be made by the 64th sect. 53 Geo. 3, c. 155, if such a charge shall appear to the Court of Directors and the Board of Commissioners to be fair and just. The manifest object of distinguishing the Territorial and Commercial branches from each other in the accounts, was to ascertain and exhibit the relative situations of the Company's government and its trading concerns, whenever it should be found necessary to treat them as separate interests; the possibility of their actual separation at a future period being necessarily contemplated by the Government and the Company when the renewal of the Charter was under discussion. With this view, it was very correctly stated, in a letter of the Court shortly after the passing of the Act of 53 Geo. 3, viz. on the 6th of September 1813, that the Political branch was to be considered as an affair of Government, and the Commercial as that of a mercantile transaction; and again, in 1817, it was stated, in a letter to Bombay, that in the adjustment of payments between the Commercial and Political branches, a charge for interest will justly attach on the balance of these payments. It must often be convenient to the Company's government that the full amount of advances out of Commercial funds, on account of Territorial charges, should not be immediately repaid by advances in India, since the exigencies of the State may require all the funds which the government can command, and it may be more advisable to suffer the amount due to the Commercial branch to remain as a debt, at a reasonable interest, than to raise money by loan for the purpose of its discharge. But unless a charge of interest can be admitted in stating the accounts, the duty imposed upon the Court of Directors to protect the interests of the proprietors can compel them to insist upon the regular annual discharge of all sums advanced upon the Territorial account, or to narrow the advances upon that account beyond what the general interests of the Company, taking Territorial and Commercial together, may require. In the statement of account between the King's Government and the Company, interest has been allowed; in all mercantile concerns it is charged of course upon advances of money; and when the object is to ascertain what is fairly due from the Indian government to the Indian trade, supposing them to be entirely separate concerns, it appears to me to be reasonable and consistent with the true intent of the statute, to state the account as it would be stated if the transaction had occurred between the Indian government on the one hand and a private merchant on the other.

The actual sum annually advanced in England is the amount which by section 56 is to be repaid in India, and if repaid by the time prescribed, is to be received without interest or any compensation for remittance; but if it is not paid at the time, and is suffered to remain in arrear, it is obvious that a forbearance commences in India from the time when the money was payable, upon which, according to all mercantile principles, interest would accrue.

What the rate of that interest should be is a matter to be discussed and settled by the Court of Directors and the Board of Commissioners, according to what the peculiar circumstances of the case may appear to render just. The money is advanced by the Company in England, where they could only invest it at English interest. On the other hand, the repayment is to be made in India, and in India the forbearance takes place upon which the claim for interest accrues. If the Government, instead of being allowed to retain the debt due to Commerce, were obliged to borrow money to discharge that debt, Indian interest must be paid; if Commerce, instead of receiving the money as soon as it is due, allows it to remain in arrear, the disadvantage of postponing the payment must be proportioned to the rate of interest at the place where the money ought to be paid, and where, if paid, it might be invested. It seems to me, therefore, that mere English interest does not afford a just criterion, either of the benefit received by the Government, or the loss sustained by Commerce, in consequence of postponing the time of payment prescribed by the statute. The rate of interest (if any) which ought to be allowed can hardly be deemed a legal question. If upon reconsideration of the subject the legality of allowing any interest should be admitted, the amount of such interest must be matter of arrangement.

Lincoln's-Inn, 20 June 1825. (signed) *J. B. Bosanquet.*

LETTER from *T. P. Courtenay*, Esq. to *Joseph Dart*, Esq.; dated 12th July 1825.

Sir,

IN reference to your letter of the 7th instant, enclosing the opinion of Mr. Serjeant Bosanquet on a case submitted to him relative to the charge of interest on account between the Territorial and Commercial branches of the Company's affairs, on which subject the opinion of the Attorney and Solicitor Generals had previously been taken, I am directed by

Appendix No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

by the Commissioners for the Affairs of India to request, that you will convey to the Court the Board's opinion, that the law officers of the Crown should be invited to confer with the Company's standing counsel on the points in question.

I have, &c.
(signed) *T. P. Courtenay.*

LETTER from *T. P. Courtenay*, Esq. to *J. Dart*, Esq.; dated 23d December 1825.

Sir,

I AM directed by the Commissioners for the Affairs of India to request that you will draw the attention of the Court of Directors to my letter, dated 12th July last, suggesting that the law officers of the Crown should be invited to confer with the Company's standing counsel on the points relative to the charge of interest on the accounts between the Territorial and Commercial branches of the Company's affairs, on which a difference of opinion appeared to exist.

The Board are desirous that this long-pending question should be brought to an early conclusion, and request that a reply to my letter may be forwarded with as little delay as possible.

I have, &c.
(signed) *T. P. Courtenay.*

LETTER from *T. P. Courtenay*, Esq. to His Majesty's Attorney and Solicitor Generals; dated 11th July 1826.

Gentlemen,

A CASE was submitted to you, on the part of the Commissioners for the Affairs of India, in the year 1824, relative to the charge of interest on the accounts between the Territorial and Commercial branches of the affairs of the East India Company. It has been subsequently suggested by the Board, that the opinion on that case should be the subject of a conference between you and Mr. Serjeant Bosanquet.

A decision with respect to this case, as I had occasion to intimate in my letter to you dated 19th November 1824, is of considerable public importance; and I am directed by the Board to request that the result of the conference, if it have taken place, may be communicated at your earliest convenience.

I have, &c.
(signed) *T. P. Courtenay.*

LETTER from *J. Dart*, Esq. to *T. P. Courtenay*, Esq.; dated East India House, 2d April 1828.

Sir,

WITH reference to your several letters of the 12th July and 23d December 1825, conveying the Board's opinion that the law officers of the Crown should be invited to confer with the Company's standing counsel on the subject of the charge of interest on account between the Territorial and Commercial branches of the Company's affairs, I have the honour to transmit a copy of the Case, and joint opinion of the Attorney-general, the Solicitor-general, and Mr. Serjeant Bosanquet, dated the 14th January 1828; from which opinion it will be seen, that in framing the accounts under the 53 Geo. 3, c. 155, s. 64, interest may lawfully be allowed on the balance annually due from the one branch of the account to the other, and that the rate of such interest, under the particular circumstances of the case, may be lawfully settled by arrangement between the Court of Directors and the Board of Commissioners, as may appear most just.

The latter part of this opinion refers to the lawfulness of charging an Indian rate of interest on the balance which may be annually due from the one branch of the account to the other. This point was long contended for by the Court. But as in their letter of 25th March 1824, the Court agreed that the interest be charged on the annual balance due from the Territorial to the Commercial branch, at the rate payable upon the Company's bond debt in England, I am directed to state to you, for the information of the Board, that the Court still abide by the terms conveyed in that letter, and which are as follows: "That the interest be charged upon the annual balance due from the Territorial to the Commercial branch, at the rate payable upon the Company's bond debt in England, at the several periods since the 30th April 1814, when the balance shall be struck; but with respect to its compound operations, the Court must still contend, that unless the annual repayments by the Territory to the Commerce shall in the first instance be applied to discharge the interest annually accruing on the account, such interest shall be held to augment the principal of the debt, to carry interest upon the subsequent adjustment."

I have, &c.
(signed) *J. Dart*, Secretary.

Appendix, No 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

(Enclosure.)

Extract of a CASE and OPINION of His Majesty's Attorney and Solicitor Generals, and Mr. Serjeant *Bosanquet*; dated 14th January 1828.

Your opinion is requested,

Whether, in framing the accounts under 53 Geo. 3, c. 155, s. 64, interest may lawfully be calculated from year to year, or in any other manner, on the balance which may be annually due from the one branch of the account to the other; and if so, whether at the English or the Indian rate of interest?

We are of opinion, that in framing the account under 53 Geo. 3, c. 155, s. 64, interest may lawfully be allowed on the balance annually due from the one branch of the account to the other, and that the rate of such interest, under the particular circumstances of the case, may be lawfully settled by arrangement between the Court of Directors and the Board of Commissioners, as may appear most just.

J. B. Bosanquet.

LETTER from *Benjamin S. Jones*, Esq. to *Peter Auber*, Esq.; dated India Board, 17th August 1830.

Sir,

I AM directed by the Board of Commissioners for the Affairs of India to refer you to the letter from Mr. Dart to Mr. Courtenay, dated the 2d April 1828, transmitting a copy of the Case submitted to the law officers of the Crown, and to the standing counsel of the East India Company, with respect to the charge of interest in the accounts between the Territorial and Commercial branches of the Company's affairs, together with the joint opinion of those gentlemen thereupon.

The Board were desirous of maturely reconsidering the whole question to which that case relates before they came to a final decision upon the several points involved in it, but they are now prepared to communicate to the Court the conclusions at which they have arrived.

While the Board are of opinion, that nothing contained in the Act of the 53d of Geo. 3, can be construed as prescribing the allowance of interest on the advances made by one branch of the Company's affairs to the other, they cannot think it unlawful for them to acquiesce in a charge of that nature, under circumstances which apparently were not within the contemplation of the Legislature.

The Board, therefore, do not see reason to depart from the decision communicated in Mr. Courtenay's letter of the 15th March 1824, that they will not object to the charge of interest due either to the Commerce or to the Territory, "provided that it is calculated on such principles, and at such rate, as they can approve."

But while the Board consider themselves at liberty to allow a charge of interest under circumstances which apparently were not within the contemplation of the Legislature, they do not think it to be within their competence to allow that charge under circumstances which were contemplated by the Legislature, and under which no provision for such a charge was made.

The 56th section of the Act of the 53d Geo. 3, directs that a "sum equal to the actual payments which shall have been made from the Commercial funds at home on account of Territorial charges *in the year preceding*, (after deducting therefrom the charges of the Commercial establishments, and all the Commercial charges in India which may have been paid from the Territorial revenues in the same year) shall, in each and every year, be issued in India, for the purpose of the said Company's India or China investment, or of remittance to England on account of the said Company, at the option of the Court of Directors."

The Legislature, therefore, contemplated the delay of at least one year in the repayments to the Commercial branch of the sums advanced on account of the Territory, and yet made no provision for the charge of interest for that year.

It is impossible for the Board to allow a charge which it must be inferred that the Legislature did not intend to permit, and they can only acquiesce in the charge of interest from the commencement of the second year after the incurring of a debt from the Territorial to the Commercial branch.

When the Board refer to the means by which the Court have been enabled to make large advances to the Territorial branch from their treasury in England, they observe, that sums of considerable amount, applicable to the fourth head of appropriation, in the 57th section of the Act of 53 Geo. 3, and usually termed "surplus Commercial profits," have from time to time remained unappropriated to the purposes to which they are destined by the Legislature, for reasons which, in the opinion of the Court, as well as of high legal authorities, justified some postponement of the prescribed appropriation. Those funds are applicable, according to the provisions of the statute, to the discharge of the capital of Indian debt, and they have been so applied almost exclusively. The retention of the amount reserved, however justifiable, has operated to prevent the reduction of an equal amount of debt bearing interest, while it has to the same extent furnished the Court with the means of meeting the Territorial demands upon the Home Treasury. The Board therefore consider it equitable that interest should only be charged upon that portion of the debt due by the

Charge of Interest on Balance due from Territorial to Commercial Branch.

Territorial to the Commercial branch which is in excess of the amount of the unappropriated surplus profits of the Company; for the Territorial branch cannot, in fairness be required to pay, at the same time, interest upon debt which might be redeemed, and upon the sums which might be applied to its redemption.

Although the Board do not see reason to depart from the principle advanced by them in Mr Courtenay's letter to Mr. Dart of the 17th April 1824, namely, that "no interest shall be allowed upon sums due from the Territory to the Commerce, repayment of which, though the Territorial funds are sufficient to meet it, is delayed by the want of a Commercial demand for it;" still, adverting to the difficulty of defining to what degree that demand on the part of the Commercial branch might have been properly extended in such case, and to all the circumstances of the several cases now before them, they will not now insist upon any deduction upon this ground from the sum upon which interest is to be charged. I am further directed to state, that the Board will not object, that after the interest bills, not otherwise provided for, shall have been first paid thereout, the sums annually remitted by the Treasury shall be applied to the discharge of the interest accruing on the debt due to the Commercial branch, that interest being calculated according to the principle above laid down.

It has been already agreed, that the rate of interest used in the account between the two branches shall coincide with that which the bond debt of the Company has borne from time to time.

I have, &c. &c.
(signed) *B. S. Jones.*

LETTER from *Peter Auber*, Esq. to the Hon. *J. Stuart Wortley*;
dated 9th December 1830.

Sir,

Having laid before the Court of Directors Mr. Jones's letter of 17th August last, which communicated to the Court the conclusions at which the Board have arrived upon the several points connected with the charge of interest in the accounts between the Territorial and Commercial branches of the Company's affairs, I have received the Court's orders to transmit to you, for the information of the Board, as the result of their mature consideration of the points to which their attention has been called, the following observations:

The Board having, in accordance with the legal opinion transmitted to them in the year 1828, signified their assent to the admission of the principle of this charge, the Court have only to remark upon the Board's view of the limitations under which the charge should be allowed.

The Court do not concur in the interpretation given by the Board to that part of the 56th section of the 53d Geo. 3, which is quoted in Mr. Jones's letter, as evidencing the intention of the Legislature, that a delay of at least one year should occur in the repayments to the Commercial branch, of the sums advanced on account of the Territory. The Court would request the attention of the Board to the remaining part of the section to which they have referred the Court, and which is expressed in the following terms:

"Provided always, that any excess which may happen to be so issued *in any year*, for the purposes of investment, beyond the actual payment which shall have been made *in the same year* by the said Company in Europe on account of Territorial charges, shall be taken into account in diminution of the sum to be applied to the purposes of investment for the year following."

From this part of the section, the Court deem it to be obvious that whatever be the method intended by the Legislature to be observed in assigning to the Commercial department in India the funds to be annually placed at its disposal under the provisions of this section, it is meant that the principle of adjustment of account between the two branches in respect to the transaction shall be that of a prescribed equality (to be obtained as far as the circumstances of the case will allow) *in the same year*, of the repayments in India, with the amount of the actual disbursements for Territorial charges in Europe; and upon a consideration of the whole section, as well of that part to which reference has been made by the Board, as of that which has been just quoted, the Court are of opinion, that the Legislature, in framing this enactment, had in view the circumstances under which the financial transactions of the Company, both Political and Commercial, must be conducted, and adapted its provisions to those circumstances. As on the one hand the amount of Political expenditure at home in any year cannot be ascertained until the close of each year, and on the other hand, the investment cannot be duly provided without previous arrangements and prospective instructions to the governments abroad, the resort in the first instance to estimate, as the ground-work of the process, becomes necessary, and, in the Court's opinion, was in the contemplation of the Legislature. This conclusion appears to derive force from the direction contained in the Act for the adjustment, in subsequent years, of the amount of any excess of issues for investment in previous years, a direction which would have scarcely been requisite had it been intended that the orders for investment should have reference to the expenditure, precisely ascertained, of a past period.

See Sec. 125.

It has always been held, and indeed it appears to have been expressly provided by the Legislature, that the operation of the Act of the 53d Geo. 3, as respects the transactions between the Territorial and Commercial branches should commence, and consequently terminate, simultaneously both in England and in India; a provision inconsistent with the allowance

Appendix, No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

allowance of a delay of one year in making the repayments from the revenues, as such a delay would involve the consequence of extending the period of repayment beyond the term granted to the Company by the Act.

The Court cannot acquiesce in the view which the Board have taken of the unappropriated surplus Commercial profits of the Company, in conneetion with the question under discussion. First, because the fund arising from this source is applicable to the reduction of the home-bond debt as well as of India debt; and, secondly, because the amount of surplus Commercial profit which is held by them unappropriated, in accordance with the advice of high legal authorities, is so held with a view to the general exigencies both Commercial and Political of the Company's affairs; the term "reservations for contingent losses," made use of by those authorities as descriptive of the purposes amongst others for which such a balance might lawfully be retained, necessarily implying that meaning.

See Opinion of Attorney and Solicitor-Generals, quoted in Letter to the Board, 12 Aug. 1818. Appx. No. 19, p. 232.

Until, therefore, upon a view of the whole of the Company's affairs, it shall have been decided, in the accustomed mode, that sums are appropriable from this source, under the 57th section of the 53d Geo. 3, to the reduction of Indian Territorial debt, it cannot be assumed that this portion of the funds in the Company's possession would ultimately receive that destination; as in fact in the occurrence of cases such as are contemplated by the legal authorities before adverted to, it might no longer remain for application, and could not therefore be taken prospectively as a set-off against ascertained demands of the Commerce upon the Territory, for advances made by the former for the service of the latter.

In the decision of every question of account between Territory and Commerce, it appears to the Court that reference should constantly be made to the object which the Legislature had in view in directing the separation; being, as laid down in the despatch of 6th September 1813, that the financial results of each branch might be arrived at, "as if they were absolutely distinct and separate concerns."

The application of Commercial surplus to the reduction of Indian debt, is the diversion of a fund, commercial in its origin, to the service of the Territorial department, the effect of which, in the accounts of the respective branches, it is important to keep in view, with reference to the object just adverted to. By the application of successive sums from the Commercial surplus to the discharge of Territorial debt, not only is there produced in the accounts of that branch an improvement not derived from its own resources, to the extent of the principal sums paid off, but further augmented by the saving of interest which would have been payable by the Territory had not such debt been redeemed; but from which it, in consequence of such redemption, is relieved. An opposite effect results from this cause in the accounts of the Commercial branch, and the amount of benefit derived by the Territory in the mode just described may be regarded as the measure of the return (although the least) which might have been yielded to Commerce by so much commercial capital, of which it has been divested, had it been employed for the service of the Commercial branch. In this view the Commerce would, as a matter of account, be entitled to credit for the beneficial employment which it might have made of the surplus of its funds applied to Territorial use; but the Court do not mean to contend that advances made by the Commerce from this source, for the service of the Territory, should be repaid by an outlay for investment. They are, however, decidedly of opinion, that no correct judgment, of the nature described in the despatch of the 6th September 1813, can be formed of the independent resources of the two great divisions of the Company's concerns, without due allowance being made for the benefit thus derived to one branch by the abstraction of a corresponding amount from the resources of the other; otherwise a fallacious ground may be afforded for future legislation with regard to the Company's affairs; and it would, in their view, involve a still greater inaccuracy to abate the allowance of interest upon a portion of the Commercial surplus which might eventually become applicable to the service of the Commercial branch. The allowance indeed, of interest, is by no means an adequate compensation to the Commercial branch for the delay which has occured in making the repayments required by the Act, inasmuch as the out-turn of Indian commerce was so much more favourable in the earlier than in the later years of the present Charter, and the limitation of the advances and suspension, in some cases, of the investments, occurred in the earlier part of the period. To the extent of the profit which would have been realized on the sale of the goods, had the sums appropriable to Commerce been advanced in due course, but which has been sacrificed through the delay in making the repayments, has the view of the Company's commercial transactions been disadvantageously exhibited. And in order to arrive at the result which would have been exhibited had the Company's Commerce been wholly disconnected from the Territory, it would be necessary to give credit to the Commercial branch for the amount of such sacrifice, were it practicable to ascertain it.

It is satisfactory to the Court to perceive that the Board no longer urge the principle contended for on a former occasion, viz. "that no interest shall be allowed on sums due from the Territory to the Commerce, repayment of which, though the Territorial funds are sufficient to make it, is delayed by the want of a Commercial demand for it." Yet they cannot admit the equity of the principle itself, or rather, in the actual position of the two branches of the Company's concerns, and their relation to each other, they cannot admit the possibility of the existence of the case supposed. For if the sums not called for by Commerce remain in the Indian treasuries (the scale of the cash balances not being increased on this account) the Territory, to the extent of the sums so remaining, is saved the necessity of borrowing in the public market, and the consequent charge for interest. And were there an actual surplus of Commercial fund in India, beyond the means of employing them in trade, the existence of a public debt in India bearing interest would afford to the Commercial branch, were it wholly separate from the Territory, the means of profitably

Appendix No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

profitably investing it. Besides, it is obvious to remark, that if the repayments to the Commercial branch have, for the accommodation of the Territory, been postponed from a period favourable for their employment in trade to one that is unfavourable, compensation for the loss thence resulting (as before adverted to) seems to be called for, rather than the infliction of a further loss, in the shape of a non-allowance for interest. The Court do not regret the accommodation which has been thus afforded by the Commerce to the Territory, but they deem it important, on every ground, that the fact of such assistance, and the extent of it, as far as it can be ascertained, should be distinctly borne in mind. The Court would beg leave to recall to the recollection of the Board the large concession they have made, as respects the interests of the Commercial branch, by consenting that the calculation between the two branches shall be made at English rates of interest. In the course which they have adopted upon this question they disclaim all idea of wishing to benefit one branch of their affairs at the expense of the other; they are only anxious that the mode of keeping the Company's accounts should be in strict conformity with the intentions of the Legislature; and under a full conviction that the mode now suggested for the adjustment of interest on the transactions between Territory and Commerce would not convey the correct information required by Parliament, they request the Board's attention to the arguments adduced in this letter in favour of their view of the subject.

I have, &c.

(signed) *P. Auber*, Secretary.

LETTER from *T. Hyde Villiers*, Esq. to *Peter Auber*, Esq.; dated India Board, 10th March 1832.

Sir,

I AM directed to address you, in reference to the correspondence, which took place in 1830, between the Board and the Court, on the subject of the charge of interest on the balance due from the Territorial to the Commercial branch of the affairs of the East India Company.

The Board have maturely weighed the objections urged by the Court to the mode approved by the Board of calculating that interest, and I am in consequence directed to communicate to you, for the information of the Court, the following observations:

The points noticed by the Court which remain unsettled are two only; namely, at what period the charge of interest on each yearly balance should commence; and whether the amount of surplus Commercial profits of the Company, remaining unappropriated in the Home Treasury in each year, should be deducted from the balance before interest is calculated.

With respect to the first point, the period from which interest should be calculated, it was proposed by the late Board, that as the Legislature appear to have contemplated in the Act of 53 Geo. 3, c. 155, the delay of at least one year in the full repayment to the Commercial branch of the sums advanced in England for Territorial purposes, and to have made no provision for the charge of interest for that year, interest on each balance should only be computed from the commencement of the second year.

After a full consideration of the arguments adduced by the Court in opposition to this view, and in favour of the commencement of interest from the period when the balance actually arises, the Board are of opinion, that a close adherence to the letter of the Act would justify the opinion which was expressed on this point. They are willing, however, to admit that the spirit of the Act in its financial clauses, which contemplates the punctual fulfilment of the functions of each part of the system, (a departure from which in one branch has appeared to the Board to justify the grant of interest on the deficiency in the reimbursements which should have taken place) would rather prescribe, that the charge of interest so introduced should be calculated from the date of the deficiency of repayment; and the Board will not object to the adoption of that principle in the calculation now in question.

Upon the second point above-mentioned, the decision of the Board was, that interest should only be charged upon that portion of the debt due by the Territorial to the Commercial branch which is in excess of the amount of the unappropriated surplus profits of the Company, it being held by the Board, that the Territorial branch could not in fairness be required to pay, at the same time, interest upon debt which might be redeemed, and upon the sums applicable by law to its redemption.

The Court object to this decision on two grounds, first, because the fund arising from this source is applicable to the reduction of the home-bond debt as well as of Indian debt; and secondly, because surplus profits unappropriated may lawfully be so held according to the high legal authorities consulted by the Court, "as reservations for contingent losses," which term the Court consider to comprise general exigencies, both Commercial and Political, of the Company's affairs; it is thence argued, that until the appropriation be made to the discharge of Indian Territorial debt, it cannot be known that such will be its destination, and its amount cannot therefore be taken as a set-off against demands of the Commerce upon the Territory.

Taking first into consideration the last of these reasons, the Board direct me to observe, that admitting the interpretation of the law assumed by the Court to be correct, and that the sole object of the reservation was to meet contingent losses, the transactions now under discussion are those of a period that is past, the losses of which are ascertained; and

Charge of Interest on Balance due from Territorial to Commercial Branch.

and it is the surplus profits, after meeting all losses of the respective years, to which the Board's decision has reference. The surplus profits are, under the 4th head of appropriation of the 57th section of the Act of 1813, applicable to the liquidation of Indian Territorial debt or home-bond debt, and to no other purposes whatever; and in so far as those purposes are Territorial, the fund has a Territorial and not a doubtful destination. These profits, while they have remained unappropriated, have constituted a part of the cash balances from which the advances for Territorial payments have been supplied, and hence arises the claim for deduction of their amount from the balance due to Commerce in the calculation of interest, for which the Board contend.

The Board are confirmed in the propriety of this view by a reference to the opinion of His Majesty's Attorney and Solicitor Generals in 1818, to which the Court have referred. The Court, in the case referred to those authorities, inquired whether they were bound, in reference to an annual statement of profit and loss, "to treat as profit the whole balance appearing in their favour in any one year, without making any deduction or reservation for contingent losses and adventures, or for such sums as may be likely to be wanted for Territorial purposes."

The opinion given upon this point was, that in regard to estimates of their profit or loss, they were "not bound to treat as profit the whole cash balance appearing in their favour in any one year, without making reasonable deductions and reservations for contingent losses, as well as for such payments as they may be called upon to make for Territorial purposes."

It is thus clear, that the Court themselves, as well as the legal authorities then consulted, considered it right to suspend the appropriation of a part of the surplus profits to the discharge of debt, in order that the current Territorial demands upon the Home Treasury might thereby be provided for. The reservation was therefore made, and the discharge of Territorial debt bearing interest postponed, in order that the same funds might be applied to Territorial purposes in another form; but the Territory cannot be charged with interest on these funds when so applied.

A further confirmation of the propriety of the Board's view is furnished from the correspondence of the Court with the Board, in which they have, on more than one occasion, signified their inability to appropriate a further portion of the surplus Commercial profits to the discharge of Territorial debt, when it has been proposed by the Board, on the ground of their being so largely in advance to the Territorial branch by issues on that account from the Home Treasury.

Vide Appx. No 19, pp. 251 and 253.

The Board would refer particularly to Mr. Dart's letters to Mr. Courtenay, dated 7th June 1821 and 29th January 1823.

In the former letter the Court observe that the measure suggested by the Board, of appropriating a further amount of surplus profits "would be highly inexpedient; the immediate and prospective demands upon the Court to an undefined amount for bills of exchange drawn from India for interest of India debt requiring the entire of the resources of the Company in England *to be retained for their liquidation*;" and in the letter of 1823 the Court objected to further appropriation of surplus profits on the following grounds: "It is true that an amount of surplus Commercial profits is still unappropriated, fully adequate to meet the whole of the bills drawn in discharge of that debt, but it is no less true that the Commercial branch of the Company's affairs is in advance to the Territorial branch to an amount exceeding the unappropriated surplus profits, and of which the repayment by India in the way of Commercial investment must necessarily be a very difficult and tardy operation."

Thus the Court have undoubtedly withheld the appropriation of surplus profits to the reduction of Territorial debt, and consequently of interest payable by the Territory, (the propriety of which proceeding is not now the subject of consideration), in order that they might with those funds pay, or in consequence of their having therewith paid, Territorial demands. It is perfectly clear, therefore, that were the Board to accede to the Court's proposition, by allowing to the Commercial branch interest on the whole of those demands, the Territorial branch would be in effect subjected to the payment of double interest on very large sums, during a considerable part of the term of the present Charter.

The only modification to which the Board feel at liberty to consent arises out of the other point of objection which the Court have urged, namely, that the surplus Commercial profits are applicable to the payment of home-bond debt as well as India debt. Considering the character of the former debt, the Board deem it to be equitable that the unappropriated surplus profits, *minus* such proportion of them as may fairly be considered applicable to the reduction of Commercial debt, should be the sum deducted from the balance on which interest is calculated. It is not necessary for this purpose to enter into the question of the precise character of the home-bond debt, but as the Company have hitherto paid the interest upon that debt out of their Commercial receipts, the Board consider that for the present purpose the amount of that debt should regulate the proportion of the surplus profits applicable to Commercial purposes.

The Board observe, that the India debt at interest during the present Charter has been, on an average, rather more than 31,000,000 *l.* sterling; the home-bond debt nearly 4,000,000 *l.* As the Act of 1831 enacts that the Territorial debt shall not be reduced lower than to 10,000,000 *l.*, and the bond debt to 2,000,000 *l.*, the surplus profits might have been applied under that Act towards the reduction of 21,000,000 *l.* of India debt, and 2,000,000 *l.* of bond debt. They propose, therefore, to consider one-tenth of the surplus profits as the amount which might have been applied to Commercial purposes. There will thus remain to be deducted from the yearly balances, before interest is calculated, nine-tenths of the unappropriated

Appendix, No. 21.

Charge of Interest on Balance due from Territorial to Commercial Branch.

surplus profits. In any year in which that portion of the profits shall exceed the balance due there will of course be no charge for interest.

The Board do not deem it requisite to reply at length to the remarks made by the Court on points already decided. The Board still adhere to the opinion repeatedly expressed, that although it may be difficult, if not impracticable, to fix a rule of calculation, interest in favour of the Commercial branch might otherwise have been disallowed for any period when the Territorial treasuries were fully equal to make repayment, and there was a failure of Commercial requisition. During several years the cash balances in India were unquestionably more than sufficient to have discharged the debt due to Commerce, and the charge of interest might to that extent have been saved to the Territorial branch had further remittances or consignments been then effected. The Board must also decline to admit that the Court have made "a large concession" in acquiescing in the charge of English interest on advances which were issued in this country only. But considering it to answer no useful purpose to pursue these subjects further, the Board, in conclusion, desire me to express their opinion, that the utmost consideration, consistent with the law, has been given to the Commercial branch by the decision now communicated; and as no further concession can with propriety be made in the principle on which the charge of interest, which is the subject of this letter, should be calculated, they request that the Court will direct that interest may be computed accordingly, and that an account be made out and transmitted to the Board, with as little delay as possible, showing the annual effect which that method will produce on the account between the Territorial and Commercial branches of the Company's affairs, from 1814 to the present time.

CORRESPONDENCE, &c. relating to the Prospective Estimate of the Finances of the East India Company.

Appendix, No. 22.

Prospective Estimate of the Finances of India, &c.

LETTER from *Thomas Hyde Villiers*, Esq. to *Peter Auber*, Esq.; dated 15th February 1832.

Sir,

I AM directed by the Commissioners for the Affairs of India to request that you will move the Court of Directors to order that the following accounts may be prepared, in addition to those requested in my letter of the 9th instant, and that they may be transmitted to this office with as little delay as possible.

A Prospective Estimate of the state of the Finances of India, including the Charges paid in England at the close of the Company's present term, corrected according to the latest advices received from India; exhibiting the result under the existing system, and upon the supposition that the trade is separated from the Territorial management.

It will be desirable in this estimate that the probable effect on its result of the liquidation of claims, the amount of which is uncertain or under discussion, should be exhibited separately.

The Board also request to be furnished with an Estimate of the probable state of the Stock of the Company in India and in England on the 30th April 1834, after including all computed claims of the Company upon the Indian revenues at that period; on the supposition, on the one hand, of the continuance of the existing system, and on the other, of any extensive alteration in it, whether by the discontinuance of the trade, the Company retaining the administration of the Territories, or by the cessation of their Territorial administration.

I have, &c.

(signed) *T. Hyde Villiers.*

Appendix, No. 22.

Prospective Estimate of the Finances of India, &c.

LETTER from *P. Auber*, Esq. to *T. Hyde Villiers*, Esq.; dated at the East India House, 10th March 1832.

Sir,

HAVING laid before the Court of Directors of the East India Company your letter dated the 15th ultimo, I am commanded to transmit to you the accompanying "Prospective Estimate of the state of the Finances of India, including the Charges paid in England at the close of the Company's present term, corrected according to the latest advices received from India; exhibiting the result under the existing system, and upon the supposition that the trade is separated from the Territorial management."

To this estimate has been added, agreeably to the desire of the Board, a Statement of "the probable effect on its result of the liquidation of claims, the amount of which is uncertain, or under discussion." The Court beg that it may be distinctly understood that it will be for the General Court of Proprietors, when the subject shall come under their consideration, to decide what course shall be adopted in stating and supporting the whole of the Company's claims.

So strongly are the Court impressed with this consideration, that they cannot undertake to furnish the Board with any regular estimate of the stock of the Company in the year 1834, under the several contingencies assumed in the Board's requisition, namely, the continuance of the present system as a whole; the continuance of the Territorial administration; the Company relinquishing the trade, and the cessation of that administration. Being, however, most anxious upon this as upon all occasions to afford to the Board every information which it is in their power to furnish, the Court have instructed me to submit the following statements and observations, premising that they are only to be regarded as an outline of the view taken by the Court, and not as in any degree committing their constituents.

The Commercial stock of the Company in England, abroad and afloat, on the 30th April 1834, should the existing system be continued, may be estimated at the amount at which it is exhibited in the Account of Stock per computation (exclusive of capital stock) made up on the 20th December 1831, the last account of that description which has been prepared. That account exhibits by computation a balance in the Company's favour of 20,400,835 *l.*, resulting from the following debits and credits; viz.

	£.
Credits, consisting of cash, merchandize, shipping, warehouses in England, debts owing to the Company, and other effects	21,956,690
Dead stock in India, not comprised in the foregoing particulars - - - - - - - - - - - -	568,801
	22,525,491
Debts, Commercial, but not comprising the capital stock -	2,124,656
Balance in favour - - -	£. 20,400,835

The value assigned in this estimate to the goods in warehouse in England is taken at the current sale prices.

In the above computation, sufficient allowance is made to cover ordinary sea risk and risk by fire. But should any considerable losses of that description occur prior to 30th April 1834, the Company being their own insurers, the property would be proportionally diminished. The value assigned in the calculation of the Company's buildings both in India and in England, would be liable to serious depreciation in any attempt to realize it by sale. No allowance has been made for the expense that would be caused after 1834 by commercial contracts then outstanding, or by providing for commercial servants pensioned, or whose services might be no longer required; the amount of which being dependant on various circumstances, the Court cannot pretend to estimate.

The home-bond debt has not hitherto been charged against either of the heads of Territory or Commerce; but the statements which have been made to the Parliamentary Committee seem to the Court conclusively to establish that debt to be Territorial, in accordance with the view taken of it by the Committee of the House of Commons, who reported upon the Company's accounts on the 12th March 1783, as quoted below*; and therefore no part of the bond debt is included in the before-mentioned amount of Commercial debts.

It

---

* "It also appeared that the Company have received and realized in England, from the territories and revenues in India, no more than the sum of 3,622,969 *l.*, from which, deducting the said sum of 2,169,398 *l.* 18 *s.* 2¼ *d.* paid to Government as before mentioned, the sum remaining for the Company amounted to no more than the sum of 1,453,570 *l.* 1 *s.* 9¾ *d.*, which was appropriated in the reduction of the Company's bond debt; and the said sum of 1,453,570 *l.* 1 *s.* 9¾ *d.* being deducted from the said sum of 5,069,684 *l*, leaves the Company in disburse upon account of the wars by which the territories were acquired, to the amount of 3,616,113 *l.* 18 *s.* 2¼ *d.*, besides interest.

It also appeared that the Company's English bond debt in part arose from their military expenses in India, and that those expenses during the wars prevented the Company from discharging the whole their bond debt out of their ordinary profits."

Appendix, No. 22.

Prospective Estimate of the Finances of India, &c.

It appears to the Court that, subject to the contingencies before referred to, the Company will, on the 30th of April 1834, stand possessed, in their Commercial character, of the balance of property estimated above, and their eventual claims upon the Territory not comprised in that balance, their constituents would, it is presumed, according to former practice, allow to remain dormant during the continuance of any further term to be granted to the Company.

With respect to the question, what would be the probable state of the Commercial stock in 1834, in the event of the "discontinuance of the trade, the Company retaining the administration of the Territories," it may be important to remark, that the Company's right to trade in common with His Majesty's other subjects is perpetual, and not dependant on their Territorial administration. That right the Company would be at liberty to exercise, unless they voluntarily consented, for a valuable consideration, to abandon it; but whether they ceased altogether to trade, or only lost their exclusive privileges, reasonable apprehensions may be entertained, that (without express provision to the contrary) the Company's Commercial capital would be exposed to greater hazard of loss or diminution than under the present system: as for instance, in remitting to England such part of the balance due from the Territory as might remain unliquidated in 1834, and any Commercial property abroad at that period; also from a possible depreciation of the value of the large stock of tea kept and ordered by the Company, in compliance with and in furtherance of the provisions of the Legislature, and for which they would be clearly entitled to equitable consideration. A part of the loss which might be expected to occur under such circumstances, would be directly traceable to the artificial valuation of the Company's Commercial property in India, in consequence of the use of the arbitrary and excessive rates of exchange prescribed by the Board of Commissioners in the plan of 1814. Some protection, therefore against such consequences following immediately on the conclusion of their present term, as well as during a continuance of their future Territorial administration, could not, it is conceived, consistently with justice, be denied to them; and with a provision to that effect, the Company's Commercial stock, in the event of the discontinuance of their trade, may be assumed at the sum already stated, of 20,400,835 *l.*, exclusive of their other claims on the Territory.

In the third supposed state of circumstances, "the cessation of their (the Company's) Territorial administration," the constituent parts of the ascertained Commercial stock of the Company would remain the same as under the previous suppositions, and in any general settlement of their affairs following thereupon, it would seem to be only equitable that a provision of the nature before specified should be made to preserve it from loss or diminution through the operation of causes similar to those already pointed out. If the Company's Territorial administration were to cease, the whole of those claims, which in the two former contingencies it has been assumed might lie dormant, must necessarily then be brought forward and determined.

The Company possess, as a commercial corporation, forts, towns, islands, territories and rights abroad, their absolute property in which has never been questioned, the same having been obtained by purchase, amicable grant or negociation, previous to the acquisition of the Dewannee; besides which, it is well known that the claim of the Company to a property (subject to the undoubted sovereignty of His Majesty) in the territories acquired by conquest, has never been abandoned by them, and that should it be determined to deprive the Company of such territories, they possess, as was asserted in their petition of 1813, a "just right to reimbursement of the expenses which they have incurred in acquiring and maintaining them, and in making the fortifications and civil and military buildings and works by them erected, with a compensation for the services and risks (of the Company) during the long time which they have had the possession and government of such territories, under the confirmation of Parliament, and all other charges incurred by them relative to such territories." The Act of the 53d Geo. 3, c. 155, reserved to the Company any right which they might possess in these respects; a reservation which has also been made in several previous Acts.

Should the Company be deprived of their Territorial administration, it will be for the General Court of Proprietors to decide in what mode and to what extent the claim in respect to the territories conquered or acquired subsequently to the acquisition of the Dewannee, as well as all other claims, shall be urged. But without presuming to anticipate the decision of the Proprietors, it may be safely asserted that the Company have an indisputable right to reimbursement of the balance of expenses incurred by them up to 1765, in the conquest of those territories, amounting without interest, in 1783, to 3,616,113 *l.*, according to the statement of a Committee of the House of Commons before quoted.

I have, &c

Appendix, No 22.

Prospective Estimate of the Finances of India.

(Enclosure.)

A PROSPECTIVE ESTIMATE of the State of the FINANCES of *India*, including the CHARGES paid in *England* at the close of the Company's present Term corrected according to the latest Advices received from *India*; exhibiting the Result under the existing System, and upon the supposition that the TRADE is separated from the TERRITORIAL Management.

By an Estimate, dated 22d July 1831, Appendix I. to a Report from the Select Committee of 1831.

		Sa. Rs.
The total Revenues in India, at the expiration of the Company's present term, are stated at 17,936,217 *l.*, or at 1 *s.* 11 *d.* the sicca rupee, the rate observed in that estimate - - - - - - - -		18,71,60,525
The total Charges in India, inclusive of the interest on the debt, whether paid in England or in India, but exclusive of the charge for St. Helena and the Home Territorial charges, 16,863,949 *l.*, or - - - -		17,59,71,641
According to that estimate, therefore, the local surplus in 1834 would be - - - - - - - - - -		1,11,88,884
Information received since that estimate was prepared, affecting some of the items both of receipt and expenditure, shows an improvement amounting to - - - - - - - - - -		2,43,874
Local Surplus - - -		1,14,32,758
But in the Estimate of July 1831, the rupee having been reckoned at 1 *s.* 11 *d.*, it was assumed that the payments from the Territorial to the Commercial Branch would be made at that rate. Supposing these payments to be made as respects Territorial Charges and Interest Bills, at the rates specified in the plan of 1814, as applicable to these transactions respectively, there would be a reduction in the estimated charge for interest on the debt of India, of - - - - - -		3,48,799
Thus augmenting the Local Surplus to - - - -		1,17,81,557
The expense of St. Helena and the Home Territorial Charges will amount upon a revised estimate to		
St. Helena - - - - - - -	£. 90,000	
Home charges - - - - - - -	1,640,000	
	£. 1,730,000	
In the discharge of which, India, under the present system of the Board's rate of 2 *s.* 3.84 *d.* pays - - -	*S.Rs.* 1,49,13,793	
Cost of effecting remittances to meet Interest Bills - -	7,80,028	
		1,56,93,821
Deficit under present system - - - *Sa.Rs.*		39,12,264

Note.—Under the present system, India has participated in the surplus Commercial profits of the Company to the extent of 4,998,799 *l.* applied to the discharge of debt; the interest of which debt, had it not been so discharged up to 1829–30, would have amounted to 3,176,152 *l.*

	Sa. Rs.
If under a change of system such as that indicated in the title to this estimate, the Territory had to effect its own remittances, the rupee, for which, so far as respects the Territorial Charges incurred at home, it now receives 2 *s.* 3.84 *d.*, would be worth to the Territory only its produce in the market; which, taking the rate in London for bills upon Calcutta, upon an average of the three last years, given in the statements before Parliament, appears to have amounted to 1 *s.* 9.247 *d.*, at which the equivalent for 1,730,000 *l.* Home Charges - - -	1,95,41,582
India would also be called upon for a further amount in effecting remittances of interest on the debt, and other advances not included in the above amount of Home Charges. The sums so remitted may be estimated at 689,000 *l.* annually, and the cost of remitting them being the difference between the before-mentioned rate of 1 *s.* 9.247 *d.* and 2 *s.* 2.012 *d.* the average rate at which the Territory is engaged to effect the remittance - - - - - - - - - -	14,25,747
	2,09,67,329
Deduct Local Surplus, as above - - -	1,17,81,557
Deficit under altered system - - - *Sa. Rs.*	91,85,772

Appendix, No. 22.

Prospective Estimate of the Finances of India.

besides which, India would of course cease to participate in the surplus Commercial profits, the amount of which since 1814 has been already stated.

It will be observed that the foregoing calculation is made upon the principle, that the Territory would effect its remittances by receiving cash in London, in exchange for government bills upon India. If the Territory were to adopt the principle of issuing cash in India, in exchange for private bills upon England, there might be an advantage in the rate, though this would, it is conceived, be countervailed by risk of loss, if no security were taken from the drawers of the bills, or by charges of management, if the security were taken of a lien upon cargoes. No allowance is made in this estimate for the contingency of either European or Indian wars.

The registered debt of India in 1834, of which the interest is comprised in the foregoing estimate, is computed at 40,24,39,525 sicca rupees.

PROBABLE EFFECT on the Result of the foregoing Estimate of the Liquidation of Claims, the Amount of which is uncertain, or under discussion.

THE claim of the Company to the balance of their expenditure upon account of the wars which preceded the acquisition of the Dewannee, amounts, according to a Report of a Select Committee of the House of Commons on the 12th March 1783, to 3,616,113 *l.* without interest. The equivalent for this at the before-mentioned rate of exchange of 1 *s.* 9.247 *d.* per sicca rupee, is 4,08,46,572 sicca rupees, which, supposing the government of India to borrow it at 5 per cent. would entail a charge for interest of sicca rupees 20,42,328 per annum.

The principal of the home-bond debt amounts to about 3,600,000 *l.*; and the interest at the present rate of 2½ per cent. is about 90,000 *l.* per annum, the equivalent for which would be sicca rupees 10,16,614 per annum.

With respect to the Territorial property of the Company, as a commercial corporation, it may be observed, that besides the question reserved in successive Acts of Parliament as affecting the Territory at large, the Company possess, in their own right, forts, towns, islands, territories and rights abroad, their absolute property in which has never been questioned, the same having been obtained by purchase, amicable grant or negociation, previous to the acquisition of the Dewannee.

(Errors excepted.)

East India House, March 1832. (signed) *James C. Melvill,* Aud^r India Acc^ts.

Appendix, No. 23.

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

MEMORANDUM of the Result of an Examination made at the India Board, of the PROSPECTIVE ESTIMATE of the FINANCES of INDIA, forwarded by the Court of Directors to the Board, with their Letter dated 10th March 1832.

THE Prospective Estimate of the Finances of India, transmitted to the Board by the Court of Directors on the 10th March last, has been framed at the desire of the Board, in order to show the probable state of those finances at the close of the present arrangement with the East India Company in 1834, on reference to the latest advices received from India; and it exhibits the result, as it would stand, first, under the existing system; and, secondly, upon the supposition that the trade is separated from the Territorial management. In the former case the Court estimate that a deficiency of revenue to defray all charges abroad and at home will remain, amounting to *Sa. Rs.* 39,12,264; in the latter case, that the deficiency will be increased to *Sa. Rs.* 91,85,772, which does not include interest on sums which the Court consider may, in the case supposed, be claimed by the Company on account of various demands upon the Territories.

Appendix (A.)

The particulars composing these results have been called for, and are added to the Appendix. They exhibit the various heads of Revenue and Charge, upon the principle adopted in the accounts laid before Parliament.

In considering this estimate, it is of importance to bear in mind that much uncertainty must always attach to estimates of the Indian finances, and especially to such as are framed so long beforehand. It is, therefore, the more important that the computation should be grounded as much as possible on results which have been actually realized. The several heads of Revenue and Charge have consequently been compared, in a Statement* hereunto annexed, with those of the last three years of which the actual accounts have been received, viz. 1827–28 to 1829–30, the receipts which are only of a temporary character being separated from those which are permanent. The amount of each head, as estimated for

---

* Appendix (B.)—This Statement is drawn up upon the principle adopted in the accounts presented to Parliament, which is followed in the Court's Estimate; a principle differing in some respects from the mode of statement in use by the Officers of Account in India, in which form such statements are occasionally exhibited.

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

for 1830–31, is also shown, but the realization of the Indian estimates, however carefully they may be framed, cannot be relied upon, as will be seen on comparing the results of the Sketch and Regular Estimates of the principal heads of revenue in previous years (as shown in the Statement) with the actual out-turn. Even should more favourable results be realized in a particular year, it would not justify the adoption of those results for a prospective and distant view.

The following remarks are suggested with regard to such heads as require observation.

Bengal Revenues.

Bengal Revenues.

The general receipts from the *Mints*, the *Post-office*, the *Stamps*, and the *Judicial* fees and fines, taken at 44 lacs of sicca rupees, appear to be estimated as high as is consistent with proper caution. Previously to 1827–28, the amount was lower than in the subsequent years, and latterly some heads have ceased, and others have yielded less revenue.

The important head of *Land Revenue*, under the Bengal Presidency *, yields a steady and somewhat increasing resource. In 1826–27, the receipt was somewhat higher than is shown in 1827–28. In the five years preceding 1826–27, the average receipt was *Sa.Rs.* 7,06,20,781. Although the Estimate for 1830–31 anticipates a receipt of *Rs.* 7,11,70,000, later advice intimates that it will probably not exceed *Rs.* 7,04,50,000, or 704½ lacs. The sum of 706 lacs of rupees appears a suitable average estimate for the future.

Although the receipts from *Customs* in 1829–30 fell short of the estimate, there is good ground to hope, from the amount of this revenue in previous years, that the Court's Estimate† may be realized in future.

The receipts from the *Ceded Territory and Tributes* have varied greatly. The districts on the Nerbudda have yielded less revenue latterly than in previous years. In 1829–30, the tributes received from numerous Native States fell much in arrear, and the receipts from a few of the districts were carried to the credit of the account with Scindia, for the pay of his auxiliary cavalry, which occasioned a nominal reduction of nearly 3 lacs of rupees. Nearly 2½ lacs of tribute have also ceased to be carried to account under the present head.

The Estimate for 1830–31 assumes a large receipt of arrears of tribute. If it should be realized, it cannot be taken as an annual resource. The Burmese cessions are not expected to yield any material increase. Upon the whole, it would not be safe to adopt a higher estimate‡ than that taken by the Court for this head of receipt.

The revenue from *Salt* § was lower in 1829–30 than for eight previous years. The quantity sold, and the price, exceeded those of 1828–29, but were lower than in some previous years; the difference of result arose in the amount of outstanding balances. The usually steady receipt from this article may justify the expectation, that as the average produce of the last seven years was 187 lacs of rupees, and it is estimated in 1830–31 at 183 lacs, this head will, on an average, yield more than is taken in the Court's Estimate, and that the amount may be 185 lacs of rupees instead of 180 lacs.

From the receipts from *Opium* ‖ in 1829–30 is to be deducted the receipt from Malwa opium, the manufacture of which on account of the Government is no longer continued, viz. *Rs.* 41,54,233, leaving *Rs.* 1,11,07,859 as the produce of the Behar and Benares opium. In the two preceding years this opium yielded an amount exceeding that of 1829–30, but since for four previous years it yielded considerably less than one crore of rupees, the latter sum

sum may be taken as a fair estimate of the future produce of this fluctuating head of revenue. The Estimate of 1830-31 includes 13 lacs on account of Malwa opium, which will not in future be realized. So high a receipt as 124 lacs cannot be expected from other opium.

The subsidy from the Nagpore State is fixed in the treaty at eight lacs of Sonat rupees, or *Sa. Rs.* 7,65,500. The payment commenced in June 1830, which accounts for the sum of only *Sa. Rs.* 5,70,000 being included in the Estimate for 1830-31. Considering that for many years past other Native States in the Peninsula have paid their full subsidy regularly, it may be assumed that the entire amount will, in most years, be received. In that view, two lacs of Sicca rupees may be added to the five lacs, at which the receipt is estimated by the Court.

The total revenues of Bengal, according to the Prospective Estimate, are *Sa. Rs.* 11,48,90,000, which, converted into sterling at 2 *s.* per current rupee, for the purpose of comparison with the accounts presented to Parliament, is 13,327,240 *l.*

The additions above suggested, amounting to seven lacs of rupees, will be brought into view hereafter.

Madras Revenues.

Madras Revenues.

The first or *General* head requires no particular remark.

The *Land Revenue* * is estimated rather higher than the average amount of the three preceding years, two of which were rather unfavourable. Considering the liability of the Madras districts to suffer from adverse seasons, this is the utmost amount that could safely be assumed.

The amount estimated to be received from *Customs* † is rather below the average of the last three years, and it may be hoped will be realized.

The receipts from *Salt* ‡ are estimated at an amount exceeding by one and a half lac of rupees, the average receipt of the three preceding years; but as this resource has been for some years improving, it may not be too high.

The *Subsidies* from Mysore, Travancore, and Cochin, have been steadily realized for many years.

One source of revenue does not appear in the Estimate, the Profits to be derived from the Government Bank, which may be taken at *Rs.* 80,000. This will constitute an addition to the receipts of this Presidency.

The total revenues of Madras are assumed in the Court's Prospective Estimate at Madras rupees 4,77,01,100, or at the Parliamentary rate, viz. 3½ rupees for the pagoda, at 8 *s.*, 6,451,555 *l.*

Bombay Revenues.

Bombay Revenues.

The increase of receipts of the *General* Department, as compared with those of the year 1828-29, arises chiefly from bringing to account the gross instead of the net receipts from *Stamps.*

In the *Land Revenue* great depression has been experienced in most of the districts, especially those situated in the newly-acquired provinces in the Deccan.

The failure of the Bombay revenues in 1828-29, as shown below §, continued during the year 1829-30; and although the Estimate for 1830-31 assumes a considerable increase, recent advices received since the Prospective Estimate was framed, indicate that the actual receipts of 1830-31 may fall below the Estimate by about 21 lacs of Bombay rupees. The Court's Estimate calculates on some improvement, and under present circumstances it can hardly be taken higher ‖.

Estimate 1830-31 - -	1,81,24,700

‖ Prospective Estimate - *By.Rs.* 1,63,50,000

The estimated receipt from *Customs* * may be considered high; but the steady increase of this resource, arising partly from the improvement of the commerce of this Presidency, and partly from increase of duties, encourages the hope that it will be realized.

The only revenue henceforth expected to be derived from *Malwa Opium*, will be realized at Bombay by the sale of passes allowing its transit through the Bombay provinces to the sea. The Estimate of 1830–31 relies on a receipt of 14 lacs of rupees from this source; but the actual receipt of the year scarcely exceeded 8 lacs. The resource is expected to improve, and it may therefore be proper to anticipate at least the amount assumed by the Court, viz. 10 lacs of rupees.

The total revenues at Bombay are taken in the Prospective Estimate at Bombay rupees 2,24,00,000, or, at 2 *s.* 3 *d.* the rupee, 2,520,000 *l.*

The revenues of India, according to the Prospective Estimate of the Court, are computed as follows, at the rates of exchange generally used in the accounts laid before Parliament:

Bengal - - - - - - -	£. 13,327,240
Madras - - - - - - -	5,451,554
Bombay - - - - - - -	2,520,000
Total - - -	£. 21,298,794

Charges.

Charges.

To estimate prospectively what the Charges of India will amount to at a particular period, must be attended with more difficulty, and the probability of its realization be more questionable, than to estimate the revenues; especially at a period like the present, when extensive reductions are in progress in every department, the benefit of most of which will only be realized gradually, and as events occur which are contingent in their character. With regard to Bengal, the difficulty is further increased, in consequence of a new arrangement, whereby, in 1829–30 and 1830–31, only audited disbursements were brought to account as the expenditure. Hence, under some heads, principally the Revenue and Judicial, in the last year of actual account, 1829–30, which would furnish the best guide for the future, a large and undefined amount of charge is omitted, and in the Estimate of 1830–31 there are probably similar omissions, and a considerable sum of arrears belonging to the former year is included in the charges. These circumstances must be considered in any comparison of the estimated amounts of charge with those of previous years.

The information furnished by the Court relative to their Estimate intimates that the charges are ascertained by adjustments upon those of 1829–30, instead of 1828–29, which was the year referred to in their former Prospective Estimates. A later year naturally affords a better guide for a future prospect, but, for the reasons already given, the difficulty of applying the rule accurately to the several heads of the Bengal Charges is considerable.

Bengal Charges.

Bengal Charges.

The adjustments made upon the Charges of 1829–30 are the following, in which the Court have assumed that arrears of Civil Charge remained outstanding at Bengal at the close of the year, amounting to 25 lacs of rupees.

Total Charges of Bengal in 1829–30 - - - - - -			Sa.Rs. 9,33,40,918
Deduct, as inapplicable to future years:

1829–30 - - - - - - - -	42,96,088
Prospective Estimate - - - - - -	41,00,000

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

Add, Brought forward - - -				*Sa. Rs.* 8,68,77,446
Pay of Civil establishments, supposed to be omitted in 1829-30 - - - - - - - - -			*Rs.* 25,00,000	
Civil pensions short paid in that year - - - -			14,00,000	
Salt advances - - ditto - - - - - -			10,00,000	
Civil extraordinaries, less than usual in 1829-30 - - -			4,00,000	
Military receipts, more than ditto - - - - -			6,00,000	
Military buildings, less than ditto - - - - -			4,00,000	
Other small adjustments - - - - - - -			12,162	
Additional interest on debt prior to 1834, as compared with interest paid in 1829-30 - - -		16,51,492		
Additional interest to be incurred to pay debt due from the Territorial to the Commercial branch - - - - -	29,91,200			
Less, adjustment of ditto in the Prospective Estimate for difference of exchange -	3,48,799			
		26,42,401		
Total estimated increase of Interest - - - -			42,93,893	
Total additions to Charges of 1829-30 - - - - -				1,06,06,055
Estimated Charge, prospectively - - - -				*Sa. Rs.* 9,74,83,501

The deductions of *Rs.* 28,13,472 are correctly excluded as peculiar to 1829-30, and not likely to recur. The *Civil* and *Marine* reductions, taken at seven lacs, and the *Military* at 20½ lacs of rupees, are assumed upon the principle of allowing for such additional savings as the reductions in progress are expected to produce by the year 1834. The amount is necessarily on estimate; the requisite distinction not being sufficiently observed in the Indian accounts.

With regard to the additions made to the Charges of 1829-30, the arrears of 25 lacs appear to have been estimated with as much accuracy as the circumstances will allow. The Civil pensions chargeable on the revenues are of large amount, and the payments within the year fluctuate considerably, Those of 1829-30 fell short of the usual amount to the extent stated of 14 lacs of rupees. The advances and payments on account of the manufacture of salt were, in 1829-30, only *Rs.* 29,79,003, which is full 10 lacs below the usual amount. The other minor adjustments seem justifiable on a comparison with 1829-30.

The charge of *Interest on the Debt* requires particular attention, and will be noticed shortly.

As it respects the Civil and Military charges, while, as already observed, an adjusted estimate, framed upon the experience of the latest actual results, may be considered as presenting the most probable view of the future, it has been considered desirable to ascertain how far the sums thus produced would be corroborated by a different process, namely, by adjusting the expenditure of a previous year (after excluding extraordinary charges peculiar to that year,) with the whole amount of reductions ordered since the expiration of that year, as far as it can be ascertained. Although the result of such a test can only be considered approximative, still, in framing an estimate which is necessarily liable to uncertainty, an additional check drawn from materials prepared for a different purpose, will further aid the judgment as to its probable accuracy. With regard to the amount of reductions ordered since the more vigorous retrenchments began, which followed the close of the Burmese war, those which were calculated to improve the financial results of the year 1828-29, were shown in statements laid before the Committee of the House of Lords in 1830*. Additional reductions were computed with reference still to that year in the Prospective Estimates laid before the Committee of the House of Commons in March and July 1831 †; but in a statement called for by the Board, and dated 22d February 1832 ‡, a more particular detail of the whole of the reductions of Indian allowances and establishments ordered, both Civil and Military, from the preceding year, 1827-28, when the principal retrenchments commenced, down to the period of the latest advices, has been furnished by the Court, and has since been laid before the Committee. The various heads of Indian charge have been examined, with a view to ascertain the effect to be expected from these reductions when they shall have attained their full operation, and by deducting their amount from the adjusted charge of the year 1827-28, the future probable charge will be nearly ascertained. The result of the examination thus made will be noticed in the course of these remarks.

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

Bengal Charges.

For greater convenience of comparison in the Abstract Statement* already referred to, the *Civil Charges* of Bengal in the three years 1827–28 to 1829–30, and according to the Prospective Estimate, exclusive of the expense of buildings and fortifications, and of interest on debt, have been brought into a total. From this total has been deducted, for the purpose of comparison, all charges on account of Malwa opium, which are excluded from the Prospective Estimate, besides the advances for the manufacture both of Bengal opium and of salt, which do not constitute an expense of establishment.

The net Civil Charges will then stand thus:

In 1827–28 - - - - - - - - -	*Sa. Rs.* 4,22,52,580
1828–29 - - - - - - - - - -	3,82,83,353
1829–30 - - - - - - - - - -	3,36,92,457
and by the Prospective Estimate - - - - - - -	3,61,41,100

The effect of the proposed adjustment of the several heads of the charges of 1827–28, by deducting the extraordinary expenditure of the year and applying to each head the total computed reductions, will now be shown. The total of the reductions is taken, for although he whole may not be fully effected by the year 1834, some few, on the other hand, were ffected before the close of 1827–28, and are not included in the Statement.

The charges in the various departments have been minutely examined upon the above principle, and the reductions applied to each head; and the following Statement shows the general result:

Net Civil Charges of 1827–28, exclusive of buildings and interest -		*Sa. Rs.* 4,22,52,580
Deduct, for arrears and extraordinaries, included in 1827–28 under the several heads - - - -	*Rs.* 28,84,000	
Civil and Marine reductions, per Statement of 22d February last - - - - - - -	23,77,980	
Reductions of provincial battalions, classed with Civil Charges, but included in the Military reductions in that Statement - - - -	7,02,625	
		59,64,605
Net adjusted Civil Charges of 1827–28 - -		*Sa. Rs.* 3,62,87,975

This view of the charges may therefore be considered as corroborating the Prospective Estimate of *Rs.* 3,61,41,100. The amounts shown in that document, which is founded upon the accounts of 1829–30, being taken rather low, in comparison with the adjusted charge of 1827–28, indicates that the reductions have operated effectively in the year 1829–30, and may be expected to do so equally in future.

The expense of *Buildings and Fortifications* is estimated at 33 lacs, which is nearly five lacs more than in 1829–30, but it is less than in the two preceding years. For 1830–31, it is estimated at *Rs.* 30,14,200, and the estimates of this expenditure are usually exceeded.

The *Military* Charge of Bengal was in 1827–28 - - -		*Sa. Rs.* 3,86,57,753
Arrears of war charges were defrayed in that year, amounting to -		5,07,123
There remains - - -		*Rs.* 3,81,50,630
The reductions are computed at - - - -	*Rs.* 50,54,063	
From which deducting those of the provincial battalions taken in the Civil branch - - - - - - - -	7,02,625	
There remains to be deducted - - -		43,51,438
Leaving as the future Prospective Charge, in this view -		*Sa. Rs.* 3,37,99,192

The Prospective Estimate founded upon the accounts of 1829–30 takes the charge at 328 lacs of sicca rupees. It is to be observed, that some reductions of the army took place prior to those contained in the Statement of February 1832. Their precise effect cannot with accuracy be ascertained, as separate accounts of reductions were not then kept, but a lower estimate of military charge, founded as it is upon the expenditure of 1829–30, may on the above ground be admissible.

The charge for *Interest* on the Bengal debt, computed in the Prospective Estimate at *Sa. Rs.* 1,99,91,200, demands particular consideration. As all the principal operations connected with the debt of India are carried on at Calcutta, under the superintendence of the Supreme Government, the Interest here estimated is regulated by the amount of debt which, it is considered, will probably be required to answer all the demands upon the Indian treasuries which the ordinary resources from revenue are not equal to meet.

---

* Appendix (B.)

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

The amount actually paid for interest in 1829–30, was *Sa. Rs.* 1,53,48,508

But the amount actually due upon the then existing debt is taken by the Court at - - - - - - - - - - - - - *Sa. Rs.* 1,61,50,000

It was actually *Rs.* 1,61,84,193.

It is computed by the Court that further debt will be incurred in 1832–33 and 1833–34 to cover the Home charges, to remit bullion in repayment of a part of the debt due to the Commercial branch, and to pay to the captors the Deccan and Bhurtpore booty, amounting in all to *Sa. Rs.* 1,70,00,000, the interest on which, at five per cent. per annum, is - - - - - - 8,50,000

Sa. Rs. 1,70,00,000

The remaining debt due to the Commercial branch in 1834 was computed by the Court, in an Estimate prepared for the Committee of the House of Commons in July 1831, at - - - - - - - £. 3,440,946

And the interest upon it at - - - - - - - 2,292,176

Making a Total of - - - £. 5,733,122

Five per cent. interest upon that sum is 286,656*l.*, to realize which at 1*s.* 11*d.* per sicca rupee, they considered would require to be remitted from India - - - - - - - - - - - - - *Rs.* 29,91,200

Making the Total Interest - - *Sa. Rs.* 1,99,91,200

But this calculation assumed, in accordance with the Order of the Committee, that the advances to Commerce since 1829 were to be repaid at 1*s.* 11*d.* per sicca rupee, and that the same rate is to be applied to the entire balance due to the Commercial branch in 1834, whereas the rates established by the Board are those applicable to both. The use of these rates the Court have now estimated would diminish the total debt to Commerce to 3,378,584*l.*, to which they add the expected loss in effecting remittances to meet interest bills, estimated at 1,300,000*l.* (not before included), making the total 4,678,584 *l.* It is now assumed by the Court that this sum is repaid at 1 *s.* 9.247*d.* per sicca rupee, to effect which additional debt must be incurred, occasioning a charge for interest which would fall short of the former calculation only to the amount of - - - - - - - - - - - - 3,48,799

Leaving the Net Amount of annual Interest payable in Bengal - *Sa. Rs.* 1,96,42,401

The first inquiry suggested by this part of the Estimate is; to what extent loans are likely to be required to carry on the public service to 30th April 1834.

The Estimates for India for the years 1830–31* and 1831–32 assume, that in the former year 48 lacs of new debt at interest would be incurred, and in the latter 79 lacs would be paid off, after providing for the required remittance of one crore of rupees to England, and the payment of the Deccan and Bhurtpore prize property. This would show a net decrease of debt in April 1832 of 31 lacs, but this decrease cannot be relied upon, as it is known that the Indian surplus revenue of 1830–31, assumed at 185 lacs of rupees, including the charge of stores received from Europe, will, so far as Bombay is concerned, fall short of being realized by about 30 lacs of rupees. The land revenue of Bengal will also have fallen below the estimated produce by nearly 15 lacs, reducing the local surplus from 185 to 140 lacs. The Home charges of 1830–31, excluding Territorial stores, would require about 122 lacs of sicca rupees, and may probably have been met by the surplus; but it is very unlikely that debt could also have been discharged from it.

The result of 1831–32 was expected by the Bengal Accountant-general, in his Sketch Estimate, to be 44 lacs more favourable than the preceding year. The retrenchments of a prospective character may somewhat improve the result, but not to that extent, and other improvements are of very doubtful character. It may however be fairly presumed, that the Indian surplus, with some aid to be derived from the cash balances, if it is found insufficient,

1831–32: Estimated Debt at Interest.

Bengal, paid off at interest - - - - -	*Net* 92,85,300
Madras, incurred - - - - - - - -	13,70,830
To be paid off—Difference - - -	*Rs.* 79,14,470

cient, will furnish the means to defray the Home charges in 1830–31 and 1831–32 taken together, and if the years 1832–33 and 1833–34 yield similar results, no additional debt will be required to meet those charges. An extraordinary remittance to England in 1832–33 is ordered of 600,000 *l.* to meet the wants of the Home Treasury for 1833–34, which may render it necessary to borrow that amount, or, at 1 *s.* 11 *d.* per rupee, the rate of a bullion remittance, *Sa. Rs.* 62,60,869. 62 ½ lacs, if borrowed at five per cent., would occasion an increase to the interest in 1829–30, taken at

occasion an increase to the interest in 1829–30, taken at - -	*Sa. Rs.* 1,61,84,193
Of - - - - - - - - - - - - -	3,13,000
Making a Total of - - -	1,64,97,193
Instead of the amount assumed by the Court - - - - - -	1,70,00,000

With respect to the debt that would still be due from Territory to Commerce, it is supposed in the Estimate to occasion a further charge for interest of -	*Sa. Rs.* 29,91,200
Or, after deducting the adjustment for exchange - - - - -	3,48,799
A further Charge of - - -	*Rs.* 26,42,401

In this statement it is computed by the Court, that the balance due in 1834 shall be repaid at such rate as shall realize the amount of that balance in England, for which purpose the rate of 1 *s.* 9 247 *d.* per sicca rupee is employed. It is to be presumed, however, that the balance will be repaid in India for investment or remittance at the rate established for all transactions between the two branches, viz. 2 *s* 3.84 *d.* per sicca rupee. Moreover, the charge for loss on remittances to meet Interest Bills, as it is calculated by the Court, has been disallowed by the Board: an account of any such loss has been directed to be prepared upon a modified principle, but it has not yet been received. It is very difficult to estimate with any precision what sum may be due upon the amount between the two branches in 1834. For the present it has been thought advisable to draw out the account between the Territorial and Commercial branches*, from 30th April 1829, in a more simple form, from materials contained in the accounts prepared at the India House, but using exclusively the Board's rates of exchange, giving credit for the remittances as actually ordered, and omitting for the present the loss on remittances to meet interest bills.

The result is, that a balance would remain outstanding on 30th April 1834, consisting of

Principal - - - - - - - - - - - - - -	£. 1,634,271
And adding Interest, as computed by the Court - - - - -	2,149,309
The Total Balance would be - - -	£. 3,783,580

But the Board have determined that a different mode of computing interest shall be adopted, and that the amount of unappropriated surplus profits shall in each year be deducted from the balances on which the Court have calculated interest, since those profits which are applicable to Territorial purposes, have in part supplied the means of paying the Territorial charges in England. This alteration, it is estimated, will reduce the amount of interest during the whole period by about 1,300,000 *l.*, leaving the balance at 2,483,580 *l.*, which if raised in Bengal, would require at the Board's rates, *Sa. Rs.* 2,14,10,172 to repay it; occasioning an annual charge at five per cent. interest of

Total Balance - -	£. 3,783,580
Deduct - -	1,300,000
There remains -	£. 2,483,580

an annual charge at five per cent. interest of - - - - - -	*Sa. Rs.* 10,70,508
which added to the interest before shown, viz. - - - - - -	1,64,97,193
will make the total Charge for Interest in Bengal after 1834 - - -	1,75,67,701
The Interest estimated by the Court being - - - - - - -	1,96,42,401
the decrease under the head of Interest at Bengal will be - -	*Sa. Rs.* 20,74,700

This charge for Interest will be subject to increase by the interest on any sum allowed by the Board for loss on remittances to meet Interest Bills, and to reduction in so far as Surplus Commercial Profits are applied to the discharge of India debt under the 57th section of the Act of 53 Geo. 3, c. 155. The amount of these sums, and especially of the latter, is dependant on so many contingencies, that they cannot be estimated at this time with any accuracy.

The total Charges of Bengal, including Interest on the Debt, are taken in the Court's Prospective Estimate, at - - - - - - - - -	*Sa. Rs.* 9,74,83,501
or at 2 *s.* per current rupee - - - - - - - - -	£. 11,308,086
The total Revenues of that Presidency being estimated at - - -	13,327,240
a surplus Revenue is thus expected to be realized in Bengal to the amount of -	£. 2,019,154

The proposed alterations of this Estimate will be applied hereafter.

Madras

---

* Appendix (D).

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate, of 10 March 1832.

Madras Charges.

The irregularity in the amount of the Charges of recent years which has been noticed with regard to the Charges of Bengal, is not observable in those of Madras. The Court assume that the entire expenditure of the latter Presidency will be Madras rupees 4,60,72,520.

The adjustments made upon the expenditure of 1829–30, are as follow:

Total Charges of 1829–30 - - - - - - - -		*Ms.Rs.* 4,77,74,953
Add—		
Future payment to Tanjore creditors - - - -	*Rs.* 6,39,720	
Further Interest on the Carnatic Fund, and small adjustments - - - - - - - - - -	1,57,847	
		7,97,567
		4,85,72,520
Deduct—		
Further Civil Reductions - - - - - - - -	*Rs.* 5,00,000	
Further Military Reductions - - - - - -	20,00,000	
		25,00,000
Total Charges, per Prospective Estimate - -		*Ms.Rs.* 4,60,72,520

Applying to the Charges of the several departments the adjustments upon the results of 1827–28 for extraordinaries and for reductions, as in the Bengal Charges, the total net amount will thus appear:

The *Civil Charges*, exclusive of Buildings and Fortifications, and Interest on Debt,

were in 1827–28 - - - - - - - - - - -		*Ms. Rs.* 1,77,46,754
Deduct—		
Excess of Charge for repair of Tanks, &c. in that year -	*Rs.* 4,00,000	
Reductions in Civil and Marine Departments, according to Statement of 22d February last - - - -	9,64,432	
		13,64,432
Net adjusted Civil Charge - -		*Ms. Rs.* 1,63,82,322

The Prospective Estimate assumes those Charges at *Rs.* 1,68,97,097.

The Civil Charges of the Madras Presidency might on this view be estimated somewhat lower; but as the more extensive Civil Charges of Bengal have been taken on a low scale, it would not be safe to assume a less amount of Civil Charge in the aggregate than the Court have taken.

The Charge for *Buildings and Fortifications* is estimated at *Rs.* 8,85,000. In 1829–30 it was *Rs.* 9,91,532: the average between this and previous years seems to have been adopted.

The *Military* Charges are estimated at *Rs.* 2,57,00,000.

Those of the year 1827–28 were - - - - - - -		*Ms. Rs.* 3,41,03,300
But in that year a large sum was brought to account for War Charges and Arrears of not less than - -	*Rs.* 56,00,000	
The Reductions, according to the Statement before referred to, are computed at - - - -	29,22,806	
Together - - -		85,22,806
Leaving a net adjusted Charge of - -		*Ms. Rs.* 2,55,80,494

which approximates very nearly to the Court's Estimate.

The Interest on the Debt is supposed to increase to 20 lacs of rupees. The increase chiefly arises from the gradual accumulation of the Carnatic Deposit, or the fund set apart from the revenues of the Carnatic for the discharge of the debts of the late Nabobs. This fund will not be equal to the discharge of those debts till some time after the year 1834, so that the full charge is taken in the Estimate.

The total Charges of Madras are estimated at - - - -	*Ms. Rs.* 4,60,72,520
or at 8 *s* per pagoda, equal to 3½ rupees - - - - - -	£. 5,265,431
The Revenues having been taken at - - - - - - - -	5,451,554
a surplus Revenue is expected at Madras amounting to -	£. 186,123

Bombay Charges.

The Charges of this Presidency have too frequently exceeded the Estimates, and their aggregate amount very far exceeds all the receipts which have hitherto been realized to meet them. The retrenchments, however, which have taken place in every department, have, of late years, considerably reduced the expenditure.

The

The adjustments made by the Court upon the charges of 1829–30, in framing their Prospective Estimate, are as follow:

The total Charges of that year were		*By. Rs.* 3,21,95,341
Deduct further reductions:		
Civil Department	*Rs.* 5,50,000	
Marine ditto	2,00,000	
Military ditto	19,00,000	
	26,50,000	
Sundry small adjustments	1,15,341	
		27,65,341
Total Charges, per Prospective Estimate		*Rs.* 2,94,30,000

The further saving from reductions is calculated to arise from such as had not taken effect on the 30th April 1830.

In making adjustments upon the amount of charge in 1827–28, it is necessary to bear in mind that in the General department some alterations have occurred since that year, the effect of which is not shown in the statement of reductions, but which have operated to increase the real or apparent amount of present charge; such are the charges on the stamp revenue not previously included as charge, the net revenue only being stated, and the additional payment to the Civil funds.

The *Civil* Charges, excluding Buildings and Interest, adjusted in like manner with those of Bengal and Madras, were, in 1827–28 - - - - - - *By. Rs.* 1,63,42,927

Deduct excess of charge for Pensions in that year		*Rs.* 11,42,000	
Reductions in Civil and Marine departments, per Statement of 22d February last		11,52,698	
		22,94,698	
Less, charges on account of Stamps, added since 1827–28	*Rs.* 1,66,488		
Additional charge for Civil fund	1,12,000		
		2,78,488	
			20,16,210
Net adjusted Civil Charge			*Rs.* 1,43,26,717

The Prospective Estimate states this charge at *Rs.* 1,44,00,000.

The charge for *Buildings and Fortifications*, estimated at 11 lacs, is taken lower than in the three previous years.

The *Military* Charges have been very materially reduced at this Presidency. In 1827–28, they were - - - - - - - - - - - - - *By. Rs.* 1,82,38,310

The Contingencies of that year were higher than usual by about	*Rs.* 7,00,000	
The Reductions expected, according to the Statement of 22d February last, amount to	33,24,000	
		40,24,000
Leaving a net adjusted Military Charge of		*Rs.* 1,42,14,310

The Court assume the amount at *Rs.* 1,37,30,000.

Retrenchments are still in progress at Bombay; but it admits of doubt whether so considerable a diminution of military charge will be realized.

The head of *Interest* requires no particular remark.

The total Charges of Bombay being assumed in the Prospective Estimate at	*By. Rs.* 2,94,30,000
or at 2*s.* 3*d.* per rupee	£. 3,310,875
and the total Revenues at	2,520,000
a deficit is still expected to exist at Bombay to the extent of	£. 790,875

Upon the review of the whole of the estimated charges of India there does not appear ground for computing them at amounts materially differing from those assumed by the Court. They seem generally to be estimated with as much care and accuracy as the nature of an expenditure will admit, which is remarkably variable, and is influenced by numerous causes which it is impossible to foresee, especially at a period several years before that to which it relates.

The net Charge of *Prince of Wales' Island, Singapore,* &c. is estimated at *Sa. Rs.* 5,58,900, or £. 64,832.

Appendix, No. 23.

Memorandum on the Court's Prospective Estimate of 10 March 1832.

The general result in India of the Prospective Estimate, calculated at the rates of exchange used in the accounts annually laid before Parliament, is as follows:—

Surplus revenue in Bengal, after deducting the net charge of Prince of Wales' Island, &c.	£. 1,954,322
Surplus revenue at Madras	186,123
	£. 2,140,445
Deficit at Bombay	790,875
Net estimated surplus Revenue in India in this view	£. 1,349,570

The Revenues and Charges of the several Indian governments having been considered, it remains only to notice the Territorial charges paid in England, the amount of which for the last three years, together with the Prospective Estimate of the Court, are shown in a Statement hereunto annexed. (*see* Appendix (B. 2.)

The Prospective Estimate exhibits the total amount of these charges, including the cost of Political stores, at	£. 1,640,000
In the Prospective Estimate of July 1831 *, the amount was	1,720,405
Being a Decrease of	£. 80,405

Which decrease is ascertained to arise under the following heads:

Passage of military	£. 10,000
Pay, &c. to officers	5,405
Political freight, &c.	5,000
Pay-office demands	10,000
Political stores	50,000
	£. 80,405

The Home charges in the Prospective Estimate are in the aggregate, including the charge of St. Helena, 1,730,000 *l.*, which is a lower amount than in 1828–29 and 1829–30, but higher than in 1830–31. The excess beyond the latter year, however, arises principally under the head of *Political Stores*, for which no more than 138,430*l.* was paid in 1830–31, being far below the payment in any previous year. The sum of 300,000 *l.*, included in the estimate, must be considered a low Estimate of this expenditure, looking at the average standard of previous years.

The head of *Pay to Officers on Furlough and Retirement* continues at a high amount, as the list has hardly reached its maximum. The effect of the large augmentations of the Indian armies in 1804 to 1807 is now felt, the period having arrived when the officers of those years are claiming their retirement allowance.

The *Pay-office Charges* are taken lower, in consequence of the reduction in the number of King's regiments in India. The charge of the *Civil Establishments for Absentee Allowances* is one of recent occurrence, the full effect of which is not yet experienced, till which time it must gradually increase. Under other heads the expenditure of average years appears to have been assumed.

The general result of the Court's Prospective Estimate, supposing the present system to continue in operation, is shown to be as follows:

Surplus revenue in India	*Sa. Rs.* 1,17,81,557	
Which, at the rates of exchange established in the Plan of 1814, will meet the Home charges to the extent of		£. 1,366,660
But will fall short of defraying the whole of those charges, viz.		1,730,000
by the sum of		£. 363,340
To which the Court add an amount in compensation for the loss alleged to be sustained by the Commercial branch, by remitting funds to meet the bills drawn upon the Home Treasury for interest on India debt. Some compensation may become due on this head, but the principle of calculating it is in dispute. Any reduction in the Court's rate will diminish the charge, but any increase of bills to be drawn † will augment it. The charge, as computed by them, amounts to *Sa. Rs.* 7,80,028, or at the exchange above mentioned		90,483
The Deficit will thus be increased to		£. 453,823

The

---

* Evidence printed in October 1831, p. 559.

† Since the date of the Court's Estimate the privilege of drawing bills for interest has been extended, which will occasion an increasing annual payment in this country on that account.

The revenues of India and the charges upon them, abroad and at home, having been reviewed, it remains only to bring together the modifications suggested in the foregoing remarks, which are as follow:

	Sa. Rs.	*Sa. Rs.*
Bengal—Revenue from salt might be taken higher by	5,00,000	
Ditto, Nagpore subsidy, ditto	2,00,000	
		7,00,000
Madras—Revenue from profits of Government bank	*Ms. Rs.* 80,000	
at 106.62 per 100 sicca rupees		75,033
Bengal—Charge for interest on debt, should be less by		20,74,700
Total Improvement	*Sa. Rs*	28,49,733
Which would reduce the deficit under the existing system, as shown by the Court, of		39,12,264
to	*Sa. Rs.*	10,62,531
which, at the Board's rates, would produce	£.	123,253
instead of the sum assumed by the Court		453,823
being a diminution of the Deficiency, amounting to	£.	330,570

The deficiency of 123,253 *l.* will be subject to alteration, according as the circumstances noticed under the head of Interest on Debt in Bengal, shall enhance or diminish that charge; and according as the loss on remitting funds to pay interest bills shall undergo correction.

	Sa. Rs.
The second view taken by the Court, namely, the result in case the present system ceases, and the Territory is left to its own resources, shows the same amount of surplus in India as in the former view	1,17,81,557
From this is deducted the cost of remitting the funds for interest bills, and for advances to various institutions not included in the Home charges, which at 1 *s.* 9.247 *d.* per sicca rupee, would require an additional sum of	14,25,747
This charge would in the case, and at the rate of remittance, supposed, be no longer a doubtful or disputed one, for the loss sustained must then be made good, as the present regulation will have ceased. There would then be applicable to the Home charges	1,03,55,810
The improvement above shown as resulting from the modifications suggested in the Prospective Estimate, namely	28,49,733
will add that amount to the Indian surplus, making the Total	*Sa. Rs.* 1,32,05,543
which if remitted at 1 *s.* 9.247 *d.* per rupee, will produce	£. 1,169,076
and the Home charges amounting to	1,730,000
the Deficiency will be reduced to	£.[*] 560,924

subject to the possible alterations under the head of Interest, above noticed.

To this result would be added, according to the Court's view of their ultimate claims, interest on the expenditure of [†] 3,616,113 *l.* in India, in the wars which preceded the acquisition of the Dewannee	180,805
And interest on the Home-bond debt, taken at 3,600,000 *l*, alleged to be Territorial	90,000
Making the total annual Deficiency	£. 831,729

[†] Vide note to Statement (C.) p. 350.

Besides any interest or annual payment on account of any property of the Company, in their Commercial capacity, existing upon the Indian territories.

It should be clearly understood that the deficiency assumed in the views above given is the estimated result of the Indian finances in the year 1834, provided that no material defalcation of resources occurs; that the whole of the reductions actually ordered are carried into effect; that they are not counteracted by subsequent increase of charge; that peace continues, both in India and in Europe; and on the other hand, that the remittances to meet the Territorial charges in England cannot be effected at a more favourable rate than that assumed by the Court, of 1 *s.* 9.247 *d.* per sicca rupee. Considering the great uncertainty at what rate the remittances can be effected through other than the channels hitherto employed, and the probability that much may be realized by bills on India, to which operation the rate assumed applies, it has appeared safer and better suited to the present purpose of estimating the contingent state of the Indian finances at a distant period, not to alter the rate of remittance adopted by the Court.

It

---

[*] A Prospective Estimate presented to the House of Lords, since the date of this Memorandum (5 July 1832), varies in some respects from the present, the principle of statement prescribed by the terms of their Lordship's order being different, and the period not exclusively confined, as in this case, to the year 1834.

It is not the object of the present remarks to enter into the important consideration of the prospects that may be supposed to exist for the further amelioration of the Indian finances, so as to render India financially independent of extraneous aid, to enable it to reduce the debts incurred during the prosecution of expensive wars, and to render it better prepared to sustain the expense of hostilities or hostile preparations, should they become necessary; but it may not be irrelevant to offer a concluding observation or two bearing on that subject.

It must be admitted that, in reference to the above-mentioned objects, the result of the Indian finances, whether present or prospective, is far from satisfactory. There is little or no prospect of its improvement by means of new or increased resources; retrenchment and economy in expenditure appear to be the chief remedy. Much has been effected in the way of retrenchment during the last few years, and it is satisfactory to observe that the expenditure has been brought more nearly to accord with the income; but if retrenchment be the only available means of improvement, much more remains to be done, and according to the views taken by the home authorities, as will be presently referred to, it is not unreasonable to expect that more may still be effected.

In the Statement of Reductions *, which has been frequently noticed, two columns are introduced, one showing to what extent the important recommendations of the Civil Finance Committee, who were long and laboriously engaged in Calcutta in revising the civil establishments of all the Presidencies, had been carried into effect; the other showing to what extent those recommendations had not yet been acted upon. It is not improbable that some of these latter recommendations, which by the last advices were under consideration, have before this time been adopted. Several of the more extensive measures, however, involve material and fundamental alterations of system, the consideration of which requires mature deliberation and caution, and several could only be adopted under authority of the Legislature, while in proportion as the changes proposed are extensive and untried, the financial benefit of them must be considered as less certain. But independently of greater changes, there would appear to be scope for considerable amelioration, on a comparison of the present standard of expenditure with that of the year 1823-24, to which, as being that of a recent year of peace in India, preceding the last war with the Burmese State, the Court, in their letter of 12th December 1827, directed that it should be reduced. The extent to which that object remains unaccomplished is shown by the Accountant-general of Bengal (Mr. Morley), in a comparative Statement inserted in his letter of 15th June 1831, upon which he makes the following remarks:

"The following Statement of the actual charges of the year 1829-30, contrasted with those of 1823-24, is framed upon the principle laid down in the 14th paragraph of the Honourable Court's despatch, under date 12th December 1827, from which it will appear, that in order to regain the level of the expenditure of the year 1823-24, prescribed by the Honourable Court as the scale by which the charges of the Government should be regulated, your Honourable Vice-president in Council will have to effect further reduction of charges to the extent of about 80 lacs of rupees."

The comparative Statement to which Mr. Morley refers is appended to this paper †. It is, however, to be observed, that a large portion of the excess beyond the charge of 1823-24 consists of increase of interest on the debt, which is stated to amount to nearly 32 lacs of rupees, the reduction of which must depend upon the more distant and difficult operation of the diminution of the India debt, or of the rate of interest paid upon it. But, independently of this amount, there remains a balance of 48 lacs, in which the existing establishments exceed those which were found sufficient for the government of India previously to the breaking out of the Burmese war. If the new charge of the districts ceded by that power is deducted, namely, seven lacs of rupees, the balance or net excess is 41 lacs, exclusive of increased interest.

The object of retrenchment has been further impressed upon the Indian government, since the date of the orders of 12th December 1827, above referred to. The Court's circular letter of 10th March 1830, drew their attention to the considerable excess in the civil charges above their amount in 1816-17, as apparent on a comparison of the establishments of that year with those of 1826-27; as laid before Parliament, and they were directed to reconsider every item of increased charge, and every augmentation in the number of persons employed, both European and Native, with a view of reducing, as far as practicable, the offices, establishments and salaries to the state in which they were in 1816-17, after allowing for increase from annexations of territory since that period.

In the letter to Bengal, Statements of the comparative rate of the various heads of charge were transmitted; and that Government was particularly directed to consider the augmented rate of charge for collecting the land revenues and customs, the former, in the Lower Provinces, having increased from 4⅔ to 8 per cent., and the latter from 10½ to 19 per cent.

Information has since been received from Bengal, that, in September 1830, the civil auditor had been directed to prepare statements in conformity with the instructions above referred to, with a view to the reduction of the charges, as far as practicable, to the standard of 1816-17. No advice of further proceedings has yet been received.

India Board, 9th May 1832. *Wm. Leach.*

(B. 3.)

GENERAL RESULTS of the PROSPECTIVE ESTIMATE of the Court of Directors, dated the 10th March 1832, after converting the Surplus Revenue into British Currency, at the Rates which it is expected to realize.

I.—Supposing the existing system to continue,

REVENUES:	*Sa. Rs.*	*Sa. Rs.*
Bengal	11,48,90,000	
Madras - *M. Rs.* 4,77,01,100 at 106.62 per 100 *Sa. Rs.*	4,47,39,355	
Bombay - *B. Rs.* 2,24,00,000 at - ditto	2,10,09,192	
TOTAL Revenues - - - *Sa. Rs.*		18,06,38,547
CHARGES:	*Sa. Rs.*	
Bengal	*9,74,83,497	
Madras - *M. Rs.* 4,60,72,520 at 106.62 per 100 *Sa. Rs.*	4,32,11,892	
Bombay - *B. Rs.* 2,94,30,000 at - ditto	2,76,02,701	
Net Charge of Prince of Wales Island, Singapore, &c.	5,58,900	
TOTAL Charges		16,88,56,990
Surplus Revenue in India - - - *Sa. Rs.*		1,17,81,557
From this Sum is to be deducted the computed Loss in remitting Funds to pay the Bills for Interest on the Indian Debt, or the difference between the rate at which the Bills are drawn, and at which Funds can be remitted to meet them		7,80,028
Amount estimated to be applicable to the payment of the Home Territorial Charges - - - *Sa. Rs.*		1,10,01,529
		£.
This amount will be sufficient at the Board's rate of exchange to meet those Charges to the extent of		1,276,177
The Territorial Charges paid in England are estimated at	£. 1,340,000	
The cost of Territorial Stores at	300,000	
The expense of St. Helena at	90,000	
		1,730,000
There remains a Deficit, on this view, of - - - £.		453,823

Or at the Board's rates, *Sa. Rs.* 39,12,264, as shown by the Court.

II.—Supposing the existing system to terminate, and the Trade to be separated from the Territorial management.

	Sa. Rs.
Indian Local Surplus, as before shown	1,17,81,557
Deduct, Loss in effecting remittances to meet Bills for Interest on the Debt, and Advances to various Institutions not included in the Home Charges, which are estimated by the Court at 689,000 *l.*; which loss arises from the difference between the estimated rate of 1 *s.* 9.247 *d.*, being the average rate of Bills drawn in London on Calcutta in the last three years, and 2 *s.* 2.012 *d.*, the average rate at which the Territory is engaged to effect the remittance	14,25,747
Amount remaining applicable to the payment of the Home Territorial Charges - - - *Sa. Rs.*	1,03,55,810
Which, at 1 *s.* 9.247 *d.*, would produce - - - £.	916,791
This sum deducted from the estimated amount of the Home Charges	1,730,000
Leaves an annual Deficit, on this view, of - - - £.	813,209 (*carried forward*)

Or at 1 *s.* 9.247 *d.* per rupee, *Sa. Rs.* 91,85,772, as shown by the Court.

---

* This sum, according to the details recently furnished by the Court, would be *Sa. Rs.* 9,74,83,501; but to produce the result originally stated, an adjustment of four rupees is required in that amount.

Appendix, No. 23.

(B). General Results of the Prospective Estimate of 10 March 1832.

		£.
Brought forward - - - -		813,209
Further Claims of the Company which are as yet undetermined, and of uncertain amount, may eventually be brought forward. Of these Claims the following are stated by the Court, the liquidation of which would augment the annual Deficiency.		
Interest on the sum to be raised to defray the Expenditure in Wars previous to the acquisition of the Dewannee (not including Interest), viz. on * 3,616,113 *l.*, if borrowed at 5 per cent. - - - £.	180,805	
Interest on the Home-bond Debt alleged to have been incurred for Territorial purposes, taken at 3,600,000 *l.* at 2½ per cent. the present rate of interest - - - -	90,000	
		270,805
These Charges would increase the annual Deficiency to - - £.		1,084,014

A further eventual claim of the Company is for the value of the several forts, towns, islands, territories and rights abroad, possessed by them as a Commercial corporation, the amount of which has not been stated.

(C.)

(C.) Effect on the Prospective Estimate of suggested Alterations.

STATEMENT of the effect that will be produced upon the PROSPECTIVE ESTIMATE by the Alterations suggested in the Memorandum prepared at the India Board.

I.—Supposing the existing system to continue.	*Sa. Rs.*
Surplus Revenue in India estimated by the Court - - - -	1,17,81,557
Improvement expected according to the Memorandum, as specified on page 341 - - - - - - - - - - - - -	28,49,733
Estimated Surplus Revenue in India in 1834 - - - -	1,46,31,290
Deduct Loss in remitting Funds to pay the Bills for Interest on the Indian Debt, as computed by the Court - - - -	† 7,80,028
Amount estimated to be applicable to the payment of the Home Territorial Charges - - - - - - - *Sa. Rs.*	1,38,51,262

---

* This is the sum alleged to have been expended, exclusive of interest. From this claim, including interest, the Court propose to deduct the amount of the Home Bond Debt in 1780, amounting to 1,514,779 *l.*

† This amount is liable to adjustment. *Vide* Memorandum, page 340.

(C) Effect on the Prospective Estimate of suggested Alterations.

	£.
This sum will be sufficient, at the Board's rates of exchange, to meet those Charges to the extent of - - - - - - - -	1,606,747
The Home Territorial Charges being estimated at - - - -	1,730,000
There would remain a Deficit, on this view, of - - - £.	123,253

II.—Supposing the existing system to terminate, and the Trade to be separated from the Territorial Management.

		Sa.Rs.
Indian Local Surplus Revenue, as before shown - - - - - -		1,46,31,290
Deduct, Loss in remitting funds to pay Interest Bills, together with advances to various institutions, not included in the Home Charges, if effected at 1 *s.* 9.247 *d.* per *Sa.R.* - - - - - - - - -		14,25,747
Amount estimated to be applicable to the payment of the Home Territorial Charges - - - - - - - *Sa.Rs.*		1,32,05,543
Which, if remitted at the above rate, will realize in England - -		£. 1,169,076
And as the Home Charges are estimated at - - - - - -		1,730,000
There will be an annual Deficit, on this view, of - -		* 560,924
If the Court's view of the ultimate Claims of the Company were admitted, there would be added to the above Deficit Interest on the principal sum of 3,616,113 *l.*† stated to have been expended in India in the wars which preceded the acquisition of the Dewannee, supposing the amount to be borrowed at 5 per cent. - -	£. 180,805	
Also, Interest on the Home Bond Debt, alleged to have been incurred for Territorial purposes, taken at 3,600,000 *l.*, at 2 ½ per cent. per annum - - - - - - - -	90,000	270,805
In this view the annual Deficit would be increased to - £.		831,729

The Claim on account of Forts, &c. abroad, is here also not included.

---

* If the whole of the remittances of funds to meet the Home Charges could be effected at 1 *s.* 11 *d.* per sicca rupee, the rate realized by remittances of bullion on the Company's ships, this deficiency would be reduced from 560,924 *l.* to 407,616 *l.*

The results contained in the Court's Estimate apply to the termination of the present Charter. Whenever the Fund now annually set apart for the discharge of the debts of the late Nabobs of the Carnatic shall be sufficient for its purpose, it may be expected that the charges will be reduced, and the results above shown further improved, to the extent of £. 102,387. This is computed to take place about the year 1836.

† *Vide* note on last page.

CORRESPONDENCE.

LETTER from the Honourable *John Stuart Wortley* to *Peter Auber*, Esq.; dated India Board, 24 June 1830.

Sir,

I AM directed by the Commissioners for the Affairs of India to request that you will move the Court of Directors of the East India Company to furnish the Board with information of the grounds upon which the recommendation of the Court of Proprietors, held yesterday, in regard to the declaration of a dividend, was founded.

I have, &c.

(signed) *J. S. Wortley.*

LETTER from *Peter Auber*, Esq. to the Honourable *J. Stuart Wortley*; dated East India House, 8 July 1830.

Sir,

I AM commanded by the Court of Directors of the East India Company to acknowledge your letter of the 24th ultimo, requesting information of the grounds upon which the recommendation to the Court of Proprietors, held the 23d ultimo, in regard to the declaration of a dividend, was founded, and in reply thereto I am directed to transmit the enclosed Statements as furnishing the information required.

I have, &c.

(signed) *P. Auber*, Secy.

(Enclosure, No. 1.)

AN ACCOUNT of Profit and Loss on all Goods sold by the East India Company in the Year 1829–30 distinguishing *India* and *China*, and specifying the Invoice Price and the several Charges respectively; also the Sale Amount; showing likewise the Net Proceeds of the Commerce, after defraying all Charges; and converting the Prime Cost of the Investment, so far as it consists of Repayment of Advances by the Commercial Department, at the Rates of Exchange used in the Company's Books, in transactions between the two Branches of their Affairs; viz. 2 *s.* the Current Rupee, 8 *s.* the Pagoda, and 2 *s.* 3 *d.* the Bombay Rupee.

Thomas G. Lloyd,
Acc^t General.

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

(Enclosure, No. 2.)

STATEMENT of the ADJUSTMENT to be made in the PROFIT and LOSS ACCOUNTS of 1829–30, with reference to the Out-turn of that portion of the India Investment which may be deemed to have been provided under the arrangement, with regard to Interest Bills, laid down in the Plan of 1814, for keeping the Company's Home Accounts, (Suggestion 5, as altered and amended by the Board) *see* Sections 55 & 56 of the Act of 1813.

(A.) THE particulars of the arrangement referred to, are contained in the annexed extract from the plan of 1814. Its intention appears to be to secure the Commercial branch from loss in effecting this portion of the Territorial Remittance from India in goods, although in consequence of the altered rates of exchange at which bills for interest of India debt have been drawn upon the Court of Directors since this arrangement was framed, the terms in which it is expressed would, at the present time, give to the Commercial branch an advantage which it is presumed it was not intended that it should derive. The provision being that an average out-turn, at least of 2 *s.* 6 *d.* per sicca rupee, shall be secured to the Commercial branch from all goods sold at the Company's sales furnished from this source, whilst the issue for their purchase in India being stipulated to be made at the rates at which the bills are discharged, (those rates for the greater part now being 2 *s.* 1 *d.* and 2 *s.*, the difference between those rates, and the average produce per rupee at the Company's sales, which for the last five years has not reached 2 *s.*), a literal execution of this arrangement would be attended with a considerable gain to the Commercial branch.

Assuming then that this arrangement shall be acted upon according to what appears to be its spirit, it next becomes necessary to determine the amount of investment which may be considered to have been furnished under its provisions, and to have passed the Company's sales.

The credit to which the Commercial Department has been entitled in India from the Territorial Revenues, since 1814, on account of that portion of the Territorial expenditure defrayed from the Home Treasury, which is technically termed "Territorial Charges," having been placed prior in order of application to purposes of investment, to that to which it has been entitled in respect of interest bills, no part of the issues in India to the Commercial department under the provisions of the Act of 1813, can be deemed to have relation to the latter, until the Territorial expenditure in England classed under the former division, has been fully liquidated. Sec. 56, Act 1813.

A Statement has been drawn up from the Accounts between the Territorial and Commercial branches, as forwarded with the Finance letters to India, wherein is shown the excess or deficiency of the "Territorial Charges" defrayed in England, above or below the amount of the issues for investment in India of the nature referred to, in each year since 1814–15, and the combination of these results in the form of an Account Current is carried on from year to year, being in fact, the particulars contained in the Statements, No. 1, in the before-mentioned series of Accounts, omitting the sums transferred to their debit or credit from the Statements marked No. 2, in the same series, and with the introduction of the calculation of interest, upon the principle observed in the General Account between the Territorial and Commercial branches.

(B.) By this Statement (B.) it appears, that with the exception of the year 1824–25, the aggregate issues in India for investment under the Act of 1813, have up to the year 1827–28 been short of the aggregate of the "Territorial Charges" defrayed in England, with the accruing interest; the small balance of an opposite description which appears in 1824–25, having been counterbalanced in the two following years.

In the last two years of the series, the issues for investment exceed the "Territorial Charges" in the following sums; viz.

In 1827–28 - - - - - - - - -	£. 608,436
1828–29 - - - - - - - - -	863,214

Showing an amount of investment to have been in course of provision in each of those years, derived from funds other than "Territorial Charges," viz. interest bills, together with other advances comprised under that division of the account between Territory and Commerce; and requiring adjustment upon the principles of the arrangement laid down in the plan of accounts.

According to the accustomed computation, the sales of 1829–30 in England are composed equally of goods procured by the funds issued in India in 1827–28 and 1828–29. The investments, therefore, of those years derived from interest bills, will be to be adjusted in those proportions, according to the net out-turn yielded by the sales of 1829–30.

From

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.
(C.)

From another Statement (C.) which has been drawn out, it appears that the average rate at which the balance of bills unprovided for up to 1827–28, had been discharged in England, was 2 *s.* 3^{561}*d.* per sicca rupee, and including 1828–29, 2 *s.* 3^{599}*d.* per sicca rupee.

The average rates at which all the issues in India for commercial purposes were charged to the Commerce in those two years, according to the values severally affixed to the currencies of Bengal, Madras and Bombay, were in 1827–28, 2 *s.* 4^{045}*d.*; in 1828–29, 2 *s.* 4^{012}*d.*

The rates at which the interest bills have been discharged up to 1828–29 thus being less than the rates at which the Commerce has been charged in account by the Territory in the two years under consideration, the amount to be made good to the Commerce on each rupee invested in goods, provided in those two years, upon the principles of the arrangement under consideration, will be the difference by which the out-turn of the goods, when sold, may fall short of the last-mentioned rates.

The rate per sicca rupee of the net produce of the Indian investment at the Company's sales in 1829–30, (deducting interest and insurance at the average rate of the Company's losses at sea) was per sicca rupee 1 *s.* 5^{868}*d.*, being 10^{687}*d.* per sicca rupee short of the rate at which issues for Commercial purposes were made in India in 1827–28; and 10^{654}*d.* per sicca rupee, short of the rate at which sums were issued on the same account in 1828–29.

The portion of Loss from which the Commercial Branch will be entitled to be relieved, as respects the Sales of this Year, by debiting it to the "Political Department," in conformity with the Arrangement of 1814, is as under:

		One-half of each of the preceding Sums computed to enter into the Sales of 1829–30, ONE-HALF.				Issued to the Commercial Branch in India at the Rates already stated, producing the Number of Rupees shown below
Amount of Investment supplied on Account of Remittance for Discharge of Interest Bills:		£.		*s.*	*d.*	*Sicca Rupees.*
In 1827–28, as per Statement -	£. 608,436	304,218	a'	2	4^{045}	26,03,399
1828–29, - ditto - -	863,214	431,607	a'	2	4^{012}	36,97,904

	£.
A short produce of 10^{687}*d.* per sicca rupee is therefore to be made good to the Commercial Branch, on sicca rupees 26,03,399 amounting to - -	115,927
And of 10^{654}*d.* - - ditto - ditto - on 36,97,904 - ditto - - -	164,156
The remaining portion of the Investment supplied on this account in 1827–28, or 304,218 *l.* according to the usual computation, entered into the sales of 1828–29: the adjustment in respect of its produce must therefore be governed by the out-turn of that year, which was 1 *s.* 8^{422}*d.* per sicca rupee, being a deficiency below the rate at which the Investment was provided of 7^{623}*d.*, or on sicca rupees 26,03,399, pounds sterling 82,690, which sum might have been adjusted in the accounts of last year, and not having been so done, is now brought forward for adjustment - - - - - - - - - - -	82,690
Total Amount to be made good to the Commercial Branch - - £.	362,773

It will be requisite, that a corresponding adjustment be made in the Accounts between the Territorial and Commercial branches.

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

(A.)

EXTRACT from the Plan for arranging the Company's Home Accounts, framed in the Year 1814, (relative to the Remittances for Discharge of Bills of Exchange for Interest of India Debt.)

Suggestions by the Court in regard to the preparation of Accounts under the New Charter.	Remarks, Alterations, Amendments and Additions, by the Board of Commissioners.
5. THAT an account be opened under the head of Bills of Exchange drawn from India on account of the Interest of Indian Debt; the debit side to exhibit the amount of payments made in England by the Company in each year on such account; the credit side to exhibit, 1st. The amount of monies that may be received in England in repayment of advances made in India on account of His Majesty's Government. 2dly. The amount of monies that may be received in England for bills to be drawn on India. 3dly. The amount of bills of exchange drawn in the Company's favour for advances made to individuals in India. 4thly. For advances made in India to the Company's commercial servants for investment to be specifically provided in India from the funds, to the amount which England shall be drawn upon for the payment of interest on the Indian debt.	THE Board fully approve the keeping the transactions to which this head of account applies, entirely distinct and separate from that of the general Territorial account. The manner of debiting the payments in England under this head, as now proposed, is correct. The formation of the credit side, by bringing to account the remittances through the four modes which are pointed out, calls for no further remark, as to the three first, than as it may relate to the uncertainty of their amount respectively, from being exposed to contingencies, as to the advances to the public service, and being experimental as to the transactions with individuals. As to the fourth mode, or the remittance to be made through the channel of the Company's Commerce, which is designed to embrace whatever amount may be required to be remitted beyond what shall have been provided for by the other modes, the Board, in reference to the several discussions which have taken place on this subject, have thought proper to agree that an arrangement be made on the following principles: The balance found remaining under this head of account at the close of the year, after giving full credit for all remittances received from India in the course of the year, whether in bills or certificates upon Government, or bills upon individuals paid or payable, or in receipts from individuals for bills on India, to be added to the amount of Territorial Charges to be repaid from the Political Treasury in India to the Commercial Department there, and to be applied by that department at the option and risk of the Company; but the amount of this balance to be converted into Indian currency at the rate of exchange at which the bills may be drawn; provided always, that if in any year the Company's trade from India shall not realize upon an average 2*s.* 6*d.* the sicca rupee, the Political Department shall be debited for the amount of the deficiency which shall be found to have arisen on the sum to which this head of account relates.

(B.)

ABSTRACT ACCOUNT between the TERRITORIAL and COMMERCIAL BRANCHES of the Company's Affairs, from 1814–15 to 1828–29, in respect to Territorial and Political Payments in *England*, separately from the Transactions which relate to the Remittance of India Debt.

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

LETTER from *Benjamin S. Jones*, Esq. to *Peter Auber*, Esq.; dated India Board, 17 August 1830.

Sir,

I AM directed by the Commissioners for the Affairs of India to acknowledge the receipt of your letter, dated the 8th ultimo, in which you communicate to me, by the command of the Court of Directors, two Statements explanatory of the grounds upon which the recommendation to the Court of Proprietors, held on the 23d of June, in regard to the declaration of a dividend, was founded.

The Board have observed in the Statement of Profit and Loss on all goods sold by the East India Company in the year 1829–30, that credit is taken for the sum of 362,773 *l.* "as the amount of loss from which the Commercial department is entitled to be relieved, in respect to investment from India, provided as a remittance to meet bills of exchange drawn for interest of India debt, under the arrangement contained in the Plan of 1814, for keeping the Home accounts."

This item appears for the first time in the statement of Profit and Loss for the year 1829–30.

The Board are willing to admit that the intention of the Plan of 1814 was to secure the Commercial branch from loss in effecting the remittance to England in goods of funds for the repayment to the Company of sums advanced from their Home Treasury, in discharge of bills drawn for interest of Indian debt; but the Board are not prepared to admit that such loss has arisen; for "trade from India" is not confined, in their opinion, to such remittances in goods as may come directly from India to England, but embraces likewise the remittances which come circuitously through China; and the out-turn of the rupee remitted from India can only be found on a view of the results of both these modes of remittance. The Board believe that the Court will find that in every year since 1814 the out-turn of the rupee so remitted directly and circuitously from India, has exceeded the rate of exchange at which the interest bills have been paid.

But although this circumstance is of itself sufficient to impose upon the Board the duty of disallowing the charge of 362,773 *l.* which the Court have brought against the Territorial revenues, in the statement under consideration, the Board feel that there is an assumption in that statement which requires from them some observation.

The Court state, "That the credit to which the Commercial department has been entitled in India from the Territorial revenues since 1814, on account of that portion of the Territorial expenditure defrayed from the Home Treasury, which is technically termed 'Territorial Charges,' having been placed prior in order of application to purposes of investment to that to which it has been entitled in respect of interest bills, no part of the issues in India to the Commercial department, under the provisions of the Act of 1813, can be deemed to have relation to the latter, until the Territorial expenditure in England, classed under the former division, has been fully liquidated;" and the Court refer in the margin to the 56th section of the Act of 1813 as that from which their inference is drawn.

But the Board must request the Court to direct their attention, not only to the 56th but to the 55th, 57th and 58th sections of the Act of the 53d Geo. 3, for it appears to the Board that the intention of the Legislature can only be gathered from a combined view of all the sections which have reference to the application of the revenues and profits of the Company.

By the 55th section, the Territorial revenues are first to be applied to defraying Military charges in India. "Secondly, in payment of the interest accruing on the debts owing, or which may be hereafter incurred by the said Company, in the East Indies or parts aforesaid, *including that portion thereof for which bills shall be demanded, payable in England, and for which provision shall at all times be made by consignments or remittances* to England, as the said Court of Directors, with the approbation of the said Commissioners for the Affairs of India, shall from time to time direct." Thirdly, in defraying expenses of Civil and Commercial establishments in India. Fourthly, towards the liquidation of the Territorial or the bond debt, or to such other purposes *subject to the provision hereinafter made*, as the Court of Directors, with the approbation of the Board, shall direct.

"The provision hereinafter made," is found in the section immediately subsequent, to which the Court have referred; viz. the 56th; and it is this, "that a sum equal to the actual payments which shall have been made from the Commercial funds at home on account of Territorial charges in the year preceding, after deducting therefrom the charges of the Commercial establishments, and all the Commercial charges in India, which may have been paid from the Territorial revenues in the same year, shall in each and every year be issued in India for the purpose of the said Company's India or China investment, or of remittance to England on account of the said Company, at the option of the said Court of Directors."

It appears, therefore, on a view of these two sections, that the issue of sums in India in repayment of Territorial charges defrayed in England is to come *before* the application of Territorial revenue to the liquidation of Territorial or bond debt; but that it is to be made *after* providing for the first, second and third heads of appropriation specified in the 55th section, of which the second is the payment of the interest of India debt, "*including that portion thereof for which bills shall be demanded, payable in England, and for which provision shall at all times be made by consignments or remittances to England.*" But the Board must

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

must likewise draw the attention of the Court to the 57th section, which provides that the profits of the Company in England shall be first applied to "the payment of bills of exchange already accepted, and hereafter to be accepted by the said Company, as the same shall become due;" and to the 58th section, which, after enacting that the profits of the Company in England shall not be liable to the liquidation of any charge on account of the Territorial or Political government of India payable in England, or of any bills of exchange or certificates drawn on account of the Territorial or Political charge in India, till after the dividend on the capital stock of the said Company shall first have been provided for, expressly excepts "such bills and certificates for the amount of which value shall have been previously paid in India from the Territorial and Political funds, and consignments or remittances made thereof to England for the liquidation of the said bills and certificates;" that is, it expressly excepts the bills of exchange for the interest of Indian debt, for the payment of which the 55th section directed that provision should at all times be made by consignments and remittances to England.

The Legislature having thus expressly directed that funds shall be set apart for the payment of the interest of Indian debt, and that provision *shall be, at all times,* made for consignments or remittances to England, to defray that portion of it for which bills shall be demanded, payable in England, and having further distinctly given to this application of the Territorial revenues the preference over any repayment in India, of sums advanced on Territorial account in England, the Board cannot admit the supposition that, until the year 1827-28, no funds for this purpose have been remitted to England, and that the payment of bills of exchange drawn on this account has, until that year, altogether depended on the pleasure of the Company; nor can the Board deem it to be consistent with their duty to allow that not only the Act of Parliament shall be disregarded by applying Territorial remittances to the repayment of advances made in England on Territoral account, in preference to the payment of bills drawn on account of interest of Indian debt, but that this last application of the Territorial revenues, for which Parliament has so specifically and carefully provided, shall be postponed till the Company have received interest on their advances to the Territory, a charge which, however equitable it may be in principle, was never contemplated by the Legislature in 1813.

The conclusions of the Board, therefore, are these:

1st. That the result of the direct and circuitous remittances from India being considered, there has been no loss to the Company by such remittances as have been made in goods to meet the charge of that portion of the interest of the Indian debt which has been paid in England.

2d. That under the Act of 53d Geo. 3, the first sums set apart in India for remittance to England, must be held to be applicable to the payment of the interest bills drawn on England, not otherwise provided for; and therefore that the out-turn of the remittance in each year, since 1814, must be compared with the rate of exchange at which the interest bills have been paid in each year, in order to ascertain whether the Commercial branch has sustained any loss by the transaction.

I have, &c.

(signed) *B. S. Jones.*

LETTER from *Peter Auber,* Esq. to the Hon. *J. Stuart Wortley*; dated East India House, 9th December 1830.

Sir,

I HAVE received and laid before the Court of Directors Mr. Jones's letter of the 17th August 1830, in which he communicated the observations of the Board of Commissioners for the Affairs of India, upon the statements forwarded with my letter of the 8th July last, as explanatory of the ground upon which the recommendation of the Court of Proprietors held on the 23d June, in regard to the declaration of a dividend, was founded; and I have been directed to transmit to you the following reply.

In framing the statements to which the Board's observations have reference, the Court were guided by what appeared to them to be the precise and positive provisions of the Plan of 1814, upon the point under discussion; in which the out-turn of the Company's trade from India, was established as the standard by which the existence and extent of any deficiency which might arise in making the remittances through the Company's Commerce for the payment of interest bills was to be decided. The appropriate sense in which the term "Trade from India," or "India Trade" has been uniformly employed in the Accounts of Profit and Loss which have been rendered to the Board, has been that of designating the direct trade from that country to England, whilst the term "China Trade" or "Trade from China," has been similarly employed to denote the investment directly consigned from China to this country. Both trades have in effect served as channels by which the far greater part of the remittance annually required by the Territory for the discharge of its engagements in this country, has been accomplished; and for reasons to which the attention of the Board will be presently requested, the Court are of opinion that none of the funds derived to Commerce through the payment of interest bills can be considered as having found a return through the China trade, and that their remittance through this channel was not contemplated by the framers of the plan of accounts. It is also no doubt in the recollection of the Board, that the arrangement in question was

a substitute

Charge for Loss on Remittances to meet Interest Bills.

a substitute for that originally proposed* for the supply of any deficiency in the remittances for the payment of interest bills, viz. by the provision of goods in India to be consigned to England, under invoices, separate from those which related to the ordinary investment of the Company; a method which obviously contemplated a remittance only through the direct trade from that country.

*Public Letter to Bengal, 6th Sept. 1813, para. 31.

Under these circumstances it does not appear to the Court that they could have put any other construction upon the terms employed in the Plan of 1814, with relation to this point, than that under which the statements forwarded to the Board have been prepared, and although from the altered state of circumstances which has since that time occurred, the provisions of the arrangement may produce a result somewhat different from the expectations entertained in 1814, the Court feel confident that the Board would not regard such a consideration as authorizing the setting aside an arrangement upon the faith of which the Company's Commercial operations have been conducted.

The Court have paid every attention to the Board's remarks upon the appropriating clause of the 53d Geo. 3, as to their bearing upon the principle of the Statement framed by the Court, with a view to ascertain the amount of Indian investment which has been derived from issues in India made for the purpose of liquidating political payments from the Commercial funds at home, other than the ordinary Territorial charges, and after the fullest consideration of them, the Court are compelled to differ from the conclusion at which the Board has arrived upon this point.

It does not appear to the Court to be at all necessary, with reference to the subject under discussion, to enter into the question of the order of priority established by the Legislature in providing for the various services chargeable upon the Indian revenues. It appears to the Court sufficient that it should have been established and uniformly maintained since 1814, that the provision for investment or remittance, contained in the 56th section of the 53d Geo. 3, was intended to be positive, and subject to no contingency. The Finance correspondence with India, since the passing of the Act of the 53d Geo. 3, appears to the Court to be quite confirmatory of this view, and they would request the more particular attention of the Board to the letters noted in the margin. Admitting on the other hand that the Act contains distinct and positive provisions for the constant application of Territorial revenue to the discharge of interest bills, and that the remittance to provide for their payment must in some mode be effected, the Court have not failed to remark that the use of the Company's Commerce for this object is not a matter of specific enactment by the Legislature, but an arrangement made by the Home authorities under the powers confided to them by the Act, for the provision, under certain conditions, by the Company in their Commercial character, of an investment additional to that which would have been provided in the ordinary course of their trade, for the distinct object of enabling the Territory to fulfil an obligation attaching to that branch of the Company's concerns.

Territorial Finance Letter to Bengal, 23d Sept. 1817, paras. 13 to 16.
Ditto, 11 Aug. 1819, para. 7.

Hence it appears to the Court, that they are fully justified in regarding the investment secured to the Company by a distinct legislative enactment, as entitled to a priority of provision over that, the provision of which was undertaken by them, under a conditional arrangement, the very nature of which excludes all idea of its interfering with, or displacing any part of the Company's regular trade.

It was always understood that this channel for remittance of the interest bill funds, was to be employed only as a *dernier ressort*, on failure of other modes. The arrangement was thus essentially one of accommodation to the Territorial branch, and as the interests of Commerce formed no part of its object, so the uncertainty of the extent to which it might be employed, rendered it impossible to look to it as a resource for carrying on the ordinary operations of the Company's Commerce.

Independently therefore of the consideration arising from the terms made use of in the plan of accounts by which this arrangement appears to the Court to be distinctly and positively connected with the India trade alone, its inapplicability to the purposes of the China trade appears obvious with reference to the legislative obligations the Company are placed under in conducting that trade: for it being imperative upon them to provide for the full consumption of tea in the United Kingdom, funds of the most certain and definite description are required for this investment; and such full provision being once made, no opening would exist for furnishing any additional investment which might be afterwards called for to complete the required remittance for payment of interest bills on the failure of other channels.

The Court would shortly remark, with reference to the nature of the Territorial charges defrayed in England, to which the provisions of the 56th section of the Act apply, that they have for the most part since 1814 been of a military character, comprising charges of raising and maintaining the forces on the establishments of the East Indies, and a large outlay for the provision of warlike and naval stores, charges of a description which stand first in the order of appropriation of the Indian revenues; others are and have been of the nature of interest on debts, as the interest on the Carnatic claims, and the payments for interest and sinking fund on the loan in 1812, of 2,500,000 *l.* from the Public, during their continuance. With regard to the sum of 60,000 *l.* per annum, payable to His Majesty's Government, under the Act 4 Geo. 4, c. 71, for retiring pay, pensions, &c. incurred in respect of King's troops serving in the East Indies, (a part of the military charges defrayed in England) the Legislature has expressly provided that the several payments on this account "shall be charged upon and borne by the rents, revenues and profits arising from the Territorial acquisitions, in the same order as the charges and expenses of raising and maintaining the said forces are now charged and borne." Sect. 1.

A similar

II.
FINANCE.

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

A similar provision also existed in the Act 52 Geo. 3, c. 135, under which the loan of 2,500,000 *l.* was raised, sect. 11, directing that the several payments to be made by the Company for interest, sinking fund and charges of management, "shall be deemed and considered to be a charge upon the revenues of the Territorial acquisitions in the East Indies, in like manner as if the interest payable in respect of the Indian debts which have been or may be discharged by means of the said principal sum of 2,500,000 *l.*, had remained payable in the East Indies," and further authorizes the Company to cause funds for defraying the charge on this account, to be provided for remittance to England, in the order of preference in which the interest of debts is payable in India.

The Court would further remark that, although undoubtedly Parliament has specifically and carefully provided by legislative enactments for the payment of bills drawn on account of interest of Indian debt, one of the provisions of the 58th section, upon the subject of these bills, (wherein it is agreed that the future directions of Parliament, as to the mode of their discharge, shall be given under certain circumstances therein specified) necessarily proceeds upon the supposition of the possibility of a failure in the provision of the remittances by which their payment should have been met.

Upon the subject of the incidental remark made by the Board on the charge of interest in the accounts between Territory and Commerce, the Court would suggest, that as such a charge could only be claimable by the Commerce, in the event of the postponement by the Territory of the obligations imposed on it by the Act, it might not be deemed necessary to provide for a case, the occurrence of which the Act did not contemplate. The arrangements in the plan of accounts under which the adjustment objected to by the Board was made by the Court, as before remarked, was not framed with any view to the interests of Commerce, the effect of it indeed, had it been called into operation in the early years of the present Charter would have been to have placed the Commercial branch in the situation of providing an investment, not in the ordinary course of its operations, and which the state of the markets at the time might perhaps not have called for, at a rate of cost enhanced by the higher exchange which would have applied to it above that which applied to the investment furnished in repayment of Territorial charges.

Opposed as the Court's views have always been to the decision of the Board, upon the rates of exchange to be observed in the accounts between Territory and Commerce, they have felt anxious that this, the only provision of the plan of accounts which qualifies the operation of those excessive rates, should be carried into effect according to both its letter and spirit, and they cannot doubt that under the explanations now offered, the Board will concur in the principle upon which the Statements forwarded by the Court have been framed. The adjustment indeed, as it has been made by the Court in the Profit and Loss Account of 1829–30, effects but an approximation to accuracy in the view of the Company's Commerce, leaving still the far greater part of the Indian investment valued in its prime cost at rates of exchange which, under present circumstances, involve the certainty of a loss upon the adventure; although when tried upon mercantile principles, it has been proved, that since the opening of the trade, even the Company's direct Commerce with India, has been conducted with a profit.

I have, &c.
(signed) *P. Auber*, Secretary.

LETTER from *Thomas H. Villiers*, Esq. to *Peter Auber*, Esq.; dated India Board, 2d March 1832.

Sir,

I AM directed to address you in reference to a correspondence which took place between this Board and the Court of Directors in the year 1830, on the subject of a charge brought against the Territorial branch of the Company's affairs for loss on remittances to meet bills for interest on India debt.

The Board thought that charge objectionable; and Mr. Jones, in a letter to you, dated 17th August 1830, stated the grounds of the Board's opinion.

In reply to Mr. Jones's letter you addressed Mr. Stuart Wortley on the 9th December 1830; and I am now to desire that you will lay before the Court the further observations of the Board, suggested by a full and attentive re-consideration of the important subject contained in the letters above noticed.

It will be obvious to the Court that before the Board could have allowed the charges in question, they must have been prepared to admit that the arrear of repayment by the Territorial to the Commercial branch, outstanding in the year 1827–28, (the investments of which year the Court assume to have formed the first element of the calculation in question,) consisted entirely of a deficiency of remittance to meet the payment of interest bills, and further that the Commercial branch had incurred the loss assumed by the Court in effecting a remittance of that deficiency, and was entitled, under the arrangements laid down in the Plan of 1814, to the reimbursement of such loss.

These admissions the Board could not adopt, and after a mature consideration of the arguments adduced by the Court, and a review of the whole subject, they are still unable to concur with the Court as to the propriety of the charge. The case in question, viz. that of the payments by the Territorial to the Commercial branch falling in arrear,

Appendix, No. 24.

Charge for Loss on Remittances to meet Interest Bills.

appears to the Board to be one for which no express provision has been made either in the Act of 1813 or in the plan adopted for effecting a separation of the Company's accounts, since both proceeded on the assumption that the provisions for the repayment of the advances made in England for Territorial purposes would be carried into full effect.

It was by no means the intention of the Board, under these circumstances, to complain that the Court should have put the construction they have upon the Plan of 1814, and at the same time the Board must distinctly disclaim the least desire to depart, in consequence of the altered circumstances of the trade, to which the Court have alluded, from any of the arrangements originally adopted. In the case now under consideration, a careful attention to the distinct enactments for the remittance and payment of interest on the Indian debt, and to the spirit of the Act of 1813, together with the correspondence which took place between the Board and the Court, and with the Governments in India, at the time that the plan referred to was in course of establishment, furnish, in the opinion of the Board, full and satisfactory grounds for coming to a right conclusion upon the present question.

The nature of the arrear or balance due to the Commercial branch depends mainly upon the determination of the question, whether the appropriating clauses of the Act of 1813, prescribe constant and regular issues from the Indian Treasuries for the discharge of the interest accruing on the India debt, and the punctual remittance of such funds to discharge the interest paid in England, or whether they sanction the postponement of such issues and remittance to an indefinite period. Upon this point the enactments appear to the Board to be express and peremptory; but as their views of those enactments have been so fully explained in Mr. Jones's letter, above referred to, they have little to add to what has been there stated, and they are unable to come to any other conclusion on the construction of the Act than was then communicated. They have only now to observe, on this part of the subject, that they cannot concur with the Court, that the order of priority established by the Legislature, in providing for the charges on the Indian revenues, is unimportant to the present question: On the contrary, they consider it a distinct guide to the due execution of the provisions of the Act. With this persuasion, the directions of the 55th, 57th and 58th sections, with regard to the payment of the interest on the Indian debt, appear to them conclusive, and cannot be intended to be set aside by the provisions of the 56th section, as the Court's interpretation would seem to imply.

The Board do not discover anything in the correspondence with India, to which the Court refer them, opposed to the view they take of the enactments upon this subject.

It was arranged by the Court in the year 1813, that the amount required to meet the interest bills, not remitted by other means, should be remitted through the Company's trade. In their Public Letter to Bengal, dated 6th September 1813, the Court directed that "immediately upon the issue of the bills for interest of the debt, there should uniformly be set apart a sum equal to the amount, in order to its being remitted for the supply of the Home Treasury," and it was added "the amount of the remittance must be absolutely carried into full effect to the extent that bills may have been drawn upon us for the interest upon the debt." These instructions were repeated in the Commercial Letter to Bengal, of 9th February 1814, notwithstanding the expectation expressed in that letter that a considerable part of the remittance to meet the interest bills would probably remain to be effected through the Company's Commerce; the Board are therefore bound to conclude, on the ground both of the legislative enactments and of the orders issued to the Indian governments, that the Commercial consignments consisted in part of consignments destined to meet the bills in question, whenever remittance for that purpose was required.

The Board are willing to admit, that adverting to the various other methods to be first resorted to, in order to effect the requisite remittance to meet those bills, the Indian governments would not always be aware what amount of Commercial remittance would be required before the year terminated, and under these circumstances the investments of such a year might properly be treated as applicable in the first instance to other Territorial charges of that year, but upon this view the investments of the following year must be considered as first applicable to the balance due for interest bills paid in the preceding year, and thus the provisions of the Act would be complied with as literally as possible under the circumstances of the case.

On the various grounds above explained the Board are precluded from admitting that the balance due from the Territory to the Commerce can be considered as composed of arrears, on account of the interest bills, unless the excess of payments of bills beyond the remittances of the last year of the account were considered to compose a part of that balance, in which case the excess would be made good in the following year.

Upon the Court's representation that the consignments which may be considered applicable to pay the interest bills stand on a different footing from their ordinary Commerce, and that the terms "Trade from India," used in the amended Plan of 1814, signified direct trade from India, and had no connexion with their circuitous trade from India through China, the Board have to remark, that whatever distinction might be made between the ordinary Territorial charges and the bills for interest on debt, in consequence of a part and sometimes the whole of the amount of the latter being provided for by different means, so far as the remittance through the Company's Commerce was concerned all distinction was done away, when, at the desire of the Court, the plan of investing the balance of interest cash to be remitted in goods from India under separate invoices was abandoned. The remittance thenceforth fell into the mass of their trade, and no particular channel by which it was to be sent home was at any time prescribed.

The observation of the Committee of Accounts, in their Report forwarded to the Board, in

Appendix, No 24.

Charge for Loss on Remittances to meet Interest Bills.

in Mr. Cobb's letter of 4th June 1814, on the mode of remitting the balance of interest cash through the Company's trade, was as follows:

"Your Committee think the most simple method of determining the question, will be to proceed *in a way similar to that adopted in the liquidation of Territorial charges.* Let the balance of payments in England for interest of Indian debts in the preceding year, constitute part of the fund that the Company shall annually order to be invested in India, and whatever difference shall arise will of course be adjusted at a subsequent period."

It is unnecessary to remind the Court that the "way adopted in the liquidation of Territorial charges" has always been to invest in Indian produce for consignment to England, what could be remitted in that form, and simultaneously to invest in other Indian produce (cotton, sandal-wood, &c.) for consignment to China, or to remit there, by means of bills, the remainder of the annual repayments by the Territory, of the advances made in England.

The Board, in Mr. Courtenay's letter of 30th June 1814, assented to the revised proposition of the Court, as having in view a remittance "*upon the same principle as Territorial charges defrayed in England;*" they objected only to the rate of exchange prescribed by the Board for other transactions (which was 2*s.* 3.84*d.* the sicca rupee) being applied to this, as the bills to be met were drawn at 2*s.* 6*d.* the sicca rupee, and a positive loss would thus be suffered by the Territorial branch. It was accordingly arranged that the sum invested to cover the balance of interest bills not otherwise met, should be converted at the rate of exchange of the bills, while the Commercial branch was to be protected from loss by compensation, should the out-turn of the Company's investments fall below that rate. Here the Board may be allowed to express their dissent from the remark of the Court that the interests of the Company's Commerce were not concerned in this arrangement, since any profit resulting from the remittance was secured to the Commercial branch, while the loss was to be borne by the Territory.

From the facts above narrated, it appears to the Board to be clearly established that the out-turn of the remittance to meet the interest bills should be calculated with reference to the whole of the Company's trade, including the portion of Territorial repayments remitted through China; and if it can be shown that loss has been sustained in any year by the remittance, upon a calculation framed upon the above principle, the Board will not object to allow a remuneration to the Commercial branch accordingly.

They are further of opinion that as the balance of interest cash invested in India in goods has not hitherto been converted at the exchange of the bills, the adjustment introduced should be revised upon such a principle as would rectify this omission in preceding years; such an adjustment the Board request may be made in the account between the Territorial and Commercial branches.

I have, &c.

(signed) *T. H. Villiers.*

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

Appendix, No. 25.

CORRESPONDENCE with Mr. *Robert Wilkinson*, and STATEMENTS, &c. prepared by him for Mr. *Rickards*, relating to the Views therein taken of the FINANCES of the East India Company.

No. (1.)—LETTER from Mr. *Robert Wilkinson* to *Robert Rickards*, Esq, dated 3, Copthall-buildings, 30th April 1831.

Dear Sir,

UPON the most attentive consideration of these voluminous documents, I am obliged to confess that I cannot find in them the materials for stating an accurate account of the Company's Commercial affairs for a given series of years, distinct from their other revenues. The difficulty, or rather the impossibility, arises not only from the want of other accounts which might be enumerated, but also of the particulars constituting the aggregate sums in several of those which are given. These papers do, however, furnish the means of stating separately the Territorial revenues and Political charges, and ascertaining, by an annual balance of those accounts, distinct from all that is extraneous, whether or in what degree it was necessary to supply the political expenditure from any other than its appropriate sources; whether, in short, it was necessary that the deficiencies of Territorial revenue should be made good from the profits of Commerce. Taking the Appendix No. 6 of the Second Report, Appendix 46 of the Third Report, Appendixes 10 and 28 of the Fourth Report, and Appendix 2 of the Papers printed February 1830, as my authority, in which all that relates to these subjects is given as matter of fact, and with an appearance of precision, I cannot have the least hesitation in declaring my decided opinion, that no such necessity existed, but that if this branch of the Company's affairs had been left to itself, and had never been blended with their Commercial transactions, there must have been, in 1826-7, the period to which these documents extend, a very large surplus of Territorial revenue in their Treasury.

In

In 1799–1800 a sinking fund is said to have been instituted, which might be received as a reason for the large increase of interest about that period (if charged in that column); but the debt would in that case be proportionably diminished; yet without any explanation that I can find, the debt is said to have been increased from 7,971,668 *l.* in 1793, to 12,811,863 *l.* in 1799, to 18,350,873 *l.* in 1802, and gradually accumulating to 30,876,788 *l.* in 1809. Such an increase, or indeed any increase, of Territorial debt, is utterly inconsistent with the documents above referred to, if they are what they purport to be. On the contrary, it is certain that, admitting the debt to have been on the 1st May 1793 as stated, 7,971,668 *l.*, the revenues furnished the means of providing the interest thereon, together with all political charges, including those paid in England, and leaving a surplus, in 1799–1800, of 2,517,003 *l.*

By the Statement I have prepared, commencing 1793–4, it appears that in 1806–7 the Territorial revenues required the aid of a loan of 2,500,000 *l.*, which they likewise supplied funds for redeeming in 1811–12; and that in 1817–18 there was a sufficient surplus to discharge the debt of 1793, and since to accumulate to the amount of 5,704,870 *l.*, which ought to have been in the Treasury as surplus Territorial revenue in 1826–7, after the discharge of all former engagements. In this Statement I have assumed that there was a Territorial debt of 7,971,668 *l.* on the 1st May 1793, and that the whole of the net charges of Bencoolen, St. Helena, &c. are Political; but if the contrary can be shown, these consequences would follow:

	£.
To my surplus of - - - - - - - - - - - - - -	5,704,870
there should be added,	
Debt, 1st May 1793 - - - - - - - - - - -	7,971,668
All the interest - - - - - - - - - - - -	11,389,043
The loan from Government in 1812, if not included in Revenue - -	2,500,000
Interest (if included in Charges) to 1822 (suppose 2½ per cent. on the whole, if repaid by instalments) - - - - - - - -	675,000
Half net Charge of Bencoolen, &c. if Commercial - - - -	2,452,169
Half net Charge of St. Helena - - ditto - - - - -	883,943
Constituting a surplus Revenue, from 1793–4 to 1826–7, of - - £.	31,576,693

I have thrown the whole subject into a tabular form, which I beg leave to submit to your correction, and shall be happy to give any explanation at your leisure.

I am, &c.
(signed) *Robert Wilkinson.*

I should be glad to see a copy of the Scheme approved by the Board of Control for separating the Accounts from the year 1814. Perhaps something may be made out beyond the mere inference, that if the Revenue be free, the whole debt must be Commercial.

(*h*) Received on account of the Chinsurah Cause.

(*i*) Including balance on the loan of 2,500,000 *l.*

(*k*) Political freight, &c. repaid by Government.

(*l*) The Estimate in Appendix 46 to 3d Report, for these charges in 1809–10, is only 565,931 *l.*

(*m*) There being surplus revenue at the beginning of this year to repay the loan of 2,500,000 *l*, I reduce the interest to the former amount.

(*n*) The loan of 1806–7 discharged out of surplus revenue.

(*o*) After charging in this year the repayment of the loan of 2,500,000 *l.* in 1806–7.

(*p*) There being sufficient surplus of revenue at the commencement of the year to pay the whole debt, the interest ceases.

(*r*) Repayment of the debt due 1st May 1793.

(*s*) After charging in this year the repayment of the debt due 1st May 1793, 7,971,668 *l.*

(*t*) After ditto, ditto.

(*v*) As in this year the balance due to Government on a loan of 2,500,000 *l* in 1812 was paid, if this is included in the charges, as well as the rest of the principal repaid, and all the interest from 1812, the whole will be an addition to the surplus revenue, if the loan itself was not included in the receipts.

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

(No. 2.)—LETTER from Mr. *Robert Wilkinson* to *Robert Rickards*, Esq. dated 3, Copthall-buildings, 10th May 1831.

Dear Sir,

THE effect of the former Table was to show, that if the Territorial revenues had been left to their own operation, unconnected with anything else, they would have discharged the Indian debt of 1793, 7,971,668 *l.*, and left a surplus in the Treasury, in 1828, of 4,347,675 *l.*, without any Indian debt whatever.

It is, however asserted, that the Indian revenue being inadequate to meet the Political expenditure, required assistance from Commerce, and the aid of loans; the interest on which is, therefore, together with all Political charges, to be placed to Revenue account. It might then have been expected, that we should have been presented with an account of Political disbursements (including all interest) equivalent to the whole amount of this joint fund of revenue and loans, from 1793 to 1828. The Statement I have now prepared and embodied in the accompanying Table, which is respectfully submitted to your consideration, was intended to ascertain this point; and strange as it may appear, it is nevertheless certain that the result presents a balance of 11,208,417 *l.* in 1828, not included in any statement of Political expenditure; which, for anything that appears, may then have been in their treasury, and must indeed have been there unless the Company will either render a further account of Political charges, or admit that it had been applied to other purposes.

Surely there must have been other Statements laid before the great authorities who have sanctioned the representation that Indian revenue is indebted to Commerce, since the printed Papers, when followed out to their necessary consequences, infallibly lead to a contrary conclusion.

If

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

If these tables cannot be contravened, and I do not perceive any fallacy in them, it follows,

		£.
That the above balance, not otherwise accounted for, has been applied to Commercial purposes - - - - - - - - - - -		11,208,417
Interest charged in this account - - - - - -	£. 52,352,803	
Whereas all that was required for Political purposes is shown in the former Table to amount to no more than -	11,208,417	
Difference - - -		40,963,760
There has therefore been applied to Commerce from Indian revenue and loans ultimately charged to Revenue, in 35 years, from 1793 to 1828		52,172,177

Or it may be thus stated :

The Revenue, as shown in the former Table, could, from 1793 to 1828, have cleared itself of all debt, and have accumulated a surplus in 1828 of -		*4,347,675
But Revenue has been deprived of this surplus, and burthened (by Commerce) with a debt, in 1828, of - - - -	£. 47,504,558	
Add, discrepancies in the Papers, as stated - - -	319,944	
		47,824,502
	£	52,172,177

And to this sum of 52,172,177 *l.* are to be added, loan from the Nabob of Oude, 1,109,975 *l.* and loan from the Bank and interest, say 3,390,000 *l.*

I am, &c.
(signed) *Robert Wilkinson.*

* This differs from the Balance stated in Table (A.) only by including the year 1827–28.

Mr. *Wilkinson's* Letter of the 10th of May 1831.

Charges, including those on Subsidies and of Ceded and Conquered Countries.	Net Charges of Bencoolen, Prince of Wales Island, &c.	Net Charges of St. Helena.	Political and Territorial Charges paid in England.	Interest on Debts.	Diminution of Debt by repayment of Loans.	Surplus remaining unapplied to Territorial Purposes at the end of each Year, including the Surplus of preceding Years after 1793-4.

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

(No. 3.)—LETTER from *T. Hyde Villiers*, Esq. to Mr. *R. Wilkinson*, dated India Board, Nov. 24th, 1831.

Sir,

MR. RICKARDS has informed me that you have had under your consideration the Public Accounts of the East India Company, which he placed in your hands, and he has left with me some papers, showing the general results at which you have arrived. Mr. Rickards also stated to me, that you would be willing to give any explanation of the method you had pursued which might be desired by this Department. I therefore beg leave to inform you, that there are some points upon which I should be happy to receive your explanations, and that I should be prepared to forward to you my inquiries immediately on receiving your permission to do so.

I am, &c.

(signed) *T. Hyde Villiers.*

(No. 4.)—LETTER from Mr. *Robert Wilkinson* to *T. Hyde Villiers*, Esq. dated 3, Copthall-buildings, 25th Nov. 1831.

Sir,

I HAVE had the honour to receive your letter of the 24th instant, and shall be happy to give, either personally, or in any other manner which you may be pleased to prescribe, the explanations required.

I have, &c.

(signed) *Robert Wilkinson.*

(No. 5.)—LETTER from *T. Hyde Villiers*, Esq. to Mr. *Robert Wilkinson*, dated India Board, 8th Dec. 1831.

Sir,

I BEG leave to acknowledge your letter, dated the 25th ultimo, and, with reference to the permission which your letter conveys, to forward to you certain Queries, herewith enclosed, which have been prepared relative to your Statements of the East India Accounts.

I shall be much obliged to you for any explanations which you may be enabled to supply upon the points referred to, or would show you any documents in this office which you may be desirous of consulting in the public records.

I remain, &c.

(signed) *T. Hyde Villiers.*

(Enclosure in No. 5.)

QUERIES relative to Mr. *Wilkinson*'s Statements.

ON what principle several charges, stated by the Select Committee of 1812, in the Fourth Report, page 452, to be Territorial Expenses " not included in the Accounts of Revenues and Charges annually presented to the House," have been omitted from the Territorial Expenditure, *e.g.*

Expenses of Ceylon and Eastern Islands - - - -	£. 1,661,345
Payment to Creditors of Nabob of Arcot and Rajah of Tanjore -	1,359,013 ?

Why, in the first sixteen years, no charge for St. Helena is inserted, although it is stated, in Appendix 51 of the Report above referred to, to have amounted to £. 1,105,351 ?

How it occurs, that of the amounts described in the same Appendix as " Doubtful as to the part Territorial or Commercial," and Dead Stock, and which (excluding the charge of St. Helena, Bencoolen and Prince of Wales' Island), exceeds £. 3,000,000, no part is charged against the Territory ?

Have the other items in that Appendix received full consideration ?

The same query as above as to charges termed " Doubtful " in 1812, which, for late years, are contained in Nos. 16 to 19 of the Papers of 1830, and there stated not to be included in the other charges, amounting to £. 741,000; the greater part of which is in those documents described expressly as " Territorial " ?

Upon what grounds all reference to the fact of the Cash and Bills in the Indian Treasuries having increased between 1793 and 1828 by £. 6,251,867, (*vide* Second Report, Appendix No. 8, and continuation of No. 6 of Papers of 1830), has been omitted, and the inference drawn that that amount has been " applied to Commercial purposes " ?

Correspondence, &c relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

(No. 6.)—LETTER from Mr. *Robert Wilkinson* to *T. Hyde Villiers*, Esq.; dated 3, Copthall-buildings, 17th Dec. 1831.

Sir,

I HAVE now the honour to transmit answers to the Queries proposed to me.

As it is difficult to treat of detached portions of the subject without some appearance of complication, if I have not succeeded in rendering myself intelligible, I should consider myself obliged by an opportunity of adding, either personally or otherwise, such further explanations as may be necessary.

I have, &c.

(signed) *Robert Wilkinson.*

(Enclosure in No. 6.)

EXPLANATIONS, &c.

BEFORE I proceed to consider each particular query, I must ask permission to make one or two general observations applicable to the whole; and in the first place it is necessary to bear in mind the precise nature of the propositions presumed to be established by my Tables. The first, marked (A), professes to prove that the Territorial revenues of the Company have, since 1793, been more than sufficient to supply the expenses of administering the Government of India, and have neither needed nor received assistance from any Commercial profits of the Company, nor from Indian loans, (except temporarily to the extent of 2,500,000 *l.*), and that it is therefore incorrect to charge the Territorial revenue with the principal or interest of a debt which must have been contracted for other purposes. The second, marked (B), undertakes to show, that the Indian loans, contracted since 1793, cannot have been expended, in addition to the Territorial revenues, upon the administration of the Indian government, because in that case, upon an account debited with the whole of the revenue and loans, and credited with the whole of the charges of that administration, including the interest upon the whole debt as a part of those charges, there could not possibly remain any balance, whereas there appears a surplus of receipts amounting to 11,208,417 *l.* These propositions are perfectly distinct from the object proposed in the extract given from the Fourth Report, and the accompanying Appendix, No. 51, which is primarily to account for the deterioration of 11,020,566 *l.* on the general affairs, Territorial and Commercial, of the Company; the classification of the causes to which it is attributed into "Territorial, Commercial and Doubtful," being altogether incidental, and not affecting nor being intended to affect the argument of the Committee, as is manifest from their leaving more than half the amount "Doubtful."

In the next place, I may be permitted to complete the quotation given in the queries from the Report, viz. "Territorial expenses not included in the Accounts of Revenues and "Charges annually presented to the House," by the addition of the remaining part of the paragraph, which will then stand as follows:—

"The extent in which the Political branch of the affairs has contributed to produce the balance (of 11,020,566 *l*, before spoken of) is stated at the sum of 6,364,931 *l.*, which sum results from adding to the surplus charges of India every other positive expense belonging to the territories, which had not been included in the Accounts of Revenues and Charges annually presented to the House, being in the greatest part disbursements made in England, either by His Majesty's Paymaster-general for the troops serving in India, or by the Company at home for freight of military, or the expense considered to have been incurred under this head."

We have here a declaration of what the Honourable Committee profess to have done; in order to account for the defalcation of 11,020,566 *l.*, they say, it will be found to have been occasioned, in the greatest part, by disbursements made in England, &c. which had not been included in the Accounts of Revenues and Charges annually presented to the House. And this conducts us to the real question at issue, which is, (not whether the printed Statements of Indian Revenue and Charges, but) whether the Tables A and B contain in effect an account of every charge indicated by the Honourable Company, which is properly Territorial, including those which had not been brought into the Accounts annually presented to the House. I am aware that the former do not comprise the Territorial disbursements made in England, which are the subject of a separate statement in the printed Papers, but they are incorporated into the Tables A and B.

I may now proceed to consider separately the several queries, of which the first is,

"On what principle several charges stated by the Select Committee of 1812, in the Fourth Report, page 452, to be Territorial expenses, not included in the Accounts of Revenues

II. FINANCE.

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

Revenues and Charges annually presented to the House have been omitted from the Territorial expenditure; *e. g.*

" Expenses of Ceylon and Eastern Islands - - - -	£. 1,661,345
" Payment to Creditors of Nabob of Arcot and Rajah of Tanjore	1,359,013?"

With respect to the expenses of Ceylon and Eastern Islands, I do not find anything said of this item of 1,661,345 *l.* in the Report, nor does it appear from whence it was derived. The reference is to the Appendix No. 17 of the Third Report, where it is stated at 1,223,571 *l.*, and where it is also stated, that of the whole of the claims admitted against the

Public - - - - - - - - - - - - - -	£. 8,212,372
There have been brought to the debit of Indian Charges and Interest - -	6,988,801
Leaving the above sum not brought to the debit of Indian Charges or Interest	1,223,571

This Appendix No. 17, is a statement of the Honourable Company's Claims on the Public and does not purport to be an Account of their actual disbursements on the objects specified, much less does it appear to me to furnish the means of instituting such an examination as would enable an inquirer to point out in figures the precise amount which ought to have been charged to Territory and Commerce respectively; when, therefore, it is asked, why was not this sum brought in the same manner as the larger amount of 6,988,801 *l.* to the account of Indian Charges, the answer, in the absence of the necessary documents, can only be general, that in the judgment of the Company, who abstained from charging it to Territory, this was the portion strictly Commercial, and therefore it would have been misplaced there. If indeed the Company have advanced 1,223,571 *l.*, which they have been unable to recover, they have sustained a loss, which may be legitimately used to account for so much of the defalcation found on their general concerns Territorial and Commercial; but it by no means follows that it should be charged to Territorial revenue, and especially when the Company, in their own analysis of the General Account, not intended to favour the Revenue at the expense of Commerce, have not deemed it right, with all the particulars before them, so to charge it, it must be considered as a Commercial loss.

Respecting that part of the payments to the creditors of the Nabob of Arcot and the Rajah of Tanjore, made in India, viz. 1,058,953 *l.* and 64,044 *l.* as stated in the Appendix 51, the reference is to Nos. 18 and 19 of the Third Report, where I find nothing from which it can be ascertained that these are the sums so paid and omitted in the Account of Charges at Madras; while in the Appendix to the Second Report, No. 6, B, purporting to be a Statement of the gross and net Receipts from Subsidies and Revenues of Ceded and Conquered Countries, there is an account of disbursements amounting to many millions sterling, but without a detailed specification of particulars; the results are transferred to the Appendix, No. 6, which the Committee, in the same Report, have assured us contains " every charge incurred in the government and defence of the possessions in India."

If the authority of the Honourable Committee must be respected in the one instance, it is neutralized by their equally positive evidence in the other; and we have nothing left in the entire absence of such details as might enable us to undertake a satisfactory analysis, but the strong probability, amounting to a moral certainty, that the Madras Presidency, in transmitting their accounts, would of course include the sums paid to those creditors, and that these, being considered territorial, have been charged against Territorial revenue, included in the Madras Accounts of their respective periods.

With respect to the portions paid in London, viz. 10,960 *l.* and 225,056 *l.*, as I find them in the General Statement, Appendix No. 22 of the Fourth Report, and they have not been included in the " Political Charges paid in England," described in Appendix 46 of the Third Report; if these are necessarily to be accounted Political charges, as in my judgment they ought to be, they remain to be charged against Territorial revenue; but the Honourable Company seem to have decided that they are not so to be considered by omitting them in the statement of Political charges.

Query. " Why, in the first 16 years, no charge for St. Helena is inserted, although it is stated, in Appendix 51 of the Report above referred to, to have amounted to 1,105,351 *l.*?"

On the subject of this query the printed Papers are sufficiently explicit to enable me to say that the charge for St. Helena for the first 16 years is included in the Tables A and B. In the Appendix No. 51 referred to, as well as the Report itself, " Supplies to Bencoolen, Prince of Wales Island, St. Helena, &c." from 1792–3 to 1808–9, are stated at 2,817,146 *l.*; the reference in the margin is to page 63 of the Second Report, which again refers to the Appendix No. 6 of that Report, where the " Supply to Bencoolen, Penang, &c." for the same period, amounts to the precise sum of 2,817,146 *l.*, consisting of the items transferred into my Tables, including therefore the whole supply to St. Helena.

The " Charges and Losses at St. Helena adjusted," 1,046,653 *l.*, and " Increase of Dead Stock at St. Helena," 58,698 *l.*, making together 1,105,351 *l.*, the subject of the query, are of course comprised in the larger amount.

Query. " How it occurs that of the amounts described in the same Appendix as ' doubtful as to the part Territorial or Commercial', and ' Dead Stock,' and which (excluding the charge of St. Helena, Bencoolen, and Prince of Wales' Island) exceeds 3,000,000 *l.*, no part is charged against the Territory?"

The

The charges relating to St. Helena being disposed of, there remain, of the class termed "Doubtful" in the Appendix, No. 51, the following, viz.

	£.
1st. Losses on Consignments from port to port in India - -	873,403
2d. Losses at the several Presidencies, not included in the Charges	461,428
3d. Paid on participation of the Public - - - - - -	500,000
4th. Seamen raised for Government - - - - - - -	47,000
5th. Loss on Loyalty Loan - - - - - - - - - -	107,878
6th. Interest on postponed Bills - - - - - - - -	120,963
7th. Paid owners of Rice Ships - - - - - - - -	110,595
	2,221,267
To which is added,	
8th. Increase of Dead Stock in India, by purchase there or consignments from England - - - - - - - -	862,992
£.	3,084,259

It is remarkable of all these, that the Honourable Committee, with all the means of information before them (as I suppose) have not undertaken to determine that any one of them ought to be debited to Territorial revenue. With respect to the first, viz. Losses on consignments from port to port in India, if we were to understand the term "losses" in its ordinary acceptation, as implying destruction or damage on the transit, it would depend on the object of the consignment (upon which we have no explanation) whether the loss should be charged to Territory or Commerce; but the reference is to Appendix No. 22 of the Third Report, where the amount is described as a mere discrepancy between the books of Bengal and those of Fort St. George and Bombay; it must be presumed that Bengal, in transmitting its annual General Statement, took credit for the full amount of its supplies to the other Presidencies, and before it can be determined whether any loss beyond that which has been brought to account, be really chargeable either to Territory or Commerce, and in what proportions, it would be necessary to have access to documents which I have not found amongst the printed Papers.

2d. Losses at the several Presidencies, not included in the Charges. As these do not appear to be arrears of revenue they must be presumed to be Commercial debts, written off as irrecoverable, in which case they cannot be charged against Territory; the reference is to Appendix No. 23 of the Third Report, where we have no information beyond the fact that they are "losses."

3d. Paid on participation of the Public. This I understand to be a part of the price of the Honourable Company's exclusive trade, therefore Commercial, and not chargeable against Territory.

4th. Seamen raised for Government, 47,000 *l.* This is too trifling an amount to require much comment; if upon the first view, it would appear chargeable to Territory, the Honourable Company seem to have decided otherwise by excluding it from the Political charges.

5th. Loss on Loyalty Loan.
6th. Interest on postponed Bills.
7th. Paid owners of Rice Ships.

In the absence of all special circumstances, it seems to me difficult to conceive that these can be considered in any other light than as losses on Commercial transactions, with which, therefore, it would be improper to charge Territory.

8th. Increase of Dead Stock in India, by purchases there or consignments from England, The cost of the Dead Stock has been included in the Indian charges, as I well recollect to to have read in some part of the printed Papers.

Query. "Have the other items in that Appendix received full consideration?"

They have been considered, and I do not find anything there clearly chargeable to Territory beyond the amount already comprised in my Tables.

Query. "The same query as above as to all charges termed 'doubtful' in 1812, which for later years are contained in Nos. 16 to 19 of the Papers of 1830, and there stated not to be included in the other charges, amounting to 741,000 *l.*, the greater part of which is in those accounts described expressly as Territorial?"

I regret that not having at present access to the Papers of 1830 referred to, I cannot give a definitive answer to this query; when I shall have had an opportunity of seeing them, if anything is found there properly Territorial, and not comprised in the Tables A and B I shall readily admit it.

Query. "Upon what grounds all reference to the fact of the cash and bills in the Indian treasuries having increased between 1793 and 1828 by 6,251,867 *l.* (*vide* Second Report, Appendix No. 8, and continuation of No. 6 of Papers of 1830) has been omitted, and the inference drawn that that amount has been applied to Commercial purposes?"

I must here again ask permission to recal attention to the real question, with which, as I submit with great deference, this item can have no manner of connexion. When it is inquired respecting the general funds paid into the Treasury, what part has been received and disbursed on account of Territory, and what part on account of Commerce, it seems irrelevant to reply that there is a balance of 6,000,000 *l.* remaining unexpended; because the only question at issue must be answered before it can be determined to whom or in what proportion that balance belongs. It cannot even be used to account for a defalcation on the General Account Territorial and Commercial, because the defalcation is a result after considering the 6,000,000 *l*, as an asset; accordingly, it is not found in the Appendix No. 51.

It may be remarked, in general, of the particulars given by the Honourable Committee in that Appendix, that they are not proposed as new matter which has never before been brought to any account, but as being of the nature of loss or unproductive expenditure, and as having in that character occasioned a defalcation in the Honourable Company's general state, Territorial and Commercial, of 11,020,566 *l.*; for this purpose they are equally effectual, whether Territorial or Commercial. The deficiency I do not question. That the particulars mentioned by the Honourable Committee have contributed to produce that deficiency I do not dispute; every thing of a similar character must necessarily have contributed to it; but I confidently believe that they are either Commercial, or in the instances in which they are Territorial, they have already been introduced (with possibly some minute and unimportant exceptions) into the Tables A and B; in which case, the position is incontrovertibly established, that the defalcation on the Honourable Company's general affairs is not Territorial but wholly Commercial.

3, Copthall-buildings, London, 17th Dec. 1831. (signed) *Rob. Wilkinson.*

(No. 7.)—Letter from *T. Hyde Villiers*, Esq. to Mr. *Robert Wilkinson*, dated, India Board, February 8, 1832.

Sir,

IN reference to your letter of the 17th of December, I beg to enclose some remarks on the Answers which accompanied your letter; and I shall be obliged by your favouring me, at your earliest convenience, with any observations which you may wish to make thereon.

I am, &c.

(signed) *T. Hyde Villiers.*

(Enclosure in No. 7.)

REMARKS on the Statements relating to the Finances of India, forwarded by Mr. *Rickards.*

THE Accounts prepared under the direction of Mr. Rickards have in view, it is presumed, to support the position laid down by that gentleman in his evidence before the Committees of both Houses of Parliament, that so far from the East India Company's Commerce having assisted the Territorial concern, the former has not only constantly received extensive support from the latter, but the whole of the debt of India, since 1793, has been incurred exclusively for Commercial purposes.

The principle of the Statements now referred to, and the results drawn from them, appear to be the following, as may be gathered from the documents themselves, and from the explanatory letters of Mr. Wilkinson, the accountant employed by Mr. Rickards, which accompanied them. It is first asserted, that none of the Accounts before Parliament contain materials for an accurate statement of the Company's Commercial affairs: it is hereupon assumed, that as what pertains to the Territorial branch of the finances is fully set forth, if the resources and disbursements of that branch are first accurately ascertained, it will become apparent what has been the real condition of the Commercial concern, and " whether and in what degree" relief has been derived by the Territory from the Commerce, or the contrary.

The first Statement (A) professes to show that the Territorial revenues were sufficient, with the aid of a loan of 2,500,000 *l.* in the course of the period, not merely to defray the Territorial charges abroad and at home, (provided, however, only so much interest on the debts is included as is assumed to have been occasioned by loans for political purposes), but likewise that they would have discharged the debt outstanding in 1793, and that a surplus of 5,704,870 *l.*, in 1826-27, would have remained to the Territory.

A second Statement (B) exhibits the whole of the revenues and the net increase of the India debt as the Territorial resources, on which, charging the whole expenditure, including all the interest on the debt, there still results a surplus receipt in 1827-28 of 11,208,417 *l.* which is said to be wholly unaccounted for, unless applied to Commercial purposes. To this surplus is subsequently added (in the letter dated 10th May 1831) the difference between

the total interest paid, viz. - - - - - - - -	£. 52,352,803
And the total interest on the debt alleged to have been incurred for Political purposes in Statement A stated at 11,208,417 *l.*, but which should be - - - - - - - - - - -	11,389,043
that difference - - - -	40,963,760
added to the surplus above shown of - - - - -	11,208,417
makes a Total of - - - £.	52,172,177

Which

Which sum, it is asserted, "has been applied to Commerce from Indian revenue, and loans "ultimately charged to Revenue, in 35 years, from 1793 to 1828."

Or, as it is represented in another form,

Territory, between 1793 and 1828, has been deprived of its surplus of -	£. 4,347,675
And has been burthened by Commerce with a debt of - - - -	47,824,502
Producing the same result - - - £.	52,172,177

These Statements thus profess to have accomplished what a Committee of the House of Commons, after three years' laborious investigation, with access to every source of information, declared it impracticable to determine; namely, what portion of the Company's receipts and expenditure, before the year 1814, belonged to each of the two great branches of their concerns.

4th Report, 1812, p. 452.

The want of a separation of the Political from the Commercial transactions of the Company in their Accounts previous to 1814 must always render it impossible to decide this point satisfactorily, or to ascertain what part of the India debt was incurred during that period for Commercial, and what for Political purposes. The solution of these questions is not the present object: it is proposed only to show, by a few remarks on some of the more extensive errors of the Statements under review, that they are insufficient to answer the ends for which they have been prepared, or to establish the conclusions drawn from them.

As it is assumed that whatever of receipts, either from revenue or from loan, is not accounted for in the two Statements has been applied to Commerce, it is evident that omissions, either of current Territorial charge or of expenditure, increasing the value of the Territorial property or assets, must equally render the conclusions fallacious. This remark is as applicable to the Account A as it is to the Account B: for although the former contains chiefly revenue on one hand and charge on the other, yet it professes to bring to account as a receipt as much debt as was required for Territorial purposes, and as a charge as much interest as was occasioned by that debt. Whatever therefore had a tendency to increase the debt and the interest, must proportionately alter its result.

In proceeding to notice some of the errors apparent in the Statements, the earliest period will be most attended to, because the want of separation in the Accounts leaves more room for erroneous representations, and because the Accounts of that period have undergone the investigation of a Committee of Parliament, the result of which is on record.

The first omission that attracts attention in the Statement A is, that the column headed "Net Charges of St. Helena" is entirely blank during the first 16 years. A note intimates that these charges "are supposed to be included in those for Bencoolen, &c. until 1809–10, when they begin to be separately stated."

That a part of the supply to St. Helena, namely, that from India, is included with those to Bencoolen, &c., is true, but it is clear, on the face of the Accounts, that but a small part is there included, and that the chief supply to the island is from England, for, first, in Appendix No. 51 to the Fourth Report, in which the deterioration of property from 1793 to 1810 is accounted for, besides the surplus charge in India, which includes the supplies to Bencoolen, &c., there is inserted (page 520,) as an additional expenditure, Charges and

Losses at St. Helena adjusted - - - - - - - - - -	£. 1,046,653
And for the purchase of Dead Stock at St. Helena - - - -	58,698
Total - - - £.	1,105,351
2dly, In the same Account, from the total "Supplies to Bencoolen, &c. is deducted the supply to St. Helena, included in it, which amounts only to - - - - - - - - - - - - - -	131,406
Leaving still - - - £.	973,945

not charged in the Indian Accounts.

3dly, By reference to Appendix No. 19 to the same Report, which distinctly states the sources whence St. Helena derived her funds, it is evident that by far the larger part was derived from England, and consequently could not be included in the charges of the Indian Governments.

As the Statements now referred to profess to include every Territorial charge abroad and at home, and as they include the charge of St. Helena in the later years, the net charge of 973,945 *l.*, above shown, ought to have been charged against the Territory. Such also was the principle adopted in the plan of separation of 1814. As a Territorial charge, it must have been provided for by an equivalent issue from Territorial resources in India. To the sum above stated must be added, therefore, interest on the amount during the greater part of the period; for in most of the years subsequently to 1796–7 the revenues were insufficient to defray the charges, and money must have been borrowed to defray this charge; and further, in the several years in which the surplus of receipt from Revenue was insufficient to discharge the interest on the debt, new debt must have been contracted for that purpose; so that in order to correct the statement of interest adopted in the Account, compound interest on much of the amount to which this remark applies should also be added.

Another class of Territorial payments of large amount is omitted from the Statements, consisting of the sums paid to the creditors of the Nabobs of the Carnatic and the Rajah of Tanjore. The amounts are—

Payment to Creditors of the Nabobs of Arcot in India - - -	£. 1,058,953
Ditto to ditto of Rajah of Tanjore in India - - - - -	64,044
Ditto to ditto of the Nabobs of Arcot at home - - - -	10,960
Ditto to ditto of Rajah of Tanjore, ditto - - - - - -	225,056
Total - - - £.	1,359,013

3d Report, p. 365.
4th Report, p. 440.

These payments are described, in the Third Report of the Select Committee, as "an issue of money, or loss, which may, in fact, be classed among the charges of the Indian Territories;" and in the Fourth Report, as "immediately connected with the Territorial affairs of the Company."

They constituted a charge or incumbrance on the districts which the above-mentioned native princes made over by treaty to the Company, arising out of debts not contracted by the latter, and not having formed a part of their resources.

3d Report, App. Nos. 18 & 19.
2d Report, App. No. 4.

Interest on the amount also requires to be added, upon the principle described under the last head. It should be observed, that in the years in which the principal part of these payments was made at Madras, there was a deficit at that Presidency, and money must have been borrowed to meet them.

	£.
Doubtful - -	5,953,660
Increase of Dead Stock,	862,992
D° - St. Helena,	58,698
	£. 6,875,350

Of a large class of charges not included among the sums charged on the revenues, denominated by the Select Committee, in their Fourth Report, "Doubtful as to the part Territorial or Commercial," and "Increase of Dead Stock," which, from 1793 to 1809, amount together to 6,875,350 *l.*, no part is admitted into these Statements as chargeable to the Territory, except the supplies to Bencoolen, Prince of Wales Island, &c. amounting to 2,817,146 *l.* thus leaving a further sum of 4,058,204 *l.*, which, although the precise proportion chargeable to each branch cannot be ascertained, it would be very inequitable to place to the exclusive account of the Commercial branch.

App. to 3d Report, Nos. 22 & 23.

The losses by consignments from port to port in India, and losses at the several Presidencies, amounting to 1,334,831 *l.*, must be, to a great extent, political, considering the extensive consignments of political property in constant transit by sea during a period of more or less active warfare, and the losses arising in exchange, and other contingencies affecting the financial transactions of so wide a range of Territorial possession; and considering likewise, that the Company do not generally carry on any trade from port to port in India.

Accounts of 1830, Nos. 16 & 17.

Further similar losses were incurred from 1809–10 to 1813–14, amounting to 301,598 *l.*; and from 1814–15 to 1826–27, losses, exclusively of a Territorial character, amounting to 349,307 *l.*

4th Report, p. 448.

Of the sum paid to the Public as "participation," namely, 500,000 *l.* the Territorial revenues must be considered as supplying at least one moiety. The Committee of 1812 denominated this sum "a certain portion of the profits accruing to the Company from the prosperity of their Revenue and Commerce." The Territory, therefore, should certainly bear a share of the payment.

Papers of 1830, No. 24, p. 55:

Increase of Dead Stock	£.
not in Charges 1792–3 to 1808–9 - -	921,690
D° - - - to 1826–27 (Accounts of 1830, No. 19) - - - -	90,946
	£. 1,012,636

Of the Increase of Dead Stock, if a judgment may be formed by the proportion belonging to the two departments as shown in the Account of Stock per Computation of 1814, wherein the Company apportion what they consider to belong to each, nearly the whole of the sum of 1,012,636 *l.* disbursed on that account, would be Territorial, for the Territorial Dead Stock was valued in 1814 at 11,735,532 *l.*, the Commercial at 475,364 *l.* only.

£.
1,334,831
301,598
£. 1,636,429

There are other particulars under this head, a proportion of which might be easily shown to have been political, but their amount is not such as to render it of importance for the present purpose. Looking, therefore only to the three heads above noticed; if, of the losses which are brought to account

from 1792–3 to 1813–14, amounting to 1,636,429 *l.*, the sum of - -	£. 1,000,000
which is less than two thirds, be considered Territorial, and to this be added the Territorial loss since, viz. - - - - - - - - -	349,307
and if, of the participation paid to the Public, one half is assumed to be on account of the Indian revenues, being - - - - - - - -	250,000
and if, further, of the Increase of Dead Stock there be considered as Territorial - - - - - - - - - - - - - -	850,000
the result will be, that an additional sum of - - - - - - -	£. 2,449,307

should have been included, under these heads alone, as expenditure on Territorial account, together with the interest accruing upon it, in consequence of the insufficiency of the revenues to defray the demands upon them in most years, which caused a proportionate augmentation of the India debt.

Thus, under the three principal heads which have already been considered payments out of Territorial resources are not brought to account in the Statements under review, although

although contained in the documents from which those Statements were drawn, to the amount of 4,782,265 *l.*

	£.
St. Helena - -	973,945
Carnatic and Tanjore Debts - - -	1,359,013
Miscellaneous - -	2,449,307
	£. 4,782,265

If only simple interest upon this amount, at the rate borne by the India debt, were added to it from the periods of disbursement to the year 1827–28, the effect of the omission of these charges would appear to be not less than 13,000,000 *l.* sterling.

But further and more extensive alterations would still be requisite.

Another important head of expenditure, not referred to in the Statements under consideration, is the advances made on account of His Majesty's Government for the capture and maintenance of Ceylon and the Eastern Islands, for the fitting out of expeditions during the late war, for supplies to the King's Navy in India, &c. &c. It appears, from the Appendix, No. 17 to the Third Report, that a large amount advanced on this account, and admitted by the Select Committee of 1808, was included in the charges and interest paid in India, and was charged upon the Revenues, but that a further part was not so included. In the Appendix No. 51 to the Fourth Report, already referred to, this part is stated to amount to 1,661,345 *l.*, which, in the Third Report (page 365), is explained as consisting of the balance of admitted charge shown in Appendix No. 17;

viz. - - - - - - - - - - - - - - - -	£. 1,223,571
And the sum advanced by the Company, but not admitted by the Select Committee as a charge against the Public, amounting to - - - -	437,774
Total as above - - -	£. 1,661,345

This is evidently not a Commercial charge; and as it appears from the Account No. 17, that it occurred almost entirely in years in which there was a Territorial deficit, it follows that debt must have been incurred to meet it; which, together with the interest thereon, and the further debt and accruing interest in the majority of years when the produce of the revenues was insufficient to defray the charge of interest, constitutes a sum of large amount, which, although the transactions producing it are of a character different from such as are usually included under the Territorial branch of the Company's concerns, was strictly a political disbursement, and could not be "applied to Commerce." The amount, therefore, forms a further deduction from the funds assumed to have been so applied.

Here it may be proper to notice, that a continuation of this Account to a later period was presented to the Committee in the last Session, subsequently to the date of the Statements now under review. This Account embraces the extensive advances which were made for the outfit of the expeditions against the French and Dutch islands, and the subsequent supply of the captured settlements, which advances stand on a similar footing with those above-mentioned. It is stated expressly that no part of them was included in the charges, and for the most part they could only be supplied by a large increase of the Indian debt.

App. to Evidence presented in Oct. 1831, No. 41.

The amount of these advances, from 1806–7 to 1821–2, was -	£. 11,277,839	
And the interest upon them is calculated at - - - - - -		£. 7,271,220
Credit is given for repayments by His Majesty's Government made in England, amounting in principal to - - - -	9,291,940	
The interest on which is stated at - - - - - - - - - -		3,574,903
Leaving a balance of Principal of - - - - - - -	1,985,899	
And of Interest of - - - - - - - - - - - - - -		3,696,317

Which balance was settled by compromise in 1822.

None of the above transactions are connected in any way with Commerce. The debt incurred on account of these large advances, instead of being incurred for Commercial purposes, as is alleged, was occasioned entirely by the demands for the King's service. As the repayments were made in England, they did not operate to reduce the debt thus increased, although, by their application to Territorial demands at home, they prevented, to that extent, its further increase.

But further, in the assumption that the surplus of Territorial receipts from revenue and from loans, which is made to appear in the Account B, is "wholly unaccounted for, unless it has been applied to Commerce," the fact has been passed over, which is evident on the face of the statements from which that account was compiled, that the *Balance of Cash and Bills in the Indian treasuries* has greatly increased during the period under review, and that by far the larger part of that increase must have been Territorial. Such balance must have been created by the application to that purpose of an equivalent amount of the Territorial resources, which amount has not been expended at all, and consequently cannot have been applied to Commerce.

On reference to Appendix No. 8, of the Second Report (1810), and to the continuation of No. 6 of the Papers of 1830, it will be seen that the increase of the balance in the treasuries, between 1793 and 1828, was 6,251,867 *l.* The increase has been gradual, but more rapid during the last half of the period. In the years in which it was not supplied from surplus Revenue, it must have been produced by the retention in the treasuries of money borrowed; not only, therefore, will the sum assumed to have been applied to Commerce be greatly diminished by the requisite correction arising from the actual amount of increase under

		£.

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

this head, but a still larger sum, in interest, with which the Territory is said to have been "burthened by Commerce," must, under this view, be carried to the account of the former.

Accounts of 1830, No. 6.

That the cash so accumulated is mainly Territorial will be evident, when it is remembered that the increase has arisen from the multiplication of treasuries scattered over vast tracts of territory acquired during the period under review, arising from the cessions or conquests enumerated in the Narrative No. 2, (D) of the Papers of 1830, nearly the whole of which treasuries are exclusively maintained for Territorial purposes. This view is confirmed by the fact, that when the cash in the India treasuries was carried to separate account in the year 1814, the whole that was considered to be Commercial was 207,147 *l.* out of 5,887,032 *l.*

Continuation of Accounts of 1830, No. 6.

In 1828, the Commercial cash is stated to amount to 383,939 *l.* out of a balance of 8,106,360 *l.*

Further decrepancies in the Statements under consideration might be pointed out, some of them of not less amount than the heads of omitted charge first noticed in this Paper; but it is presumed that enough has been shown, and shown chiefly from the documents whence the materials of the Statements were selected, or from others in the same collections, to make it evident that the Statements cannot be relied upon, and that they by no means establish or countenance the assertions which gave birth to them. It may be further observed, that the Accounts in question equally fail in supporting the views taken by Mr. Rickards in the Statements presented by him to the Committee of the House of Lords in 1830, with the principles as well as the results of which the Accounts now brought forward are in several respects at variance.

Lords' Evidence, p. 337.

(No. 8.)—Letter from Mr. *Robert Wilkinson*, to *T. Hyde Villiers*, Esq. dated, 3, Copthall-buildings, 21 Feb. 1832.

Sir,

I REGRET that circumstances have rendered it impossible for me to transmit more promptly the accompanying observations on the Papers which I had the honour to receive from you. It is difficult to arrive at perfectly conclusive results with respect to detached portions of the Account between the Territorial and Commercial branches of the Honourable Company's concerns, unless principles be first agreed upon, and details investigated which the Honourable Company alone can furnish.

I have, &c.

(signed) *Robert Wilkinson*,

EXPLANATIONS, &c.

£. 973,945 charges of St. Helena.

WITH respect to the first of the objections stated to the Tables, viz. the sum of 973,945 *l.* charges of St. Helena, there is nothing in the Appendix No. 51, to the Fourth Report, which could lead to any other conclusion than that this sum is included in the larger amount, 2,817,146 *l.*, as explained in my Statement of 17th December; if, however, it is to be considered as additional to that amount, its admission against Territorial revenue would only be subject to the general observation, that the whole of the expenses of

Bencoolen, Prince of Wales Island, &c., including St. Helena, to 1808-9 - - - - - - - - - - - -	£. 5,069,114
And of St. Helena separately, from 1809-10 - - - - - -	1,887,462
Together - - - -	£. 6,956,576

although introduced into my Tables for the purpose of showing the result of the account of Indian revenues, even admitting these charges in conformity with the example in the Appendixes to the Reports, but subject to the explanations afterwards given by the Honourable Committee of their Non-territorial or only partially Territorial character, yet that in my judgment either the whole or by far the greater proportion ought to be struck out from the account of Territorial charges as strictly appertaining to Commerce, those establishments having been founded and maintained, as it appears to me, not with any view to Territorial objects, but for purposes exclusively Commercial.

£ 1,359,013 payment to the creditors of the Nabob of Arcot and Rajah of Tanjore.

On the payments to the creditors of the Nabob of Arcot and the Rajah of Tanjore, I have nothing to add to the remarks in my Statement of 17th December, except that neither the "Observations," nor the Appendix No. 51, to the Fourth Report, establishes the position that 1,058,953 *l.*, and 64,044 *l.*, paid in India, and constituting the principal part of the amount, are not included in the Madras disbursements, and consequently not included in the Territorial charges.

Doubtful - -	£. 5,953,660
Increase of Dead Stock	862,992
Ditto at St. Helena -	58,698

The next item in the "Observations," viz. 5,953,660 *l.*, denominated by the Select Committee "doubtful," includes the charge for St. Helena 973,945 *l.*, which had already been treated of separately; and of the remaining items, I have only to observe, in addition to my Statement of 17 December, that I find nothing in the Appendix No. 51, to take the Dead Stock in India, 862,992 *l.*, and ditto,

ditto, St. Helena, 58,698 *l.*, out of the general rule thus described in No. 19, p. 40, of the Papers of February 1830, and in various parts of the Reports: "These stores (speaking of Dead Stock) "are composed partly of stores purchased and paid for in India, and partly of stores purchased and paid for in England. The cost of the former has been included in the Indian charges; the cost of the latter has been stated in the Home charges." Nor does it appear what portion of them is Territorial; nor does either the Honourable Committee, or the writer of the Observations, deduce from the whole any specific sum as chargeable to Territory.

£. 500,000 paid to the Public.

I have nothing further to remark on the 500,000 *l.* paid for participation of profits to the Public.

Losses from Port to Port £. 1,334,831, and additional from 1809–10 to 1826–7

With respect to the losses by consignments from port to port in India, 1,334,831 *l*, whatever importance might reasonably be attached to the description now given of the Honourable Company's transactions between port and port, the remarks in my Statement of 17 December still hold good to their full extent. Whether any, and what part, should be charged to Territory, must depend on an analysis, which the printed Papers do not supply the means of undertaking, and without such an investigation it is difficult to conceive that the Commissaries or others who supplied those shipments which were Territorial, did not charge them to some account in which credit has already been taken for them as disbursements or charges, and in that case it is erroneous to bring them forward a second time in the character of losses. The same reasoning is considered to apply to the additional sums of 301,598 *l.* from 1809–10 to 1813–14, and 349,307 *l.* from 1814–15 to 1826–27.

Increase of Dead Stock *not in Charges.*

1792–3 to 1808–9	-	£. 921,690
1826–7, D°, N° 19	-	90,946

Without further information it is difficult to understand and impossible to ascertain that the sum of 921,690 *l.* and 90,946 *l.* increase of Dead Stock, are not included in the charges either of India or England at the various periods when the disbursements for them were made, and no explanation is given which requires that the rule before referred to must in this case be dispensed with. It is obvious that if they were included in political stores shipped from England or purchased in India, they are comprised as charges in my Tables.

The writer of the Observations proceeds to remark, that if the various particulars enumerated above were brought to account, they would constitute together an additional amount of charge against Territorial revenue of 4,782,265 *l.*, or, with interest to 1827–8, not less than 13,000,000 *l.*; but I beg leave to suggest, that the premises must be much better established before they can be admitted in the character contended for; nor, if they were, can it be thought sufficient merely to correct one side of the account while there are other large amounts to be brought to the opposite side, which ought in fairness to be considered in connexion with them, such as the following:

Loan in England in 1812, charged with the interest to Territorial revenue, for which Revenue received nothing - - - - - -	£. 2,500,000
Interest thereon - - - - - - - - - - - -	1,307,985
Loan from the Nabob of Oude, liquidated by a grant of Territory - -	1,109,975
	£. 4,917,960

These sums are not introduced into my Tables as receipts on account of Territory, and therefore are to be considered, until some general adjustment, embracing all these and other particulars, shall be made, as advances by Territory to Commerce, for which the former has not had credit, and constitute more than a sufficient set-off against the above 4,782,265 *l.*, even if the 6,956,576 *l.* disbursed for Bencoolen, St. Helena, &c., were allowed to remain a charge against Territory.

£.1,223,571 and £. 437,774, claims on the Public for Ceylon and the Eastern Islands.

The next items of 1,223,571 *l.*, the balance of admitted, and 437,774 *l.* of unadmitted, claims against the Public, for the capture and maintenance of Ceylon and the Eastern Islands, &c. are introduced in the following manner: "It appears from the Appendix No. 17 to the Third Report, that a large amount advanced on this account, and admitted by the Select Committee of 1808, was included in the charges and interest paid in India, and was charged upon the Revenues, but that a further part was not so included;" this further part was 1,661,345 *l.* composed of the two above-mentioned sums. This, it is said, was not a Commercial charge; that it was almost entirely occasioned in years in which there was a Territorial deficit, and that therefore debts must have been contracted to meet it. It is allowed that "the transactions producing it are of a character different from such as are usually included under the Territorial branch of the Company's concerns," but that it was "strictly a Political disbursement, and could not be applied to Commerce." Here are one or two assumptions; as, first, that there was a Territorial deficit in the years which gave occasion to these transactions; and, secondly, that they are necessarily to be charged to Territorial revenue. But to assume as a matter of course that there was a Territorial deficit in those years, is to take for granted what will not readily be admitted to the extent demanded, nor without adding to the revenues of current years the remaining surplus upon the Territorial receipts of former years, on an account fairly stated; and it is contended, that such an account would exhibit, not a deficiency, but a large surplus of Revenue for the whole period. Whether these expenses are properly chargeable to Territory must depend, as it appears to me, upon some considerations which have not been alluded to in the Observations, and, chiefly, whether the security or increase of the Indian Territorial revenue was the object of them; but this supposition is very positively negatived by the Honourable Company in their correspondence with the Lords of the Treasury on the subject of their

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

Appendix to First Report, p. 52.

claims for reimbursement, as given in the Appendix to the First Report; they repeatedly declare that these expeditions were not considered necessary by the Company to those objects, and never would have been undertaken, except at the instance of the Government, against whom their claim is preferred, upon that ground, for the whole amount. What branch of the Company's concerns was it then which was to derive advantage from these undertakings, since Territorial revenue was certainly to receive none? They urge upon the consideration of the Lords of the Treasury the disadvantages arising to the Company from a state of war in India, arising out of European warfare; but subjoin, "although it may be admitted, that notwithstanding these additional imports, the trade of the Company during the last war flourished beyond example; still this circumstance produced considerable advantage to the State, in the mode above described, whereas the Company by no means benefited in proportion, because, from the heavy expenses of their military establishments, and other incidental causes, they have been obliged to borrow money in India at very high rates of interest, to supply the investments for Europe, which have furnished the sales at home, on which Government have reaped so great advantage, from the duties levied thereon." It is not surprising that the trade of the Company should appear to flourish under a system which allows the investments for Europe to be furnished from loans in India, not charged to Commerce, but to Territorial revenue, while the payments in England for Territorial account are likewise charged to Indian revenue. That the investments were so provided is here distinctly admitted; and something of the process by which Territory is thus burthened, and Commerce relieved, will appear from the consideration of the Appendixes No. 4 to the First Report, and No. 17 to the Third Report. We collect from the former, that the Company's claims on the Government amounted, in principal and interest, to 8,461,331 *l.*; and from the latter, that of this amount 8,212,372 *l.*, principal and interest, have been admitted; of which there has been 3,675,533 *l.* principal, and 3,313,268 *l.* interest, placed to the account of Indian charges, and consequently the principal, 3,675,533 *l.*, is included in my Table A in diminution of the balance which would otherwise have appeared as the surplus of Indian revenue; yet the whole, together with the 1,223,571 *l.*, alleged not to have been carried to the same account, are claimed from and liquidated by the Government. I am sensible that some part of this claim has not been repaid to the Company in money; there is a large deduction for Pay-office and Victualling-office demands; but it seems reasonable, upon the supposition that Territory was correctly charged with these disbursements in the first instance, that any monies received from the Government in repayment should pass to the credit of Territorial revenue: and it appears, from Appendix No. 4 to the First Report, that no less a sum than 3,400,000 *l.* of principal, carrying 841,900 *l.* interest, was so received in Leadenhall-street, from August 1798 to July 1806. It appears to me, therefore, that in the statement of Indian revenue, either the above 3,675,533 *l.* must be withdrawn from the charges, or 3,400,000 *l.* must be added to the receipts. When this correction is made, viz. when 3,400,000 *l.* are admitted as a receipt on account of Territorial revenue, if the balance of 1,661,345 *l.* be held to belong to the administration of the government of India, it would be rightly placed amongst the Indian charges.

Balance of Charges on the French and Dutch Islands, Principal £ 1,985,899. Interest £ 3,696,317.

The next item exhibits a balance of 1,985,899 *l.* principal, and 3,696,317 *l.* interest, abstracted from Territorial revenue or Indian loans, and applied to the outfit of expeditions against the French and Dutch Islands, and subsequent supplies to the captured settlements, from 1806–7 to 1821–2, which are represented to "stand on a similar footing with those above-mentioned." The first remark to be made upon this item is, that the Statement to which it refers, Appendix No. 41 to Evidence presented in October 1831, was printed subsequent to the preparation of my Tables, and could not therefore have been consulted by me. The second is, that when the documents upon which those Tables are founded are described as containing "the total annual amount of the Revenues and Charges" of India; and when this description is adopted and confirmed by the Honourable Committees, it could scarcely have been expected that an account extending in amount to so many millions, and in duration from 1806–7 to 1821–2, should have remained unnoticed during the whole period, to be first brought forward in 1831, and the balance claimed as a charge against the Territorial revenues of India. And, considering the example presented by the preceding part of the account, wherein similar advances have been *included* in the Indian charges, least of all could it have been expected that in this continuation of it they should have been *excluded*; yet such is represented to be the fact, both in the Observations and in a note at the foot of the printed Statements. But it moreover appears, from the Treasury Minute alluded to, that His Majesty's Government liquidated the account, by placing to the Honourable Company's credit, as from 1812, 1,300,000 *l.*, which, when the interest from that period is added, will leave but a comparatively inconsiderable balance (if any) on this head of claims. This account, however, appears to me to stand upon a different footing from the preceding one, in this respect, that if the disbursements contained in it are to be considered as charges appertaining to the administration of the Government of India, which I am not prepared to admit, and have not been liquidated, they constitute new matter, never before disclosed, to be brought to account against the Territorial revenues of India, which must also have credit for the payments received from Government, and otherwise, on account of them. But there should first be an investigation of the nature of these charges with reference to the principal, and an ascertainment of the true state of the Indian revenue, as a distinct and separate account, with reference to the necessity for borrowing and the amount of interest claimed. But although I have thus supposed a case in which the subject of the two preceding articles would

would be placed to account of Territorial charges, I must beg leave to retain the opinion, that these expeditions were undertaken mainly with a view to the security and advantage of Indian commerce, and that the expense ought to be divided in proportions, to be fixed by competent authority, between Commerce and Territory.

It is remarked that these advances "could only be supplied by a large increase of the Indian debt; but this considered alone proves nothing with respect to the propriety of charging these loans with the interest to Territorial revenue; it should further be shown, by an account fairly stated, that the exhausted state of the Indian treasury was occasioned by a deficient revenue; and if it should appear, on the contrary, upon such an account, that there had been a sufficient surplus of revenue, but that the exhaustion of the treasury was occasioned by the surplus having been applied, like the loans referred to in a preceding extract, to the supply of investments for Europe, there would manifestly be as great an impropriety in charging these as there was in charging those to Territorial revenue.

It is represented as a great oversight that the increased balance of cash and bills in India in 1828 over that of 1793, 6,251,867 *l.* has not been admitted as accounting for the surplus of receipts over disbursements for Territorial account 11,208,417 *l.* in the Table B. The expectation that it should have been so admitted can only be founded upon a mistaken view of the nature of that Table; it does not purport to be a statement of Indian receipts and disbursements alone, but professes to collect from the accounts in India and England, considered as one general cash account, all receipts and disbursements which, in the printed Papers, are treated as appertaining to Territorial revenue and charges: it brings, in addition to the revenues, the loans of India to the debit of the account, and admits to its credit the interest on those loans, in addition to the charges, as well in England as in India, designated Territorial, in order to try the truth of the allegation, that the Indian loans were necessary to supply the deficiency of Indian revenue, it being obvious that if such were the case, there could be no balance upon an account containing the whole of those receipts and payments; and it is shown that the disbursements amount to less than the receipts from revenue and loans by 11,208,417 *l.*; this therefore may, for that purpose, be called the Territorial portion of the general cash account in India and England, as collected from the representations of the Company in the printed Papers. But if we advert to the Commercial branch of the same general account, we find it asserted by Mr. Melvill, in his Evidence, Second Report 1830, p. 763, that Commerce has contributed to Territory, or, which is the very same thing, to the general fund, from 1813–14 to 1827–28, the sum of 19,384,774 *l.* Now the only way in which Commerce could make this contribution would be by supplying to the general fund 19,384,774 *l.* more than it has withdrawn; if therefore the surplus said to have been contributed by Commerce has not been diminished by Territorial demands, (which cannot be if the Table contain the whole), there ought to remain upon the general cash account,

		£.
The balance of the Territorial account - - - - - - - - -		11,208,417
And of the Commercial ditto, from 1814 to 1828, to say nothing of the previous alleged balance of 12,044,934 *l.* - - - - - - - -		19,384,774
Making together - - - - - - - - - - - -		30,593,191
But the balance actually found is, in India - - -	£. 8,106,360	
in England - - -	312,638	
		8,418,998
There is therefore an amount of - - - - - - - - - £.		22,174,193

Which is a deficient balance, and to be debited to Territory or Commerce, or to both, in proportions to be adjusted, before it can be ascertained to whom the balance really existing belongs. But considering the Table B as the Honourable Company's own representation in the printed Papers of what ought to be charged to Territory, it is thus shown to be impossible that Commerce can have contributed 19,384,774 *l.*, or any other sum, to Revenue: on the contrary, the balance supplied by Territory alone, even after placing to that account the whole of the interest, we see is not forthcoming. But it is further maintained that the Table A contains in effect the true statement of Territorial revenue and charges, (subject to adjustment on both sides of the account, which will probably not materially affect the result); and in that case, Commerce must be debited with all the loans and all the interest not required to assist Territorial revenue, and thus we return to the position from which we originally set out.

3, Copthall-buildings,
21 February 1832.

(signed) *Robert Wilkinson.*

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

FURTHER OBSERVATIONS on the STATEMENTS forwarded by Mr. *Rickards*.

THE second paper of "Explanations," in reply to the "Observations on the Statements relating to the Finances of India, forwarded by Mr. Rickards," might have been suffered to pass without particular notice, under the impression that every impartial reader who is conversant with the subject would see that the objections which have been urged are in no respect invalidated by those Explanations, were it not that the attempt made to evade their force, and, in some instances, to occupy new ground, may render a few brief observations in reply desirable, in order to obviate misconception upon a question of some intricacy, not usually much investigated, but which has now become one of considerable interest.

Before the details are taken up, it may be proper to recal the grounds on which the Statements put forward by Mr. Wilkinson rest, and what has been the drift of the remarks made upon them. Those Statements professed to show, that if every description of the Territorial disbursements of India were brought in charge against the revenues, from the year 1793–94 to the year 1827–28, inclusive, the revenues would have been more than sufficient to cover them; and consequently that the debt incurred must have been on Commercial, not on Territorial account. This, it is assumed, is corroborated by a further statement, showing that if credit be given for all the receipts from loans as well as from Revenue, and all charge on Territorial account be set against the aggregate, a considerable surplus will remain, which is unaccounted for, unless it has been expended upon the Company's Commerce, to which it is asserted that the surplus, which is made to amount to above 52 millions, has been applied.

Supposing the resources to be accurately carried to account, which is a comparatively simple process, it is evident that the validity of the conclusion drawn from such a statement entirely depends upon the fidelity with which every charge of a political character is brought into view; and this point is of the more importance when the addition of interest, and often of compound interest, according as the annual result and the amount of debt alters from year to year, so extensively affects the *general* result of a long period.

The object, therefore, of the observations already made has been chiefly to inquire into the accuracy of the charges, whence it has become necessary to point out omissions in the Indian charges alone, so numerous, and of such magnitude, as render the Statements in question wholly insufficient for their professed purpose.

It should however be remarked, that the errors in these Statements are not confined to the side of the charges, for under the head of "Increase of Debt by additional Loans," in Table B, a considerable sum is included which does not fall under that description, consisting of arrears of allowances to the civil and military servants of the Company, interest due, &c. which, though they constitute a debt, could not have been available as supplying additional funds. This over-debit to the Territory affects the result materially in the course of the period reviewed.

	£.
In 1792 the amount of them was - - - - - -	1,150,172
In 1828 it was - - - - - - - - - - -	2,554,335
Being an Increase of - - - £.	1,404,163

To proceed to the expenditure from revenue or from loans, omitted in the Tables; *First*, Charges of St. Helena, 1793–94 to 1808–09, 973,945 *l.* This was shown in the "Observations" not to have been included in the charges taken as Territorial in the Tables, on three grounds:

1. Their being introduced by the Committee of 1812, in Appendix No. 51, to the Fourth Report, (the object of which was to account for a deterioration of property in the period above stated), as an expenditure over and above the surplus charge in India, of which "supplies to Bencoolen, Prince of Wales Island and St. Helena," formed a part.

2. The amount of 131,406 *l. only* being deducted in that Appendix from the above item of supplies as the amount advanced *in India* on account of St. Helena; and,

3. The supplies to St. Helena appearing from Appendix No. 19, to the same Report, to be drawn almost entirely from England, not from India.

It may be added that it is a fact well known to those conversant with the Company's accounts, that the charge of St. Helena has always been stated as a branch of the home expenditure.

In the "Explanations" it is asserted, without any attempt at proof, that there is nothing in No. 51, of the Fourth Report, which shows that these charges have not been before included. The third proof to the contrary is wholly unnoticed. But it is added, that if this is to be considered as an additional charge, its admission will only be subject to the general observation, that the whole, or the greater part of the supplies, not only to St. Helena, but to Bencoolen and Prince of Wales Island also, amounting to 6,956,576 *l.*, should be struck out of the Territorial charges, as strictly appertaining to the Commerce.

To this it may be replied, that it is the first time that the charge of Prince of Wales' Island has been asserted to be a Commercial charge, and that no argument whatever is adduced in support of the position; and with respect to Bencoolen and St. Helena, that the authorities invested by the Legislature with power to decide the point, have declared the charge of those places to appertain to the Political branch; and unless it can be shown

shown that they stood on a different footing previously to 1814, it must be so considered Political in the earlier period. When a division of expenditure into Political and Commercial is to be made, the cost of maintaining forts and garrisons for the occupation of places unproductive as Commercial establishments, naturally falls under the former description, and it was so classed accordingly. With respect to St. Helena, it can never be admitted that the full charge may be introduced in one half of the statement, and excluded in the other

Secondly. Payments to Carnatic and Tanjore creditors, 1,359,013 *l.*

It is observed in the Explanations, that nothing in Appendix No. 51, of the Fourth Report, establishes the position that the sum of 1,122,997 *l.*, paid in India, was not included in the Madras disbursements; but the very fact of the amount being introduced in that Statement, in addition to the "Surplus Charge in India," from 1792–93 to 1808–09 (which is the result of the finances of the three Presidencies, after including all that was inserted in the Madras disbursements), as an additional means of accounting for the deterioration of property in the period, clearly establishes the position that these payments had not been previously included. Another proof is, that they are brought into view in the Third Report[*] of the Committee, which was particularly directed to the consideration of *extraordinary* receipts and payments not embraced in the Accounts yielding "the Surplus Charge in India" above referred to, which were reviewed in the *Second* Report.

That payments attaching to portions of the territories of two native princes which had come into the possession of the British Government in India, should be treated as a "Commercial loss," is too absurd a position to require refutation.

Under this and the last head errors exist to the extent of 2,332,958 *l.*, with all the interest which would accrue from the introduction of them into the Table (A) at an early period.

£.	1,359,013
	973,945
£.	2,332,958

Thirdly. Losses by consignments from port to port[†], and losses at the several Presidencies - - - - - - - - - - - - - - £. 1,985,736
Increase of Dead Stock - - - - - - - - - - - 1,012,636
Participation paid to the Public - - - - - - - - 500,000

1. *Losses*. In the former Explanations of 17th December, it was contended that it was impossible to ascertain how much of these losses was Territorial, and how much Commercial, and therefore the whole was omitted from the Territorial charges. In the Explanations of 21st February it is insinuated, that the whole must have been included in the charges, and therefore cannot be brought forward a second time as losses.

As to the latter point, it is unquestionable, whatever be their character, that they have not been included in the charges. The insertion of them by the Committee in the Appendix No. 51, to the Fourth Report, in addition to the surplus charge of India, proves it. Moreover, the losses at the Presidencies are there described expressly as "not included in the charges;" those from 1809–10 to 1813–14 (Papers of 1830, No. 16) it is as expressly stated in the title of the Account, "have not been inserted in the charges of the said Presidencies;" and those of 1814–15 to 1826–27 (Papers of 1830, No. 17) have precisely the same description. If this were not sufficient, both the losses from port to port, and at the Presidencies, are introduced by the Committee in their *Third* Report, and are consequently *extraordinary* payments not included in the charges. This point is therefore indisputably established from the Papers from which the materials of the Tables (A) and (B) were drawn; and as to the proportion that is Territorial, it was proposed upon grounds stated in the Observations, that of the sum of 1,636,429 *l.* undistinguished, 1,000,000 *l.* might safely be assumed to be Territorial, while the sum of 349,307 *l.* is in the account of those losses declared to be exclusively so; and as no objection has been stated to this division, it follows, that to the further extent of 1,349,307 *l.*, with interest, the Tables require correction.

Vide Appendixes to 3d Report, Nos. 23 & 26.

2. *Increase of Dead Stock*. In the "Explanations" of 17th December, the only remark on this charge is the following: "The cost of the dead stock has been included in the Indian charges, as I well recollect to have read in some part of the printed Papers." In the Explanations of 21st February, it is observed on this point, "I find nothing in the Appendix No. 51, to take the dead stock out of the *general rule thus described* in No. 19, of Papers of February 1830, and in various parts of the Reports: 'These stores,' (speaking of dead stock) 'are composed partly of stores purchased and paid for in India, and partly of stores purchased and paid for in England. The cost of the former has been included in the Indian charges, the cost of the latter has been stated in the Home charges.'"

It

---

[*] The payments in question are introduced, in App. No. 26 to the Third Report, as *Extraordinary* Disbursements. See also Third Report, p. 365.

		£. 1,985,736

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

It would hardly be supposed, that this remark does not apply at all to the articles in question. On reference to the Account No. 19,* it will be seen, that it applies to the head of Military Stores alone, and those of a period subsequent to 1809, whereas the charge now referred to applies to the increase of dead stock *in the Civil Department*, which took place in previous years. It is evident that this is no "general rule" applicable to dead stock; indeed, in the very account referred to (No. 19,) a sum of 90,946 *l.* increase of dead stock, is expressly stated to be "not included in Charges in India."

So also the title of the account of the increase of dead stock (Appendix No. 25 to the Third Report) describes the expense as "not included in the charges."

As the Appendix No. 51, does not determine what proportion of this charge is Territorial, reasons were stated in the Observations why the part chargeable to that branch might fairly be estimated at 850,000 *l.*

3. *Participation paid to the Public*, 500,000 *l.*

Half this sum it was proposed to charge to the Territory, as the Committee of 1812 describe it as composed of profits from the Revenue and the Commerce conjointly. In the Explanations it is contended that it is entirely Commercial, but it seems to have been more a Territorial than a Commercial payment, since it was one of the appropriations of the Revenues of India, and the payment was to be suspended in case of the expenses of war absorbing the resources from whence it was to be derived. Payments affected by war charges falling upon the Revenues of India, could hardly be connected with the Commercial branch, and, certainly, could in no light be viewed as entirely of that character.

Under the third or miscellaneous head, therefore, comprising Losses, Dead Stock, and Participation of the Public, the Territorial expenditure omitted remains as stated in the former Observations at - - - - - - - - - - -	£. 2,449,307
which added to the two former heads - - - - - - - -	2,332,958
makes an aggregate of omissions in principal amounting to - - -	£. 4,782,265

In connexion with these Charges it is urged, that both sides of the account should be subjected to revision, and receipts that are omitted be introduced as well as charges. There is no difficulty in acceding to this proposition, if the Statements were considered susceptible of complete revision; but that is impracticable, and it was considered sufficient to show, by a few obvious instances, that accuracy of principle had been so little observed with regard to the Indian Charges, that the Tables could not be relied upon, and could not establish what was designed by them. Some receipts from loans, which ought to have been included, have it seems been omitted from the Tables. These will be noticed in due course.

The fourth head of omitted charges is Advances on account of the King's Service for the capture and maintenance of Ceylon and the Eastern Islands, &c., 1,661,345 *l.*

It is admitted in the "Explanations," that if this balance be held to belong to the administration of the Government of India, it would be rightly placed among the Indian charges. That it has not hitherto been included among them is clear from its being brought into Appendix No. 51 to the Fourth Report, as an expenditure additional to what is included in the accounts producing "the Surplus Charge," as observed under other heads; as likewise from its introduction among *extraordinary* disbursements in the Third Report not forming part of the ordinary charges (page 365 and Appendixes Nos. 17 & 26.)

How any one who has looked at the accounts of these expenses could, for a moment, suppose them to have been incurred on Commercial account is unintelligible. Besides supplies to the King's navy, they will be found to include advances for expeditions against Manilla, Egypt, Buenos Ayres, the Cape of Good Hope, Java, the Spice Islands, &c. &c. They do not in fact belong to the head of Indian Expenditure, neither the Territorial nor the Commercial, but to a separate account; nevertheless, as having absorbed money borrowed on loan, they constitute one means of accounting for the funds borrowed in India; and in Statements such as those under examination, should be brought in charge accordingly. This amount, added to the sums stated under previous heads, would carry the total of omissions to 6,443,610 *l.*

£. 4,782,265
1,661,345
£. 6,443,610

It is urged in the Explanations, that certain repayments by Government in England upon this account should be credited. The propriety of bringing to account these repayments as a set-off to Home Territorial Charges, has been stated in the Observations. It would occupy more space than could be allotted to it in this place, to exhibit the effect of all such adjustments upon the account, but before this credit could be given, the Home Territorial Charges contained in the Tables must undergo extensive correction.

It was not thought requisite on a former occasion to travel further than through the Indian Charges, but it may be proper now to glance at the Home Charges, the Statement of which, as exhibited in the Tables (A) and (B), cannot fail to attract notice, as their amount in 1808–9, when at nearly the highest standard of the earlier years, was only 550,766 *l.*, while in the next year they are shown to be 1,057,225 *l.* and in subsequent years still higher. So striking a difference might have called forth some doubt as to the accuracy of that part of the Tables. The Statement from which the charges of the earlier years is taken (Appendix No. 46, to Third Report) is incomplete for the purpose to which it has now been applied. It was also framed before the principles of separation of accounts acted upon

---

* The note is appended to an account of the increase of Dead Stock, and runs thus: "This account *does not comprehend Military Stores*. The value of such stores, stated as Dead Stock, amounted in April 1814 to 1,975,254 *l*, and in April 1827 to 3,614,687 *l.*" Then follows the passage quoted in the text, "*These* stores are composed," &c.

upon in later years were determined, and from causes into which it is not necessary here to enter, it does not contain all the expenditure which must be considered fairly chargeable upon the Revenues. No payment whatever is included for expenses incurred in this country on account of *King's regiments serving in India*, which must ever be a charge upon the Revenues. These expenses amounted in the years 1793 to 1808, to 3,138,526 *l.*; from 1809–10 downwards they are inserted in the Home Charges.

Again, the cost of *political stores* sent to India, beyond what is accounted for in the Indian Charges, has not been included in the earlier years. It is impossible to state with any accuracy the amount that should be charged under this head; but it appears from the account of stores exported, Appendix 35, to Fourth Report, that their value (excluding St. Helena and China) from 1793–4 to 1808–9, was 4,955,072 *l.* by far the greater part of which were doubtless political stores. The amount brought to account in the Indian books is not known, but in the subsequent years to 1822–23 inclusive, not more than two-fifths of the value exported were credited in those books. There remains, therefore, to be further charged to the Territory a very large sum on this account.

Moreover a portion of the Home Charges noticed in Mr. Melvill's evidence before the Commons' Committee, on 7th June 1830, consisting of *off-reckonings* and *stores*, which were not included in the Statements from which the Account, No. 2, of February 1830, was drawn, require also to be added; these amount to the sum of 1,698,982 *l.*

Off-reckonings	-	£. 957,755
Stores	- -	741,227
		£. 1,698,982

The off-reckonings of the period prior to 1809–10 should also be added. Here, then, abundant additional reasons are furnished why the view taken in the Statements in question cannot be maintained.

Fifthly. The next point to be noticed is the omission of all reference to the increase of the *Cash Balances in the Indian Treasuries* during the period, amounting to 6,251,867 *l.* which must have been furnished from the Revenues or the Loans for which credit is given in the Table (B). It is only requisite to observe, in reply to the remarks on this point, in the "Explanations," that whether the amount be introduced into that Table or not, is of little importance, but it certainly ought to have been adverted to before it was asserted as a consequence deduced from that Statement, that the whole surplus of the resources from Indian Revenue and Loans which remains after charging the amount of expenditure there introduced *, "has been applied to Commercial purposes" and that "the balance supplied by the Territory is not forthcoming;" assertions which the Statements then before the writer were sufficient to show to be without foundation. The part of those resources applied to the augmentation of the cash balances, could not possibly be applied to Commercial purposes.

The additional receipts from loans, which it is stated in the Explanations should be added to the resources of the Territories, are as follows:

Loan in England in 1812 - - - - - - - - -	£. 2,500,000
Interest thereon - - - - - - - - -	1,307,985
Loan from Nabob of Oude, commuted for Territory - - -	1,109,975
	£. 4,917,960

Upon the principle of the Table (B) there would have been no objection to the insertion of the loan of 1812, as a receipt on Territorial account, but how the interest *paid* on the loan can constitute an additional *receipt* is not explained. All other interest on debt is included in that Table among the *charges*, and the interest upon that particular loan is expressly directed by Act of Parliament to be treated as a *Territorial payment*.

The Oude loan might be admitted as a receipt in India; but against these additional resources is to be set the over-credit taken for the arrears of allowances, &c. noticed at the beginning of these observations, as not constituting an available resource. The balance to be credited to the Territories on this ground, would counteract but to a small extent the large omissions of charge which have been pointed out; besides which those omissions occurring for the most part in the earlier years, and money being annually borrowed to meet them, the consequent increase of interest on the Territorial account must form an immense addition to the first charge, upon the principle adopted in those Tables. The loan in 1812 and that from Oude, have occurred in later years.

One remark in the "Explanations" still requires notice. It is observed, that "it is not surprising that the trade of the Company should appear to flourish under a system which allows the investments for Europe to be furnished from loans in India, not charged to Commerce but to Territorial revenue, while the payments in England for Territorial account are likewise charged to Indian revenue." It cannot be intended to object to the charging of Territorial payments made in England to the account of Indian revenue, and if they are so charged, from what source is the latter to defray the amount. It must be either by means of surplus revenue, or in failure of such surplus, by loan, on Territorial account. Whatever be the channel through which these sums may be remitted to this country, whether it be the commerce of the Company or of the private merchant, the character of the debt incurred is not thereby altered, nor does it become chargeable to the trade of the one any more than to that of the other. The existence of a Territorial deficit is indeed spoken of as an inadmissible assumption; but the exhibition of a Territorial surplus,

---

* *Vide* Mr. Wilkinson's Letter to Mr. Rickards, 10 May 1831; and "Explanations," dated 21 February 1832.

Appendix, No. 25.

Correspondence, &c. relating to Mr. R. Wilkinson's Statements on the Finances of the East India Company.

surplus, by means of the exclusion of large amounts of Territorial expenditure in charge and in interest, appearing in the documents from which the statement is drawn, seems much more to merit that designation.

Had the views in the Tables been confined to the period in which complete separation of accounts has been effected, and not extended to one in which such separation is impossible, erroneous and confused statements would have been avoided or could have been easily rectified. In the present instance, sufficient has been adduced to show that extensive errors exist in the Statements, enough to produce a result with regard to the relative financial position of the Territory and the Commerce the opposite to the true one; in short, the conclusion arrived at in the former Observations has only been more fully established by this further investigation, viz., that the Statements in question neither establish nor even countenance the assertions which gave birth to them, while they equally fail to support the statements put forward by Mr. Rickards, by whose desire these Tables were prepared. Indeed, not the least attempt is made in the "Explanations" to show that the very different principles and results of the respective views can be reconciled, or can stand together.

Appendix, No. 26.

Statements whereupon the Half-yearly Dividends were declared, from 1 May 1814.

Appendix, No. 26.

COPIES of all STATEMENTS submitted to the COURT of DIRECTORS, whereupon the HALF-YEARLY DIVIDENDS were DECLARED, from 1st May 1814, to the latest Period.

THE RETURNS hereunto annexed, numbered (1 to 17,) and specified in the following List, are Copies of Statements which were annually prepared for the information of the Court of Directors, previously to their taking into consideration the Rate of Dividend to be by them recommended to the Court of Proprietors for Declaration at Midsummer in each year, since 1814; being the only Statements of that description which were prepared in relation to the several Half-yearly Dividends declared since that period.

STATEMENT of the Adjustment to be made in the Profit and Loss Accounts of 1829–30, with reference to the Out-turn of that portion of the India Investment which may be deemed to have been provided under the Arrangement, with regard to Interest Bills, laid down in the Plan of 1814, for keeping the Company's Home Accounts. (Suggestion 5, as altered and amended by the Board), *see* Section 55 & 56 of the Act of 1813.

[See *ante*, p. 355 to 362.]

(A.)

EXTRACT from the Plan for arranging the Company's Home Accounts, framed in the Year 1814 (relative to the Remittances for Discharge of Bills of Exchange for Interest of India Debt.)

[See *ante*, p. 357.]

(B.)

ABSTRACT ACCOUNT between the Territorial and Commercial Branches of the Company's Affairs from 1814–15 to 1828–29, in respect to Territorial and Political Payments in *England*, separately from the Transactions which relate to the Remittance of India Debt.

[See *ante*, p. 359, 360, 361.]

(C.)

STATEMENT to show the Rates at which Bills of Exchange drawn for Interest of Indian Debt, and on other Accounts comprised in the Remittance Branch of the Accounts between the Territorial and Commercial Departments, have been discharged in *England* since 1814, and the Average Rate of those which remained unprovided for by Remittances, otherwise than through the Company's Commerce, at the end of 1827–28 and 1828–29, respectively.

[See *ante*, p. 362.]

(No. 17.)—1880–31.

AN ACCOUNT of PROFIT and LOSS on all Goods sold by the East India Company in the Year 1830–31, distinguishing *India* and *China*, and specifying the Invoice Price and the several Charges respectively; also the Sale Amount; showing likewise the Net Proceeds of the Commerce after defraying all Charges, and converting the Prime Cost of the Investment, so far as it consists of Repayment of Advances by the Commercial Department, at the Rates of Exchange used in the Company's Books, in transactions between the two Branches of their Affairs, viz. 2 *s.* the Current Rupee, 8 *s.* the Pagoda, and 2 *s.* 3 *d.* the Bombay Rupee.

Balance of Surplus Commercial Profits remaining unappropriated on 1st May 1831, including the sum of £. 1,848,790, Interest on the Balances due from the Territorial to the Commercial Branch - - - - - - - - - -	£.	2,802,369
Balance remaining unappropriated on 1st May 1831, exclusive of Interest, as above -	£.	953,579

No. 17 of Appendix No. 26—*continued.*

AMOUNT of Loss from which the Commercial Branch is entitled to be relieved in respect to Investment from India, sold in the Year 1830–31, provided as a Remittance to meet Bills of Exchange for Interest of India Debt, under the Arrangement contained in the Plan of 1814 for keeping the Home Accounts.

Amount of investment supplied on account of Remittance for discharge of Interest Bills:	One half of each of the preceding Sums computed to enter into the Sales of 1830–31.	Average Rate at which all the Issues in India were charged to Commerce in each Year.	Issued to the Commercial Branch in India at the Rates already stated, producing the number of Rupees shown below.
	£.	s. d.	*S. Rs.*
In 1828–29 (as per former Statement B.) £. 863,214	431,607	a' 2 4.012	36,97,904
1829–30 (continuation of ditto) - - 354,602	177,301	a' 2 3.999	15,19,777

From a continuation of a former Statement (C.) the average rate at which the balance of bills unprovided for, up to 1828–29, had been discharged in England, was 2 *s.* 3.599 *d.* per sicca rupee, and including 1829–30 was 2 *s.* 3,129 *d.*

The rates at which interest bills were discharged being thus less than the rates at which the Commerce has been charged in account by the Territory in the two years 1828–29 and 1829–30, the amount to be made good to the Commerce will be the difference by which the out-turn of the goods when sold may fall short of the rates at which their issue was respectively made.

The rate per sicca rupee of the net produce of the Indian investment at the Company's sales in 1830–31, (deducting interest and insurance at the average rate of the Company's losses at sea,) was per sicca rupee 1 *s.* 8.136 *d.*

Being 7,876 *d.* per sicca rupee short of the rate at which issues for commercial purposes were made in India in 1828–29.

And 7.863 *d.* per sicca rupee short of the rate at which these issues were made in 1829–30.

		£.
A short produce of 7.876 *d.* per sicca rupee is therefore to be made good to the Commercial Branch on sicca rupees 36,97,904, amounting to -	£. 121,353	
And of 7.863 *d.* per sicca rupee on - 15,19,777, - ditto - -	49,792	
		171,145

Continuation of Statement (B.)

ABSTRACT ACCOUNT between the Territorial and Commercial Branches of the Company's Affairs, in respect to Territorial and Political Payments in England, separately from the Transactions which relate to the Remittance of India Debt.

1829–30.

Dr.	£.		Cr. £.
To Balance applied to Investment on account of the Remittance Fund -	354,602	By Excess of Issues in India above amount paid in England, calculated at the rates of exchange fixed in 1814 - - - - - -	354,602

Continuation of Statement (C).

STATEMENT to show the Rates at which Bills of Exchange drawn for Interest of India Debt, and on other accounts, comprised in the Remittance Branch of the Accounts between the Territorial and Commercial Departments have been discharged in England, and the Average Rate of those which remain unprovided for by Remittances, otherwise than through the Company's Commerce at the end of 1829–30.

	£.		*S. Rs.*
Excess of payments for bills above the remittances realized for meeting the same at the end of 1828–29, brought from former Account - - - -	£. 4,558,173	- - - -	*S. Rs.* 3,96,37,420
Average rate to end of 1828–29 as before, 2 *s.* 3,599 *d.*			
1829–30: add;			
Excess of payments for bills beyond the amount realized	782,035	a' 2 *s.* 0.68 *d.* - -	76,04,878
	£. 5,340,208	- - - -	*S. Rs.* 4,72,42,298

Average rate to the end of 1829–30, 2 *s.* 3.129 *d.*

Appendix, No. 31.

Minute of Sir John Malcolm, 30 Nov. 1830.

EXTRACT from a Minute of Sir *John Malcolm*, dated 30th November 1830, on his Administration of the *Bombay* Government.

FINANCIAL RESULTS.

268. THE actual reduction of expenditure since my arrival, amounts in all, in the Civil and Marine departments, to 11,15,860 rupees, and the prospective reduction to 3,48,946 rupees. From these sums must be deducted an actual increase of rupees 6,59,770, and a prospective one of 12,000 rupees; this would leave a net decrease in the actual charges of rupees 4,56,090, and in the prospective of 3,33,946 rupees, amounting in all to 7,93,036 rupees.

269. Under the head of Extraordinary Charges there is an additional net decrease of 9,10,900 rupees during the course of the three years following November 1827, as compared with the three preceding that date. It may be observed that two of the principal items of increase, the Audit and Mint departments, were adopted at the suggestion of the Finance Committee, and that the decreases of extraordinary charges, although large, would have been considerably larger had not the compensation allowance to civil servants thrown out of employ by the operation of the economical measures, added greatly to the amount of expenditure under this head. This item, together with the expense attending the mission to England, consequent on the proceedings of the Supreme Court, amounts to nearly a lac and a half of rupees, but are of course to be viewed as temporary charges.

270. The actual permanent reduction in military expenses amounts to 40,27,498 rupees, from which must be deducted an increase of 7,67,510 rupees, leaving a net decrease of 32,59,988; of the increase, 6,58,281 rupees is permanent and 1,07,299 rupees is temporary. Of the permanent increase, 4,59,405 was in consequence of orders from home, and the remainder, 3,85,618, is the result of the arrangements of the Bombay government; of this sum 1,07,229 rupees is temporary, and indeed 27,716 rupees have already been discontinued. Of the total decrease, 10,78,757 rupees was by orders from home, 29,48,741 rupees by Government*. For the particulars of these items a reference must be made to accompanying statements, from which it will be observed what sums have actually been reduced and what are in a prospective state of retrenchment. For the above decrease a considerable amount is to be added, the result of reductions and alterations of establishments, ordered in October and November last; but as these are all prospective they are included in the total which has been exhibited.

271. The disbursement for extraordinaries in the Military department during the three years that I have presided over this government, are less than those of the preceding years by 69,06,609 rupees. The largeness of this sum is attributable to field charges in the former years, but still, excluding these, the reduction of expenditure is very great. The net decrease in the several departments is nearly as follows:

Civil department - - - - - -	*Rs.* 5,18,765
Military ditto - - - - - - - -	32,59,988
Marine ditto - - - - - - - -	2,74,271
TOTAL - - -	*Rs.* 40,53,024
Civil and Marine extraordinaries - - -	9,10,900
Military - - - - ditto - - - - -	69,06,609
TOTAL for three years - - -	*Rs.* 1,18,70,533

272. This short notice of financial results will be fully illustrated by the documents which accompany this Minute. It is therefore only necessary to add that many charges, and those of a very heavy nature, must gradually diminish, if the system of check and control over expenditure which has been established, is fully supported and rigidly exercised. No attempt can be made at present to estimate prospective reductions, but the accounts of next year will show more fully the effect of recent measures in their operation in the departments of commissariat stores, public buildings, and all contingencies and extraordinaries, civil and military.

GENERAL OBSERVATIONS on the Administration of the *Bombay* Presidency.

273. THE Territories of Bombay are not generally productive, and its revenue is not equal to its expenses. This would not be felt as an evil if it were not for the usage, which notwithstanding changes that have amalgamated their territories, still keeps distinct the accounts of receipts and disbursements of Bengal, Madras and Bombay, as in times when independent

---

* About 12 lacs of this reduction was by instructions from the Supreme Government.

Appendix, No. 31.

Minute of
Sir John Malcolm,
30 Nov. 1830.

independent kingdoms intervened between these presidencies. I have in the Minute noted in the margin observed upon the injurious effects of this usage; it will I trust be early altered, and India be governed as a whole, otherwise the recent labours of the Governor-general in Council to produce uniformity of system, will prove fruitless, if the rule of comparing receipt and disbursement in the various quarters of our empire continue. Expenses beyond what are calculated will be tolerated in those parts which are richest and which require least force to guard and least trouble to manage them, while every proposition to improve a rugged and unproductive country, or to preserve its peace, will be rigidly tried and checked with reference to the resources of its government, and the rewards and salaries to which public officers are entitled, for their arduous duties, will be judged by the same standard. To illustrate the unfair operation of this rule, as applied to Bombay, it need only be stated that the Indian navy, which protects an extensive and profitable commerce, from which every part of India benefits, besides keeping up the communication with Europe by the Persian Gulf and Red Sea, is wholly charged to this Presidency, and that his Majesty's corps (one regiment of dragoons and four of infantry) consume a great portion of the revenue. These corps may be necessary to maintain and defend India, but they are not required to preserve the local peace of this quarter, although many circumstances may render it expedient that they should be stationed where they are, but this cannot constitute a reason why this Presidency should be debited with a charge for a force which, as it relates to its own territories, it does not require, and which is so disproportionate to its means. It is possible that circumstances may require a still greater proportion of European force in the western parts of India, and an increase of native troops. We have an exposed frontier to defend, and if such additions are made, the complaints of our superiors regarding the excess of expenditure over receipt at this Presidency will be increased. It may appear trifling to dwell upon such a palpable absurdity as such distinctions in the financial part of our rule would appear, but when I observe this cause operating in a manner injurious to the public interests, I must desire to call it to the serious and early attention of the authorities in England.

Appendix, No. 32.

Appendix, No. 32.

Charge for Public Buildings; Letter to Bengal Government, 31 March 1830.

LETTER from the Court of Directors to the Governor-general in Council at *Bengal*; (Finance Department); dated 31st March 1830.

Para. 1. HAVING recently had under our consideration the expenses which of late years have been incurred upon Public Buildings in India, we were induced to direct our especial notice to the regulations which are laid down at our several Presidencies for the observance of the departments to which the execution and superintendence of works are entrusted. Our object has been to ascertain whether those regulations are calculated to ensure a correct and economical disbursement of the public money, as well as the completion of works in a durable manner; and it affords us pleasure to be enabled to state, after an attentive examination of them, our conviction of their general fitness to answer these important ends At the same time, a few points have presented themselves which appear to be susceptible of improvement, and upon such of these as relate to your Presidency we proceed to communicate our sentiments.

2. It appears that, in the Civil department under your government, certain repairs are made to the buildings at the different Zillah stations, the execution of which is not committed to the officers regularly appointed to the charge of districts, nor is it, we presume, in any way subjected to their control. The sums expended in these repairs form part of the contingent charge of Judges and Collectors, and it is to be inferred that the outlay takes place solely at their discretion. Under this system, a sum of from 40,000 to 45,000 rupees is annually disbursed for repairs to the several gaols throughout the provinces subject to your government; the individual items of which, it is true, are often but of small amount, though in some instances they reach as high as from 2,000 to 5,000 rupees. We desire that in future all repairs, as well as new works, which involve an outlay of 500 rupees, be entrusted to the regular executive officers of your establishment. Should circumstances in any instance render obedience to this order impracticable, the Judges and Collectors must obtain your consent before they commence the outlay of such an amount, except only when the delay of a previous reference to you would be obviously detrimental to the public interests; and even in these cases we direct that an executive officer certify to the work having been properly performed.

3. You are aware that officers appointed to carry on Public works are required to make affidavit to the correctness of their disbursements. We observe that the affidavit prescribed to be taken under your Presidency, does not go to such an extent as that demanded from officers of the Madras and Bombay establishments; and that when the works have been performed upon estimates regularly sanctioned, a declaration upon honour is by you held to be sufficient. The same is the case when Bengal officers have superintended the execution of works upon contract. We desire that your practice in these matters be assimilated to that which exists at the other Presidencies. We must also remark, that there is an objection to the method of requiring affidavits of this sort to be made *periodically*, and to the *general* correctness of disbursements. We consider that, under such a system, they are likely to degenerate into mere form, and that the plan of annexing an affidavit to the bill for each

Appendix, No. 32.

Charge for Public Buildings; Letter to Bengal Government, 31 March 1830.

particular work, is the one best calculated to keep the minds of officers alive to the importance of the attestation which they are making: you must therefore observe this plan in future.

4. We are not aware of any further points of which it is necessary for us to take separate notice. The main scope of the regulations relating to the Building departments is the same we observe at each of the Presidencies; but there are some matters which are more fully explained and provided for at one Presidency than another. We shall therefore direct the other governments to communicate to you the whole of their regulations relating to Public Works, in order that, as far as possible, an uniform system may be adopted throughout India. In effecting this object, you are to understand that the alteration of those matters of regulation wherein our several governments at present differ, is to proceed on this principle; that in each particular that Presidency is to be regarded as the model for imitation by the rest, where abuse and neglect are most amply provided against, and the dispatch of business most effectually secured.

5. We also desire that you will form into one code the whole of your rules upon this subject, which we have found to be very much scattered, and that you forward to us some printed copies of the same.

6. In the course of the investigations which we have made, it has attracted our notice that no uniform method has existed in India of rewarding executive officers for their superintendence of public works. At Bombay, it appears never to have been usual to grant them more than the staff allowances fixed for the performance of such duties. At Madras, it was long the practice to grant officers a commission on the cost of the work executed, till that government, some years ago, discontinued it as objectionable; while at your Presidency it has been the custom to make donations to individuals of 10, and occasionally even 15, per cent. upon the amount of their disbursements. We have already, in our communication to you, disapproved not merely the excess to which you have carried this principle, but also the principle itself; yet we cannot find that it has been relinquished. We give you credit for making such donations only when you are satisfied that the duties committed to officers have been skilfully and economically fulfilled; but, conceding this, it is not sufficient to remove our objections to such a mode of remuneration.

7. We are not aware that you ever granted a donation to an individual who had been at the same time receiving either the regular salary attached to the charge of a division or district, or a personal salary for performing the particular duties on account of which the donation was presented to him, and we take this opportunity to prescribe it as a rule that in no such case you grant any extra reward without our specific sanction. When an officer, not having drawn allowances of the above description, shall have superintended or executed works in such a manner as to recommend himself to your notice for a donation, we desire that the amount of it may be regulated by more economical principles than you have formerly observed in such cases, and that it be not fixed with any reference to the extent of his disbursements. We would suggest, as a more proper mode of determining what should be the amount of a donation, that after considering the time during which the party has been employed, you shall compare the labour and responsibility which he has undergone with those of officers who draw the regular salary annexed to the charge of districts.

8. We positively desire that in no instance you grant a donation to an officer till after the expiration of three years from the completion of the work, his performance of which has recommended him for such a distinction.

9. Considering the financial difficulties under which India has for some years been labouring, we have been somewhat struck with the amount of expenditure which has taken place upon Public Works of various descriptions. The note below contains an account of the sums which have been laid out upon new buildings under your government during the last four years*, for which your general books are in our possession. Much of this outlay we are aware is to be attributed to the increase of your territory and establishments, having rendered it necessary to construct additional buildings and works of defence; yet after making due allowance for these considerations, we still think that the disbursement has been larger than it ought to have been had your government been actuated by that determined spirit of economy which circumstances urgently required. It is at least certain that after so much money has long been annually sunk in this way, a very moderate expenditure should suffice for future years.

10. Persuaded, after the experience we have had, that in order to enforce the observance of the necessary economy in this large branch of your expenditure, it is expedient that it should

Charge for Public Buildings; Letter to Bengal Government, 31 March 1830.

should be more immediately brought under our own supervision and control. We direct as follows:

11. No new work or building, nor any alteration or repair of any old work or building, the estimated cost of which shall exceed ten thousand rupees (10,000 rupees) shall be commenced in any department till our consent thereto shall have been obtained, excepting only in cases of sudden and unforeseen emergency, where it is absolutely necessary that such new work, alteration or repair should be commenced before our pleasure can be known.

12. In such cases, you will communicate by the very first opportunity the peculiar circumstances of such emergency.

13. We shall hold you responsible for the indispensable necessity of the case which may have obliged you to incur such expenditure without our previous sanction.

14. A similar restriction is to be observed in respect to the purchase of land or buildings.

15. You will report to us every three months, the progress made in the several works, and the prices at which the materials and labour have been furnished in the execution of each separate service.

16. You will transmit every estimate to us by the first opportunity after it has received your sanction, and you will endeavour to have all estimates prepared so far prospectively as to enable us to signify our pleasure upon them before the commencement of the works to which they refer.

17. We direct that in future, you report to us in separate letters in the several departments, all matters relating to Public Works, whether buildings, fortifications, roads, bridges, canals or tanks, as well as all proceedings which refer to the officers and establishments employed in carrying on such works, and the rules which may at any time be laid down for their observance.

We are, &c.

Appendix, No. 33.

Appendix, No. 33.

Charge for Public Buildings; Letter to Madras Government, 31 March 1830.

LETTER from the Court of Directors to the Governor in Council at *Madras*; (Finance Department); dated 31st March 1830.

Para. 1. HAVING recently had under our consideration the expenses which have of late years been incurred upon Public Buildings in India, we were induced to direct our especial notice to the regulations which are laid down at our several Presidencies for the observance of the departments to which the execution and superintendence of works are entrusted. Our object has been to ascertain whether those regulations are calculated to ensure a correct and economical disbursement of the public money, as well as the completion of works in a durable manner; and it affords us pleasure to be enabled to state, after an attentive examination of them, our conviction of their general fitness to answer these important ends. At the same time, a few points have presented themselves which appear to be susceptible of improvement, and upon such of these as relate to your Presidency we proceed to communicate our sentiments.

2. It would appear that in the provinces subordinate to your Presidency, it is the custom to have certain repairs to the civil buildings performed under the superintendence of the judges and collectors, without the intervention of a regular executive officer. The sums disbursed for these repairs are, it is true, generally of trifling amount, but we take this opportunity of observing, that engineer officers, as well from their education and experience as on account of the more regular control which is exercised over their proceedings, are the only persons to whom the superintendence of public works of any kind can safely be entrusted. We accordingly direct that, except when it may be absolutely impracticable, no new works or repairs which involve an outlay of 500 rupees be committed to the execution of any other than officers of that description.

3. You are aware that officers appointed to carry on public works have to make affidavit to the correctness of their disbursements. It is provided at your Presidency, that instead of affixing such affidavit to the bill for each separate work, the officer shall make oath *quarterly* to the effect required. We consider such a system as this to be objectionable, because there is a danger that under its influence the affidavit may be regarded as a mere form, whereas the plan of annexing a declaration to the bill for each particular work seems calculated to keep the minds of officers alive to the importance of the attestations which they are making. You will therefore observe the latter plan in future.

4. We find that useless expense has on some occasions been incurred in India by the selection of sites for new buildings which have been afterwards found so unhealthy as to render it necessary that the stations should be abandoned. The Supreme Government, some years ago, laid down a rule, that no barrack, gaol or hospital should be erected without the concurrence of the superintending surgeon, or senior medical officer on the spot, as to the site and aspect of the building. It is so evidently proper to take every precaution that the sums devoted to public works shall be well applied, and the above precaution, in a country like India, appears to be of such an obvious kind, that we are rather surprised at its having ever been overlooked. We direct that you will invariably attend to it in all cases in which it may be hereafter required.

5. In

Appendix, No. 33.

Charge for Public Buildings; Letter to Madras Government, 31 March 1830.

5. In the general view which we have taken of the regulations in force at your Presidency, in respect to public works, it has not failed to attract our notice that works in the Revenue Department are exempted from the system of management and control under which those in the other departments of the service are placed. We cannot discover what advantage is secured by such an arrangement as this. It is undoubtedly proper, in the case of works which are intended to ensure the due irrigation of the soil, and the means of communication between one part of the country and another, that the revenue authorities should be consulted as to what disbursements are in their opinion requisite, but we feel assured that, as concerns the mere execution of works and the expenditure of money, the adoption of one system of check for all departments is calculated to produce the most beneficial results. We therefore desire that in future public works in the Revenue branch be carried on under the control of and in communication with the Military Board, and be subjected in all other respects to the same management as works in the other departments.

6. We are not aware of any further points of which it is necessary for us to take separate notice. The main scope of the regulations relating to the building departments is the same, we observe, at each of the Presidencies, but there are some matters which are more fully explained and provided for at one Presidency than another. We direct therefore that you communicate to the Bengal Government the whole of your regulations relating to public works, and we shall issue orders to the Bombay authorities to make a similar communication, in order that as far as possible an uniform system may be adopted throughout India. In effecting this object we have given the Bengal Government to understand that the alteration of those matters of regulation wherein they at present differ from our other governments is to proceed on this principle, that in each particular that Presidency is to be regarded as the model for imitation by the rest, where abuse and neglect are most amply provided against, and the dispatch of business most effectually secured.

7. In our despatch to you in this department (No. 1, of 1830), we informed you of its having been found impracticable to obtain from your accounts a perfect statement of the sums expended on public buildings under your Presidency. We therefore derive no assistance from a source of that kind in forming an idea of the extent to which you have been guided by principles of economy in this branch of expenditure. We are disposed, however, from a review of your proceedings in the several departments, to give you credit for having shown a disposition to restrict the outlay upon public works within moderate bounds; though still we are not satisfied, considering how severely the financial interests of India have for some years been depressed, that such a disposition might not have beneficially displayed itself in a more decided manner.

Paras. 8 to 14, regulations to be observed, the same as those in Letter to the Bengal Government, paras. 10 to 17.

Appendix, No. 34.

Appendix, No. 34.

Charge for Public Buildings; Letter to Bombay Government, 31 March 1830.

LETTER from the Court of Directors to the Governor in Council at *Bombay*; (Finance Department); dated 31 March 1830.

Para. 1. HAVING recently had under our consideration the expenses which of late years have been incurred upon Public Buildings in India, we were induced to direct our especial notice to the regulations which are laid down at our several Presidencies for the observance of the departments to which the execution and superintendence of works are entrusted. Our object has been to ascertain whether those regulations are calculated to ensure a correct and economical disbursement of the public money, as well as the completion of works in a durable manner; and it affords us pleasure to be enabled to state, after an attentive examination of them, our conviction of their general fitness to answer these important ends. At the same time, a few points have presented themselves which appear to be susceptible of improvement, and upon such of these as relate to your Presidency we proceed to communicate our sentiments.

2. By a General Order, published on the 1st August 1819, you directed that the control of engineer officers over the civil buildings at the subordinates should be confined to the Sudder station of each Zillah, in no case extending to the buildings in the Pergunnahs without your special order. We accordingly find that disbursements are often made for public works carried on under the sole superintendence of collectors or magistrates. We decidedly object to the existence, in any considerable degree, of a practice such as this. We consider that engineer officers, as well from their education and experience, as on account of the more regular control which is exercised over their proceedings, are the only persons to whom the superintendence of public works of any kind may be safely entrusted; and we direct that in future, except when it may be absolutely impracticable, no new works or repairs, which involve an outlay of 500 rupees, be committed to the execution of any other than officers of that description.

3. We have been especially struck with one instance, which your subordinate accounts furnish, of very extensive disbursements, of the kind to which we allude, having been made under the superintendence of a collector and magistrate. It appears that Mr. Lumsden, while collector of Surat, drew from the treasury under his charge sums which, in the course of four* years, amounted to no less than 1,17,688 rupees, for various objects, chiefly for the construction and repair of Wells and Tanks, and for repairs to the Tannas in the Collectorate

---

* From 1822 to 1825 inclusive.

Appendix, No. 34.

Charge for Public Buildings; Letter to Bombay Government, 31 March 1830.

over which he presided. We further observe with surprise, that the whole of the above sum remains to the debit of Mr. Lumsden on the books of the Surat collectorate up to the 30th of April 1828; although at that date a period of between six and seven years had elapsed since the first portion of it was drawn, and a period of more than two years since he quitted Surat to take charge of another station. Such a circumstance seems to indicate considerable neglect on the part of the officers of audit at your Presidency, since we cannot doubt that the advances in question were properly applied by Mr. Lumsden. It is our wish that you will furnish us with an explanation upon the subject.

4. Another respect in which the regulations at your Presidency are deficient, is, that they do not require security to be given by executive officers in consideration of the advances of public money which are continually being made to them. Under the Bengal Government, officers in regular charge of districts are required to enter into bonds of 10,000 rupees, and officers temporarily employed in the building department of 5,000 rupees each; and at Madras also executive engineers give security to the Government in various sums, proportioned to the average amount of their disbursements. We desire that you immediately introduce a similar provision into your regulations, and that you call upon all the officers on your establishment, to whom the execution of public works is committed, to furnish security to the extent of at least 10 per cent. upon the average annual amount of the cash advances with which they are supplied.

[Concurrence of medical officer required as to the site of a building, same as para. 4, and regulations to be conformed to those of Bengal, the same as para. 6, of the Letter to the Madras Government.]

7. In the course of the investigations which we have made, we have been much displeased by observing the great neglect which your Government has shown, in not duly reporting to us the sums which have been expended under your Presidency for public works; and we may remark, that yours is the only one of our Governments which has been guilty of such an omission. In all your despatches, but more especially those in the Revenue and Judicial departments, this neglect is evident; and even in your Military letters, disbursements are not advised, unless they happen to be of very large amount. We positively enjoin you to report distinctly to us every future instance of expenditure, whether for new works, purchases or repairs, which shall amount to 1,000 rupees.

8. Considering the financial difficulties under which India has for some years been labouring, and the great degree in which they have been aggravated by the heavy pressure of your annual deficiency, we have been somewhat struck with the amount of the expenditure which has taken place under your Government upon works of various descriptions. The note below* contains a statement of the sums which you have laid out on new buildings alone during the last three years, for which we have received your books of account. Much of this outlay we admit is to be attributed to the increase of your territory and establishments, having rendered it necessary to construct additional buildings and works of defence; yet after making due allowance for these considerations, we still think that the expense has been much greater than it would have been had your Government been actuated by that determined spirit of economy which circumstances urgently required. It is at least certain that after so much money has been annually sunk in this way, a very moderate expenditure should suffice for future years.

[Paras. 9 to 16, Regulations to be observed, the same as those in Letter to Bengal Government, paras. 10 to 17.

Charge for Public Buildings; Fort St. George Consultations, 23 September 1831.

EXTRACT from *Fort St. George* Finance Consultations, of 23d September 1831.

Ordered,—THAT a copy of the Honourable Court's despatch, under date the 31st March 1830 (No. 40 of 1830), be furnished for the information and guidance of the Military Board, and with instructions to issue to the several officers under their control the necessary directions for giving effect to the orders of the Honourable Court.

The subject of works in the Revenue Department, referred to in para. 5 of the Honourable Court's despatch, will be taken into consideration separately.

The Military Board will lay before Government a copy of the whole of the Regulations relating to Public Works, in order that the reference prescribed in the 6th para. of the Honourable Court's despatch may be made to the Bengal Government; and will submit the periodical reports required by the 13th para. of the same despatch.

Ordered,—That a copy of this Resolution, and of the Honourable Court's despatch, dated 31st March 1830, be furnished to the Accountant-general.

Ordered also,—That copy of the foregoing Resolutions and Orders be furnished to the Accountant-general, and an extract thereof to the Military Board, for their information and guidance.

Letter from Madras Military Board, 8 November 1831.

LETTER from the Military Board at *Madras* to the Governor in Council at *Madras*; dated 8th November 1831.

Sir,

WE have the honour to acknowledge the receipt of a letter from the Chief Secretary in the Financial Department, bearing date 23d September last, transmitting copy of a despatch from the Honourable Court, dated 31st March 1830, (No. 40 of 1830).

Adverting to the despatch from the Honourable Court, noticed above, it appears that paras. 3, 4 and 6 only require our notice. We have given the necessary orders for each separate bill of executive engineers being supported by an affidavit.

Sites for public buildings have been selected, in communication with local medical authorities, since 1825, under the orders of Government.

A correct copy of the Engineer Regulations was submitted, with our Report, No. 269, dated 26th July last.

We have, &c. &c.

Appendix, No. 37.

Charge for Public Buildings; Letter from Bombay Government, 6 November 1830.

Extract from a LETTER from the Governor in Council at *Bombay*, to the Court of Directors (Finance Department); dated the 6th November 1830.

Honourable Court's Letter; dated the 31st March 1830.

Par. 1st. OBSERVE that their attention has been directed to the regulations respecting the construction of public buildings, express conviction of their general fitness to answer the objects in view, but proceed to communicate their sentiments on several points which they consider susceptible of improvement.

2d. Object to the practice of allowing disbursements on account of public works being made by any other than engineer officers, whom for various reasons they consider the only persons to whom the superintendence of public works can safely be intrusted, and direct that no work involving an outlay of rupees 500 be committed to the superintendence of any but officers of that description, except when it may be impracticable to do so.

3d. WITH regard to the subject adverted to in the second paragraph, we beg leave to inform your Honourable Court that the reasons which led to the issue of the Order of the 1st August, to which you allude, are fully laid down in our President's Minutes of the 13th March 1829 and 14th May 1830. It is there clearly shown, that, were the repairs of every description of public buildings thrown solely on the Engineer department, it would require a very great increase of officers and establishment, to be at all efficient for the duty imposed upon it, and a consequent heavy expense would be incurred.

4th. The present establishment of officers belonging to the engineer corps is quite unequal to such extensive personal supervision, as the system which your Honourable Court have directed to be adopted would require, consequently much must be directly delegated or indirectly left to native artificers and servants, whence, of course, great delay in time, much waste of materials and abuse in expenditure must arise, highly injurious to the public service and detrimental to the reputation of the

engineer

Appendix, No. ;

Charge for Publ Buildings; Lett from Bombay G vernment, 6 November 1830.

engineer corps, and there is reason to apprehend that these causes have led to a much greater expenditure by this Government, under the head of "Public Buildings," than would otherwise have occurred or will happen again.

5th. The paucity of officers of experience to perform and superintend the duties of executive engineers, had unavoidably led to the appointment of young officers to fill that responsible station, who, from their recent arrival in the country, could not be expected to possess experience in, or practical knowledge of, their profession, and whose very deficiency in the coloquial languages of the people, whose operations they were required to direct, want of acquaintance generally with their character, and ignorance of the customs of the country, as well as of the description and cost of the materials required, led frequently not only to unnecessary expense being incurred, but also to the works entrusted to them being of an inferior and unendurable character.

6th. The amount of expense to be incurred for the pay and establishment of an executive engineer at some stations (where attention to the system ordered by your Honourable Court would require one being employed), would itself exceed the whole annual outlay of expenditure in the works they may have to execute.

7th. Experience has proved that under this Presidency the system of carrying on public works by contracts, under proper control, is highly advantageous, but it of course militates so much against the interests of the people on the permanent establishment of the local engineer, that it becomes their interest to throw obstacles in the way of respectable men coming forward as contractors.

8th. It must however be observed that it never was contemplated, where *science* was required, to employ other than officers of the engineer corps.

9th. It is on scientific works alone, such as fortifications, bridges, &c. that their abilities and superior knowledge can be shown, or are indeed required, and in superintending efficiently their construction there is ample employment for the present engineer establishment, supposing (as must be the case to ensure beneficial results) that none but officers of experience are employed executively, and that the juniors are placed under them for instruction, and as assistants, which indeed is very essential.

10th. The plan laid down in the order which your Honourable Court would seem not to approve, of transferring the erection of all civil buildings, not requiring scientific knowledge, to their respective departments, had in view the union of two great desiderata, *efficiency* and *economy*, and the records of this Government, as well as the books of our Accountant-general, will, we hope, afford satisfactory proofs to your Honourable Court, that the measure has been attended with beneficial results, both as regards economy and other objects.

11th. Besides the reasons above stated, it was supposed that the local and personal knowledge of the civil officers would suffice for the execution of the works required where the outlay was trifling, and when otherwise, Government might judge upon the reports to be furnished, to whom it should be entrusted.

12th. Mr. Romer, who to much general knowledge adds great experience in the affairs of this Presidency, remembers when all such works were carried on by the heads of departments, and he is of opinion that they were performed most efficiently and at one-third of the expense subsequently incurred.

3d. Instance a case in which disbursements on account of public works were made by a collector and magistrate to a very considerable amount, viz. rupees 1,17,688; express surprise that the whole of that sum remains on the books of the Surat collectorate to the debit of Mr. Lumsden, the officer to whom they allude, and direct that an explanation of such circumstances be furnished to them.

13th. The necessary explanations will be called for and submitted to your Honourable Court.

4th. Notice the practice which obtains at Bengal and Madras, of requiring security from executive engineer officers in various sums, proportioned to the amount of their disbursements; direct that such provision be made in the regulations at this Presidency, and that all officers entrusted with the execution of public works be called upon to give security of 10 per cent. at least, on the average annual amount of the cash advances made to them.

14th. A proviso of the nature pointed out by your Honourable Court will be introduced into the regulations.

Appendix, No. 37.

Charge for Public Buildings; Letter from Bombay Government, 6 November 1830.

5th. Direct that in future, previous to any new buildings being erected, the opinion of the senior medical officer at the station be obtained as to the salubrity of the situation and aspect of the building.

15th. The orders of your Honourable Court on the subject of this paragraph will in future be strictly attended to.

6th. Direct that the whole of our regulations respecting public works be communicated to Bengal, in order that a uniform system be adopted, as far as possible throughout India, the work of revision being proceeded with on the principle that in each particular that Presidency be regarded as the model for imitation by the others where abuse and neglect are amply provided against, and the dispatch of business most effectually secured.

16th. In compliance with the instructions conveyed in this paragraph, we have communicated to the Supreme Government the regulations in force under this Presidency, relative to public buildings.

7th. Notice the great neglect which has arisen in not reporting to them the sums expended on account of public works at this Presidency, and enjoin Government to report to them every future expenditure, whether for new works, purchases or repairs, which shall amount to 1,000 rupees.

17th. We shall be more careful in future in reporting to your Honourable Court the expenditures that may be incurred on public works.

8th. View with surprise the amount of expenditure under this Presidency, on account of new works of various descriptions; hand up a statement of the sums laid out on new buildings for the last three years, and observe that a moderate expenditure on that account should suffice for future years.

18th. With respect to the observations contained in this paragraph, we can assure your Honourable Court that every means have recently been resorted to to reduce this branch of the public expenditure to the lowest possible scale which the exigencies of the service would admit of.

9th. Proceed to lay down rules in order to secure the observance of the necessary economy in this branch of expenditure.

10th & 12th. No new work or building, nor any alteration or repair of any old work or building, the estimated cost of which shall exceed 10,000 rupees, shall be commenced upon without their sanction, except in cases of sudden and unforeseen emergency, the peculiar circumstances of which must however be reported to them, and observe that they will hold Government responsible for the indispensable necessity of the case in which the rule they have laid down is departed from.

19th. The orders contained in these paragraphs will be obeyed in all future cases.

13th. The restriction in respect to building or repairing any new or old work, also applicable to the purchase of land or buildings.

14th. The progress made in constructing works, and the prices at which materials and labour have been furnished, to be reported to them every three months.

15th. Estimates of works to be transmitted to them by the first opportunity after they have been sanctioned by Government, and direct that they be prepared so far prospectively as to enable them to signify their pleasure before the commencement of the works to which they refer.

16th. All matters connected with public works to be reported to them in separate letters in each department.

20th. The instructions of your Honourable Court, as conveyed in these concluding paragraphs of your despatch, will be attended to in all future cases as they may occur.

Appendix, No. 38.

ANSWERS to QUERIES proposed by the Board of Control, upon Subjects relating to the FINANCES of INDIA.

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

LIST OF QUERIES.

I.—WHAT are the principal Causes which have affected the Revenues of India since the year 1808–9, either by the improvement or deterioration of Old, or the introduction of New Resources?

II.—What are the principal Causes which have affected the Amount of Charge in the various Departments of Indian Administration during the same period?

III.—Whether any Measures can be suggested for rendering the existing Revenues more productive, or for realizing the Revenues with more regularity and promptitude?

IV.—Whether any Measures can be suggested which would be calculated to reduce, in whole or in part, any Head of Charge falling upon the Indian Revenues, or to introduce more Economy into the Expenditure?

V.—In what Mode, and upon what Terms, has Money been borrowed in India by the Government since the year 1808–9, and what are the Advantages or Disadvantages of the Course that has been pursued?

VI.—What Number of Mints existed in India in 1809, and at the present time; what are the general Regulations of the existing Mints, and what has been, and what is now, the Condition of the various Currencies, and of the Import and Export of the precious Metals?

VII.—What steps have been taken for the separation of the Territorial from the Commercial Accounts of the Company in India and in England; and whether, and what, further Measures are required for that purpose?

VIII.—Whether any instances of considerable Loss or Waste have come to your knowledge during the period referred to; and is the System of Accounts, whether general, subordinate or personal, such as is best calculated to guard against Loss, to prevent unauthorized Disbursement, and to compel the bringing to account, promptly and accurately, Public Money or Stores received and expended, either by Individuals or by Departments; and whether any suggestions can be offered for improving and simplifying the existing System of Accounts?

QUERY I.—What are the principal Causes which have affected the Revenues of India since the year 1808-9, either by the improvement or deterioration of Old, or the introduction of New Resources?

Mr. Hill.

ANSWER.—THE revenues of Madras, with which only I have any acquaintance, have not, within the period in question, varied, either in their items or in their amount, to such a degree as to be deserving of particular notice.

Mr. Langton.

IN 1814, the duties on export and import in India were taken off some articles entirely and, on others they were reduced to one-third and one-fourth of what had been previously levied; yet the customs, including town and transit duties, had been rather more productive since, than previous to 1814; this must have been owing to the increase of trade since the alteration, and if the expectation of a further increase of trade, from the measures which may now be looked forward to, should be realized, this branch of the revenue would improve in proportion.

The Land Revenue is said to have been collected with the greatest ease and punctuality in those districts where the cultivation of indigo has been introduced; a similar good effect may be expected to ensue more generally throughout the country, from the free admission of British capital and enterprise to the cultivation of Indian agriculture and commerce.

Mr. Wood.

IT appears, from comparing the Indian receipt and charge of the three Presidencies of the year 1808-9 with the year 1826-27, that the revenues of Bombay have increased from 63,95,303 to 2,29,91,332 rupees, caused principally by territory ceded and conquered since the year 1808-9, which caused a great increase in the receipts in the land revenue and customs. The revenues at Madras have increased from 4,60,38,979 to 4,81,83,715 rupees, and was owing to the same cause. In Bengal, the revenues have been increased from 8,47,55,042 to 12,77,63,375 rupees, partly by acquisitions, but principally by improvement of the land revenue existing in the year 1808-9.

Land Revenue of the Bengal Presidency.—The demand on account of the land-tax in 1808-9, in the Lower Provinces, was 2,84,56,804, and the amount collected 2,67,14,156 rupees, leaving an uncollected balance of 17,42,648 rupees; the demand in 1826-7 on account of the same was 2,99,50,318, the amount collected 2,66,02,508 rupees, leaving an uncollected balance of 33,47,784 rupees. The balance outstanding at the termination of both periods having been since collected, there was a permanent increase of 15,00,000 rupees, caused by a resumption of lands, granted under a life-interest, in the districts permanently settled, and to an increase in the land-tax of Cuttack, and the districts not permanently settled in 1808-9.

In the Western Provinces, which were not permanently settled in 1808-9, the demand was, in 1808-9, 2,81,59,722, and the amount collected 2,49,46,483 rupees, leaving an uncollected balance of 32,13,239 rupees. In the year 1826-27 the demand was increased to 3,78,28,865, and the collections amounted to 3,59,97,382 rupees, leaving a balance of 18,31,474 rupees. During this interval of 20 years the revenue has increased one-third, when during the same period the revenue paid by the Lower Provinces has remained the same; and the difference paid by the cultivator of the land has been realized by the zemindars or proprietors, and probably to a much greater amount than realized by the Government from the Western Provinces, when the capital annually expended in the cultivation of indigo, amounting to a crore or million, is taken into account, for the amount has been laid out in reclaiming waste lands and keeping them in the highest state of cultivation. In addition to the capital vested in indigo, the outlay on account of silk has increased since 1813 from 17,00,000 to 85,00,000 rupees, causing an increase in the cultivation of the mulberry plant in the vicinity of the silk factories. The advances for opium have increased from 8 ½ lacs to 19 ½, causing a corresponding increase in the cultivation of the poppy most advantageous, the poppy being raised by gardeners, and employing thousands of individuals in collecting and preparing the drug. The value of this branch of cultivation may be estimated by the rent of the land, which has been raised from 3 and 4 rupees to 18 rupees the beegah, which increase of rent has gone to the zemindar. In consequence of the poppy cultivation being prohibited under the leases granted in perpetuity since 1792, the Government has been enabled to realize a revenue from the land settled in perpetuity in proportion to the limited cultivation of the poppy, by the sale of the drug at a monopoly price; and the zemindar has at the same time derived benefit from the capital annually expended in the cultivation. If indigo had only been cultivated under a monopoly system, similar to the opium, and the Government had realized the difference between the price of its production and the sale price, a revenue exceeding the amount realized from the opium might have been raised from the land settled in perpetuity, for there would have been little difficulty in realizing 100 per cent. from the restricted produce. The landholder has, under the existing system, realized the profit which, if the land rent had not been settled in perpetuity, would have gone to the Government.

Under

Under the head of Salt,

The receipt in 1808–9 was - - - - -	*Rs.* 1,57,00,000
Ditto - 1826–27 - - - - - -	1,87,00,000
Increase - - -	*Rs.* 30,00,000

The average price in 1808–9 was 371 rupees 14 annas the 100 maunds, and in the year 1826–27 the price was 419 rupees 6 annas 9 pice. It appears that the cost to the State was, in 1808–9, 35,25,208 rupees, and in 1826–27, 59,04,697 rupees. I must observe, that the Honourable Court has, on more than one occasion, directed its revenue servants to realize the revenue from the sale of an increased quantity of this necessary of life, rather than an increase of the monopoly price; but it would appear from the particulars of the sales, that the quantity brought to sale has not increased sufficiently to lower the price, or the price has been maintained by not forcing the purchasers at the sales to pay for their lots and clear them. The population has no doubt greatly increased since the year 1808–9, when the quantity brought to sale was 44,00,000, and in 1826–27 the quantity was 46,00,000, and in the three preceding years 50,00,000 maunds. Of the quantity brought to sale in 1808–9, there was a balance at the end of the year of 4,27,000 maunds, and there was a balance at the end of the year 1826–27 of 12,66,200 maunds, which would tend to prove that a less quantity was thrown into the market in 1826–27 than in the year 1808–9 by 6,41,000 maunds. It may be assumed that, the price remaining the same, individuals consume the same quantity every day of the year; and it being paid for by the consumer, the wholesale and retail sellers have no excuse for not paying for their lots and clearing them. Any indulgence shown by the Government enables the purchaser to keep back his lots, and enhance the price to the retailer.

Under the head of Opium,

The Receipt in 1808-9 - - - - - - -	*Rs.* 51,29,126
Ditto 1826–27 - - - - - - - -	- 1,47,87,136
Increase - - -	*Rs.* 96,58,010

In the year 1808–9, 4,208 chests were brought to sale, and averaged 1,213 rupees the chest; the sale amounting to 51,05,740 rupees, and the cost of the drug to the State 8,62,967 rupees. In 1826–27, 5,500 chests of Patna and Benares opium were brought to sale, and averaged 1,218 rupees the chest; the cost to the State was 19,79,561 rupees, and the sale amount 67,31,195 rupees. The number of Malwa chests sold in Calcutta was 1,500, and averaged 1,418 rupees the chest, yielding 21,28,000 rupees. The number of Malwa chests sold at Bombay was 2,980, averaging 1,469 rupees the chest, which realized 42,79,604 rupees. Had a portion of the capital expended in the cultivation of the opium in Malwa been advanced for the production of the drug from our Western Provinces, equal to their capabilities of production, at the Malwa prices, the zemindars of our own districts would have benefited instead of the zemindars of Malwa, and our revenues would have improved in proportion.

Mr. Mackenzie.

The Revenue has been considerably increased by war or through negociation. The war with the Goorkhas, commencing in the autumn of 1814, and brought to a termination in the spring of 1816, gave us, in complete dominion, the province of Kumaon, a portion of Garhwal, the valley of Dhera, with the adjoining mountainous pergunnahs of Jounsar and Bawar, and some other inconsiderable and detached portions of the country lying within the skirts of the Himala, and between the rivers Jumna and Sutluj. It placed under our protection, with the obligation of a light tribute, the territories of several Hill Chiefs, occupying the remainder of the mountain tract between Kumaon and the Sutluj*, and possessing an inconsiderable portion of the plain country east of that river. We likewise acquired the undisputed possession and disposal of a long line of forest and pasture land; important, as it enabled us to settle the boundary of our dominions, but little meriting our attention on the score of finance, excepting that a part of it, with a pergunnah, Khyragurh, formerly belonging to Rohilcund, was accepted by the sovereign of Oude in lieu of a crore (10 million) of rupees borrowed from him during the war. The whole of those acquisitions, indeed, can never be financially of much importance, excepting in so far

---

* Kahloor, or the trans-Sutluj possessions of the *Belaspore* Rajah, are not, I believe, under our protection; our interference there being barred by treaty with Runjeet Sing How far Kunawar, or the country belonging to the Bussahar Rajah, which extends to the N. W. of the Sutluj, amidst and beyond the mountains covered with perpetual snow, is in a like predicament, has not, that I am aware of, been formally determined. Nor is the point, perhaps, of much importance, since the people who repulsed the Goorkhas from the very banks of the river, are not likely to stand in need of aid against any other enemy, even if their country, the wildest and most inaccessible probably in the world, could feed one.

far as they have added (and they have greatly added) to the security of our other possessions, or have enabled us to facilitate commercial communication with Tartary. The negociations and hostilities with the Mahratta and Rajpoot states, on which Lord Hastings was engaged from the summer of 1817 to the spring of 1819, and the arrangements adopted by him, for the settlement of Central India, after it was cleared of the predatory bands who are known under the name of Pindarees, resulted in a large accession of territory and revenue to Bengal and Bombay, and in the addition of considerable tributes to the resources of the former Presidency. In this administration, too, the settlement of Singapore was established, affording, doubtless, a very useful emporium for the trade of India and England, and which, with due economy, ought not to cause any burden upon the finances of either country. To the above I ought, perhaps, to add the purchase from the Nizam of the Peshcush which the Madras government used annually to pay on account of the Northern Sirkars, amounting to about 6,00,000 rupees.

The war in which Lord Amherst's government engaged with the Burmese, also added largely to the extent of our dominions, with comparatively little addition, however, to the Revenue; and a small portion of the charges of that war has been met by a contribution from the enemy of about a crore of rupees, since gradually liquidated.

Though I have not the means of stating the amount collected from the several acquisitions above mentioned so accurately as can easily, I imagine, be done by the officers at the India House, yet it may be useful, in facilitating inquiry, to specify the particular districts thus added to the British dominion.

To Bengal.—By the Goorkha War:
Kumaon,
Dhera Dhoon,
Jounsar and Bawar,
Sabathoo and other villages between the Jumna and Sutluj,
Tributes of Hill Chiefs.

By the Mahratta, and by the Pindaree War, and consequent arrangements:

Saugur and the Nerbuddah territory,
Sumbhulpore and other pergunnahs on the N. W. frontier of Bengal,
Khandah in Bundlecund,
Ajmere and part of Mairwarrah,
Part of Nimar,
Bairsea and Shoojawulpore.
Tributes—Jyepore,
Joudpore,
Oudepore,
Boondee,
Kotah,
Pertabghur,
Rutlana,
Banswarra,
Doongurpore.

By the Burmese War:

Assam,
Arracan,
Ultra Irrawaddy territories.

To Bombay.—By Negociations and Conquests preparatory to, and consequent upon, the war against the Pindarees and Mahrattas:

Various territories and rights in Goozerat,
Northern Concan,
Southern Concan,
Kandes,
Ahmednuggur,
Poonah,
Dharwar.

To the above I should perhaps add Malacca, Chinsurah, and some other inconsiderable possessions which we acquired by treaty with the Dutch, getting rid of Bencoolen.

2dly. The revenue has been considerably increased by escheats and the lapse of tenures held under temporary grants or leases, free of assessment, or subject only to a light quit-rent.

Under this head I place *Hatrass*, in the district of Alygurh, which was forfeited in 1817 on the rebellion or rebellious resistance of its Talookdar; also pergunnah *Goverdhun*, annexed to the district of Agra on the death of the late Rajah of Bhurtpore, and our consequent interference in the affairs of that state. The former, indeed, who paid a quit-rent, was always properly liable to the ordinary jurisdiction of our courts; and his tenure, like those of several other Talookdars or renters in that part of the country, would, at any rate, have been subject to assessment at his death. The latter was, I believe, held by the Bhurtpore Prince in virtual sovereignty, at least without any interference on the part of our local authorities, but was considered to have been held under a life tenure only. At various times

times during the period in question, villages belonging to petty chiefs among the protected Sikhs who occupy the country to the north and north-west of Dihlee, between the Jumna and the Sutluj, have lapsed to the British Government, in consequence of the demise, without other heirs, of the late possessors. They are under the charge of the political agent at Umbala.

Many tax-free tenures, within our ancient possessions, have also fallen in and been added to the rent-roll; and various farms have expired with a like addition to the revenue; the detail of which can only be ascertained with accuracy by a particular examination of the *Revenue* Accounts. And I may take this opportunity of observing, that the *Financial* Statements hitherto submitted to Parliament do not appear accurately to exhibit the effect of territorial arrangements: separations and annexations of districts occasioning a rise and fall in the collections brought to credit under the heads used by the financial officers, without there being really any corresponding improvement or defalcation in the resources of the provinces specified.

3dly. The improvement of the country, by which I mean extended tillage, enlarged commercial dealings and augmented population, appears to have occasioned an increase of receipt in all branches of the revenue that admitted of increase.

4thly. The increase in the revenues may doubtless be in some degree ascribed to the enactment of better laws, and to more efficient management, as experience has pointed out defects.

5thly. There has been some additions made to the burthens of the people directly, as in the case of new Stamp and Custom Duties, (the latter branch being however chiefly remarkable for the abatements made in favour of English trade,) and indirectly, as through the rise in the price of salt.

6thly. The great increase of the demand for Opium in China has considerably augmented the receipts drawn from that source, notwithstanding a greatly enlarged supply of the produce of Turkey, and the more formidable competition of the now tranquillized country of Malwa.

It does not now occur to me that there has been any deterioration of old, or any introduction of entirely new taxes, during the period in question, sufficiently important to merit notice here; unless the taxes levied in the Madras territories on the profits of trade, and on the professional income of various classes, under the names of Versaluddy and Moturfa, can be reckoned such.

QUERY II.—What are the principal Causes which have affected the Amount of Charge in the various Departments of Indian Administration during the same period?

Mr. Hill.

ANSWER.—THE remittance constantly required from India to England on the Government account is a disbursement for which India receives no return, and may be regarded in the light of a national tribute. To that remittance have to be added the funds required for the use of private individuals, for which, in the same manner, no return is made to India. The total amount of this tribute is so large that the payment of it requires to be facilitated as much as possible, both by fostering the resources of India, and by promoting a demand for her products on the part of other countries. If this great duty be not attended to in both its parts, India may come to be unable to satisfy the exactions of England. Whatever augments the surplus produce of the country will enable it the better to bear the burden we have laid upon it. This should be done, first, by every practicable measure directly tending to its prosperity; secondly, by economy in its public expenditure; and thirdly, by assistance in its foreign trade. It is contrary to the last of these three branches of policy, to favour by our laws the export to India of articles with which she is able to supply herself, or to discourage the export from India of articles with which she is able to supply other countries. We have, in a great measure, succeeded in supplanting her cotton manufactures by those of England. I understand that the practicability of supplying her with salt from Liverpool is under consideration. We exclude East India sugar from the English market by means of high duties. If, in addition to all these disadvantages, any change of system were materially to diminish the tea trade from China to England, by means of which China is enabled to pay for the opium and cotton which she imports from India, it is probable that the demand for those articles would be proportionally reduced, and India would then be disabled from paying its tribute to England.

Mr. Langton.

UNDER this head of inquiry, I venture to remark on two items of charge, which merit particular attention, both from their magnitude and from their being the principal cause of that difficulty to which the 10th and 11th heads of inquiry relate. The first, which extends through every department of government, is the extravagant scale of remuneration to functionaries of every class; the second is, the pay on furlough and retirement, and the retiring pensions and allowances for length of service in all departments: the latter is a rapidly increasing charge, and both appear to be susceptible of being materially reduced.

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

Mr. Wood.

ALTHOUGH the Bombay receipts have been considerably augmented, the charges at that Presidency have increased out of proportion to the receipts, for the deficiency in 1808–9 amounted to 1,20,79,630, and in 1826–27 to 1,26,12,987 rupees, and a portion of the charge for interest, amounting to 26,00,000 rupees, was transferred to Bengal, which, if added to the deficit of 1826–27, would amount to 1,52,12,987 rupees. The increase occurs in the Civil to the amount of 88 ½ lacs; and if interest charged in 1808–9 be taken into account, to 117 lacs; and in the Military to 83 lacs. At Madras, although the receipts were augmented, the charge increased out of proportion, for the deficiency, which in 1808–9 amounted to 15 lacs, increased in 1826–27 to 36 lacs; and if a portion of the charge of interest on the debt, transferred to Bengal, be added to the deficiency, amounting to the difference in the charge of interest in the two years, it would increase the deficiency to 67 lacs. The increase in the Civil charge, after allowing for the difference of charge for interest, amounted to about 12 lacs; and the increase in the Military to 45 lacs. The total of the debt bearing interest on the 30th of April 1809 at the three Presidencies, amounted to 24,33,30,220 rupees, and

on the 30th of April 1827 to - - - - - - - -	*Rs.* 29,75,38,029
And the charge on account of interest in 1808–9, was - - -	1,95,84,320
And in the year 1826–27 - - - - - - - - -	1,61,18,290
	Rs. 34,66,030

And the difference has been caused by the interest being reduced from 10, 9, 8, and 6 per cent., the rate of interest the debt carried in 1808–9, to 8, 6, 5, and 4 per cent., the rate of interest the debt carried in the year 1826–27. Since the year 1808–9, the interest, which at that period, with a large proportion of the principal, was payable in cash in India, or bills on the Home Treasury at the exchange of 2 *s.* 6 *d.* the sicca rupee (the then value of the rupee in English currency), at the option of the holder, has since been made payable in cash only, with exception to a portion of the debt, amounting to 7,72,00,000 rupees; the principal of which is payable in England, at the exchange of 2 *s.* 6 *d.* the Calcutta sicca rupee, and the interest at 2 *s.* 1 *d.*, at the option of the holder. The remainder of the debt is only payable in cash, excepting under the indulgence of the governments, which has recently been withdrawn. The debt between the years 1808–9 and 1813–14 was gradually reduced from carrying an interest at 10 and 8 per cent. to the rate of 6 per cent., by taking advantage of the Government credit and the balances in the Indian treasuries; and in the year 1822–23, the same circumstances admitted of paying a portion of the principal, amounting to about four crore, and reducing the interest from 6 to 5 per cent. on about nine crore of the debt. On the breaking out of the Burmese war, the Government borrowed a portion of its debt at 4 per cent., and subsequently, on money becoming more scarce, raised money at 5 per cent. Since the year 1808–9, many facilities have been afforded the European and Native public of receiving the interest on the debt through the medium of the treasury officers at the three Presidencies, at a trifling charge; and without their aid, from any treasury in the country; and although these facilities have not been made sufficiently known to the native inhabitants, from the orders of the Government not being sufficiently explained, yet the natives throughout the country have become more familiarized with the loan operations; and as their confidence increases, their habits of hoarding may be expected to give way, and their capital to be made available in times of difficulty and offensive warfare to the Government. As every holder of the loan paper must of necessity be attached to the Government to whom he looks for the payment of the loan, and as our rule in the East must be strengthened by having the debt distributed rather amongst the Native than the European creditor, every facility should be given in the payment of the interest, and from the treasuries throughout the country; and, in my humble opinion, as few changes as possible should be effected in the rate of the interest, for every change causes inconvenience to the holder of stock. The Government loans to an individual in the habit of hoarding will be valued more with reference to their permanency than to the rate of interest they carry. The hoarder, if disposed to give himself the trouble of superintending the management of his money, may, by lending to others on security, at all times secure a much higher interest than the loans will yield, and of course than he is ever likely to obtain from any change in the money market, and their habits of hoarding can only be surmounted by making the Government treasuries, through the debt, an available deposit for their savings. Much of the success of the loan operations, during the Burmese war, may be attributed to the treasury officers of the three Presidencies being placed in communication with the native capitalists, and the confidence reposed in the Government. There was great distress amongst the mercantile community, and the Government afforded them aid, which but for the success of its loan operations would have been impossible. By withdrawing from the money market no more than was required for the current disbursements, the rate of interest was kept down to 5 per cent. I have not the means of going into the details of increase and decrease of the receipts and charges of the Presidencies of Fort St. George and Bombay, without a reference to the particulars of the establishments since the year 1808–9; and the labour of such an investigation would occupy months of unceasing attention, which the Committee must be aware would take more of my time than I can conveniently spare, and I hope may be pleased to excuse. With the accounts of the Bengal Presidency I am more familiar, and beg to refer to my own reports, which will afford all the information in my power on the principal heads of receipt and disbursement, by comparing the receipt and charges of the year 1808–9 with the receipt and charges of the year 1826–27, the last report furnished by me previous to quitting India.

The

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

The increase in the charge of the debt at Bengal in the year 1826–27, from 1,22,27,201 to 1,41,42,153 rupees, its amount in the year 1808–9, was caused by the transfer of the debt from Madras and Bombay, amounting to 2,25,71,675 rupees, and the sums raised since that period having been funded in Bengal. But for these transfers the charge would have been less, and the amount of the debt more. The total of debt on the 30th of April 1809, bearing interest at the three Presidencies, was 24,33,30,220 rupees, which carried an interest of 1,95,84,320 rupees, and the total of the debt on the 30th of April 1827, bearing interest, was 29,75,38,029 rupees, and it only carried and interest of 1,61,18,290 rupees. In the year 1808–9 the debt carried an interest of 8 per cent. with exception to a debt of 86 lacs at 10 per cent., and the Treasury notes at 6 per cent. In the year 1826–27 the debt only carried an interest of 5 per cent., with exception to 7½ crore at 6 per cent., and the Treasury notes at 5 per cent.

There was a surplus in Bengal, in the year 1809, of 1,52,75,280 rupees, and in the year 1826–27 a surplus of only 42,04,208 rupees, leaving a deterioration of 1,10,71,082 rupees. During this interval the Military expenditure has more than doubled, and the Civil, after deducting the charge on account of interest, has increased about one-twentieth. The receipt during the same period, after deducting the tribute from Ava, has increased about half the amount in the year 1808-9.

Mr. Mackenzie.

FOR a detail of the measures that have occasioned the very large increase which has occurred in the charges of the Indian Government, I must necessarily refer to the statements prepared by the officers of audit and account; confining myself to such general remarks as may seem likely to be useful.

I need not advert to establishments actually employed or stipends payable in our new acquisitions, nor to the interest of the public debt, which follows, though happily at a reduced rate, the increase of the principal; in so far at least as that represents money actually borrowed.

The public establishments at the Presidencies must have been expected to become more chargeable (the nature of the agency remaining the same) in proportion as our empire has extended in size, or in the number and wealth of our subjects, and as other establishments controlled by them have been increased, whether with increase of receipt or increase of expenditure. And the business in which Europeans are concerned, and which requires generally more expensive agency than that of natives, has especially augmented since the last Charter Act.

Durbar charges and other expenses incurred by the Governor-General and Governors, and by those immediately attached to them, seem to have increased chiefly in consequence of the progresses which at all the Presidencies it has been thought expedient for the heads of the governments to make in the interior of the country under them. New and more complex political relations have caused the appointment of new agents. The church establishment has been largely added to. There have been various new calls upon the Government for support to charitable institutions, which have much multiplied; the claims of the poor, the sick and the ignorant being in India, as in England, more liberally considered, or being at least more extensively met through the operation of societies than they used to be. The education of the people, still miserably defective, has been better provided for. A liberal allowance has been given to a fund established for the purpose of providing retiring annuities to civil servants: surveys and public works have been undertaken on a larger scale. The number of young civil servants attached to the college has of late years been greater than formerly. The irregular troops charged to the Civil Department (general branch) were largely increased. It may be proper here to observe, that I speak now of what was done before that system of active retrenchment, which the present Governor General has been pursuing with a zeal that cannot be surpassed, had commenced.

The Board doubtless possesses a much fuller detail of the reductions that have been effected, and are contemplated by the several Governments under that system, than I could pretend to give, even were I to confine myself to Bengal, and to the period of my stay in India; and will naturally have caused the necessary statements to be prepared. I shall only therefore remark, that the effect must, I conceive, be an increase in the local surplus to a much greater extent than has yet been anticipated in the evidence taken by the Committees of Parliament, and that it seems to be very desirable to obtain from Bengal, the actual accounts of the present year, and a careful estimate for 1832–33, as soon as possible.

To return to the question, as to the causes which have occasioned increase of charge. There is, I apprehend, in all departments of all governments, when not forced the other way by some special pressure, a constant tendency towards new and additional expenses, which it is exceedingly difficult to check; and the constitution of the Indian Government, and the way in which it conducts its business, are not, I think, such as to apply any very efficient check; nay, depending as it does mainly upon the reports and statements of its executive officers for information of what they do, every effort it makes to control with more knowledge, is itself an occasion of expense. In the Revenue Department, the per-centage which the charges bear to the gross receipts must of course depend greatly on the facility with which the amount required can be collected. A rich government, if tolerably honest, will naturally discontinue taxes costing much to collect. On the other hand, a government pressed for money, to pay its army and civil establishments and debt, must look to the *amount* of the net revenue, rather than to the *proportion* which it bears to the gross collection. In such circumstances, 10 out of 12 may be thought better than 9 out of 10, although in the first

first case the charge is 1-6th, and in the latter only 1-10th. And, unfortunately, the Indian Governments have generally, very brief periods of prosperity excepted, been or thought themselves to be in this predicament.

Land Revenue and Sayer.

The Land Revenue of the permanently settled districts might certainly be collected for a mere trifle: for less than the per-centage of commission which the collectors themselves received on the excise and other miscellaneous receipts of their respective districts. It has always indeed been collected more cheaply than those miscellaneous items of revenue; and therefore, in proportion as the receipts from those items increased, the per-centage of charge necessarily increased also, until a limit was put to the commission receivable by the collectors, or (as has been done with doubtful policy) a fixed salary was given in lieu of all other allowances. Besides this, I should state that, in proportion as the retail sale of opium has been extended, the Abkarree Department has had to bear a new and comparatively heavy charge in the price of the drug transferred from the Opium Department, which can scarcely be reckoned among the charges of collection. But further, collectors have been required to hold much more elaborate proceedings than formerly in the settlement of the Government demand. They have also been required to do many things that have no necessary connection with the business of collection; they are judges or referees in many private suits; they divide estates and apportion the Government demand among coparceners; they investigate claims to rent for lands and pensions; they inquire into, and in the first instance decide various other cases between Government and individuals. It was hoped, that they might have established such a system of accounts relative to land and its rents, as to redeem and preserve much of the knowledge necessary to the protection of the agriculturists, and with that view and for the preparation and preservation of good records, expensive establishments were entertained. In many districts (at Madras and Bombay in all) collectors are also vested with the charge of the police, and with certain powers for the punishment of criminal offences; and for the purpose of securing the better execution of the above and other duties, the number of collectors and the strength of their establishments were considerably increased, while at the same time the constitution of the superior Boards was modified, their powers enlarged, and their numbers added to, in the hope of enabling them not merely to superintend with more efficiency the collection of the revenue, but also more carefully to investigate and weigh the private interests which their acts affect. In the Delhi territory especially, the establishments have been greatly increased along with the increasing population and revenue, and the gradual introduction of a more regular system of administration. Hence has resulted a great increase in the charges brought to account, under the head of Land Revenue. Under this head also, is charged the expense of works for the improvement of inland navigation, and that of canals, for carrying water to arid countries, and that of embankments, whether designed to protect the country against mischievous floods, or to gather water in ponds or lakes for the purposes of irrigation, and all these items, with others probably of a like nature, which escape me, will be found to have contributed to swell the charges. In the Revenue, as in other Departments, too, a considerable increase of charge will, I imagine, be found to have arisen from the construction of public buildings; the offices of all collectors being now, with few if any exceptions, held in houses built at the Government expense.

Mint.

This cause must especially have swelled the charges of the Calcutta and Bombay Mints, expensive buildings having been erected for the reception of very costly machinery sent out from this country. Most of the other mint charges depend on the extent of coinage, the fixed establishment being restricted to what is thought always necessary to be maintained, and the items of stores expended and waste incurred, like that of temporary labour hired, varying of course with the quantity of metal subjected to mint operations. At Bengal the mint charges must have varied considerably from other causes, for in the period in question several changes in the mint regulations have been made. The Furruckabad mint has been abolished, but a new mint, designed to be temporary, was established at Saugor. The establishment of the Benares mint, since wholly abolished, was increased by the appointment of a separate office of assay, once very strangely combined with that of the mint master. The salary of the mint master at Calcutta was increased, but the office has since been united with that of superintendent of stamps; an arrangement calculated to effect considerable saving. The subordinate establishments have been considerably added to.

Post-office.

Of the increase in the Post-office charges, as in the collection, a part is nominal; various establishments entertained by political agents in foreign states, what were formerly brought to account in the Political Department, being now transferred to their proper head.

Stamps.

In the Stamps also, though the charges on account of commission and the purchase of paper, which last might stricly perhaps be regarded as an abatement of the tax, have necessarily increased with the increase of receipt. A portion of the exhibited charge, as of the income, may be deemed to be merely nominal; it consists of sums collected from suitors in lieu of the old institution fees, and paid to the native judges (at one time the register of the zillah courts were remunerated in the same way) by whom the cases were decided. Of late years European water-marked paper has been used more extensively; and the number of venders in the interior will be found to have been multiplied not only for the purpose of adding to the revenue, though at the expense of a higher rate of charge, but also from the necessity of bringing stamps within reach of the people in remote and less productive places.

Customs.

In the Custom Department the principle I have above alluded to as necessarily influencing a poor or spendthrift government, viz. that of seeking an increase of net revenue at the expense of an increased rate of charge, is likely to operate with particular force, and our system of custom law at Bengal is such as could scarcely fail to produce the same effect under any circumstances. In 1810 a general scheme was adopted (under Regulation 9, of that-

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

that year) of which the main features were these: 1. That inland duties should only be levied on the articles specified in the law. 2. That the duties should be collected and passes granted only at the head offices where there were European collectors. 3. That the subordinate posts, the transit through which infers the obligation of paying duty, should as far as possible be confined to the vicinity of those head stations. 4. That a pass granted at one custom-house should cover the goods specified in it in their transit throughout the provinces. 5. Duties varying from 5 to 10 per cent. (on imports on foreign ships the rates were 10 and 20) were imposed on all goods imported by sea; which having paid that duty had then a free transit in the interior. 6. Goods which had paid the inland transit duty were generally passed free, or with a partial drawback if exported on a British bottom, exports on foreign bottoms being subject (Regulation 3, 1811) to such charges as that the amount of inland or export duty collected and retained, should always be twice the sum taken on similar articles exported on British bottoms. In 1815 and subsequently, extensive abatements of the import customs and enlarged drawbacks from the inland duties, were granted in favour of the trade with the United Kingdom. The first and second of the above stated provisions have been maintained, and (if transit duties be at all levied) may perhaps be deemed unobjectionable, excepting that the second implies the employment of European agency in a manner and to an extent scarcely to be defended; the *third* provision, never properly applicable to the traffic which crosses the extensive champagne countries west of Benares, has every where been more and more departed from, as the necessity of guarding new routes, or routes newly brought under observation, has from time to time been suggested; the *fourth* provision operates of course to extinguish the relation which under a well regulated local consumption duty would be found to exist between the extent of the trade passing through particular tracts and the amount of duties realized by the custom duties established therein. Thus for example, of the customs levied on the salt consumed within the whole of the Conquered and Ceded Provinces and Benares, probably more than 39-40ths will be found to be collected by the Agra and Delhi establishments, and so of other staples; and though in some respects the rule is advantageous to the merchant who has to pass through the limits of many custom-houses, yet its tendency seems to be to enhance considerably the per centage of charge, both because it subjects the local trade of particular tracts to an excessive and therefore often evaded duty, and because the goods though free of duty are still subject to examination and search.

The great enlargement of the trade between England and India, and the alterations which the duties and drawbacks established by the fifth and sixth provisions, have undergone since 1815, must have still more importantly affected the relation of receipt and charge. A very large increase in the establishment of the Calcutta custom-house was quite unavoidable to meet the fair expectations of the mercantile body; the same circumstance rendered it necessary to strengthen the authority of control; and of course the exemptions and abatements granted in favour of the trade with England, without essentially affecting the work to be done, prevented that increase of revenue which would have followed increase of traffic. Drawbacks I need scarcely say, while they reduce the Government receipts, add much to the labour of its officers and increase expense. I should perhaps add, that I think the increase of establishment has been carried rather too far; and especially the employment of Europeans. But I have little or no doubt that frauds prevail now much less than they once did; and that if we could ascertain the sums paid upon smuggled goods when the fair trader wanted the facilities now afforded to him, and when comparatively few checks were imposed, we should find that the proportionate amount levied from the public (if bribes and sums paid to smugglers be reckoned such) exceeded the present rate.

Salt.

In the salt department the measures taken for the better prevention of smuggling, for the prompt decision of charges of illicit dealing, and for the increased supply of salt from the Bengal and Cuttack agencies, have occasioned an increase of establishment, and consequently expense. In almost all the salt districts too, it has been found necessary to increase the price paid to the manufacturers, either on the ground of a rise in the necessaries of life, or a comparative scarcity or dearness of fuel, or simply on the representation that without smuggling they could not live on their earnings. And the revenue of Bengal has been saddled with a charge of 4,00,000 rupees as compensation to the French. In the Opium Department the necessity of greatly increasing the supply in order to meet the competition of Turkey and Malwa, has similarly operated to enhance the charges; and at one time they were considerably increased by the rewards given to informers and seizures of illict opium, but this I believe has now been stopped, and generally smuggling both of opium and salt has I conceive been checked. In the judicial establishments a considerable increase must have been expected as a necessary consequence of increasing population, of the subdivision of landed property, yielding in the permanently settled districts a large net income to the persons who have contracted to pay the Government quit-rent, and of the position in which our arrangements have left those persons relatively to other classes connected with the land; and this cause of increased expense, which could only be counteracted by having recourse more largely to native agency, though that has been done extensively, will accordingly be found to have operated through the appointment of new courts and additional judges: gaols and court rooms also have been expensive. I need scarcely advert to the increase of the military establishments, which has of course been long and prominently presented to the attention of the Board, as one of the main causes that have affected our Indian charges. Nor can it be necessary to mention the important item of stores furnished from Europe, which have for some years past been included in the Indian accounts of Revenue and Charge.

Opium.

It

It may not be useless to observe, that among the Civil Charges contained in a printed Statement dated the 17th March 1830, there is a considerable item entered as the "*Pay of Troops as per Treaties,*" which I suspect to be erroneously charged, if, as I imagine, it refers to the Scindia contingent, our advances for which are recoverable from that State.

In the above, and in all these remarks, I would be understood to refer chiefly to Bengal. In regard to Madras and Bombay, the Board has other means of acquiring more accurate information than I can hope to offer. In respect also to Penang and to the other subordinate settlements, I could do little more than refer to causes of expense which have been already fully exposed, and no longer, I hope, exist.

QUERY III.—Whether any measures can be suggested for rendering the existing Revenues more productive, or for realizing the Revenues with more regularity and promptitude?

Mr. Hill. *ANSWER.*—THE Madras revenues have been realized with surprising regularity, and without any want of promptitude. The best means of preventing them from falling off, is not to tamper with the main sources from which they are drawn: the best means of rendering them more productive is to promote the prosperity of the people.

Mr. Mackenzie. I HAVE little hope of being able to suggest anything of much use under this head; looking merely to immediate effects. In the Land Revenue we should look to equalization rather than increase. The Custom Revenue might, I think, be unobjectionably raised by imposing new and additional duties on metals imported by sea—copper, spelter, tutenague and tin especially, would yield a very considerable increase. Wines and spirits, and several other articles might also, I conceive, be properly subjected to a higher rate of duty, and the tax should, I think, as far as possible be fixed upon quantity (different descriptions of goods having different rates), and not be left to vary *ad valorem*. Stamps might be extended to the Delhi territory, and to other districts not yet subjected to the law; but I would except always the stamp required for plaints and petitions. A few articles of luxury might possibly be taxed without any serious objection; but the habits of the people are still comparatively simple; and although of tobacco the consumption in Bengal must be immense, and a moderate rise in the price of the article might not be seriously burthensome, yet no scheme that has been suggested for subjecting it to a general tax could, I apprehend, be put in operation without so much risk of annoyance, and exaction and fraud, as to dissuade from the attempt. The Mint receipts might probably be increased and the charges lessened by having one currency for all India; and by supplying copper or spelter money to take the place of the shells used in petty dealings. In the Salt and Opium Departments I confess I greatly doubt the expediency of any considerable change of system; but the supply of salt should, I think, be increased, even though there will probably be a temporary loss of income. In regard to opium, we have no choice but that of extending the supply according to the demand of the market and the competition we have to meet. In the Post-Office we should push for speed, and be moderate in our rates; the privilege of franking should cease, or be confined to a few. Looking forward to no very distant time in the history of a nation, we might, I think, increase the wealth of the country or secure a better distribution of it, and consequently raise more revenue, if wanted, by all or some of the following measures: By a settlement of the amount to be paid by the owners of land for a long term of years, the assessment being so adjusted as to leave them a valuable property in the surplus rent beyond the Government demand; and with a survey and record such as to remove all doubt in regard to the subject-matter of the settlement; by encouraging the settlement of Europeans and the children of Europeans, and the application of their energy, skill and capital to agriculture; by educating the Natives to European knowledge and habits; by admitting Natives to a larger share in the advantages of office; by constant, but gradually urged efforts to give a more popular character to the administration of the country; by a liberal but economical and strictly watched expenditure, in facilitating internal intercourse; by removing all artificial impediments to the extension of trade in India, or between England and India; by abolishing the usury laws in India; and providing generally a good system of mercantile law, and courts to administer it promptly and cheaply.

Mr. Langton. A REDUCTION of high duties is generally found to increase revenue by favouring the increase of consumption, both of the article on which the duty is reduced and of other taxable commodities. The Indian import and export duties are low, but the town and transit duties are both high and unequal in their operation: the total abolition of all such would tend greatly to increase consumption, and a moderate increase of the import and export duties to compensate the falling off in the revenue from the abolition, on the present scale of consumption, would eventually produce a great increase in the revenue.

On various grounds this measure is to be recommended:

1st. From the numerous officers employed in the collection, the productiveness to the revenue of these duties bears a smaller proportion to their drain on the means of consumption than higher direct duties at the place of importation would do.

2dly. More than the legal duties are frequently exacted, with little danger of detection to the officer, as it is known that from distant stations few complain or seek for redress. Of this

this excess of charge, it is obvious that nothing will go into the public coffers, and nothing but the entire cessation of these duties can secure the small trader from such unjust exactions.

3dly. Further impediments to consumption, without benefit to the revenue, are, the vexatious delays incidental to the system, and the injury done to merchandize from the repeated opening and examining packages, which is often done to obtain fees and gratuities.

As connected with the latter part of this Query, the long retention of monies collected, in the hands of the collectors, may be noticed. A similar abuse has been corrected at home, with great acknowledged advantage. In India the abuse has been carried to a much greater extent than it ever was in this country, and must have been prejudicial, not only to the State, but also to individuals. The State has incurred a loss in interest on the amount thus kept back, and for the whole period beyond which the collected revenues might have been transmitted to the treasury; and the monies so retained have been employed occasionally in mercantile pursuits, exposing the private trader, in a country where interest is so heavy, to a ruinous competition against funds burthened with no interest.

Defalcations also have resulted from the practice, probably in more cases than have become known, and * disgraceful advantages are said to have been drawn from the retention of such collections, of which it might be dangerous to speak more particularly, as the cases are perhaps not susceptible of proof, and the reports may be calumnious; but the existence of such reports, true or false, is a strong ground for altering the practice and for withdrawing the temptation and the opportunity.

Mr. Wood.

I am asked if any measures can be suggested for rendering the existing revenues more productive.

The revenues of the Western Provinces and Ceded Districts may be expected to improve as the population increases, and the land becomes more cultivated. Nothing will more contribute towards their improvement than long leases, and encouragement to the cultivators of indigo, sugar, opium, and other articles of export calculated to yield a return for capital vested in their production, and to remunerate the landholder for bringing waste land under the plough, and improving the system of cultivation of the land already broken up. It must take time, and improvement must be allowed to go forward, before the Government raises its rent; and more permanent gain will be realized by waiting the result of improvement under leases of 10 years' duration, than by anticipating the gains likely to accrue from prolonged leases, and driving a hard bargain with the present occupiers of the land on the condition of allowing their existing leases to be extended for a period of 10 years. Great judgment should be used in making the settlement of the Land Revenue, and the most experienced servants should be employed; and they should not be praised so much for enhancing the rent (as I fear may have been too often the case) as for making a fair and reasonable settlement of the Government claim, which will admit of the landholder realizing the rent without resorting to the sale of his cattle and property. In the districts not permanently settled, the increase of the revenue should be sought from the land rent, and not from any custom duty laid on the produce.

In the Lower Provinces, which have been settled in perpetuity since the year 1792, when they were in a very uncultivated state, the Government can only raise an additional revenue, by continuing the monopoly of opium, salt and saltpetre, which the landed proprietors are not entitled to produce under the terms of their leases; and by levying a duty on the produce of the districts when passing beyond the limits of the land settled in perpetuity, into the districts not enjoying a like advantage, and on the exports by sea. There can be no equitable reason why the zemindar, who pays no rent for his land, should be allowed to export the produce of it into districts where the State exacts a heavy land rent. If the State levies a duty on grain, indigo and sugar, the produce of the Bengal districts, when passing into the Western Provinces or seaward, it will not probably change the circumstances of the cultivator or labourer of the districts where the State exacts no land rent. He is now obliged to pay the zemindar the surplus produce, over and above what is retained for the expenses of cultivation, and this will be continued to be received whether the duty is levied or not. If a duty is levied, it will enhance the price of the produce, and this will operate as a premium to encourage the cultivation of the Western Provinces and Ceded Districts. In addition to levying a custom duty on the exports of the districts permanently settled, a gradual increase of the stamp duties may be made to tax the landholder of the Lower Provinces; but any change of this nature must be gradual, so as not to excite alarm and opposition.

The Government of India is prohibited from levying a duty on the principal articles of export to Great Britain, and on this portion of the produce of the Bengal provinces, under the existing system, established for the benefit of Great Britain, the Government has no means of taxing, and it may be admitted, that India is made to pay a tribute to England annually to the amount of its duties levied on the imports from India, which do not probably amount to less than 700,000 *l*. If the prohibition were withdrawn, the Government in India would have the power of raising a revenue equal to the amount levied in England.

If

---

* Usurious interest; trafficking with and paying in an inferior currency to that in which the taxes were collected.

If the duty on the sugar were lowered, it is probable that the consumer in Europe could afford to take an increased quantity at a lower price; and it is probable that an increase in the price in India would operate as a premium to the cultivation of more sugar, which would tend to improve the revenues of the Western Provinces, and enable the Government eventually to realize a revenue in proportion to the means of the landholder to pay the same. At the present prices there can be no great increase in the production of sugar, for the native landholder will only cultivate his land with the article capable of yielding him the highest price for his labour, and if grain will produce more than the sugar-cane, he will give it the preference.

The inhabitants of Madras and Bombay are not subject to the same salt tax as the inhabitants of Bengal; and it may be worth considering whether they may not be made to pay a duty on salt, either by establishing a salt monopoly at those Presidencies, on the plan of the Bengal system, or by levying a duty on the salt when in transport from the coast into the interior of the country.

The revenues of Bengal have been fixed since 1792; and the only way of raising an increase is by retaining a monopoly of articles prohibited under the terms of the leases, such as opium, salt, and saltpetre, and subjecting the produce of the country to a custom duty. England, to serve its own purposes, and to exact a tribute from India, has prohibited the Indian government from levying a duty upon the principal articles of export, and taxes India to the amount of the duty levied in England, amounting to about 700,000 *l.* If it were not for the prohibition, the exports to England might be taxed through the customs to the extent of the Indian deficit in times of war, without oppressing the country; for it must be kept in mind that the Government has foregone its right to raise the land-tax, since 1792, of the country producing the principal articles of export. With reference to the prohibition, and the Indian government being prevented raising an increase of revenue, it may be considered how far it may be prudent to relieve the Indian revenues of the whole, or a part, of the burden now imposed on them in England. If, in consideration of the duty levied on Indian imports, the expenditure in England, now charged to the Indian revenue, were foregone, it is probable that more economy would be observed, should the government pass from the hands of the Honourable Company to the Crown, for the public would naturally be more watchful when it had to pay the home expenses than if they were, as at present, to remain burdened on India.

QUERY IV.—Whether any Measures can be suggested which would be calculated to reduce, in whole or in part, any Head of Charge falling upon the Indian Revenues, or to introduce more Economy into the Expenditure?

Mr. Hill.

ANSWER.—IN answer to former letters which you have addressed to me, and in papers therein referred to, I have expressed my opinion that material reductions are practicable in the judicial and military charges upon the Indian revenues, and that a system of much greater economy in the public expenditure is essentially necessary.

Mr. Mackenzie.

UNDER this head I would beg leave to refer to the various measures actually in progress at the several Presidencies, and to the Reports of the Civil Finance Committee, which sat in 1829–30 at Calcutta. It will thence be seen, that charges to a great amount have been, and may be reduced; the detail would swell this paper very needlessly, but it may be right to state some leading points. The salaries of officers to be regulated by the work to be done, without reference to the individuals or classes employed, further than is necessary with the view of having good work, including in the term as respects civil government, the maintenance and security of the sovereignty of England; the consequent employment of native agency more and more extensively with liberal, though (comparatively to Europeans) moderate allowances; the restriction of high paid European functionaries (I include all judges, magistrates, and collectors of districts,) to matters necessarily requiring their interference; the full recognition of the absurdity of attempting to administer the affairs of a million of civilized men through the direct agency of one or two individuals, and those foreigners; and the practical application of the principle, that we cannot really have a civil government excepting through the co-operation of the people; the gradual exclusion of servants temporarily deputed from Europe, from all functions not necessarily confined to them, with a view of maintaining the sovereignty of England; the more general employment of individuals, in place of the agency of collective bodies; the immediate exemption of the local governments, especially the Supreme Government, from responsibility for matters of detail which they cannot usefully, and do not actually administer; the clear definition of the responsibility actually belonging to all classes of public functionaries; the appointment of a Governor General and Council for all India, with powers and duties so defined as to make him such in reality, not in name; the union of the armies of the three Presidencies under one head; the transfer of the whole to the Crown; the substitution of a part of the Royal Navy for the Bombay Marine or the Indian Navy; the better regulation of the supply of stores required by the Indian Governments; a stricter check upon expenditure in public works; the better definition of the functions of direction as distinguished from those of control; the exclusion of the controlling authorities from all patronage direct or indirect.

I should suppose it likely that the purposes of economy would be promoted by the employment of the Ordnance and other national establishments, in all business connected with the Indian army, which has to be done in England in their several departments. The Island of Ceylon ought, I should think, to be part of the Indian Government; St. Helena should be a national concern; and of course the revenues taken from the people of India in virtue of our national sovereignty, should be regarded as belonging to the public purse of England, so that every saving in our territorial charges may be considered as a national saving; and every waste of our territorial resources, a waste of the public money.

Mr. Langton.

AS the means of reducing the two items of charge observed on in the answer to No. 2, a remedy, though perhaps not a very palatable one, presents itself, by the employment in office of native Hindoos, Mahometans, Anglo-Indians, and (if free settlement in India should be granted) of British settlers in every department of the government, where competent persons can be found to fill the offices. Such persons would gladly serve for salaries affording merely the means of living respectably in the station of life suitable to their respective offices; they would serve for life, or till late in life, and a small annual deduction from their salaries would form a sufficient fund to meet all demand for retiring allowances, without adding to the annual burthens.

Were this sacrifice of patronage to the welfare of India made, the measure would operate very gradually, even if every opportunity of resorting to it were embraced; and at least 25 or 30 years must elapse before it could be carried to the extent which it might be deemed safe and prudent to go in this respect.

The relief to the finances would also be gradual, but it would soon begin to be felt beneficially, and in process of time, would both very materially reduce the charges on the Indian revenues, and do away, in a great measure, with the necessity for those remittances so exhausting to India, and for which no return in British produce and manufactures can be made.

The reduction in the rate of interest paid on the register debt of India, since 1808-9, from 8½ to 5 per cent., is an advantage which speaks for itself, and without which the state of the finances would be really deplorable. I am not aware of any disadvantage from the change, except that the savings and fortunes made in India can no longer be accumulated, without risk, at Indian rates. The reduction of the rate proves, I think, that the debt is in fact due to Europeans, and might without difficulty be transferred to England, reducing at same time the rate to the level of English interest, or, say to 4 per cent., and giving a relief to the Indian finances equivalent to the annihilation of eight or ten millions sterling of debt. The measure, however, would probably not succeed, unless the legislature were prepared to declare this country responsible for the debt of India. It might be useful to inquire, whilst no danger threatens, What would be done for the creditors of the India debt, in the event of the country being unexpectedly torn from us?—If they would have to bear the loss themselves, the interest they now get is low enough; if they would have to be indemnified, the interest ought to be reduced with as little delay as possible.

Mr. Wood.

IT may be worth considering, with reference to the education now given to the young men at the College of Haileybury, and the advanced age of the writer of the present day, whether they may not, on reaching India, be made available for a portion of the judicial duties performed by the magistrates and judges, or whether it may not be better for the country, and more economical, to nominate one or more assistants to every judge and magistrate, than to nominate any new assistant judge, in the event of increase of business. If the assistants, or such of them as by their attention to the details of judicial business were qualified to discharge the duties of a magistrate in the opinion of the judges of circuit, were allowed to draw an addition of allowance equal to 500 rupees per mensem, in lieu of travelling and deputation allowance, their services might be made available in the interior of their districts, without any additional charge to the State; and by employing them the magistrates would be saved much time to devote to their civil causes. The assistant now receives 400 rupees per mensem, and when on deputation his travelling charges, in addition to deputation allowance of 6 rupees per diem; but he would be much more useful if at all times made available for the judicial duties of his district, were he placed on a fixed salary of 500 rupees, and his authority extended. In all departments of the service the junior servants ought to be employed in performing a portion of the duties entrusted to the heads of offices; and they should be made to understand that promotion to offices of responsibility would depend on the ability with which they perform their duties as assistants.

The receipt amounted to 6,97,791 rupees. As recommended in the Judicial, the assistants in this department may probably be made to perform much of the duties now exacted from the collectors; and if their allowances were made to depend on their attention to the details of the business of the departments, the State may be saved the expense attending the formation of new collectorships. With reference to the charge for revenue surveys, it is probable that the juniors of the service would qualify themselves to survey if the increase of their allowances depended on it; and the knowledge of surveying is so very essential to enable them to check the measurements of the natives, and estimate the value of land, that it would be economy to grant an addition of 100 rupees to the established allowance of 400 rupees per mensem to every assistant who qualifies himself to survey land.

I am asked if I can devise any arrangements by which the charges can be reduced, and I would beg to recommend that they may be carefully revised, on the principle of bringing them to the scale that may be deemed requisite to raise the revenue to the scale of expenditure required for the three Presidencies, and to meet the home expenses chargeable to territory; and that the principle of dispensing with establishments, rather than any reduction of allowances, be followed; for I am persuaded that at present, with the greatest economy, and by saving one-third of allowances received, it will take 30 years to accumulate 36,000 *l.*, calculating 4 per cent. interest; and when it is considered how few at the age of 20 can expect to live to the age of 50, it may be admitted that the prospects of the service are not too great, and that the servants of the Honourable Company are not too highly paid for discharging the most important duties that can devolve upon any set of men, in banishment from their native country, and in a climate very unfavourable to an European constitution. It must also be taken into consideration, that their time abroad is fully occupied, without a day's relaxation from business, and their attendance required on an average of eight hours per diem. It has been suggested to me, that natives may be entrusted with the details of much of the business now performed by Europeans, at a much lower charge. My experience tells me, that the State would lose by any arrangement of the kind. There have been, I am sorry to say, too many instances of misconduct at all periods amongst the lower as well as the higher classes, and particularly lately amongst the highest educated, and those admitted into the society of European gentlemen, to prove that they could not be trusted with the management of a revenue treasury. It is unnecessary to mention names, but the prosecutions in the Supreme Court will prove, that there would be no safety in trusting the most respectable families, and I have been made acquainted with too many instances of very respectable men being imposed on by their own relations and servants, that I fear the Government would be subject to loss if it were to seek recommendations through the natives of rank. I wish we could look for any improvement of character from the education now afforded by the native college; but I cannot flatter myself with hope, and I do not think the natives look to any improvement, although they submit to have their children instructed in European literature; they have had, however, the mortification of seeing one or two turn out very ill, and one of the most respectable families to lose the largest portion of its fortune by the forgery of the father's name, and the sale of the government notes. I am of opinion that the junior servants cannot be employed too early in carrying on the details of the duties performed by their seniors, and making themselves acquainted with the duties now performed by the natives, and familiar with their books and entries in their native language, and that they should be employed in the interior of their districts, and mix with the population as much as possible. The character of the natives can be only known by such communication; and we can only obtain the confidence of the natives by such personal intercourse. It was in this way that Mr. Duncan and Sir Thomas Munro gained the character which they have left behind them, and which has raised the character of our government amongst the natives. When at Fort St. George, I mentioned with what pleasure the natives in the villages at Benares spoke to me of Mr. Duncan's having mixed so much with them; and Sir Thomas Munro observed to me, that the natives on the Coast delighted at the opportunity of speaking in the same way of him; and that the Honourable Company's servants, to be useful, and check the conduct of the native servants placed under their authority, must follow the example set them by Mr. Duncan. If the revenues cannot be collected without the charge of European superintendents, it is important that there should be as few as possible, and it may be useful to revert to the scale of the establishments maintained in 1808–9, with the view of doing away in the Lower Provinces the offices created since that period, if they can be dispensed with; and also for the purpose of ascertaining if, by the aid of assistants, the principals may not be able to perform the duties which formerly devolved on them. It will be useful if the accountant-generals at the three Presidencies are directed to furnish annually a special report on the increase to the different establishments, and suggest what may appear to them desirable for the information of the Honourable Court and the home authorities. If desirable, the monthly and quarterly audits of the Civil and Military Departments may be sent home, and the military and civil auditors of the three Presidencies may be directed to continue, under the head of Temporary Establishments to be remarked on, all charges not sanctioned by the Honourable Court, whose sanction alone should be deemed sufficient authority to bring a charge on the fixed establishment.

QUERY V.—In what Mode, and upon what Terms, has Money been borrowed in India by the Government, since the year 1808-9, and, what are the advantages or disadvantages of the course that has been pursued?

Mr. Hill.

ANSWER.—ALL the money borrowed by the Government in India within the period in question has been raised by means of public subscriptions to open loans. The rate of interest has fallen from ten to eight, six, five and four per cent. The principal and interest of old loans were payable by bills on England. This is now the case with respect only to about a third part of the debt. The loans are liable to be discharged, at the option of Government, after certain stipulated periods or length of notice. The mode pursued has had the advantage of enabling the Government to borrow upon better terms than private persons, and without favour to one tender over another, and to adapt the treasuries at which interest and principal were payable to their own convenience. Its chief disadvantage has been that of enabling Government to borrow with facility, and to spend with prodigality.

Mr. Mackenzie.

THE money required by Government in aid of its proper resources has generally been borrowed by opening all the treasuries of collectors, and political residents, as well as the head treasuries of the three Presidencies, for the receipt of cash in loan to the East India Company. Bills payable being received as cash. The subscribers to such loans receive acknowledgments, entitling them and their representatives to an annuity equal to the interest of the sum subscribed, payable by half-yearly or quarterly instalments, until the Government shall see fit to pay the principal; but the instruments, though without any definite term of repayment, have the form of a promissory note, and are transferable by endorsement. The rate of interest has never during the period under review exceeded six per cent. per annum, to which rate the interest of nearly the whole of the fixed debt of India was reduced during the administration of Lord Minto: about half a million sterling of eight per cent. debt remained at Bombay until the year 1814. In 1823 the interest of a considerable portion of the debt was reduced to five per cent. per annum; and at this rate money has since been raised, excepting that at the commencement of the Burmese war, about a crore and a half of rupees was obtained at four per cent.; but subsequently almost wholly transferred to a five per cent. loan, on the condition of an equal amount being subscribed in cash, and that in 1828, a trifling sum was similarly obtained. The amount which the promissory note conditions to repay has always been the same with that actually received, excepting (in as far as I know) one instance, when, during the Pindarree war, notes were issued at a discount of four per cent., *i. e.* at the rate of 100 for 96 of cash subscribed. But occasionally considerable advantage has been allowed in the exchange, either with the view of supplying local wants, or indirectly as a bonus to promote subscriptions; and the principal of a large portion, and the interest of the whole of the fixed debt as it stood in 1822, being payable by bills on England at the rate of 2 *s.* 6 *d.* per the sicca rupee, and at 12 months date, the loan proprietors had a still more essential gain from that cause. This has been partially corrected; and, according to a Report from the Accountant General of Bengal, dated the 1st July 1830, the fixed or registered debt of Bengal stood as follows:

	Held by EUROPEANS.	Held by NATIVES	TOTAL.
	Sa. Rs.	*Sa. Rs.*	*Sa. Rs.*
1st. 6 per cent. remittable loan of 1822 -	7,00,06,400	47,04,800	7,47,11,200
2nd. 5 per cent. loan - - 1823 -	7,02,74,600	2,14,20,900	9,16,95,500
3d. ditto ditto - - 1825-6 -	6,64,16,000	2,77,38,300	9,41,54,300
4th. 4 per cent. ditto - - 1823-4 -	3,13,400	9,17,700	12,31,100
5th. ditto ditto - - 1828-9 -	5,28,100	4,14,100	9,42,200

Of the first, the principal when repaid, and it cannot be forced upon the loan-holders during the currency of the Charter, is demandable in bills on England at the rate of 2 *s.* 6 *d.* the sicca rupee, the interest being intermediately payable half-yearly, either in cash in India, or, if the proprietors reside in Europe and demand it in that form, by bills at the rate of 2 *s.* 1 *d.* Of the other loans both principal and interest are demandable only in India, but to the holders of the second, an option was given of receiving their interest, which is payable half-yearly, in bills at the rate of 2 *s.* 1 *d.* during the pleasure of the Home Authorities, and of the third and fourth, the interest issued quarterly was made payable to all holders, wheresoever resident, either in cash or in bills, at the rate of 2 *s.*, with a similar reservation to the Home Government; which has been, the Board is aware, in both cases enforced by countermanding the issue of interest bills. The five per cent. loan of 1823 is repayable only by annual instalments of one and a half crore of rupees, the notes first entered in the register having

having the advantage of being last liable to be discharged. The other five per cent. loan is repayable at pleasure after the middle of the present year, if I rightly recollect the date. Besides the money regularly borrowed, as above described, from the public at large, different sums have been received at different times from Native Princes and Chiefs. Thus in the administration of Lord Hastings, two crore of rupees were borrowed from the sovereign of Oude, of which one was discharged by a cession of territory, and of the other, since partially paid off, the interest was applied to the payment of certain stipends chargeable to the Oude government. During the same administration, a sum of about 50 lacs of rupees was obtained from the same Prince, in consideration of his having transferred to him the property of the deceased Begum of Tuzabad; the Bengal Government taking upon itself the payment of stipends to the descendants of that Princess, equivalent to an interest of six per cent. on the amount received by it. During the administration of Lord Amherst loans of one crore and of 50 lacs respectively, were obtained from the King of Oude, at an interest of five per cent., the first with a special appropriation as defined in the engagements then recorded in the political proceedings of the government; and the Scindia State advanced 80 lacs, and the Rajah of Putteula, one of the protected Sikh Chiefs, 20 lacs of the local currency at the like interest; other loans, of some lacs each, being received also from different petty chiefs and monied men. These last-mentioned loans have, I imagine, been now repaid, arrangements for that purpose being in progress when I left Bengal in December 1830; among which it may be worth noticing the engagement of the chief native banker at Guallier, through his agent in Calcutta, to advance 50 lacs for promissory notes bearing five per cent. interest. To meet temporary exigencies, acknowledgments, called treasury notes, have at various times been issued, with different rates of interest, from the general treasury of the Presidency; they have generally been made payable at a specified, and that not a distant date, and are receivable intermediately in payment of government demands on account of customs, salt and opium, or other public dues collected at the Presidency. Deposits, too, are received from various public institutions, under special arrangements, which I need not detail, having already, I fear, detailed too much. On the whole, I think the plan pursued, if the Government must borrow, is an advantageous one; though it would not probably answer on a larger scale of expenditure. The money is obtained without the intervention of any expensive agency. The gradual savings of persons employed in the public service, and other individuals, are gathered in small sums throughout the country, in a manner very convenient to the parties, and consequently on terms favourable to Government. The form of the promissory notes admits of their being readily assigned in security for money borrowed, which adds to their value; and as the loan can be discharged by the payment of the same amount as was borrowed, excepting the option of remittance too hastily allowed, and now discontinued, Government has none of the embarrassment that results from the obligation of an artificially exaggerated capital. It is curious to remark the charge incurred by the Company on account of the two millions borrowed in England in 1812, in consequence of their having become bound for an equivalent amount of three per cents., redeemable by a sinking fund. I have lost the calculation I made, but it proved, if I remember rightly, that not less than 15 per cent. per annum had been paid for the use of the money; and it may not be useless to observe, for future consideration, that the advantage of the three per cents. lying in the superior value of the annuity (3 *l.* per annum on 100 *l.* stock, selling higher and therefore yielding more to the Exchequer than the same annuity on 60 *l.*), it may be reasonable to follow the plan of borrowing at a discount when there is no intention of paying the debt, but that such a scheme is likely to prove a very bad one if we ever come into the condition of discharging the obligation. By the course followed in India, the Government has certainly obtained a great command over its creditors, and it is only to be regretted that the remittance clause placed a considerable portion of the debt out of the reach of those measures which would have been otherwise adopted, but which seemed to be impracticable without the aid of Parliament.

QUERY VI.—What number of Mints existed in 1809, and at the present time; what are the general Regulations of the existing Mints, and what has been, and what is now, the condition of the various Currencies, and of the Import and Export of the precious Metals?

Mr. Wood.

ANSWER.—IN 1809 there were three mints, one at the Presidency, one at Benares, one at Furruckabad; and there are now three mints, one at the Presidency, one at Benares, one at Saugur. At Bombay three mints, at the Presidency, at Trivat, and at Broach; and at Madras one mint. For the regulations of the existing mints, I must refer to the printed regulations of the three Presidencies. The mints are accessible to the public on a payment of the mint duty of two per cent.; and individuals carrying bullion to the mints are allowed to superintend the melting and weighing of their bullion. It is usual to roast dollars and other foreign coins, to ascertain that they have not been plugged before they are melted. On the value of the bullion being ascertained, a mint certificate for the out-turn is issued to the party wishing to have it converted into coin, and this certificate is payable in cash from the General Treasury, without waiting the process of the coinage. The coin is received throughout

throughout the country by weight, and when under weight one per cent., the revenue officers receiving it are directed to remit it to the mints for recoinage. In the Lower Provinces, and in Behar, the Calcutta sicca rupee, in which all the accounts are kept, is only current, and its weight is 191.916; pure metal 175 923, and alloy 15.993. In the Western Provinces the Furruckabad rupee is current, and weighs 180.234; pure contents 165.283, alloy 15.019. At Madras, the rupee weighs 180; pure contents 165, alloy 15. At Bombay, I believe, the currency is now made to conform to the Madras and the Furruckabad: the Bombay and the Madras rupees are made to circulate in currency at these Presidencies at an equal value. Gold, from selling at 17 rupees 8 annas, and 18 rupees, the gold mohur, when its value in account is only 16 rupees, has disappeared from the circulation. The weight of the new gold mohur is 204.710; pure contents 187.651, alloy 17.059. At one period the revenues were paid in gold; but silver having been more abundantly supplied, has become cheaper than the rate at which it was convertible into gold in payment of revenue, and at the mint price, and gold has been withdrawn. The currency has been maintained at its full weight, under the regulation of receiving it only by weight; and for the imports and exports of the precious metals, I beg to refer to the returns accompanying my Reports on the Accounts of 1826–27. If one currency were established for British India, there would be no necessity for more than one mint at each of the Presidencies to coin the importations of bullion; for the short-weight rupees, which seldom amount to more than three or four lacs, may be easily remitted, as opportunity offers of troops proceeding to the Presidencies, for recoinage.

Great facilities would be afforded by establishing one current coin for the whole of British India, and for the British possessions to the east of the Cape of Good Hope, bearing on its face, in the native languages of the three Presidencies, and in English, its weight, its pure contents, and its alloy, in grains. If such a coin were established for the British possessions, the surplus receipts of one Presidency would be available for the excess of disbursements at another, without passing through the mints; and in the event of its being remitted to Europe, there would be no necessity for its being melted to ascertain its value, and it would be used for the mercantile currency of the world in the same way as the dollar, and probably find its way back to India through a circuitous channel, if not by a direct one, but would be more valuable than any other bullion by the amount of the mint duty, or 2 per cent. on the coinage.

Mr. Hill.

THERE has been only one mint at Madras throughout the period in question. Its sole employment, with scarcely any exception, has been that of recoining for Government the former currencies which they had called in. There is little import or export of the precious metals at Madras, and little coinage for private individuals. The rate of seignorage is two per cent. The currency established in 1818 consists of silver; the rupee of 180 grains, containing 165 grains of pure silver and 15 grains of alloy. The gold coinage is of the same weight and fineness as the silver, but the ratio between gold and silver is liable to be varied from time to time by a Government Proclamation.

Mr. Mackenzie.

IN Bengal (I mean the territories belonging to that Presidency) there were four mints: the Calcutta mint, a mint at Benares, a mint at Furruckabad, and a mint at Delhi. The currencies were three: the Calcutta sicca rupee, the Benares rupee, and the Furruckabad rupee. This last, sometimes called the Quenow rupee, because intended to be equivalent to that of the Oude government, was struck both at Furruckabad and Delhi, but the Delhi mint was never employed to any extent of importance. The Calcutta sicca rupee was, throughout the period in question, and long before it, circulated in the provinces of Bengal, Behar and Orissa. The circulation of the Benares rupee was confined to the province of Benares; that of the Furruckabad rupee extended to all the Ceded and Conquered Provinces, excepting Cuttack and the acquisitions east of Bengal, into which the Calcutta rupee has been introduced.

The mints at Delhi, Furruckabad and Benares have been abolished; and the rupees current within the territories subordinate to the Bengal Government have been reduced to two; viz., the Calcutta sicca rupee and the Furruckabad rupee; the currency of the latter being extended to Benares. The standard of both is now the same, the alloy being 1–12th of the weight; and for practical purposes the Calcutta rupee may be regarded as weighing 192 grains troy, with 176 of silver, and the Furruckabad, 180 grains with 165 of pure metal*; the fractional excess in the latter and defect in the former coin being too minute to deserve notice, even if the adjusting machinery of the mint were perfect. At Madras and Bombay, each of which has, I believe, always had one mint only, a rupee is coined of which the prescribed weight and standard agrees exactly with that above stated for Furruckabad, viz. 180, with 1–12th alloy; and since all the three rupees are issued to the army as equivalent to to the sonat rupee (now a nominal coin), it would seem easy to make them really alike, and to give them a common currency, and not impracticable to make them take the place of the Calcutta sicca rupee in the provinces of Bengal, Behar and Orissa. A copper coin, weighing 100 grains, passes throughout the Bengal territories at the rate of 64 to the rupee, but as a legal tender only for the fractional parts of that coin. I have not mentioned among the regular mints of Bengal that of Saugor, because it was established there for a temporary purpose, viz. the conversion of the local currencies into Furruckabad rupees, and it has, I presume, been or soon will be abolished. Nor can we reckon among the currencies the gold coin that issues from the mint; because the market value of gold relatively to silver having risen considerably above the mint value, the gold has ceased to circulate at the prescribed or at any fixed rate. It may be right, however, to mention, that the gold mohur of Bengal weighs 204.710 grains, of which the fine gold is 187.651. The Madras gold rupee is of the same weight and standard with the silver, viz. 180 grains, and at both Presidencies the relative value of gold to silver is 15 to 1; the Bengal mohur being reckoned equal to 16 rupees. The general rules of our Bengal mint, with which I believe those at Madras and Bombay coincide, are as follows: All bullion tendered by individuals is converted into the current coin, on the payment of a seignorage duty of two per cent. A charge at various rates is also made for the expense of refining, which attaches to gold if in any degree inferior to the standard of the mohur, and to silver when below the standard of the Spanish dollar, or six worse than the rupee. On the coinage of half and quarter rupees, an additional duty of one per cent. is levied, and this is the only duty chargeable on the recoinage of money that has issued from our mint. To prevent the circulation of light money, it is prescribed that the several coins shall not be receivable as a legal tender, if when separately weighed they shall be found to have lost more than two pice, or 2-192 parts, equivalent, in the case of the Calcutta sicca, to 1.999 grains troy, or we may say two grains, if the rupee be taken at 192 grains.

---

* Calcutta sicca rupee 191,916 grains troy.
Furruckabad rupee 180,234 —

The condition of the currency, as far as regards the bulk of the money circulating within our provinces, is, I believe, unexceptionable. But in different places old coins still circulate to a limited extent, and expose the people to some loss in their transactions with the money dealers; and in the territories of foreign states considerable embarrassment in the adjustment of rates of exchange has been experienced from the irregularity of the current coins.

For information in regard to the import and export of the precious metals, I beg to refer to the Trade Reports of the three Presidencies, and especially to the Review of the External Commerce of Bengal, published by Mr. Wilson, at Calcutta in 1830.

It will thence be seen that this branch of trade has undergone very great variations. As to its present condition, it may be briefly stated, that the balance with England being against India, and (China excepted) the export trade of India to the other countries whence it drew our bullion having declined, it seems likely that for some time the supply will not equal the demand; and that consequently a fall in prices, attended possibly with some difficulty in the realization of the Revenue, excepting that derived from opium, may be anticipated, until the cheapness of commodities, from the scarcity of silver or improved modes of production, shall again turn the course of trade.

It has become, therefore, especially expedient that every measure by which the exports of India can be increased shall be adopted. And it may not be unimportant to consider whether increased facility may not be given to the transfer of bullion and coin from that country to this, since pending the transition of exchange, every expense in the remittance of gold or silver will apparently operate as a tax upon the trade, and that a tax of pure loss.

The trade between England and India being reduced to a very small scale, the interest being lowered, and no possibility existing of procuring bills of exchange on favourable terms, are circumstances which have obliged individuals to send to England the gold and silver coins of India, by which they effect a more favourable exchange. The governments of India have also, I understand, sent considerable sums to England, and with what was exported during the Burmese war, must have impoverished India in those precious metals. To facilitate the intercourse between the countries, would it not be worth the consideration of the Government to make the coins of India bear a proportionate value to those of England? This might be accomplished by a very simple method for the present, until a new coin is introduced, by stamping on the coin His Majesty's head, with its relative value underneath, in the same way that formerly obtained with Spanish dollars. It would prevent the coin from being melted, and would confer on the colonists of the Cape of Good Hope, Mauritius and Australia, most essential benefit.

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

QUERY VII.—What steps have been taken for the separation of the Territorial from the Commercial Accounts of the Company, in India and in England; and whether, and what, further Measures are required for that purpose?

Mr. Lloyd.

ANSWER.—THE books of account, both in India and in England, have been arranged according to the plan for the separation of accounts as approved by the Commissioners for the Affairs of India, in June 1814, and subsequently presented to Parliament. Since that period, an alteration in respect of political freight and demorage was proposed by the Court, and agreed to by the Commissioners for the Affairs of India, on 15th December 1819.

Discussions at various times have taken place between the Board and the Court upon points connected with the accounts respectively of Territory and Commerce, as follows:

In respect to the propriety of charging interest upon the annual Balance of Account between the Territorial and Commercial branches:

Letter from the Board, dated 17th February 1818.
Letter from the Court, 12th August 1818.
Extract Letter from the Board, 23d and 30th April 1823.
Extract Letter from the Court, 1st May 1823.
Letter from the Board, 15th March 1824.
Letter from the Court in reply, 25th March 1824.
Letter from the Board in rejoinder, 17th April 1824.
Letter from the Court in answer, 17th June 1824.
Letter from the Board, transmitting case and opinion of Counsel, 30th November 1824.
Letter from the Court, transmitting case and opinion of Company's Standing Counsel, 6th July 1825.
Letter from the Board, 12th July 1825.
Letter from the Board, 23d December 1825.
Letter from the Court, transmitting case and opinion of the Law Officers of the Crown, and the Company's Standing Counsel, 2d April 1828.
Letter from the Board, 17th August 1830.
Letter from the Court, 9th December 1830.

With respect to Insurance proposed to be charged on the Company's Accounts:

Letter from the Court, 31st January 1818.
Letter from the Board, 17th February 1818.
Letter from the Court, transmitting a case and the opinion of the Law Officers of the Crown, and the Company's Standing Counsel, as to the legality of reserving a sum out of the surplus profits to answer contingent losses.

On the mode of stating the Company's Accounts between the two Branches:

Letter from the Board, 30th April 1823.
Letter from the Court, 18th September 1823.
Letter from the Board, 1st December 1823.
Memorandum from the Board, 18th February 1824; with reference to the Board's letter of 1st December 1823.
Memorandum of the Chairs on the same subject, dated the 20th February 1824.

On the subject of charging the Territorial department with the Loss in respect of investment from India to meet Bills drawn for Interest of India Debt:

Letter from the Court, dated 8th July 1830, enclosing statement.
Letter from the Board, 17th August 1830.
Letter from the Court, 9th December 1830.

Reviewing the Indian Books from the year 1814:

Several Despatches, both in the Territorial and Commercial Finance Departments.
Commercial Finance Letter to Bombay, 9th April 1817.
Commercial Finance Letter to Bengal, 25th May 1819.
Public Letter to Fort St. George, 12th July 1820.
Commercial Finance Letter to Bengal, 28th November 1827.
Commercial Finance Letter to Bengal, 5th March 1828.
Territorial Finance Letter to Bengal, 1st April 1828.
Commercial Finance Letter to Fort St. George, 3d December 1828.
Territorial Finance Letter to Fort St. George, same date.
Commercial Finance Letter to Bombay, 26th August 1829.

Regarding

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

Regarding the rate of conversion of the several Indian Coins:
Regarding the Expenses of Bencoolen:

Discussion upon these points has terminated, with the exception of the subject of charging interest upon the Balance due from Territory to Commerce, except also upon the subject of charging the Territorial department with the loss in respect of investment from India to meet bills drawn for Interest of Indian Debt.

Mr. Langton.

THE system of Accounts, of which the outline was prepared by the Company in 1813, and which was sanctioned by the Board of Commissioners, appears to be so satisfactory, as to leave nothing to be desired in respect to the mechanism of the plan. And in Mr. Melvill's evidence of 1830, No. 5668, it is stated, that "the accounts are kept by double entry, and balanced annually, with all that attention to accuracy which characterises book-keeping in the counting-house of a merchant."

A good system of accounts does not, however, supersede the necessity of an audit. The Act of 1813, places ample powers for this purpose in the hands of the Board of Commissioners, but of which it does not appear that the Board has ever availed itself.

Mr. Hill.

THE separation of the Territorial from the Commercial accounts of the Company at Madras has been completely carried into effect, and no further measures are required for that purpose.

Mr. Wood.

I AM unacquainted with the method observed in England. In India the Accountant-general allows no advance on account of Commerce without a previous order from the Government, and on receiving the same, issues his directions for the advance from the Treasury, where it is required; and the officer making the advance takes the receipt of the commercial officer receiving it, and debits Commerce with the amount. A statement of these advances is furnished the commercial accountant for his information; and it becomes his duty to see that the advances are properly appropriated in the Commercial departments. The Territorial department has no control over the commercial advances from the period that the sums are paid out of a territorial treasury.

Mr. Mackenzie.

THE measures taken for this purpose have doubtless been explained to the Board much better than I could hope to do. I shall only therefore observe, that in so far as regards India, I am not aware of anything further being required.

The commercial branch had indeed been exempted from some inconsiderable charges on account of guards, and from its share of some items common to the two branches; but this has been I believe corrected, and excepting in so far as the members of Government may be considered to act in a commercial capacity (the less they do so the better for the Company's trade, as well as for the country), I believe the separation has been carried into complete effect.

At home, the main thing wanted is the distribution of stock, on which it appears that hitherto there has been no distinct determination; and I am somewhat at a loss to understand how the dividend and the amount of commercial surplus can have been satisfactorily declared without such an adjustment between the two branches of the Company's concerns. It seems consequently to be important to ascertain from the India House how the amount of the yearly and half-yearly profit is ascertained, how the existence of a profit sufficient to pay the dividend or of a surplus beyond it, is shown to those who have to control the application of the surplus, whether any and what restriction other than the discretion of the Directors is put to the accumulation of commercial stock; how the commercial assets have accumulated, and how the Company would stand, supposing it to cease from having any concern whatever with the Government or Territorial Revenues of India; and taking into account all assets and debts, and all rights and obligations attaching to the corporation, this should have been done long ago; but though it may be difficult to come to a satisfactory adjustment now, that difficulty will only be aggravated by further delay.

QUERY VIII.—Whether any instances of Loss or Waste have come to your knowledge during the period referred to; and is the system of Accounts, whether general, subordinate or personal, such as is best calculated to guard against Loss, to prevent unauthorized Disbursement, and to compel the bringing to account, promptly and accurately, Public Money or Stores received and expended either by Individuals or by Departments; and whether any suggestions can be offered for improving and simplifying the existing system of Accounts?

Mr. Langton.

ANSWER.—IT appears from the Report of the Select Committee of 1811, p. 366, that a loss of near 900,000*l.* was sustained between 1792–3 and 1808–9, by the transmission of money from one Presidency to another; the money remitted being either not current at the place of its destination, or current only at an inferior value. I have not observed any indication in the papers laid before the present Select Committee, of what loss has been sustained since 1808–9 from this cause; but similar losses must have been experienced, as appears from Mr. Gordon's Evidence in 1831, Nos. 2139 to 2141. The uniform coinage recommended by him, would not only prevent the recurrence of such losses, but would obviate another inconvenience, experienced also in many parts of Europe, but bearing very severely on the Ryots of Hindostan; (see the same Evidence, Nos. 2114–2117,) that, namely, of affording constant opportunities to the cunning and crafty to impose on the unsuspecting and the ignorant.

The defalcations alluded to in No. 3, come under this head; but as the system of accounts in use between the Finance Boards and their agents is not known to me, I can offer no suggestions for their improvement or simplification.

Mr. Wood.

I AM of opinion that the system of accounts now used, and the checks in practice, if observed, are sufficient to ensure the Government from loss; and having been framed from time to time to meet every circumstance calling forth the attention of the Government to prevent loss, that little improvement can be looked for; at the same time the vigilance of the service must be alive to every change, and watchful to prevent the designs of individuals against the Government: and there are many on all occasions ready to take advantage of any negligence on the part of the heads of offices and the Government servants.

I have known a loss at the mint of the Presidency; and, since my return, there has been a loss sustained at the mint of Benares; in both instances through the misconduct of the mint masters. I have known the treasury of Delhi, of Moorshedabad, and of Sylhet, to have sustained loss by the misconduct of the Native treasurers and their Amlah; and by the officers in charge omitting to pay that attention to the details of their management so essentially necessary to prevent the receipts from being misappropriated. I have known the General Treasury and the Bank of Bengal defrauded at different times; and other treasuries, by the misconduct of the Native Amlah, and by a want of vigilance on the part of the officers in charge. In almost all these instances, the Government has been saved from loss by the security of the native treasurers covering the loss, even when the native in charge has destroyed himself. The accounts and checks have been sufficient to show the extent of the frauds committed, and are ample to ensure, with common attention on the part of the Board and Judges of Circuit, the Government from loss. In the investigations which have on every occasion followed the report of any irregularity, the officers in charge of the treasuries have been dismissed their offices, on proof of neglect being brought to the satisfaction of the Government. For the credit of the service there have been few instances in which a servant has ever been proved to have participated, directly or indirectly, in the frauds committed; and when this has been proved they have invariably been dismissed the service. It is the duty of the Accountants-general of the three Presidencies to keep a watchful eye over the treasuries throughout the country placed under their control and management; they ought to receive monthly reports of the balances, and estimates of their receipts; and it is seldom that an opportunity offers of any misappropriation of receipts, as the accounts of every officer under the Government are checked monthly in the office of the Accountant-general in the Civil and Military departments.

Mr. Mackenzie.

I DO not immediately recollect any losses or instances of waste that can be traced to a defect in the accounts as their cause; what has been wanting is promptness in the audit, and a sufficiently frequent examination of the cash actually in hand compared with the stated balance. In the accounts of the Store department, indeed, I should infer some defect, from the difficulty experienced in obtaining from the Military Board of Bengal a clear account when required by the Government under instructions from home; but I am not able fully to explain the matter, which indeed could only be done by taking up the accounts successively;

Appendix, No. 38.

Answers to Queries, relating to the Finances of India.

and, as a general suggestion, I should say, that every important defect of record will be remedied by enforcing universally the principles of balanced commercial account, which already generally prevail in the financial transactions of the Government. It might possibly be useful to depute to India an officer from the Accountant's department in this country; it being next to impossible, within the ordinary time of man's life, to set such things right by means of correspondence; nay, I am disposed to think there would be advantage in causing the officers of Account at home and abroad to rise as in one establishment; I exclude of course mere clerks or copyists, and confine the suggestion to higher European functionaries.

Mr. Hill.

IN answer to a former letter, I have stated my opinion that all the officers of Account in India ought to be trained to their duties in England, and ought to receive their appointments and their instructions from the authorities at home.

Ditto - - - - - ditto, 1828–29 and 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No 37.)

Vide also Return of the value of the Foreign Export and Import Trade of the Port of Canton, &c., under head of "Trade with China."

Statement of the Amount paid in England for Freight and Demorage, including Cost and Outfit of Company's own Ships, from 1814 to 1829 - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Statement of the Amount paid by the Company for Commercial Freight from 1815 to 1828; distinguishing the Amount charged to the Trade with India from the Amount charged to the Trade with China - - (Lords' Report, 1830, Appx. p. 642; Lords' Paper, 1830, No. 227; and Commons' Report, China Trade, 1830, Appx. p. 93.)

Ditto - - - - - ditto, 1829 and 1830 - - - - - (Lords' Paper, 1832, No 87.)

Sale Amount of the Privilege and Private Trade Goods sold at the East India Company's Sales, from 1810–11 to 1828–29; distinguishing India and China - - (Papers of February 1830.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Sale Amount of the Company's, the Private Trade, and the Neutral and Prize Goods, &c. sold by the East India Company, from 1810–11 to 1828–29, (Papers of February 1830.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 37; and Commons' Paper, 1831, No. 206.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 50.)

An Account showing the Invoice Amount of all Goods, Stores and Bullion Exported by the East India Company to their several Presidencies and Settlements in India, to St. Helena and to Canton, from 1810–11 to 1828–29 - - - - - - - - - (Papers of February 1830.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Account of all Goods Imported into Great Britain from the East Indies and China (exclusive of the Mauritius) in the Four Years ending 5th January 1829; specifying the Value and Quantity of the principal Articles imported - - - - - - - (Papers of February 1830.)

Ditto - - - - - ditto, in the Year ending 5th January 1830, (Lords' Paper, 1831, No. 45; Commons' Paper, 1831, No. 217.)

Ditto - - - - - ditto, in the Year ending 5th January 1831 - (Lords' Paper, 1832, No. 32.)

An Account of all Goods Exported from Great Britain to the East Indies and China (exclusive of the Mauritius), in the Six Years ending 5th January 1829 - - (Papers of February 1830.)

Ditto - - - - - ditto, in the Year ending 5th January 1830, (Lords' Paper, 1831, No. 45; and Commons' Paper, 1831, No. 217.)

Ditto - - - - - ditto, in the Year ending 5th January 1831 - (Lords' Paper, 1832, No. 32.)

An Account of the Profit and Loss upon the Trade of the East India Company between Europe and India, Europe and China, India and China, China and the North American Colonies, for the Ten Years ending 1828–29, (Lords' Report, 1830, Appx. p. 630; and Commons' Second Report, 1830, Appx. p. 92.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Minutes of Evidence, 1830–31, p. 196.)

An Account explanatory of the above Accounts, showing the Total Amount of Charges therein specified, and the Amount charged on each of the various Heads. (Commons' Report, October 1831, Appx. p. 574.)

Ditto - - - - - ditto, specifying how the Profits of the Company on their China Trade are diminished by the adherence to the Board's Rates, (Commons' Report, October 1831, Appx. p. 576.)

Ditto - - - - - ditto, of the Loss on the Trade between Europe and India, (Commons' Report, October 1831, Appx. p. 577.)

An Account of Profit and Loss as above, for 1830–31 - - (Lords' Paper, 1832, No. 37.)

A Return of all Ships belonging to or chartered by the East India Company lost or captured since 1792, stating their Tonnage, Cargoes, and the Voyage they were prosecuting when lost or captured - - - - - (Commons' Report, China Trade, 1830, Appx. p. 112.)

Ditto - - - - - ditto, for one Year later, (Commons' Minutes of Evidence, 1830–31, p. 199.)

An Account of Losses sustained by the East India Company from Perils of the Sea, Damage of Ships or Cargoes, from Bad Debts, &c. from 1822–23 to 1828–29 (Lords' Paper, 1830, No. 187.)

Ditto - - - - - ditto, 1828–29 and 1829–30 - - - (Lords' Paper, 1831, No. 38.

Ditto - - - - - ditto, 1830–31 - - - - - (Lords' Paper, 1832, No. 37.)

An Account showing the Total Amount of Charges on the Commerce of the East India Company in England, India, China, &c. for 1828–29 and 1829–30, (Commons' Report, October 1831, Appx. p. 574.)

Returns of Commercial Offices and Establishments in Bengal, the Colonies and England, with the Salaries and Allowances, &c. as they stood on 1st May 1817 and 1827, (Commons' Report, October 1831, Appx. p. 671, &c.)

A Return of the Company's Establishment at the Cape, with the Salaries of the different Officers, the Expense incurred for maintaining Warehouses, the Rate of Agency charged on Purchases and Sales, the Gross Amount of the same, for the five years ending December 1829, (Commons' Report, China Trade, 1830, Appx. p 106.)

Ditto - - - - - ditto, for 1829–30 - (Commons' Minutes of Evidence, 1830–31, p. 183.)

An Account of the Value of the Trade of the East India Company, showing the Prime Cost of the various Articles purchased, the whole of the Commercial Charges in England, the East Indies, China, &c. together with the Freight and Demorage, and the Total Value of the Proceeds of each Trade, for 1827–28 - - - - - (Commons' Report, October 1831, Appx. p. 664.)

Accounts showing the Amount of all Supplies received from the several Presidencies and Settlements in India at the Factory at Canton, and from the Factory at the several Presidencies; with the Amount of Supplies from England, and of Cargoes consigned from the Factory to England, from 1822–23 to 1828–29, (Lords' Report, 1830, Appx. p. 635; and Lords' Paper, 1830, No. 139.)

Ditto - - - - - ditto, 1829–30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Accounts showing the Amount of all Supplies between St. Helena and the Factory at Canton, specifying the particular Supplies under each Head, from 1822–23 to 1828–29, (Lords' Report, 1830, Appx. p. 637.)

Ditto - - - - - ditto, 1829–30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Rates of Exchange and Sights at which the Select Committee at Canton have drawn Bills on the several Presidencies in India, and the Amount in each Year, from 1814–15 to 1828–29 - - - - - - - (Commons' Report, China Trade, 1830, Appx. p. 96)

Ditto - - - - - ditto, 1829–30 - - (Commons' Minutes of Evidence, 1830–31, p. 207.)

List of the Number of Vessels belonging to the United States which have cleared from their Ports for Ports beyond the Cape of Good Hope, from 1813 to 1828, (Commons' Paper, 1829, No. 285, p. 53.)

Statement of the several Articles of British Produce and Manufacture exported in American Vessels to China and to the East Indies, from 1818 to 1829, together with the Official and Declared Value - - (Lords' Report, 1830, Appx. p. 724; and Lords' Paper, 1830, No. 197.)

Ditto - - - - - ditto, in 1830, (Lords' Paper, 1831, No. 45; and Commons' Paper, 1831, No. 217.)

Ditto - - - - - ditto, in 1831 - - - - - - (Lords' Paper, 1832, No. 32.)

II.—TRADE OF INDIA, EXCLUSIVELY.

An Account of the Quantities and Value of British Manufactures Exported to all parts of India, exclusive of China, by the East India Company, 1814 to 1829 - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of British Manufactures Exported to our Indian Possessions in the Twenty Years ending 30 April 1829; specifying particularly the quantity and value of Woollens and Cotton - - - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1829–30 - - ditto, (Lords' Paper, 1831 No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Statement of the Value of Imports into and Exports from Bengal, Madras and Bombay by Sea, from 1814-15 to 1826-27, exclusive of the Trade of the East India Company, (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1828-29, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 and 1830-31 - - - (Lords' Paper, 1832, No. 37.)

An Account of the Imports into the several Presidencies of India from the United Kingdom, and of Exports from India to the United Kingdom, 1814-15 to 1826-27, exclusive of the Trade of the East India Company - - - - - - - (Commons' Paper, 1829, No. 285)

Ditto - - - - ditto, 1827-28 and 1828-29, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 and 1830-31 - - - (Lords' Paper, 1832, No. 37)

Account of Imports and Exports between Great Britain and all Places to the Eastward of the Cape of Good Hope (excepting China), distinguishing the Articles and Value, and the Private Trade from that of the East India Company, from 1814 to 1828 - - (Papers of February 1830.)

Ditto - - - - - ditto, in 1829, (Lords' Paper, 1831, No. 45; and Commons' Paper, 1831, No. 217.)

Ditto - - - - - ditto, in 1830 - - - - - - (Lords' Paper, 1832, No. 32)

Statements of the Commerce of British India with Great Britain, North America, South America and Foreign Europe. 1811-12 to 1826-27; distinguishing the Trade of the Company from that of Individuals, and Merchandize from Treasure - - - - (Papers of February 1830.)

Ditto - - - - - ditto, 1827-28 and 1828-29, (Lords' Paper, 1831, No. 46; Commons' Minutes of Evidence, 1830-31, p. 187.)

Copy of the Report on the External and Internal Commerce of Bengal for 1828-29, (Commons' Report, October 1831, Appx. 3, p. 1.)

Ditto - - - - - ditto - - - of Madras for 1827-28, (Commons' Report, October 1831, Appx. 3, p. 126.)

Ditto - - - - - ditto - - - of Bombay for 1828-29, (Commons' Report, October 1831, Appx. 3, p. 143.)

Statement of the Prices of India Cotton Piece Goods at the East India Company's Sales in 1813 and 1828 - - - - - - - - - (Commons' Paper, 1829, No. 285.)

An Account of the Quantities of Raw Silk Imported into London from Bengal, from 1813 to 1828; distinguishing the Company's from the Private Trade; and showing the Average Price per Pound of all the Bengal Silk sold at the Company's Sales in the same Years, (Commons' Paper, 1829, No. 285.)

An Account of all Sums advanced to the Commercial Agents in Bengal on account of the Investment of Raw Silk, from 1809-10 to 1828-29 - (Commons' Report, October 1831, Appx. p. 578.)

An Account of all Sums written off as Losses, and of all Outstanding Balances standing in the Books of the several Commercial Agents on account of Investment of Raw Silk, from 1809-10 to 1828-29 - - - - - - (Commons' Report, October 1831, Appx. p. 579.)

An Account of the Company's Annual Investment of Raw Silk, provided in Bengal and imported into London, from 1814-15 to 1829-30, with its Cost Price in Rupees; specifying the several Charges thereon, and converting the Gross Amount into Sterling at the Mercantile Rates of Exchange at which Bills were drawn from Calcutta on London in each Year; also showing the Sale Proceeds in London, deducting all Charges, with a Statement of the Net Profit or Loss, and the Rate per Rupee realized in Sterling in each Year, as a Remittance to England, (Commons' Report, October, 1831, Appx. p. 656.)

An Account of the Quantity of all Raw Silk supplied by the Agents in Bengal, and sold in India and in England, stating the Value thereof in each Year, from 1809-10 to 1830-31, (Commons' Report, October 1831, Appx. p. 657.)

An Account showing in Detail all the Items, and the Amount of each, forming the Invoice Price of the Company's Investment of Bengal Raw Silk, 1813-14 to 1829-30, (Commons' Report, October 1831, Appx. p. 658.)

A Statement of the Number and Valuation of Silk Filatures or Factories of the East India Company in Bengal, at the last Valuation; distinguishing the Name of each, together with the Value of the same - - - - - - (Commons' Report, October 1831, Appx. p. 659.)

Account of the Remittances in Merchandize from India made in each Year from 1814-15 to 1829-30, with their Invoice Value, and the Charges incurred upon them, and the Sums they have actually realized at the Company's Sales - - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of Indigo purchased by the East India Company in Bengal in each Year from 1814-15 to 1829-30, with its Cost Price in Rupees; specifying the Rate per Factory Maund, together with the several Charges thereon, and converting the Gross Amount into Sterling at the Mercantile Rates of Exchange at which Bills were drawn from Calcutta on London in each Year; also an Account of the Sale Proceeds of Indigo in London, deducting all Charges, with a Statement of the Net Profit or Loss, and the Rate per Rupee realized in Sterling in each Year as a Remittance to England - - (Commons' Report, October 1831, Appx. p. 655.)

Statement of the Quantity and Cost in London of White List Cloth (Red) Exported to India in 1813-14, and to be Exported in 1828-29 by the East India Company, (Commons' Paper, 1829, No. 285.)

Statement of the Prices of British Calicoes, &c. in October 1813 and 1828, (Commons' Paper, 1829, No. 285.)

An Account of the Trade between the Eastern Islands and India, from 1814-15 to 1826-27, (Commons' Paper, 1829, No. 285.)

An Account of the Trade between the Eastern Islands and India, 1827–28 and 1828–29,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829–30 and 1830–31 - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of Registered Tonnage employed by the East India Company in their Trade to our Indian Possessions, from 1809–10 to 1827–28 - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1828–29 to 1830–31 - - - (Lords' Paper, 1832, No. 87.)

Accounts of the Quantity and Value of Cargoes Exported by American Ships from British India, 1815–16 to 1826–27 - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827–28 and 1828–29,
(Lords' Paper, 1831, No. 46; Commons' Minutes of Evidence, 1830–31, p. 192.)

An Account of the Quantity of American Tonnage which has cleared out from the different Ports of British India, from 1815–16 to 1826–27 - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827–28 and 1828–29,
(Lords' Paper, 1831, No. 46; and Commons' Minutes of Evidence, 1830–31, p. 195.)

An Account of the American Trade to the British East Indies, 1826 and 1827; (Enclosure in Letter from Mr. Lack, dated 12 December 1828) - - - (Commons' Paper, 1829, No. 285.)

Selections from Copies of Communications respecting the Coal Mines of India received at the India House from the different Presidencies - - (Commons' Report, October 1831, Appx. p. 776.)

Copies or Extracts of all Despatches sent to India by the Court of Directors since the passing of the Act 53 Geo. 3, c. 155, as to the Interference of the Agents of the Company with Private Traders in respect of any Article of which both are Purchasers,
(Commons' Report, October 1831, Appx. p. 652.)

Copies or Extracts of all Despatches sent to India by the Court of Directors since the passing of the Act 53 Geo. 3, c. 155, relating to the Reduction of the Customs and Inland Duties in India, and the Proceedings had thereupon - - (Commons' Report, October 1831, Appx. p. 621.)

Copies of Correspondence, dated in 1828 and 1829, relating to the Cultivation of Cotton and Tobacco in the East Indies, (Lords' Report, 1830, Appx. p. 733, &c.; Lords' Paper, 1830, No. 57; and Commons' Report, China Trade, 1830, Appx. p. 120 to 133.)

Correspondence and Papers relating to the Character and Qualities of Cotton Wool,
(Commons' Minutes of Evidence, 1830–31, p. 209, &c.)

Extract Letters in the Revenue Department, dated in 1824 and 1826, and Copy Minute of Mr. Trower, and Resolution of Government of Bengal, respecting the Cultivation of Coffee in India,
(Lords' Report, 1830, Appx. p. 729, &c.; and Lords' Paper, 1830, No. 56.)

III.—TRADE OF CHINA, EXCLUSIVELY—THE HEAD OF "TEA TRADE," EXCEPTED.

An Account of the Annual Value of the Trade between the Subjects of Great Britain and China, 1814–15 to 1827–28 - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827–28 to 1829–30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Accounts of all Imports and Exports between Great Britain and China, from 1811 to 1828, specifying the Quantity and Value of the principal Articles; and distinguishing the Trade of the East India Company from the Privilege Trade,
(Lords' Report, 1830, Appx. p. 644; and Lords' Paper, 1830, No. 144.)

Ditto - - - - - ditto, 1829 - - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Trade with China carried on by the East India Company, and by Private Ships under the British Flag, for the Fifteen Years ending with 1827–28; distinguishing the principal Articles, and the Tonnage employed - - - - - (Lords' Report, 1830, Appx. p. 674.)

Ditto - - - - - ditto, 1828–29 to 1830–31 - - ditto,
(Lords' Paper, 1831, No. 36; Ditto, 1832, No. 55.)

A Return of the Value of the Foreign Export and Import Trade of the Port of Canton, from 1813–14 to 1830–31; distinguishing the Trade carried on by each of the different Nations from that under the British Flag; and also the Trade carried on by the Company from that carried on by Private India Ships, with the Tonnage employed by each Nation, in each Year for the same period,
(Lords' Papers, No. 124, of 1830, No. 36, of 1831, and 55, of 1832, and also Report of 1830, Appx. p. 674 and 720; and Commons' Report, October 1831, Appx. p. 661.)

An Account of the Quantity and Value of all Manufactures, exclusive of Woollens, Exported by the East India Company and their Officers to China, in the Nineteen Years ending 30 April 1829,
(Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, in 1829–30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Invoice Value of the East India Company's Trade between China and England, from 1814–15 to 1827–28 - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1828–29 and 1829–30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of British Manufactures annually Imported by the East India Company into the Port of Canton, from 1809–10 to 1827–28; specifying particularly the quantities of Wollens and Cottons imported - - - - - - (Commons' Paper, 1829, No. 285.)

An Account of the Quantity of British Manufactures annually Imported by the East India Company into the Port of Canton, 1828–29 and 1829–30; specifying particularly the quantities of Woollens and Cottons imported - (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

Statement of the Quantity and Cost in London of Woollens Exported to China in 1813–14, and to be Exported in 1828–29 - - - - - - - (Commons' Paper, 1829, No. 285.)

An Account of the Quantity of Woollens Exported by the East India Company to China, from 1810 to 1829 - - - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of Goods Exported by the Court of Directors from England to Canton, from 1822–23 to 1828–29, and a Statement of the Gain or Loss on the Sales of the Company's Exports in each Year - - - (Lords' Report, 1830, Appx. p. 660; and Lords' Paper, 1830, No. 141.)

Ditto - - - - - - ditto, 1829–30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of Long Ells, Broad Cloth and Camlets, demanded from and Exported to China, from 1811–12 to 1829–30 - - - - - - - - - - - (Lords' Paper, 1830, No. 98.)

An Account of Lead and Tin, ditto - ditto, from 1811–12 to 1829–30, (Lords' Paper, 1830, No 98.)

An Account of Sundry Articles of British Manufacture and Produce which have been Exported to China upon Experiment, not having been demanded by Indent, from 1811 to 1829, (Lords' Paper, 1830, No. 98.)

An Account showing the Amount of the Cargoes (and of what consisting) consigned from the Factory at Canton to England, likewise the Amount of all Payments for which England is debited, from 1822–23 to 1828–29, (Lords' Paper, 1830, No. 139; and Lords' Report, 1830, Appx. p. 638.)

Ditto - - - - - - ditto, 1829–30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Prime Cost and Quantity of Raw Silk Exported from Canton by the East India Company, from 1809–10 to 1827–28 - - - - - (Commons' Papers, 1829, No. 285.)

Ditto - - - - - - ditto, 1828–29 and 1829–30, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Registered Tonnage employed by the East India Company in their Trade to China, from 1809–10 to 1827–28 - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - - ditto, 1828–29 to 1830–31 - - - - (Lords' Paper, 1832, No. 87.)

An Account of the Quantity of Registered Tonnage belonging to the East India Company clearing out annually from Canton for England, 1810 to 1828 - - (Commons' Paper, 1829, No 285.)

Ditto - - - - - - ditto, 1829 to 1831 - - - - - (Lords' Paper, 1832, No. 87.)

An Account of all Sums paid for Freight, Demorage, &c. on Ships employed by the East India Company in the China Trade, from 1822 to 1828, (Lords' Report, 1830, Appx. p. 671; and Lords' Paper, 1830, No. 67.)

Ditto - - - - - - ditto, 1829 and 1830 - - - - - (Lords' Paper, 1832, No. 87.)

An Account of the Rate of Freight per Ton paid by the East India Company from China on the Average of the whole Tonnage, from 1824 to 1829, (Lords' Report, 1830, Appx p. 671; Lords' Paper, 1830, No. 43; and Commons' Report, China Trade, 1830, Appx. p. 92.)

Ditto - - - - - - ditto, from 1824 to 1830 - - - - - (Lords' Paper, 1832, No. 87.)

Ditto, which will probably be paid on ditto, of the Years 1830 to 1834, (Commons' Report, China Trade, 1830, Appx. p. 92.)

An Account of the Charges imposed by the Chinese Government on Ships in the Company's Service entering the Port of Canton, from 1814–15 to 1827–28 - (Commons' Paper, 1829, No. 285.)

An Account of the Charges incurred by the East India Company on their Shipping at Canton, including the Measurement of Ships, &c. from 1822–23 to 1828–29, (Lords' Report, 1830, Appx. p 671; and Lords' Paper, 1830, No. 81.)

Ditto - - - - - - ditto, 1829–30 and 1830–31 - - - (Lords' Paper 1832, No. 87.)

Statement of the Manner in which the Freight and Charges on Ships proceeding to China *viâ* Bengal, Madras and Bombay are apportioned on the Outward and Homeward Voyages, (Commons' Report, China Trade, 1830, Appx. p. 91.)

An Account of the Losses sustained by the East India Company in the China Trade, from 1822–23 to 1828–29, by Perils of the Sea, &c., (Lords' Report, 1830, Appx. p 672; and Lords' Paper, 1830, No. 142.)

Ditto - - - - - - ditto, 1829–30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - - ditto, 1830–31 - - - - - - (Lords' Paper, 1832, No. 37.)

A Statement of the Company's Establishment of Supracargoes, &c. at Canton, specifying the Rank of each, their respective Salaries, and all other Charges of the Establishment; likewise the Commission paid to each on the European or China Sales of Goods, from 1822–23 to 1828–29, (Lords' Report, 1830, Appx. p. 662 Commons' Report, China Trade, 1830, Appx. p. 102.)

Ditto - - - - - - ditto, 1823–24 to 1828–29 - - - - (Lords' Paper, 1830, No. 45.)

Ditto - - - - - - ditto, 1829–30, (Lords' Paper, 1831, No. 38 (Statements 41 and 45); and Commons' Minutes of Evidence, 1830–31, p. 185.)

Ditto - - - - - - ditto, 1830–31, (Lords' Paper, 1832, No. 37 (Statements, Nos 41 and 45)

An Account showing all other Charges, as well in China as in England, incurred by the East India Company in their Trade with China, including Freight, and stating the actual Amount in each Year, from 1823-24 to 1828-29,
(Lords' Report, 1830, Appx. p. 669; and Commons' Report, China Trade, 1830, Appx. p. 104.)

Ditto - - - - - ditto, 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Minutes of Evidence, 1830-31, p. 184.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the actual Cost of all the Company's Buildings in China up to the latest Date; also a Statement of the Sums expended in Repairs, Rent, Taxes or otherwise, from 1822-23 to 1828-29 - - - - - - - - - - - (Lords' Paper, 1830, No. 143.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Value of Imports into and Exports from Canton by the Americans, from 1814-15 to 1826-27 - - - - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1829-30,
(Lords' Paper, 1831, No. 38, and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Trade from the United States to China in 1826 and 1827,
(Commons' Paper, 1829, No. 285.)

An Account of the Exports from Canton by the Americans, intended for American Consumption, from 1815-16 to 1826-27 - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1828-29.
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Exports from Canton by the Americans, intended for European Consumption, from 1815-16 to 1826-27 - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1828-29,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 37.)

Statement of the Number of Furs imported into China by the Americans, from 1804-5 to 1826-27,
(Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1828-29,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 211.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 37.)

Quantities and Value of British Manufactures Imported into China by the Americans from 1824-25 to 1826-27; and also the Amount Imported by the East India Company and their Officers in the same Years - - - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1827-28 and 1828-29,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Foreign Trade with China carried on by the Americans; distinguishing the principal Articles of Export and Import; also the Tonnage employed, from 1813-14 to 1827-28,
(Lords' Paper, 1830, No. 124; and Lords' Report, 1830, Appx. p. 722.)

Ditto - - - - - ditto, 1828-29 - - - - - - (Lords' Paper, 1831, No. 36.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1832, No. 55.)

An Account showing the Amount of all Bills of Exchange drawn upon the Court of Directors by the Supracargoes at Canton from 1822-23 to 1828-29, in Tales, converted into Sterling Money at the Rate of 6 *s.* 8 *d.* per Tale, contrasted with the Amount of the Payment of the said Bills actually made in Sterling Money,
(Lords' Report, 1830, Appx. p. 673; and Lords' Paper, 1830, No. 140.)

Ditto - - - - - ditto, 1829-30, ditto - - - - (Lords' Paper, 1831, No. 38.)

Ditto - - - - - ditto, 1830-31, ditto - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Rates of Exchange and Sights at which the Select Committee at Canton have drawn Bills on the Court of Directors in England; distinguishing the Rate at which the Canton Treasury was opened generally from the Rates at which the Commanders and Officers of the Company's Ships were supplied with Bills, conformably to the Charter-party Agreements, from 1814-15 to 1828-29, with the Amount of the Bills in each Year,
(Commons' Report, China Trade, 1830, Appx. p. 94.)

Ditto - - - - - ditto, 1829-30 - - (Commons' Minutes of Evidence, 1830-31, p. 208.)

A Return of the Rates of Exchange and Sights at which the Select Committee at Canton have drawn Bills on the several Presidencies in India, and the Amount in each Year from 1814-15 to 1828-29,
(Commons' Report, China Trade, 1830, Appx. p. 96.)

Ditto - - - - - ditto, 1829-30 - - (Commons' Minutes of Evidence, 1830-31, p. 207.)

An Account showing the Amount of all Supplies from England to the Factory at Canton, from 1822-23 to 1828-29 - (Lords' Paper, 1830, No. 139; and Lords' Report, 1830, Appx. p. 637.)

Ditto - - - - - ditto, 1829-30 - - - - - - (Lords' Paper, 1831, No. 28.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

IV.—TEA TRADE, &c.

An Account of the Prime Cost and Quantity of Tea Exported from Canton by the East India Company, from 1809-10 to 1827-28 - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - - *ditto*, 1828-29 and 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of Tea Exported by the East India Company from Canton; specifying the several kinds of Tea, and the average Prime Cost per Pound, from 1822-23 to 1828-29,
(Lords' Report, 1830, Appx. p. 680; Lords' Paper, 1830, No. 44; and Commons' Report, China Trade, 1830, Appx. p. 20.)

Ditto - - - - - - ditto, 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Minutes of Evidence, 1830-31, p. 204.)

Ditto - - - - - - ditto, 1830-31 - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity and Sale Amount of Teas sold by the East India Company, from 1810-11 to 1828-29 - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - - ditto, 1828-29 and 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Quantities and Prices of the several Sorts of Tea sold by the East India Company, from 1814-15 to 1828-29 - - - - - - - - (Papers of February 1830.)

Ditto - - - - - - ditto, 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

A Statement showing the Average Sale Price per Pound of all Teas sold by the East India Company, from 1814-15 to 1828-29 - - - - - - - - (Papers of February 1830.)

Ditto - - - - - - ditto, 1829-30,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1824 to 1830 - (Commons' Report, October 1831, Appx. p. 660.)

Ditto - - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of Tea put up to Sale in the Years 1826 to 1828, the Quantity sold, and the Quantity refused by the Buyers, (including the private Trade of the Commanders and Officers) - - - - - - - - - (Commons' Paper, 1829, No. 285.)

Ditto - - - - - - ditto, 1829 and 1830, ditto,
(Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - - ditto, 1831 - - ditto - - - (Lords' Paper, 1832, No. 37.)

Quantity and Value of Tea unsold in each Year from 1815 to 1829,
(Commons' Report, China Trade, 1830, Appx. p. 86.)

Ditto - - - - - - ditto, 1st May 1830 - (Commons' Minutes of Evidence, 1830-31, p. 182.)

Ditto - - - - - - ditto, 14th June 1830, (Commons' Report, China Trade, 1830, Appx. p. 90.)

An Account of the several Sales of the East India Company from 1822-23 to 1829-30; specifying the Quantity of each kind of Tea sold, the average Price at which each kind was put up, and at which each kind was sold at each Sale,
(Lords' Report, 1830, Appx. p. 682; Lords' Paper, 1830, No. 42; and Commons' Report China Trade, 1830, Appx. p. 6.)

Ditto - - - - - - ditto, 1830,
(Lords' Paper, 1831, No. 38; and Commons' Minutes of Evidence, 1830-31, p. 205.)

Ditto - - - - - - ditto, 1831 - - - - - - - (Lords' Paper, 1832, No. 37.)

A Return of the Average Time the whole Quantity of Tea sold at each Quarterly Sale had been in the Company's Warehouse prior to such Tea being put up to Sale, for the Years 1827 to 1829,
(Commons' Report, China Trade, 1830, Appx. p. 23.)

Ditto - - - - - - ditto, 1830 - - (Commons' Minutes of Evidence, 1830-31, p. 199.)

Statements of the Probable Freight and Demorage per Pound on Teas to be imported in the Years 1830 to 1834 - - - - - (Commons' Report, China Trade, 1830, Appx. p. 88.)

Statement of the actual Expenditure of the East India Company in their Tea Trade, from Wastage and Allowance, from 1814-15 to 1828-29 - (Commons' Report, China Trade, 1830, Appx. p. 88.)

Ditto - - - - - - ditto, 1829-30 - - (Commons' Minutes of Evidence, 1830-31, p. 181.)

Account of the Profit and Loss on the East India Company's Tea Trade with China, for 1828-29; stating the Prime Cost, how calculated, the Freight and Demorage, the Charges incurred in Landing, &c. &c the Interest and Insurance as calculated to make the Upset Price; the Supracargoes' Commission, and all other Charges incurred either in England or China,
(Commons' Report, China Trade, 1830, Appx. p. 26.)

Ditto - - - - - - ditto, 1829-30 - - (Commons' Minutes of Evidence, 1830, p. 200.)

Total Amount of Tea Duty collected by the East India Company, and paid over to His Majesty's Government, from 1814-15 to 1829-30 - (Commons' Report, China Trade, 1830, Appx. p. 84.)

A Return of the Establishment of the Excise for collecting the Revenue on the Imports of Tea in London, stating in Detail the several Branches, and their Expense in 1829,
(Commons' Report, China Trade, 1830, Appx. p. 90.)

Return to an Order for a Copy of the Accounts and Estimates presented by the East India Company to the Treasury for the last Five Years, specifying the Orders of Importation, Price of Sale, &c., of Tea - - - - - - - (Commons' Report, China Trade, 1830, Appx. p. 23.)

An Account of the Quantity and Value of Teas sold by the East India Company at the Cape of Good Hope, from 1813-14 to 1827-28; also showing the Rate of Colonial Duty payable thereon, (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1828-29 and 1829-30, ditto, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

Instructions to the Agent at the Cape relative to the putting-up Price of Teas, (Commons' Report, China Trade, 1830, Appx. p. 24.)

An Account of the Quantity and Value of Teas sold by the East India Company at Quebec and Montreal, 1825-26 to 1827-28, with the Rate of Colonial Duty payable thereon, (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1828-29 and 1829-30, ditto, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity and Value of Teas sold by the East India Company at Halifax, in the Years 1826-27 and 1827-28, with the Rate of Colonial Duty payable thereupon, (Commons' Paper, 1829, No. 285.)

Ditto - - - - - ditto, 1828-29 and 1829-30, ditto, (Lords' Paper, 1831, No. 38; and Commons' Paper, 1831, No. 168.)

Ditto - - - - - ditto, 1830-31 - - - - - - (Lords' Paper, 1832, No. 37.)

An Account of the Quantity of Tea Exported from Great Britain to Foreign Europe, to British Colonies and Possessions, and to all other Parts, from 1814 to 1829, (Papers of February 1830.)

Ditto - - - - - ditto, in the Year ending 5 January 1830, (Lords' Paper, 1831, No. 45; and Commons' Paper, 1831, No. 217.)

Ditto - - - - - ditto - - ditto - - 5 January 1831 - (Lords' Paper, 1832, No. 32.)

Copy Correspondence, &c. between the Board of Control and the Court of Directors, in 1824, regarding a Memorial presented to the Lords of the Treasury from certain Tea Dealers of the City of Edinburgh - - - - (Commons' Report, China Trade, 1830, Appx. p. 59.)

Copy of Edicts of the Chinese Government against the Exportation of Tea from any Port or Ports of China - - - - - - - (Commons' Report, China Trade, 1830, Appx. p. 22.)

Memorial from the Bombay Merchants as to the Suspension of the Intercourse with China, May 1815 - - - - - - - (Commons' Report, China Trade, 1830, Appx. p. 134.)

Copies of Correspondence and Papers, dated 1828 and 1829, relative to the Interruption of the East India Company's Trade at Canton, (Commons' Report, China Trade, 1830, Appx. p. 143 to 170.)

Ditto - - - - - ditto, relative to the Suspension of ditto, 1829-30, (Commons' Report, October 1831, Appx. p. 594 to 620.)

Copies of Papers relating to the alleged Breach of the Laws of China, (Commons' Report, October 1831, Appx. 2, p. 1 to 30.)

Ditto - - - - - ditto, relating to the Death of Mr. Mackenzie at Canton, (Commons' Report, October 1831, Appx. 2, p. 31 to 46.)

Indigo.

THE cultivation of indigo has been very beneficial to the interests of the inhabitants of the Robertson, 104.
district of Tirhoot. It is impossible to look at the district without being struck with its high
state of cultivation and the quantity of forest land which has been brought under the plough.
This improved cultivation is the effect of the funds received from the indigo planters, who
have raised indigo on the ground which had been previously given up to corn: it has certainly
contributed to the wealth of the country. The condition of the ryots who labour for European Ramsay, 231.
indigo planters, is worse than that of other ryots. There is no difference observable between
them. The indigo cultivators are rather better off. There is not in the districts where indigo Davidson, 251. 257.
is grown an increased consumption of British goods. The situation of the ryots has become Ramsay, 232.
worse since the great competition took place. The cultivation of indigo has considerably
benefited the country; the zemindars are becoming wealthy, and the ryots are improved in Rickards, 335, 336.
condition, and possess more comforts than where that cultivation does not exist. The general
conduct of indigo planters is very good. The improvement in the condition of the ryot Harris, 308.
depends much on the conduct of the planter: the latter is seldom guilty of oppression, as it
is very contrary to his interest; though instances no doubt have occurred. Europeans have Hodgson, 246.
not been oppressive superiors. Ryots under Europeans are more favourably situated than Harris, 301.
others. The villages increase much in value. The natives are in a better condition where D° 303. 308.
indigo is cultivated, and their land is better tilled. The possession of lands legally would D° 304.
enable the planter to do more than he did indirectly, and by the indirect holding they were
much improved. Before the indigo planters had permission to hold lands in their own names, Ramsay, 230.
they obtained them by farming the different zemindaries in the names of their servants,
whence arose various oppressions of the planters towards the natives: they compelled them
to sow a larger portion of land with indigo than they would otherwise have been inclined to
do, and they took their best lands. Large farms were frequently taken in the names of Harris, 302.
servants, at great risk of loss. A lease from a zemindar places a planter in the shoes of the D° 305.
zemindar; the planter pays rent to the zemindar, and receives rent from the ryots. The & Davidson, 255.
advantage of the lease is to keep other Europeans off, and to induce the ryot, through good Dunlop, 323.
will, to cultivate more land with indigo. The lease gives no power of directing the cultivation, & Davidson, 255. 306.
but there is no difficulty in inducing the ryots to cultivate indigo. There is a great disposition Harris, 306.
on the part of the ryots to engage in it. It is reported that ryots have been forced to cultivate & Davidson, 251. 259.
indigo, but it is not a general practice. The ryot has by law a power to cultivate his land D° 260.
as he pleases. The ryot has generally a right to cultivate the land as he likes, and the Ramsay, 231.
planter interferes with that right. The zemindars would seldom give a lease for more than Harris, 308.
three years. A lease for 21 years would be sufficient to enable the European speculator to
derive the full benefit of the employment of his capital. Greater interest in the land than D° 302.
is gained by making advances to the ryots, is often wanted. The power of holding lands is Davidson, 253.
very essential to the cultivation of indigo. Indirectly, the defective administration of justice
has an effect upon the production, as has also the want of free permission to Europeans to
settle and colonize. If Europeans generally were enabled to hold leases, the production Harris, 306.
of indigo would not be much increased, as almost all the lands fit for it are now in cultivation.
It is not essential to the interests of the manufacturer that he should raise the articles which Davidson, 254.
he manufactures; if he could do it through the ryots, it would be unnecessary for him to
raise the article, but often he cannot. A very small portion of the indigo grounds are D° 260.

cultivated by Europeans on lease; the greater parts by ryots contracting to furnish the
produce; the most profitable cultivation is through the ryots. The permission to hold land
Davidson, 252. would be an advantage, but the extension of the cultivation must depend on the price;
Ramsay, 230. a long term of years would not be so good as a perpetuity. In almost all cases the planters
Davidson, 251. make advances to the cultivators, who agree to deliver so much weed at certain prices; the
Harris, 304. advance was two rupees a bega for cultivation, and one for seed and weeding. The better
Davidson, 251. the ground is dressed, the better is the produce of the indigo: it requires good culture, but
D° 258. no particular skill. The crop is very uncertain; the native is put to great expense in culti-
Ramsay, 231. vating it, and it often yields nothing; then the planter who has made the advances may be
very oppressive. The ryot has no other remedy against oppression than an appeal to the
courts, where he has very little chance of having his appeal heard. Oppression is principally
exercised in the lower parts of Bengal, where a number of low Europeans and Half-castes
Davidson, 260. are settled. The advances made to the ryots induce them to cultivate indigo. They are
& Ramsay, 230. frequently lost. Europeans have a difficulty in enforcing their agreements; they can only
Davidson, 259. do it by applying to the courts. The ryots frequently make agreements with more than one
Ramsay, 230. planter, which leads to great violence and oppression; in cutting the weed, to which both
D° 234. parties conceive themselves entitled, dreadful affrays occur. The disputes are often occa-
sioned by questions respecting boundaries, as the rivers throw up lands which two parties
claim, and they enlist Europeans on their side by selling the disputed lands to them. Very
Harris, 302. few difficulties were experienced with the ryots; in general they acted as conscientiously as
most people in their situation would do; as farmers in England would. There have been
D° 305. a few instances of their letting lands to more than one person. Mr. Harris had no occasion
Davidson, 254. to have recourse to a court of justice against either zemindars or ryots. It would not be
practicable to carry on the cultivation of indigo under the present disabilities, if any other
D° 256. country were discovered producing it with greater natural advantages. The greater price of
indigo in India, as compared with that obtained in England, has arisen from the necessity
of making remittances, and from the competition of the East India Company. These have
D° 253. produced an over-supply in Europe, which depresses the market. Europeans have been
D° 258. most successful in indigo; the quality and quantity have been much improved; that is, the
Crawfurd, 350. manufacture has been improved, not the weed itself. The cultivation of indigo has improved,
which is attributable to a free application of European skill and capital, and to that only.
Hodgson, 245. The introduction of indigo at Tinnivelly was a successful speculation. The manufacture of
Ramsay, 230, 231. indigo has greatly improved within the last 20 years. It is not so profitable a speculation
Baber, 220. as when indigo was cheaper, owing to the great competition. Europeans engaged in the
Dunlop, 324. cultivation of indigo have not found the speculation answer their expectations. Upon the
Harris, 301. whole it has been a profitable speculation to those engaged in it. Indigo was an advan-
Robertson, 105. tageous employment of capital and land; in its manufacture expensive establishments are
Harris, 306. required, but not much machinery. The buildings form but a small part of the outlay;
the principal expense is in the advances and the labour, the advances being from one third
Ramsay, 232. to one half of the whole. Some natives have considerable factories, but the indigo is not
Dunlop, 323. so good as that manufactured by Europeans. The zemindars do not engage in the manu-
facture so much as Europeans do, but many do engage: they employ both European and
D° 325. Native assistants. The manufacture by them is increasing. They manufacture the article
in the same way as Europeans, but not with so much attention, though with more than they
Dunlop, 324. formerly did. The Natives pay more regard to cotton than to indigo. Many indigo planters
Harris, 302. employ European assistants. "I had a great dislike to employing them," for the natives
were always fully sufficient, and always trustworthy, and the more confidence there was
Dunlop, 324. placed in them the more deserving they were of it. The Native labourers must be strictly
looked after and kept to their work. They do not get through so much work as American
Davidson, 258. slaves. There are from 500 to 1,000 Europeans engaged as indigo manufacturers. Those
Ramsay, 233. who take lands for the cultivation of indigo generally reside on them. In some cases the
& Davidson, 251. 255. agents in Calcutta have shares in the factories, but not in all. The factories are generally
Chaplin, 186. Dunlop, 323, 324, established by capital not brought from England, but borrowed in Calcutta, at a high rate
Harris, 304, 305. of interest, and belonging to natives and to the agency houses, and some part of it being the
Davidson, 256. savings of the Company's servants. The agency houses have no security unless it be on
Harris, 306. Dunlop, 323. the buildings; they make the planter insure his life. The factors may be considered as the
Ramsay, 233. servants of the Calcutta agents. The indigo planters return home whenever they can. There
are many respectable men among them, but not many men of capital. There is no instance
known of a man with capital going out to India to establish an indigo plantation.

Cotton.

Ryder, 315. INDIAN cotton is usually at two-thirds the price of American of the same staple; it is
& Burddock, 318. shorter stapled than the short-stapled American; it has more dirt, and there is more waste
Ryder, 316 in the manufacture of it. It is generally used in making low goods, or mixed with other
Burddock, 317, 318. wools to reduce the price; it is much more used abroad. It is inferior from the use of the
Crawfurd, 347. native seed, and from its dirty state; it is short in the staple, so as to require peculiar
D° 344. Davidson, 259. machinery, of coarser quality, and extremely dirty. Surat cotton is considered the best;
but the fine Dacca muslin, which is not equalled in England, is made in Bengal. Some
Crawfurd, 347. of the best Surat cotton is nearly as good in quality as Georgia, but it is 40 per cent. worse
Ryder, 315. in price, from the American being better grown and cleaner. Very clean Indian cotton
would approach very nearly to the price of American; it would fetch six sevenths of that
price. The loss in cleaning is about 10 per cent. in weight, and the expense is trifling.
It would answer better to purchase the uncleaned cotton at 3 *d.* per pound than the cleaned
Burddock, 318. at 6 *d.*; and spinners prefer having the cleaning of it themselves. If imported in its dir-

tiest state, it would be very difficult to clean it. Packing does not injure it. In England
there is machinery for cleaning cotton superior to the American. The effect of machinery Burddock, 317.
is to hurt the cotton; it is better cleaned by hand. American cotton has much improved Ryder, 316.
of late years by the constant change of seed, and by the superior method of cleaning, on Burddock, 318. Carruthers, 320. 322.
which the value much depends. The Indian seed has not been changed. In the last Burddock, 317
two years the Indian cotton has been worse. There has been no improvement in Indian D° 319, 320.
cotton; it is as good as it used to be, and some of it is better cleaned. It is very possible Ryder, 315. Crawfurd, 343
to improve the growth of cotton in India. By improved cultivation and selection of seed, Burddock, 318. 320.
Bombay cotton might be grown as good as Sea Island. The finer the cotton is the more Ryder, 316
care is required in the cultivation. There should be more attention in selecting seed, in Burddock, 819 Crawfurd, 345.
growing, and above all, in cleaning, packing and preparing for market. All the cotton is
spun by hand in India. More attention is paid by the natives to cotton than to indigo. The D° 344
cultivation of cotton might be extended by a greater application of capital. In cotton and Dunlop, 324. Elphinstone, 169.
other articles, attempts to introduce an alteration in the culture have hitherto failed, with Hodgson, 243,244, 245.
the single exception of the cultivation of Bourbon cotton in Tinnevelly; there, owing to
favourable circumstances of soil and climate, a considerable extent of ground is cultivated
with superior seed from the Isle of France; but the climate has opposed the extension of
the cultivation of that article. No sanguine hopes can be entertained of a large increase of Davidson, 254.
the cultivation of cotton, for the land is pre-occupied with other articles of export, and with
the necessary food for a dense population; besides, America has such great natural advantages
in the production of cotton; but the experiment could not be fairly tried till there was D° 253.
the power of holding lands, and free egress, and every thing belonging to an unrestricted
commerce. Cotton cannot be grown by Europeans as indigo now is, because it requires
more machinery and permanent buildings, and the investment of fixed capital would be
greater. No long-stapled cotton has been cultivated in India; no skill or capital has been Crawfurd, 342.
applied to it; the natives do not require it for their own manufactures, and it has not been
wanted for exportation. Long-stapled fine cotton is only grown near the sea. The only D° 343 345, 346.
way to improve the cotton of India is to allow a free admission of European residents and D° 344
capital; no good cotton can be produced without it. When skill and capital are invested D° 348.
in the soil and industry of India, machinery, and whatever may be requisite, will be applied
naturally; but the interference of Government with a view to the improvement of the cultivation
is of no benefit whatever. The price of raw cotton in China has declined much of Magniac, 421.
late years; the quality of a portion of it was formerly of a superior description; that now
probably finds its way to Europe. The superior kinds were better cleaned, as they could
afford the expense; the inferior were not so well cleaned.

Silk.

The silkworm is principally confined to Bengal Proper, with the exception of the eastern Ramsay, 221.
districts. It will not flourish in the Upper Provinces. Silk is very little cultivated under Chaplin, 181.
the Bombay presidency, the soil not being suited to the mulberry. The Company's investment Larkins, 26.
for England is provided by the agency of their commercial residents; and the silk is
obtained by contract with the men who rear the cocoons, to whom considerable advances
are made. The cultivators are not a poor class of people. The Company have extensive
manufactories, but under no other superintendence than that of their own residents; and
they do not carry the manufacture beyond reeling. They have about 12 residencies. At Ramsay, 220.
one or two of them piece goods are manufactured; in the other factories the silk is only
wound from the cocoons, and sent to Europe in a raw state. The piece goods are made
from Putney silk; that is, silk wound by the natives at their own houses. Want of capital D° 221.
on the part of the natives prevents the increase of the winding at their own houses. They D° 224, 225.
have not money to buy the machinery. Many natives employed in the silk trade have large D° 220.
capital. The mulberry-trees and the worms in general belong to different people. Sometimes D° 223.
the growers are paid so much for the cocoons; sometimes so much for the silk reeled Chaplin, 182.
from them. The manufacture of the finer silks, called kincobs, has much diminished.
English silks are imported to a considerable extent. The silk manufactures of Boorhampoor
and Mongapytun have much diminished. Great endeavours have been made by the Company Larkins, 26.
to improve the quality of their silk. They employed for many years a very intelligent
man who was well acquainted with the manner in which silk is made in Italy, and who
introduced Italian filatures into Bengal. The Italian worm is only reared at a few factories; Ramsay, 221.
it spins stronger silk than the Indian. There are four harvests of silk from the latter; in
November, January, March and June, of which November and January are the principal;
from the Italian there is only one. The produce of the Italian worm has fallen off in quality
and quantity. Several European residents have factories of the same description, but not D° 220.
on so large a scale as the Company's. The prices which the Company give, command the D° 222.
market: they are so high, that no private merchant can purchase with a prospect of advantage. D° 224.
The Company's silk fetches a higher price in London. Their agents make advances
for the silk, and it is their duty to see that it is not afterwards sold to others. The natives D° 225.
employed in the Company's factories had certain privileges, now done away with. They
could not be summoned in a civil suit till after the silk harvest; and they were more protected
from oppression. The Indian silk is not capable of much further improvement, as its D° 224, 225.
great defect is want of staple. The cultivation of silk may be improved. It might perhaps Chaplin, 187.
be extended by a greater application of capital. The power of holding lands is very essential Elphinstone, 169.
to the cultivation of silk by Europeans. There is no obstacle to the extension of the Davidson, 253.
cultivation in the regulations of Government, but sufficient encouragement is not held out Baber, 218.
to the people; yet the growth has been increasing. It does not require a considerable Ramsay, 223.

Baber, 218. capital. Both silk and indigo appear to be attended with very little expense. It would be
D° 219. an advantageous speculation for a British subject, possessing capital, to undertake the cul-
Ramsay, 224. tivation of silk upon a large scale. Private individuals have not made the speculation
Hodgson, 243, 244, 245. answer. In silk and other things, all the attempts hitherto made to alter the culture have
D° 246. not been attended with success. The introduction of the cultivation of silk in Bangalore
Wilson, 265. was successful. Indian silk has deteriorated of late years. Want of staple and want of
cleanness are the principal faults; quantity rather than quality has been attended to, which
D° 269. is in a great measure owing to the system of the Company's advances. Another great evil
is in the purchasing cocoons by weight. It is possible to get as good silk from India as
Italy can now produce, the breed of worms being improved, the best obtained, and proper
attention paid to their food and to the reeling. As the worms are all kept within doors, climate
can make little difference. Wherever mulberry-trees will grow, good silk may be produced.
D° 271. The China silk is as good as any in the world. The best Indian silk sells nearly as high as
Durant, 309. the best Italian; but it is not applicable to exactly the same purposes. The greater part
D° 310. 312. of the Indian silk is very inferior; the quality has not improved of late years; apparently
the reason is from the trade being in the hands of a great Company, who cannot exercise
the strict superintendence that is required. The Company's silk is, however, the best, for
D° 311. theirs are the only European filatures remaining. The only way to improve the quality
would be to open the trade to the free competition of individual reeling. The Company do
not indeed impose any restrictions at present; but their transactions are so extensive that
the private trader has no chance. Attempts have been made to establish European filatures,
but without success. The Company do not go into the open market; they employ the silk
reelers; and they must make remittances; so that they do not mind submitting occasionally
D° 312. to a loss which a private trader could not support. The reeling is much the same as it for-
merly was: if more attention were paid, there would be better silk. The Indian thread is
D° 313. not so firm as the Italian. The silkworm is removed from one country to another without
difficulty; but it soon partakes of the climate to which it is removed, and the fibre of the
silk depends in some measure on the food. There is not so much difference in the intrinsic
quality of the silk as in the mode of reeling it. The finer sorts are more valuable for some
D° 312. kinds of goods, and the stronger for others. The general impression among the manufac-
turers is, that if Indian silk were much improved, they still could not proceed without some
D° 313. Italian. They are now generally used together; not to improve the quality, but to reduce
the price. An attempt has been made to import the silk of Italy, for the purpose of reeling
it in England, but the freight is very expensive, and the packing injures the cocoons. The
D° 314. import of a large quantity of Bengal silk at a low price, the consumption of which is con-
fined to this country, is essential to the prosperity of the silk trade, and the withdrawing of
D° 313. it would be very hazardous. Very little Indian raw silk is sold for exportation; China
silk would be preferred. The Company have for some years given up the importation
Larkins, 26. of the latter, and the importation has increased. The Company do not send any silk from
India to China.

Sugar.

Chaplin, 179. 187. SUGAR is cultivated in various parts of the Deccan. There are very few parts of India,
possessing the means of irrigation, where sugar could not be cultivated. It requires irriga-
D° 181. 185. tion. The employment of British skill and capital in its cultivation might be productive
D° 187. of advantage. The Native mode of manufacture is very simple. Their machinery is in
D° 181. a very imperfect state at present, and there is great room for improvement; no doubt the
D° 187. manufacture would be improved by the introduction of better machinery. Sugar is not more
D° 181. extensively cultivated, because there is no demand for it; if there were an European demand
it would be more cultivated. If there was a probability of a ready sale for sugar, leases for
10, 15, or 20 years, might be granted to Europeans with advantage, always provided that
Jenkins, 148. the Government had the same control over them as now. No foreign machinery is used in
Dunlop, 325. the preparation of sugar in Nagpore; it is the same as has been used from time immemorial.
Elphinstone, 169. The cultivation of sugar might be extended by a greater application of capital. No sanguine
Davidson, 254. expectation could be entertained of a large increase in the cultivation of sugar. Sugar is
Crawfurd, 350. a stronger case than cotton and tobacco for European skill, as it is more in the nature
Dunlop, 325. of a manufacture, and requires a greater degree of skill and capital. The natives are more
likely to engage with advantage in sugar or cotton than in indigo. The manufacture
could be improved without the aid of machinery; great improvement might take place
Chaplin, 185. through Europeans; some works are now carried on by Europeans. The cultivation is
Dunlop, 325. perfectly free, as is that of cotton and indigo. The description of labourers is the same as
Chaplin, 187. that employed in other modes of agriculture; the cultivation is expensive. West Indian
Robertson, 105. machinery was introduced, and it was found that it did not extract so much from the
cane as the simple machinery of the natives. The speculator was a considerable loser; his
loss was not attributable to the rate of duty on East India sugar in England, as he made
Baber, 220. it for the use of the Commissariat in India, for the manufacture of rum. Two Europeans
Hodgson, 243. entered into speculations in Malabar, but both abandoned the project. An attempt was
made from 1796 to 1803 to introduce the culture of sugar into Ganjam, but the result
was unsatisfactory.

Tobacco.

Baber, 218. THE cultivation might be carried to any extent, with due encouragement on the part of
Crawfurd, 350. Government. Indian tobacco is not worth one-third of what American tobacco is. This
may be ascribed to the want of skill on the part of the grower and preparer, particularly of

the preparer. There is very good tobacco in China and Burmah, where more care is taken with it. More attention should be paid to the selection of seed, the choice of soil, to weeding, to reaping the crop, to its after preparation, and to the packing. India could not come into competition with America, but the tobacco of the former might be extensively consumed in this country for particular purposes, if European skill and capital were applied to it.

Coffee, &c.

Chaplin, 182. 187. THE Bangalore (Mysore) coffee is very good, though not so good as that of Mocha. The cultivation is spreading. Hodgson, 246. The attempt to cultivate coffee in Bengal is a failure. Crawfurd, 346. Hodgson, 245. The attempt to cultivate cinnamon, nutmegs and coffee, in Arcot, failed. Dº 244. Cocoa plantations in Ganjam failed.

Cardamums.

Baber, 218. ARE exported from Malabar to England, and all parts of India. More attention would be paid to the cultivation if the trade were free, and the land would become more valuable.

Canals and Roads.

Fortescue, 32. THE effect of the renovation of the old canal (Murdan Shah), which ran along the line of the Jumna to Delhi, has been wonderful. As the water went gradually through the province, it fertilized it in an astonishing manner, and to a most incredible distance, right and left, even to the distance of five or six miles; in wells which were completely filled up, and thought useless, the water sprang up again. The canal is too narrow for navigation, and does not convey more water than is required for the purposes of irrigation.

Jenkins, 150. There are very few roads in Nagpore; an attempt was made to form a road to extend to Calcutta, but it was found advisable to discontinue it. There is no communication by canals. In the dry season the communication is carried on by bullocks and carts; during the rains it is almost impossible to carry on any communication.

China Trade.

Toone, 350. THE Company's servants are remunerated by a commission of 2 per cent. on the sale of all goods, except bullion, exported to China on account of the East India Company, from England or India, and on all goods sent to London on the same account, and also on teas sent for sale to Halifax or Quebec. The calculation is made in England. The 2 per cent. is subject to deductions on account of the salaries of two tea-inspectors, two surgeons, and an interpreter; an allowance to the commodore of the Indiamen; a retiring pension to a tea-inspector; and the salaries of all the European servants connected with the factory. In addition to the 2 per cent., the Company pay the expenses of the table, and the rent of the factories, at Canton and Macao, and the charges of removal from time to time; 3 per cent. covers the whole expense. Dº 351. The amount of commission paid by private traders is from 3 to 5 per cent.; generally the latter. Davidson, 462. The expense of the Company's establishment at Canton is not great; it is not much more than the sum to which the commission payable to private agents in the conduct of so extensive a business would amount. Bates, 367. The American commission given to agents in China is 2½ per cent., 1 per cent. of which is probably given to the supracargo. Everett, 391. Milne, 436. The commission on the sale of goods at Canton is 5 per cent. The supracargoes were paid, as the whole commission, 3 per cent. Toone, 351. The Company's business might be managed by a smaller number of leading persons, with clerks to execute their orders. The number might be reduced from 20 to 10. A residence of three years is sufficient to qualify a person to manage a trade. A knowledge of the language is highly useful, but not absolutely necessary; not one of the private traders has such knowledge. Urmston, 443. It is quite impossible to conduct the Company's business with a smaller establishment than at present; they are constantly employed during the season of business, six or eight months; and they have a good deal to do at other times. Dº 444. The knowledge of mere buying and selling might be acquired in two or three years, but there are other equally important considerations, which require a study of several years, viz. the knowledge of the Chinese character, system and habits. In this respect the factory has decided advantages over any private agent. Toone, 351. The usual mode adopted by the Company's servants, is to contract for teas in the spring, to be delivered in the autumn and winter. The contract price with regard to the bulk of teas does not vary; Dº 352. with regard to some of the green teas, and to souchong, it does, in order to obtain a supply more suited to the demand, and to compete successfully with the Americans. The contract price of green teas has been occasionally increased; that of black teas was diminished in 1825. The contract prices had been the same for a long series of years. The Hong merchants contract for the teas with the Native dealers, and make advances to them to the amount of two-thirds of the value of the tea, about six months before the delivery. The usual interest of money at Canton between the Hong merchant and the merchant in the interior, is from 1 to 1½ per cent. per month. The Hong merchant generally gives 17, 17½ and 18 tales per cent. to the country merchant; his additional expenses are reckoned at three tales* per pecul; and the Company pay for the pecul 25, 26 and 28 tales.

---

* The tale is considered in calculating the value of goods at 6 *s.* 8 *d.*; its real value, at 5 *s.* 2 *d.* the ounce of silver, being about 6 *s.*: 72 tales are considered equal to 100 dollars.

tales. The Hong merchants in general act as brokers; but some of the principal send
agents into the country, and buy teas on their own account: in consideration of the profits
they derive from the brokerage, they make certain payments to the government. The
Urmston, 442. teamen who sell to the Hong merchants bring the tea down to Canton. Sometimes they
Davidson, 454. are proprietors of tea, but in general only brokers. Avowedly the Hong are the principals,
Toone, 351. but in a great many instances they are no doubt merely agents. The Company sometimes
purchase teas not on contract, to supply the deficiencies in the contracts, which are
Urmston, 442. occasionally large among the junior and poorer merchants, the portion depending on the
Toone, 351. season. The Hong supply the teas not contracted for, as well as those for which contracts
are made. In the contracts, all teas that do not come up to the Company's standard, are
D° 359. 363. rejected. There has been no difficulty in obtaining the quantity desired of black teas, as
Bates, 379, 380. they are placed almost entirely at the option of the Company; but they have been obliged
Toone, 351. occasionally to buy of inferior quality: with regard to green teas, they enter into competition
with the Americans, who sometimes give higher prices than the Company's servants deem
it advisable to give, and then the latter cannot obtain the teas they wish. The teas purchased
in the open market have been, with regard to green, sometimes dearer than those
purchased by contract; but in general the same scale of price is maintained as with respect
D° 356. 359. 363. to the contract teas. There is no difficulty in getting a sufficiency of black tea, but there
D° 363. has never been so much green tea obtained as the indents required; the black tea supply
Urmston, 442. may be increased. There has been a great defalcation in the quantity of green teas, and
there has been a difficulty in obtaining the quantity which the contract required. When
the quantity of green tea was not furnished on contract, it seldom happened that there was
any of the requisite quality to be found in the market. The teas bought in the market are
sometimes equally good, sometimes inferior, to the contract teas; inferior are sometimes
Milne, 440. taken to make up the investment. Of young hyson the quantity desired was not always to
be procured; of the other qualities of tea, sometimes the price was a little higher, but there
Bates, 367. was no deficiency in quantity. Green tea is not so abundant as black, but the Americans
have not found any difficulty in obtaining as much as they wanted. The export of green
D° 368. teas has considerably increased. Particular kinds of green tea have advanced in price. The
Americans buy the high-priced green teas, which seldom come to England. The Americans
Urmston, 442. generally take green tea. The Company do not succeed in obtaining as much as they wish
Magniac, 425. of the better qualities of black teas. The greatest varieties of tea are supplied in England
Mills, 463. by the private trade of the officers of the Company's ships. The Company supply but few
D° 469. varieties. The private traders supply finer teas than the Company. The staple teas of the
Alsager, 486. Company are certainly better, but those purchased by the Company's officers are fancy
Davidson, 459. teas, which are beneath the notice of the Company. There would be no difficulty in the
Chinese furnishing a larger supply of tea to this country to the extent of many millions of
Urmston, 452. pounds. The Company have frequently had considerable difficulty in getting the better
D° 453. kinds of tea. They have been sometimes compelled, when they could not obtain teas of
a better sort, to make up the quantity with teas of a lower quality than that termed the contract
quality; but they have always been exceedingly cautious and particular. Their investment
Urmston, 451, 452. is, owing to the vigilance of their servants, of the same quality as it was, though the
Toone, 359. 363. demand has increased of late years. The tea now imported is rather better than it used to
Milne, 438. 440. be, being more carefully prepared. The teas have deteriorated in quality, as the quantity
Toone, 362. 364. has been increased. The Company have never introduced the coarser teas. The brokers
& Urmston, 446. have advised them against doing so. They have always given orders that the quality should
be kept up, that no discredit may be brought on the article. As the duty forms so large
Bates, 379. a portion of the price, any thing very inferior in quality would not be brought here for consumption.
Toone, 356. Tea is grown over a large part of China, but that which suits our market is grown
only in a few provinces; the black in the province of Fokien, and the green in those of Che-kiang,
D° 364. Kiang-nan and Kiang-si. It is supposed that the difference of culture and preparation
makes the difference between black and green; but it is a disputed point. Tea is
D° 363. consumed throughout China. The inhabitants in general drink black tea. The teas are
D° 360. nearly a year old when they arrive in England, and they are kept another year before they
are sold. Green tea loses its flavour by keeping, but black tea will remain for two or three
Milne, 438. 440. years without injury. Old teas are not so valuable as new teas by more than 5 per cent.
Davidson, 460. New teas are decidedly better than old. The Chinese have a mode of refreshing the old so
Urmston, 441-2. as to give them the bloom of new teas. The Company purchasing by contract, obtain teas
on as advantageous terms as individuals in the open market do. They have the chance of
Toone, 353. procuring better teas. The Americans and the Company's ships' officers in general deal with
Urmston, 450. the outside merchants, but the goods bought of them must pass through the hands of the
Stewart, 393. Hong. It is understood that they do not obtain teas, on an average of years, on such good
Davidson, 456. terms as the Company do. Mr. Davidson, a private merchant, almost always dealt with the
Alsager, 485. Hong, and not with outsiders. Captain Alsager, a commander of one of the East India
Company's ships, always dealt with the Hong, and had no difficulty. Those who, to make a
greater profit, dealt with the outside merchants, have had bad teas, and some trouble in obtaining
Urmston, 448. the money for their goods. The Company have the choice of the teas; most distinctly,
D° 442. 446. those purchased by the Americans are inferior, but at the same time cheaper; it is presumed
Bates, 379 that they find such more profitable. There have been instances in which the Americans
Urmston, 442. have contracted for teas. The Americans purchase on as good terms as the Company; they
Bates, 367. sometimes buy on contract, but more generally in the open market; they buy both from the
Hong and from the outside merchant, but not from those who actually bring the tea from
Davidson, 459. the interior. The Americans obtain their teas at as low a price as the Company, but not so
D° 460. good; neither do they seek to do so. They probably find them not so suitable to their
D° 459. markets. Teas in the open market may in small parcels be obtained as good as the Company's,

pany's, but not in large quantities. Much of the tea brought home by the officers of the Alsager, 489.
Company's ships has been rejected at the tea sales as bad; it was probably bought from the
outside merchants. The Company's business has generally been divided among all the Hong Urmston, 443.
merchants: when the poorer or junior merchants have not been able to procure their teas by
themselves, it has generally been done through the agency of the senior merchants. Private Davidson, 456.
merchants have found it more profitable to deal with insolvent Hongs, supported by the Magniac, 423.
Company. The tea merchants are without capital, and depend on the advances made to Toone, 362.
them by the Hong merchants. Large advances are made by the private agency houses and
by the Americans to the Hong merchants.

At the Company's sales in London the tea is bought by brokers, to whom a commission Mills, 473.
of a half per cent. is paid. The price at which the tea is set up is taken to be a remunerating D° 474.
price, covering the cost of the tea in China, and the expense of bringing it home. In most D° 467.
cases the selling price is considerably in advance of the upset price, which may be attributed D° 463.
to the inadequacy of the supply. The advance at the June sale of 1830, above the cost at D° 464.
Canton in 1828-29, was from 66 to 195 per cent. Occasionally the teas do not fetch the D° 468.
upset price; when they are refused by the brokers it is because, in the opinion of the latter, D° 463.
they are not worth the money; the brokers show thereby that they differ in opinion with the D° 467. 474.
Company's officers at Canton as to their estimation of the teas. The Company charge their
ships' officers 26 per cent. *ad valorem*, on the teas sold for them: on silks, which on an D° 469. & Alsager, 488.
average amount to threefold the value of the teas, they charge 1½, and on spices 1¼ per cent.
It is supposed that they make this difference in order to prevent their servants from entering Mills, 473.
into competition with them in teas. It is a great inconvenience to the trade that few tea
sales occur in the year; they ought to be more frequently held. The consumption of tea D° 468.
might be materially increased: that of coffee has increased since 1824, 130 per cent.; but
that of tea not more than 26 per cent. The lowest and the finest qualities of teas might be
the most increased. The reduction in the price of teas of late years is attributable to the D° 474.
increased quantity declared by the Company for sale, and to the increased consumption of
coffee.

The funds provided by the Company in China are the produce of goods imported from Toone, 353.
London and India; the deficiency is supplied by bills drawn on Bengal and on the Court
of Directors; the bills on Bengal amount annually to one-and-a-half or two millions of
dollars. The funds provided in China, which are given to the factory for their bills on India
and on London, are the proceeds chiefly of opium and of the general exports from India
The bills on England and India are drawn at the mercantile rate of exchange, or at rather
less, in consequence of the greater security of the Company's paper. Of late years the Factory Stewart, 394-5.
have drawn as little as possible on London, and there is great difficulty in obtaining Davidson, 457.
bills. The Company's bills are of great use in making remittances.

The sales of British manufactures in China are thus conducted by the Company: their Toone, 353.
servants send for the Hong merchants, and showing them the samples, allow them time to
make their offers; the goods are then sold either to the Hong in shares, or to the best
bidder; the woollens are divided; the cotton is always sold to the best bidder. In calculating
the value of the goods, the tale is considered worth 6*s.* 8*d.*, though its real value, at
5*s.* 2*d.* for the ounce of silver, is about 6*s.* Seventy-two tales are reckoned equal to
100 dollars. Rupees are converted into tales at their intrinsic value. In general the cotton D° 354.
trade from India to China has been a capital trade for the Company. The trade in British & Maxfield, 408.
manufactures from England has been always attended with loss. Whatever the price may Toone, 363.
be that can be obtained, it is the practice of the factory to sell all that are consigned to
them. The price at which they have been sold in China has diminished, but not so much D° 354.
as the price in London; the consumption has not increased with the diminution of price. D° 361.
The Chinese merchants state that they have a difficulty in selling British manufactures.
Woollens are chiefly used by the Chinese for furniture, and for the dresses of shopkeepers
and the poorer classes. The woollens are sent all over China by canals. They are subjected D° 356. 360.
to a considerable transit duty, at the frontier of every province. The export of Urmston, 448.
British manufactures by the Company has not been so profitable as it used to be, though
the price in China has not fallen at the same rate as the price in England; which is D° 449.
attributable to the resources possessed by the Chinese in their own silk and cotton manufactories,
and China is much more impoverished as a country than it was. The prices
of their own commodities have not fallen. Of cotton goods they manufacture a larger
quantity than formerly. There are no woollen manufactories in China, but there is much D° 450. 449.
less demand for our woollens than there formerly was. Though the prices of manufactures Alsager, 485.
have fallen in England, they have not produced an equivalent profit in China, as they have D° 486.
fallen there rather more in proportion. Captain Alsager never took British manufactures
to China except as a forlorn hope. Woollens have been imported from England almost Magniac, 422.
entirely by the Americans; they have not been imported by the country trade from India.
Camlets are much cheaper than they were, they have fallen from 140*s.* to 78*s.*: the fall is Shaw, 480.
attributable to the use of yarn spun by machinery, instead of that spun by the hand, to
the low price of wool, and to the diminution in the cost of dyeing; the quality is 5 per cent. D° 481.
better. The Company buy by tender; their orders have decreased. Since the price has D° 475.
fallen, the importation of woollens into China has increased. The demand might reach to Magniac, 425.
any extent, if the price did not prevent it; if cheaper, they would be more generally
worn. The Company have attempted to sell cotton manufactures, but the sale has been Toone, 355.
less profitable than that of woollens. The Chinese have a very good cotton manufacture of D° 359.
their own, in which the people, with the exception of the richer classes, are chiefly clothed; Magniac, 422.
it wears better than ours. They have no prejudice against ours, but the Chinese government & Bates, 376.
would probably protect their own manufacture, if our imports of cotton goods were Toone, 355. 359.
carried

Bates, 380. carried to a great extent. Their cotton is spun by hand. The Chinese attend to durability;
they are very exact judges of quality. The nankeens of China have hitherto been thought
superior, but the difficulty in competition is now overcome, and by-and-bye nankeens may
be carried to China. The French now make nankeens superior to the Chinese. Cotton
Magniac, 422. manufactures to a certain extent have been imported into China from England by way of
India; and the import is rather increasing. Their cottons are cheap and strong; at the
present low prices we should perhaps compete with them in cost, but our manufacture is not
so strong as theirs. They have no prejudice against buying the British article; but the duty
on the raw material is so little, and labour is so cheap, that they can manufacture very
Toone, 355, 356. cheaply themselves. The country trade has taken a good deal of cotton manufacture to
Bates, 365. 380. China, but it has found by no means a ready sale. Cottons have been rather omitted from
Magniac, 417. the list of exports to China in the year 1830. Mr. Magniac was never employed to sell in
China woollens for British merchants, and very seldom cottons; but since his return to
England, in 1827, his house has had considerable consignments both of cottons and cotton
Everett, 392. yarns. A new shipment of cottons has been made with success. The Company have
Toone, 359. exported cotton twist, it is said, with advantage. The importation of cotton yarn will pro-
Magniac, 423. 425. bably increase. There are no new articles of export to China, but it is understood that
Brown, 434. trial is being made of cotton yarn. The price of raw cotton in China has declined very much
Magniac, 421. of late years; the quality of a portion was formerly of a superior description, but that probably
D° 423. finds its way to Europe. The cultivation of cotton appears to have increased in China,
Shaw, 483. judging from the circumstance of the price having fallen considerably. Some Norwich shawls
Davidson, 458. have been sent to China, and the trade is rather increasing. The chief articles consigned for
sale in China are cotton and opium, forming nine tenths of the whole. The principal dealing
Magniac, 418. is in opium. It is not imported regularly; it is sent into the country from the ships; every
D° 421. now and then there is a strong edict against the trade, but like other Chinese edicts, it is
nearly powerless. It imposes a little difficulty perhaps for the moment, and enables the
D° 420. mandarins to extort money from the dealers. The opium business was originally transacted
at Macao; but the charges of the Portuguese, and the difficulties thrown in the way by the
mandarins drove it partially to Whampoa, and finally and entirely to the place where it is
D° 421. now carried on. Turkey opium is almost entirely imported by the Americans. The opium
Toone, 355. is almost wholly paid for in China by bullion. The opium trade is now so comfortably
Davidson, 461. circumstanced that no change is required.

Brown, 433. The American tea trade has been much overdone. The Americans are not great consumers
Bates, 368. of tea, they mostly use coffee; six or seven millions of pounds is their average consumption of
D° 380. tea. The loss which the Americans have experienced arises from persons engaging in trade
on insufficient capital, and being tempted by early gains to overtrade. The American trade
Brown, 433, 434. was at first profitable; during the last four years it has been unprofitable, and now it is
D° 435. beginning again to be profitable. The goods taken to China have in general sold well, and
Milne, 437. 440. for a fair profit; but the return cargoes have been unprofitable. The imports from China,
D° 437. besides tea, were silks, nankeens, and bills of exchange: the silks were profitable; the trade
in nankeens has almost entirely fallen off, from the great variety of pantaloon stuffs made in
England and other countries. The return in tea used to be safe, but of late it has been
D° 439, 440. ruinous; the loss has been from 25 to 30 per cent. A profit may have been made on the
outward voyage on British goods taken from this country; but the tea market has been
overstocked, and the teas in Europe have fallen very low; the trade to Canada has been
completely cut off; coffee is low in price, and the Americans breakfast on coffee. The
Bates, 365. Americans have imported much China raw silk into this country, *viâ* America, and also silk
manufactured goods; sometimes the trade has been profitable, sometimes losing. The
Toone, 356. Americans have given up the purchase of any other article than tea; they can be better
Brown, 435. supplied with silk from England than from China. It is not certain that the want of a return
cargo which could be disposed of in the English market, has caused the limitation of the
American speculations in China; the unprofitableness of the returns has imposed a barrier,
Milne, 436. to which no doubt their exclusion from the best market has contributed. The Americans
Bates, 370. Toone, 361. Milne, 437. used to send to China only dollars; they generally purchase with dollars; they now send
D° 439. merchandize also, almost entirely British; they succeeded better this year in vending such
goods in China. A person has been employed who had some knowledge of the caprice and
taste of the people, and his employment has been beneficial. The Americans send from
Bates, 365. 380. & Everett, 388. England to China, British woollens, cottons, metals, and opium—Turkey opium, the trade
Brown, 432. in which has rather increased. These adventures have been upon the whole profitable, not
Bates, 378. 365. giving large profits, but a regular small profit. It is presumed they have been profitable.
Everett, 386. 380. Bates, 373. The woollens are of the same kind as those which the Company send, with perhaps a few
D° 376. imperfections as to colour, but equally good in quality; they are bought rather cheaper, and
Everett, 388. not sold for less than the Company's. They are quite as good, and bought with as much
Brown, 434. care, and nearly the same sorts are taken. They are probably better; they are bought by
Everett, 389. contract, not by tender; the latter is a bad way. The Company's goods are subject to an
Brown, 435. inspection which creates delay in the payment for them; this does not happen with the
private merchants, and they are consequently able to make themselves as desirable customers
Shaw, 478. to the sellers as the Company are. The quantity of camlets rejected by the Company is
D° 479. very considerable; their inspection is not always conducted with fairness and discrimination;
D° 478. 480. those rejected by them have been frequently sold to private merchants, and exported by them
D° 479. to advantage. The American demand for camlets has been very much on the increase since
D° 480. 482. 1821; the goods made for them are of the same kind as those made for the Company; there
D° 479, 480. is in fact little or no difference between them. Not one tenth of those bought by the private
trade have been rejected by the Company. The best bargain that the manufacturer can
make is made with the private merchant; the latter perhaps obtains the goods cheaper than
the

the Company do, but it is more advantageous to deal with him, as the Company's pieces are Shaw, 479. 481.
subject to be returned, and to many deductions, amounting to from 5 to 7½ per cent.; by that
amount the price to the Company is increased. They cut off one of the marks from the D° 480.
goods which they reject; this injures the piece very much, and renders it unsaleable, except
at a great diminution of price. The Americans always have the goods which they purchase
inspected. The goods purchased by Mr. Brown were shipped under the mark of his principal, Brown, 435.
and not under any imitation of the Company's; his own mark obtained as much
credit. The American camlets are charged at the same price as the Company's; they are Urmston, 450.
the same article, and are ingeniously packed and marked, so as to look like the Company's;
if they gain anything by them, it must be owing to smuggling. The Americans did not Everett, 385.
export to China manufactured goods previously to 1818, as they were before that period
too dear; the exports were principally in specie. The export of cottons and woollens has
increased in quantity, but from the fall of prices the value does not appear so much increased
as the quantity has been. Woollens and cottons in the manufactured state have been the D° 387.
most profitable investment; if the Company have lost by them, it must be owing to their
expensive way of doing business. The commission on the sale of goods at Canton is 5 per D° 391.
cent.; that for purchases in England 2½. There is no difficulty found in the sale of such Bates, 377.
goods in China. The sale is increasing, although but slowly. The American trade in D° 380.
woollens has been profitable since the late fall in prices. The Americans send woollens and Magniac, 423.
cottons from the United States also. The exports of British manufactures by the Americans Everett, 391.
have increased; they sometimes export manufactures from the United States, but more Crawfurd, 429. 431.
frequently from England. They have not in America the means of exporting manufactures D° 431.
to a large amount; they have no manufactures of their own to give. It has not answered Toone, 359.
to take American cotton to China. There is generally an American ship every two years D° 358.
from the north-west of America. American vessels occasionally arrive at Canton from South Magniac, 424.
America; they import bullion, and sometimes copper. The import of silver has been very
profitable; it comes in large masses from South America, and is sold at a considerable
premium.

The British might carry on the trade as cheaply as the Americans do. They might carry Bates, 370.
it on, on better terms. The Americans have not carried the trade to such an extent as it Stewart, 395. 399.
might have been carried, if it had been open and free. They have not the capital to be found Everett, 387.
in England. The British would drive the Americans out of the market. Mercantile capital Maxfield, 408.
is much more plentiful in this country than in America; the interest of money is less, and Brown, 433.
the expense of navigation as little. The British would be able to carry on the trade as
advantageously as the Americans. An English merchant or manufacturer would understand Milne, 441.
the shipment of goods better, with regard to a free trade. It is very difficult to enter into
competition with a large manufacturing house in this country. A manufacturing people
would enjoy greater advantages than one that is not manufacturing. If the trade had been Brown, 435.
open, and the speculation carried on by British instead of American merchants, the result
would not have been to the former more profitable than it has been to the latter. They must
have sustained a loss by the import of teas. The British could not, unless they altered their Everett, 386. 392.
system, carry on the trade so cheaply as the Americans.

The private merchants sent home from China raw silk, silk piece goods, nankeens, bullion Magniac, 418.
and dollars, and bills of exchange; all considered as merely effecting a remittance; the D° 422.
profit was certainly not considerable. Raw silks and nankeens have been employed to D° 418.
a considerable extent as remittances. From China to India, the remittances are made in D° 422.
bullion, dollars, bills, and a long list of goods. The country ships go from India to Toone, 356.
China partly laden with cotton, and fill up at Singapore with articles the produce of the
Eastern Islands; but they take mostly cotton. They carry back dollars, tea, sugar, silk, Stewart, 398.
and drugs. At Bombay there is a larger demand than at Calcutta for Chinese goods; but Toone, 356.
much silver is always taken. The officers of the Company's ships principally take cotton Alsager, 484.
from India to China. They used to export from China, drugs, raw silk, and nankeens (but Toone, 356.
very little now-a-days of the last) and tea. Tea was a more profitable investment than silk. Alsager, 485.
The returns made from China to India were the factory bills on the Indian Government, Davidson, 458.
silver, and other articles. British manufactures might be sent to China by the country trade Stewart, 395, 396.
from India; but it is probable that the raw cotton affords a better chance of profit than
goods with the advance necessarily put upon them in India. Considerable quantities of Crawfurd, 430.
British manufactures are sent to China by means of the country trade. The British merchant Everett, 386.
has not availed himself of his power of making shipments of British goods in American Crawfurd, 430, 431.
vessels, for trade with China. The British merchant has certainly now the means of sending
British manufactures to China through Singapore, but he has not the means of making
a return. It is possible to send British manufactures to China, trans-shipping them at Magniac, 418.
Singapore; and to receive Chinese goods (tea excepted) for England, in the same way.
The expense of trans-shipment would be from a half to one per cent. It would not be very Crawfurd, 430.
considerable. British manufactures might also be sent to China by the Company's ships, as Magniac, 418.
they go nearly empty. The Chinese very seldom purchase British manufactures in the Crawfurd, 429.
Eastern Islands, for sale in China. Many British camlets are sold to go to Singapore; the Shaw, 481.
trade is increasing. The Chinese use no knives or forks; their hardware is much cheaper Magniac, 425.
than ours; they have more regard to cheapness than to quality; the price of our hardware
is an obstacle to its use among them. They have no disposition to use such articles of ornament
as Birmingham imitations of gold, &c. There is a considerable export of British manufactures Bates, 380.
to Java as well as to Manilla, though the regulations at the former place are much
in favour of Dutch goods.

Bates, 368.

The Dutch Company endeavoured to supply Holland with tea, but they met with considerable loss.

The Chinese are a people much attached to old customs. They are superior as artificers to the natives of India, and their merchants are not inferior in ability. They are distinguished as merchants and as artificers. The Chinese are always disposed to trade. One Hong merchant has given an order in this country for British camlets. There is a good deal of intercourse between Manilla and Macao; the vessels sail under the Spanish and Portuguese flags, but it is understood that they belong to the Chinese; they import the produce of the Eastern Archipelago. The Chinese are allowed to trade only to one port of Japan; they are more restricted than the Dutch are. Greater facilities are given to trade in the port of Canton than in almost any port in the world. The commerce of the port is carried on in broken English. The regulations with respect to the entrance of foreign vessels are very strict; but perhaps they are not rigidly enforced. The Americans have not found any difficulty. The American agents experience no difficulty in managing their concerns, either from the regulations of the government or the disposition of the people: if they conduct themselves properly, they have never experienced much difficulty. No ship can commence her commercial operations till a Hong merchant has become security for her. The Americans have frequently found it difficult to obtain a security merchant. It is less difficult for the country ships from the circumstance of their being British, for it is known that they are under the Company's representatives. Silver is constantly exported from China, as opium is imported, although the trade is illegal. The regulations of government, calculated to prevent trade with foreigners, are habitually set at nought; so that in the event of a total stoppage of the trade, tea would probably still be exported. If the trade were interrupted, tea might be supplied through Singapore, but not without great difficulty. The Chinese would tax it heavily. The experiment of carrying on smuggling on the coast of China, in the same way as it is practised in the harbour of Canton, did not succeed. Attempts have been made to carry on a trade in opium on the coast of China, but without success; also in cotton, but the vessel was obliged to return to Canton with the cargo unsold. Trade on the coast of China could not be legally carried on, as the government prohibit trade in any port except Canton; the exactions of the mandarins would be too great. The Americans have not attempted to trade with any port except Canton. Country ships have gone on the coast, particularly with opium, but they have not met with success. The Russians made an attempt some years ago to trade with China by sea, but an order came down from the Emperor of China forbidding them so to trade. The Canton government had, however, previously given them permission to load with tea. The Emperor did not understand how they could come to China from opposite quarters; and the Chinese said that the English must have shown them the way.

The country trade between India and China is almost entirely in the hands of the British mercantile houses at Calcutta and Bombay; there is scarcely any trade with Madras. The country trade is principally in the hands of British merchants, but the Parsees of Bombay are also personally engaged in it, and the capital of the Hindoo merchants of Calcutta is employed therein. The country trade of India competes largely with the Chinese in the trade from the British possessions in India, and the Malay Islands, to China. The country ships are very fine merchantmen of from 500 to 700 tons; a few are as large as 1,000 tons; they are manned with Asiatics, but officered by Europeans. Before sailing from Bengal to China, they are obliged to enter into a bond to conform to the regulations of the Company's supracargoes.

Alsager, 484.
Toone, 357.
Alsager, 485.

The officers of the Company's ships are remunerated by a small monthly pay, but principally by the share of the tonnage allotted to them; 103 tons between China and England, and two-fifths of the tonnage between India and China. Whatever they bring home is sold at the Company's sales, and the Company charge a duty of 25 per cent. on the goods so sold. The officers make very little by the direct trade between England and China, but a good deal by that between India and China. A fair average gain for the commander on a voyage is 5,000 *l.*, the capital employed being about 50,000 *l.*

The Company's ships carry 30 or 40 guns, and 130 men; 26 guns, and 135 men. Chests of tea taken in large ships are stowed more rapidly, less liable to be broken, and less damaged. There is no difference with respect to liability to damage between a large and a small vessel, if the latter be dry. The merchant must, in a pecuniary point of view, give the preference to the smaller vessel, but there are many advantages in those of a larger size; the cargo is packed better, the vessel is more readily loaded, and the tea would come home better, though it is not a cargo that is much damaged. A vessel of 600 tons is better as a merchant vessel than one of 1,200, except with regard to the port-charges at Canton, which are heavier in proportion on the smaller than on the larger vessel: the cargo is not safer in large ships, and the insurance is not less. The difference of port-charges does not counterbalance the disadvantages. The most economical vessel would be one of 450 tons, navigated by 18 or 19 men. The most advantageous size would be one of 500 or 600 tons, the American size.

Toone, 358.
D° 359.
Brown, 434.

With regard to the purchases of tea in China, the Company carry on their trade as advantageously as any private merchant could, and they could continue to do so without the aid of monopoly. Their establishment and long connections give them some advantages, but any mercantile house provided with adequate means could trade on the same terms. No company can carry on trade with so much advantage as a private merchant can,

can, provided he have sufficient capital; the persons managing the great concerns of the
Company do not bestow the same degree of care, as, whatever may be the out-turn, they Appendix, No. 1.
have neither more nor less in the shape of interest and revenue. A private merchant would Milne, 441.
consult the caprice and taste of the Chinese. The Company, without the monopoly, would Urmston, 448.
still, as a combined commercial body, conduct their trade at Canton to advantage, provided
it was managed on the same principles and in the same manner as now. No public body Davidson, 462.
constituted as the Company is, can possibly compete with the quiet enterprise and economical management of the intelligent and industrious individual merchants of this country.
If the monopoly were at an end, an increased demand for British manufactures would grow D° 461.
up; enterprising manufacturers would send out goods, and probably lose much in the first
instance, but a taste would be created and large quantities ultimately sold. The articles
now sent would be sent on a larger scale; cloths, metals, cottons, &c. In the event of Bates, 369.
opening the trade there would be a considerable increase in the exports of British manufactures; the Chinese would receive the manufactures of England, and they would enter
more generally into the consumption of the country, if the trade were in the hands of private & D° 374.
merchants, as it requires considerable management to introduce the different articles. If
the trade to China were open, the British merchant, and not the American, would supply D° 374.
foreign Europe with tea. The Company's monopoly is an obstruction to trade. If those D° 378.
who carry on the trade from the different parts of India could carry it farther, there would
be less loss of freight: a ship would proceed from England to Bombay and Calcutta, and
go thence to Canton; but it cannot proceed from Canton to England, there is a return
voyage without profit. The Company make by their bills on England the returns which the
private merchants would make, but then the private merchants are obliged to take those
bills; besides, the trade would in all probability be greatly extended if the monopoly were D° 379.
to cease. The hope of gain from tea would form an additional inducement for the export of
British manufactures, and the one acting on the other would increase the trade very much.
It might not always be profitable, but in the end it would be. At present the Company's
ship goes to China without a freight, and returns with one: the private trader goes with and
returns without. The China trade is capable of great extension, provided greater capital Everett, 387.
were employed. The opening of the trade would affect the commerce of this country bene- Stewart, 394. 396, 397.
ficially, inasmuch as under the operation of a perfectly free trade to Canton, there would be
a greater consumption in China of the staples and manufactures of England, particularly
woollens and metals, but more especially metals; and China, in its varied productions, silk,
drugs, nankeens, sugar and tea, would afford the means of making returns directly to this
country, if it were desirable, in goods without loss, while returns to a great extent might also
be made in bullion, there being in general an abundance of gold and silver at Canton; the
trade would also employ an increased number of ships and seamen. The effect of such
a trade would operate in India on the same principle. Perhaps the most profitable mode & Maxfield, 412.
of carrying on the trade with China, if it were perfectly free, would be circuitously by India, Stewart, 396.
but British manufactures would not be so sent. The power of making returns in teas, or of Magniac, 423.
making any returns, would greatly facilitate the transactions of the India trade generally. D° 425.
If the trade were opened and a greater quantity of tea exported from China, tea would be
deteriorated, as the Company cannot now obtain as much as they wish of the better qualities,
and as it apparently answers better to the Chinese to produce a middling quality at a middling price, than a better quality at an advanced price. The finest black teas would almost
disappear. By a free trade in tea the export of British articles would be considerably
increased; woollens, camlets and cotton piece goods would gradually and eventually find
their way into China in considerable quantities. The exportation of teas would afford the
means of remittance, the bar to trade at present being a want of returns; and the profit
would probably be looked for on the exports to China. Perhaps, under an open trade,
hardware might be introduced. The superior activity and enterprise of individuals must Davidson, 458.
open new channels of commerce. The difficulty of making remittances arises from the
merchants not being able to deal in tea. In the making of remittances the merchants
would be in a better situation if the trade were open and conducted on sound principles.
The first effect of an open trade in tea would be to raise the price, because numbers of spe- D° 459.
culators would rush to buy, but ultimately the tea growers and merchants would be satisfied
with remunerating prices. If the trade were open, private traders would have considerable Urmston, 450.
difficulty in obtaining a Hong merchant to become their security. The Americans have Bates, 379.
not experienced any difficulty in trading, and the Free trader would not be exposed to more Mills, 473.
difficulty. The tea brokers of London are anxious to confine the trade to the port of
London. The tea dealers are divided in opinion, but they would like an open trade, if it
were confined to London. If the trade were thrown open, there is no doubt that there
would be a greatly increased consumption of tea. Tea might be imported at a cheaper rate
by private merchants, who would be content with a portion of the Company's profits.

In spite of the great interests which the Chinese government and people have in main- Davidson, 460.
taining the trade, they will in their arrogance stop it. This must happen sooner or later
under the present unwise and undignified system of dealing with the Chinese government,
but it would happen sooner under an open trade. There can be no permanent increase of D° 462.
trade without previous negociation with the Chinese government. There is no salvation for D° 461.
an open trade in the absence of the power and political influence of the Company, without
a previous understanding between the two Governments. This country will be compelled
to negociate directly and vigorously, and not through the medium of a mere complimentary
embassy.

Davidson, 454-457. Private merchants certainly derive advantage from the existence of the Company as
a great trading body at Canton. There would be cause for an unwillingness to settle in
Canton, but for the power of the Company, in some measure at least, to protect commerce.
They possess important influence from their general character and extensive trade. The
influence of the Company is a counterpoise to that of the Hong. But for the existence of
the Company in China, British trade could not be carried on. The exaction and oppression
of the Chinese government are so great that no one would be fool-hardy enough to hazard
his property on shore, but from a knowledge that there is a body like the Company to protect
Urmston, 444. it. The Company, by their power and influence generally, have been able to gain points
with the Chinese, which have frequently proved beneficial to other nations. The same
objects could not have been effected if they had carried on trade to the same extent, but
without monopoly. It is the great combination of their influence which gives them a control
over the markets generally at Canton. They have the power of stopping the trade with the
country ships, which gives them great influence with the Hong merchants. The same power,
so far as regards the Chinese, could be exercised without monopoly, if the trade were as great.
D° 445, 446, 447. The probity of the Company's dealings, the magnitude of their trade, and the confidence
which the Chinese have reposed in all their acts, have given them a powerful influence with
the Chinese; they have frequently averted exactions from the trade, and induced the Chinese
to give up points which otherwise might have been attended with vital consequences. Some
minor points have been obtained by Americans and others, on their own representations; but
D° 445. those of importance which the Company have obtained, could not have been gained by the
D° 446. Americans. The power of stopping the trade is not a great obstacle to commerce. It has
Milne, 440. not been of advantage to the Americans that the Company were established at Canton. An
Urmston, 447. individual in the capacity of consul could not do so well as the Company have done. The
Chinese would always refer to the trade, and not to the consul. A consul would not have
the slightest weight or influence so long as there was a great commercial body at Canton. If
the Company's trade diminished, their influence would still prevail to a considerable extent:
D° 448. 447. the Chinese could not easily be brought to forget the importance of the Company. The
Toone, 358. power exercised over the trade by the Company's factory, could not be so well exercised by
a King's consul. The Factory have great influence over the Chinese merchants from the trade
which is in their hands, and the merchants have it in their power by their representations to
influence the officers of government. A King's consul might exercise the same power as the
factory possess, with regard to the country trade. Private merchants could not be persuaded
to suspend their private transactions for any general good, and would not act cordially with
the consul in suspending the trade. If power were given by law to a consul, the best way of
his exercising it would be by its being made obligatory to deposit the ship's papers with him.
Stewart, 403. If the trade were opened, it would be necessary to establish some public authority at Canton,
which should have the power of controlling Europeans visiting China. The authority now
vested in the Company's Factory is sufficient, and should be retained. They have very extensive
powers; they can remove any British subject from Canton; they can interdict the trade
at any time they please; and all ships' crews must obey their orders. It would not be necessary
Bates, 379. that there should be a deposit of the ship's papers. Under an open trade, free traders
would have no difficulty, as the consul would point out to them the regulations to be observed.
Magniac, 423. It is a great advantage to the trade in general, that the Company's servants, acting as one
body, and carrying on an immense trade, are enabled to resist the exactions thrown in the
D° 426. way of trade by the Chinese government and its officers. Individuals cannot be brought
to act as a body; their interests are various and opposite, and each acts for himself.
A consul, unconnected with the trade, cannot have the same power as persons who are
both connected with the trade, and have authority also. The Dutch and American
Urmston, 447. 484. consuls have little or no authority over their countrymen. The American consul is generally
D° 449. a mere cypher. The Americans suffer commercial inconvenience from want of unanimity
among themselves, and of the unity of a public body. The American consul has made
representations to the Chinese government, and has sometimes obtained redress, sometimes
not.

Indigo.

THE importation from India commenced about 40 years ago, but it has so greatly Gisborne, 1072.
increased as almost to have superseded all other indigos. The cultivation is carried on from Crawfurd, 1189.
Dacca to Delhi; the average quantity of exportation is 9,000,000 lbs.; the amount paid by
British-born subjects, for rent and labour, is stated to be 1,680,000 *l.*; on its arrival at
Calcutta, it is valued at 2,403,000 *l.*; and it is said to realize in England 3,600,000 *l.* The
annual value of the indigo exported is from two or three millions sterling, but it varies very
much. It is exported chiefly to England; some to America; some to France, where the
consumption has increased of late years; and a small quantity to the Persian Gulf. There Bracken, 49.
are from 300 to 400 factories in the Bengal provinces; chiefly in Jessore, Kishnagur, and D° 58.
Tirhoot. The best soils are those that are liable to inundation from the Ganges. It does D° 157, 158.
not require a very deep soil. Indigo is raised in the Madras provinces, as well as in Bengal, Rickards, 2830,
for exportation. There is none exported from Bombay, though the soil and climate are & Ritchie, 1515.
suited for it. Indigo, in small quantities, is exported from Madras; it is very inferior to Gordon, 605.
that of Bengal. There is very little cultivated in Coimbatoor; the cultivation is not found Sullivan, 5116.
to answer. The culture of indigo has increased the value of land very greatly; it has raised Crawfurd, 1895.
the price of labour, and therefore improved the condition of the people, as is seen by their
being better housed and clad. In Tirhoot the land rose from 2*s.* 8*d.* and 3*s.* 3*d.* per acre
to 4*s.* 7½*d.* and 7*s.* 6*d.*: there has been a rise of 50 per cent. in the price of labour; and
rents have risen in Tirhoot fourfold, and generally they have been doubled. The introduction of indigo has given great facilities to Government for the collection of the revenue.
On 56 indigo factories the average annual outlay for six years, without including interest or Bracken, 56.
commission, has been 319,300 *l.*; they return 398,100 *l.*; the gross profit is 79,600 *l.*: from
which, to ascertain the net profit, a deduction should be made of 18 or 20 per cent. for
charges and interest of money.

The low price of indigo in Europe will diminish the quantity produced. The agency D° 146.
houses have withdrawn their support from all the inferior soils, which the high prices had
brought into cultivation. The quantity of indigo could be increased, no doubt, but at Gisborne, 1087.
present the quantity supplied seems to be as much as is required in Europe.

The manufacture of indigo could not be carried on under a system in which the government D° 619.
took half the gross produce; it requires too much capital.

The order which allowed Europeans to hold land for the cultivation of indigo is encumbered Bracken, 110.
with many restrictions.

The great firms in Calcutta make advances to indigo planters. Generally speaking, in D° 58.
the commencement of their career, the planters borrow their capital; and the money is D° 141, and
advanced by the agent in Calcutta, at an interest of 10 or 12 per cent., on a mortgage of Chaplin, 5319.
the property. The interest is high because there is considerable risk. The actual stock
mortgaged is comparatively of small value, in some instances merely equal to the annual
outlay; so that in the event of an unfavourable season there would be a greater deficiency
perhaps than the mortgage could cover. Natives in Calcutta borrow at 12 per cent.; in D° 178.
the provinces not under the jurisdiction of the Supreme Court the interest is much higher,
24 or 30 per cent., attributable to the risk. Some of the factories within the last six or D° 183.
eight years have got completely out of debt; some of them have been obliged to abandon D° 188.
their factories from the amount of their debts. In addition to the interest, the agent charges
to the planter 2½ commission upon advances, and 2 per cent. upon sales. The indigo Crawfurd, 1885.
plantations are carried on generally by the capital of the houses of agency, banking-houses,
and merchants of Calcutta; but there are men of large property in this country who are
indigo planters: there are also indigo planters on the spot who are men of independent
property.

property. The natives have begun to imitate the European process of manufacture, and
Appendix, No. 2, have invested large funds in it; but their manufacture is in general very inferior. The
Gisborne, 1770. natives make indigo upon the European plan, but of inferior quality, because they do not
take the same care in the process; but they have shown no objection to adopting the European
Rickards, 2815. system. The natives of Oude have lately adopted a better mode of preparing indigo for the
European market; occasioned partly, no doubt, by the example of Europeans, but in a great
measure also by the unsaleable state of the article as formerly prepared, which rendered it
indispensably necessary that some improvement should take place before it could be brought
into general use. The manufacture and export were certainly not entirely begun by Europeans,
for indigo as a colour has long been known and used in the East, and therefore manufactured,
as well as exported, by natives alone. The great extension of the manufacture of late years
is no doubt to be ascribed to British enterprise and capital; but of the present produce of the
British provinces (exclusive of what is produced in Oude) at least about 20,000 chests are
actually grown and manufactured by natives alone. Some of the specimens manufactured by
natives are as fine as the most beautiful products of the European factories, but this is not
generally the case.

Bracken, 160. Many of the indigo planters have resided a considerable time in India; the majority are
British-born subjects; there are many Frenchmen. There are some half-castes among the
indigo planters, and they have advantages by being enabled to take farms and leases in their
own names; one of the largest concerns in India is held by a half-caste.

Gordon, 647. The greatest advantage that Bengal at present possesses, is the presence of such persons
Crawfurd, 1907. as the indigo planters. The indigo planters have that sort of influence which property gives
Bracken, 136. everywhere. The indigo planters are a very respectable class, and men of extremely good
information. As a body, they do not ill-use the natives, though there have been individuals
among them who have committed violence. There are now men of better education in that
line than there used to be. The result of the inquiry into their character is said to have
D° 344. been very favorable. Indigo planters settled at a distance from an European station have
been of much use in arranging the little disputes of the natives. Some of the civil service
have recommended that respectable indigo planters who live at a great distance from stations,
should be recognized by the Government as arbitrators, and, under certain regulations,
as magistrates. None of them are now in the commission of the peace, but it is desirable
that they should be entrusted with that office. They are in closer contact with the
people, and live upon greater terms of familiarity with them, than gentlemen of official rank
do: this, to a minor extent, would unquestionably give them facilities in settling the disputes
with the natives, but they could not devote their time to any very important cases.

Silk.

Crawfurd, 1880. There are three species of mulberry trees cultivated in India: the white mulberry, which
is used for feeding silkworms in Europe; the dark purple mulberry, used for the same
purpose in China; and the Indian mulberry, used for the same purpose in India. For the
purpose of feeding silkworms, its growth is confined to Bengal Proper; it has been increasing.
Saunders, 1966. It is cultivated from small strips, instead of the large tree; it is cultivated in
beds; it is a distinct species from that of Italy. There are two species of worms, the
country worm and the annual; the latter was brought either from Italy or China, and its
Bracken, 262. produce is better in quality than that of the country worm. Mulberry trees abound to
Sullivan, 4768. a great extent in India. The mulberry trees grow in some parts of Coimbatoor, and might
Saunders, 1972. be extended to all. A wild silk is found on the north-eastern frontier; it is wound, and
made into cloth for domestic use; it has not been considered worth the attention of merchants
here, and it is very inferior to the cultivated kind.

D° 1976. The cultivation of the mulberry and the production of the cocoons are almost entirely
confined to the natives; sometimes they are raised by the same, but generally by distinct,
D° 1978. parties. The Company make advances to those who supply the cocoons; the prices are
settled subsequently to the delivery of the silk or cocoon: and the sellers do not know
D° 2010. them at the time of delivery. Silk varies in quality according to the season in which it is
produced; the best is in the dry and cold season; but the quality chiefly depends on the
Bracken, 259. reeling. To carry the production of silk to any advantageous result would require a very
large capital; the silk filatures are expensive establishments, and have a great deal of
building connected with them. The silk is at present produced by the ryots, but the Company
have been at a large expense in building filatures upon an improved construction.
Saunders, 1982. The cocoons purchased by the Company are in general reeled at the Company's filatures
D° 1991. by natives. The machinery is on the Italian principle; very simple, and made at the
D° 1959. Company's factories. The Company have 11 or 12 filatures in Bengal; none in the Lower
D° 1987. 1984. Provinces. Gonatea silk is the best; Bauleah the worst. In some districts there are out-factories.
D° 1986. 2048. The silk districts have since 1827 been divided into circles, in consequence of
the competition of the residents in the different factories to obtain the largest quantity.
D° 1986. The same price is given for the silk of the same circle, whatever the quality may be; some
D° 2030. parcels are perhaps two rupees a seer worse than others. The Company's residents are
paid by a commission, said to be 2½ per cent. on the quantity supplied. They fix the prices
D° 2034. to be given for the silk. They are allowed, after they have supplied the Company, to purchase
D° 2054. on their own account, and act as agents for others. They are not good judges of
silk; there may be some who understand it, but in general they are quite ignorant of silk.
The business of collecting and managing it practically devolves upon the head native of the
establishment.

D° 1995. For filature silk the natives have adopted the Company's mode; for piece goods they
D° 1996. reel the silk differently, into putney silk, which is quite of a different nature. The native
mode

mode of reeling is by the hand. The Company frequently buy the silk reeled by the na- Appendix, No. 2.
tives. The attention of the natives is directed more to the quantity than to the quality of Saunders, 2008.
the article they produce, in consequence of the great demand of the private trade. A cer-
tain portion of material, if wound into superior silk, will not produce the same quantity as
if wound into silk of an inferior quality. The principal faults of the Indian silk are its D° 2063.
foulness, unevenness, and want of staple: to improve it, there is required greater attention,
in cultivating the mulberry, in rearing the worm, and in the reeling and manufacture of the
article. The raw silk of Bengal has deteriorated in quality lately. The quantity exported D° 2059.
has increased since 1824, owing to the opening of the trade; the duties also have been
diminished. There was a rise in price from 1824 to 1827, gradual, and considerable; but D° 2038.
the produce of India did not increase in the same proportion, which it would have done if
the trade had been free from the Company's interference. Mulberry land has risen in rent;
but generally speaking, land has risen little or nothing. The zemindars are interested in the
monopoly, as they obtain higher rents in consequence of the Company giving higher prices.
The actual producer is not benefited in proportion to the increased price. Under a different
system *, silk would be produced at a much lower price, and the producer be as well paid.
Good silk can be produced for less than half the average price of the Company's investment D° 2078.
in 1826, and for one third less than it was in 1815. If Europeans were to engage largely D° 2068.
in the cultivation, the quality would be improved; but they would not enter into it without
greater security for their property than at present exists. It might be rendered equal to
average Italian, and in some cases equal to good Italian. Bales of East India silk have D° 2071.
been sold realizing nearly the same price as that which, at the same period, the best Italian
obtained. Relatively speaking, considering the quality, the Company's silk and that of the D° 2073.
private traders have sold equally well; but the Company's is in general of a better quality,
and consequently sells at a higher price: greater attention is paid at the Company's facto-
ries; and the natives at theirs care more for quantity than quality. If the private trader
were allowed to produce silk in Bengal, as he now produces indigo, his silk would be as ✓
good as the Company's. The indigo and silk cultivation could be conducted together pro- D° 2077.
fitably. The Company's investment is made for the European market. The export to D° 1981.
England is almost entirely in the hands of the Company. The shipments of raw silk to Gisborne, 1148.
England, in the six years 1823–1828, increased 35 ½ per cent. over the preceding six years; Saunders, 2080.
while the Company's investments increased in the same period only 17 ½ per cent. There is
no native silk in Bombay. The Persian and Chinese silk have not improved. There has Ritchie, 1516.
been an increased importation into Bombay of raw silk from Persia, and there is a great con- D° 1262. 1292.
sumption of coarse silk at Ahmedabad. Silks are now imported into India from England; Bracken, 266.
they are subject to a trifling duty.

An experiment has been made to produce silk in Java, but it has not yet become an Maclaine, 1629.
article of export; the experiment promises to be successful; some samples have been
thought nearly equal to China silk. The mulberry grows luxuriantly, and the worms were
imported from China and Bengal. At present there is great difficulty in reeling the silk;
machinery has been lately introduced from China; and the difficulty at present experienced
may be easily overcome.

Cotton.

THE Indian cotton is not yet sufficiently good to vie with the American. The importation Bracken, 281.
has fallen off, from the competition of the American market. The cotton of the Company's Gordon, 818.
territory is the worst that comes into the British market; that of the islands of Seychelle
and Bourbon is the finest in the world. The Surat cotton, with reference to American, is Ritchie, 1324.
short stapled; it is very dirty, and latterly it has been much injured by the natives in adul-
terating it with water and sand. It is probably 15 per cent. below the common American
cotton in value; a great part of the difference arises from the difference in point of cleanli-
ness. Between the cleaned Bombay cottons and the best cleaned American upland cottons,
there would be a difference in value of from 10 to 15 per cent. There is a real difference in
the intrinsic value of the article, independently of any skill in the management. Indian Gisborne, 1054.
cotton is much inferior to the lowest kind of American, from shortness of staple, and from
being much more dirty. The defect in the culture has not been remedied; the dirtiness has
been partially remedied by great care in the selection, when Europeans have purchased it.
The Surat cotton is in general only applicable to the coarser manufactures of England, but Ritchie, 1336.
it is becoming a much more useful cotton in our manufactures than it was; it is now mixed
in spinning the finer cottons, and it is more generally used in the mills of this country. If
the quantity could be increased, it would materially interfere with the consumption of the
low American cottons. The improvement required in Indian cotton is the introduction of Gisborne, 1136
different seed, and a more frequent changing of seed, as well as much greater attention to
the cultivation. It is not sown in drills as in America, but broadcast; there is no care taken Ritchie, 1352.
of it afterwards, except to keep the cattle out of it. The introduction of a cotton of which D° 1271.
the wool adhered with less tenacity to the seed, would, if practicable, be a considerable
improvement.

The cotton plant at Bombay is almost entirely an annual, a green seed and short stapled. D° 1313. 1355.
Cotton

---

* With respect to the mode in which the Company interfere with freedom of trade in silk, *see* pp. 477, 478 of this Paper.

Crawfurd, 1855. Cotton is not considered as a matter of primary importance in the cultivation of India;
rice, wheat, and grain generally, are considered as the most important objects of Indian
husbandry, and cotton a secondary one.

The ordinary cottons cultivated are for the most part the coarsest, because they are the
most easy to rear; the finer varieties are very rare, because the people have not skill to
D° 1862 keep them up; they are in fact delicate plants in comparison. The Indian cotton is short
in the fibre and strong in the staple, coarse, and always very dirty. No improvements have
been made in the cleaning of it. The seed adheres very closely to the wool, and it is very
difficult to separate. India is capable of producing cotton for the European market,
provided there is a proper application of skill and capital to the production of the article,
in the same manner as in other countries; but the unaided skill of the natives is incapable
of doing it.

Ritchie, 1330. Cotton is never cleaned with the saw-gin. Bombay cotton may be as clean as any
American, by picking it clean from the bushes originally. The machinery does not affect
the cleaning of it. The machine is only used to take away the seed; it must be picked
clean. The greater part of the dirt is leaf and sand as well as seed, left in by carelessness
or design. In May 1830, the Government published regulations to prevent the adultera-
D° 1310. tion, and it has become comparatively clean, though there is no improvement in the cotton
D° 1397. itself. It has consequently risen in comparative prices. But prices generally have been
D° 1341. lower since that time. If individuals possessing capital would engage in the cultivation of
cotton, it would be their interest to bring the cotton in the best state to market, and there
D° 1365. would be no need of regulations. It would be picked cleaner if it were picked separately
as the pods became ripe.

D° 1296. The attempts to improve the cotton have not succeeded. In some of the experiments
Bracken, 104. & the cotton deteriorated very much; in others, the seeds did not come up well. There has
Ritchie, 1359. been no improvement in cotton since the introduction of the free trade. It was better in
Gordon, 818. 1818 and 1819 than it is now. The Company have taken very trifling measures, not worth
Bracken, 281. mentioning, to improve it. There is no doubt that it would be improved by greater skill
Crawfurd, 1855. being employed in its cultivation. There is no reason in the world to suppose that the
cultivation of India might not be considerably improved.

Ritchie, 1404. The cotton is obtained through the medium of the natives. It is brought by them to
Bombay, and there purchased by Europeans. There are many natives who can be trusted
with those transactions. It is purchased by sample, and every bale examined; where the
deterioration went to a great extent, it was necessary to examine every bale in two or three
places, it was so falsely packed. No confidence was to be placed in those who brought it
down. Very rich natives are engaged in the trade, who would not adulterate, but their
underlings would.

Bracken, 86. Europeans do not superintend the actual growth of cotton, but they make advances to the
Gisborne, 1049. ryots. Europeans have no share in the culture of it; it is entirely carried on by natives.
No extensive attempt has been made by Europeans to cultivate it. The Europeans who deal
in it, have merely the collection of it, and perhaps the further cleaning of it after it comes
into their possession, and the packing of it for export.

Ritchie, 1366. No lands producing cotton are in the hands of Europeans. If Europeans were permitted
D° 1368. to settle, farms for the production of cotton might be cultivated; but as far as they have
gone yet, Europeans have not been successful, and they have had fair trials. Very superior
cotton has been produced, but it did not pay. The cultivation is too expensive. In two or
D° 1383. three years the cotton deteriorated. The superiority was owing to the introduction of new
D° 1386. seed; it would be possible to improve the cotton by the constant introduction of new seed,
Gisborne, 1177. but it would not pay. It is not likely to be improved but by the introduction of European
D° 1086. skill and capital. It might be materially improved if it were more in the hands of
Europeans.

Ritchie, 1403. When European agents are employed in the cotton districts they are paid five or three
per cent.

Gisborne, 1050. The Indian cotton could not be sent to England unless it was compressed to a much
smaller compass than it is when purchased from the natives. A screw-press is used at
Calcutta; at Bombay there are hydraulic presses.

Ritchie, 1361. The machine for cleaning cotton used by the natives is a small hand-gin, or wooden cylin-
drical machine; it has been used from time immemorial, and is the same as that used for
D° 1343. Sea-island in America. They dislike the adoption of our machinery. The machinery by
Gordon, 823. which the cotton is cleaned is very inferior; it costs 6d.; it is turned by hand; cleans the
cotton very rudely, and with great loss of labour; it requires no strength, but occupies the
whole time of one person. The cotton requires subsequently to be cleaned by a bow-string,
which breaks it to pieces. An American machine might be fitted up for about 5l. The
natives have no prejudice against any such machinery. The Hindoos buy flour from the
Ritchie, 1314. Strand Mills at Calcutta, where it is ground by machinery. The Government made a trial
of American machinery for freeing cotton from the seed, but it was not successful; the
machinery ground up the seed with the cotton. Surat cotton adheres strongly to the seed,
much more strongly than the American.

D° 1389. At 5d. the Surat cotton pays a fair profit; at 4½ d. it might answer as a matter of remit-
tance; at 4d. money would be lost by it. The price in Bombay is almost as low as it can
D° 1394. be cultivated at. The freight is 5l. a ton, about 1d. a pound, at which rate the usual
description of free-trade ships can afford to sail.

Gordon, 611. The Company's investment of cotton at Madras is procured by means of Commercial
residents, principally from Tinnevelly. In 1823 the investment was 8,000 bales of 250 lbs.
D° 709. It is sent to Madras, and thence to China. In the custom-house tariff the cotton of Madras
generally

generally is valued at 100 the candy. Tinnevelly cotton is valued at 120. It is remarkably
good, compared with other Indian cottons; it is the best, except Seychelles and Bourbon. Gordon, 835.
The cultivation can be extended considerably, and improved considerably. There is a Bracken, 281.
particular kind of cotton, in the neighbourhood of the Silhet hills, equal to any in the South
Sea Islands, but it is at present of very limited cultivation. Cotton has been tried in Saugur,
but the expense was so great in protecting it that it failed. There is no cotton cultivated Crawfurd, 1873.
by Europeans in Bengal, except as an experiment. The province is unfit for the cultivation
of cotton; it requires great skill and attention. It is extremely liable to depredation;
a whole cotton field might be plucked in the course of a night, where there are no fences,
and little protection from such depredation. There is a fine variety in the neighbourhood D° 1855.
of Dacca; it is cultivated by the natives alone, and is not at all known in the English
market, nor in that of Calcutta.

The general opinion is, that the fine specimens of Sea-island cotton cannot be grown at
any distance from the sea; the bare circumstance of planting the seed in the high lands
10 or 12 miles distant from the sea, is sufficient to deteriorate the quality immediately.
The finest of the China cotton is produced near the sea-side. A village near Mangrole, in Ritchie, 1301.
Kattywar, called Labarcoire, produces a small quantity of very fine cotton: it is cultivated
entirely by natives. It is said that it cannot be much increased. It appears to be only
grown in one particular spot; it is near the sea-coast.

The best Indian cotton is grown in Guzerat. There is a large quantity of cotton grown D° 1349.
in Cutch, but not in proportion to what might be cultivated. It is particularly fine in the Wildey, 2312.
staple, and well cleaned, much better than any that is grown in Guzerat.

A large portion of the cotton of Coimbatoor has always been taken by the Government, Sullivan, 4768.
sometimes by agency, sometimes by contract, which, though nominally open, is in fact
a close contract. Some Coimbatoor cotton has fetched a high price at the Company's
sales. As it grows upon the poorest soils, the produce may be carried to any extent. It
is principally exported to China by the Company. Only a small quantity of it is now sent D° 4784.
by way of Madras. It used to be collected at Coimbatoor; thence sent 180 miles by carts
to Palamcottah, where it was screened; then 30 miles to the coast of Tinnevelly; there
sent by boats across the surf to Madras; re-embarked at Madras, and again sent across
the surf, and kept there until the arrival of the China ships; then re-shipped across the
surf for China. This occasioned a great increase of price, and has caused the abandonment
of the trade.

Cotton is now taken in payment of revenue. Ritchie, 1398.

The Pacha of Egypt has been manufacturing cotton-twist by European machinery. It is D° 1281.
a low-numbered yarn, strong, but very unequal. The speculation is not likely to pay.
It was not liked by the natives.

In working up the cotton-twist imported from England, the natives make use of no Gisborne, 1032.
machinery but that to which they have been accustomed; they do not use European
machinery. A cotton-mill has been erected at Calcutta, for spinning yarn. It will require Ritchie, 1286.
to be very well and very economically managed, to answer.

The consumption of cotton is increasing very rapidly in this country. It amounts to Crawfurd, 1875.
15,000 bales a week at Liverpool. Indian cotton was first imported in 1790, and United D° 1868.
States cotton in 1791. The total export from all India, in 1827, was 68,411,015 lbs.; the
value of which, at 25*s.* per maund of 80 lbs., would be 1,068,922 *l.* The importation of
American cotton has increased from about 19,000 lbs. to 294,000,000 lbs.

(With regard to the Company's interference with the freedom of trade in cotton, *see*
pp. 487, 488. of this Paper.)

Wool.

THE wool of the Cutch sheep is particularly long in the staple, though not fine. It is Wildey, 2280.
principally exported to Persia for the making of carpets. A gentleman conversant with the D° 2293.
wool trade in London, has stated that wool of that sort is much wanted in this country.
It will make excellent blankets, carpets, and other coarse articles.

Tobacco.

EUROPEANS never engage in dealings in tobacco. They are not permitted to engage in Bracken, 122. 106.
the inland trade. It is produced extensively in the northern districts of Bombay, and Ritchie, 1421.
throughout those territories, of very fine quality. One bale imported sold higher than any
American; it sold at 6 *d.* when the latter was 5 *d.*; but the average of an experimental
exportation was found to be defective in the curing, and did not pay. It did not fetch
above 1 *d.* or 2 *d.* It is of a different description from the tobacco of North America, and
approaches more to the Brazil, the thin-leaved tobacco. If it were properly cured, it would
answer as an article of exportation from India to Europe; but it is difficult, from its great
delicacy, to bring into the proper state; the slightest particle of green vegetable matter left
in it, heats it on the voyage. All the importations of tobacco from Bengal and Bombay
have been failures. There is no impediment to individuals making the experiment of
improving the culture. The tobacco lands of Guzerat are the cleanest and best-farmed
lands. Tobacco is the most valuable product of the land in Coimbatoor. It is consumed Sullivan, 4768.
in Malabar, where, from the moisture of the climate, it is next to a necessary of life.

Sugar.

EUROPEANS do not enter into the immediate cultivation of sugar; they purchase it Bracken, 86.
generally in the bazaars, and they make advances to the ryots. Europeans do not engage
in the culture and manufacture of sugar in the same manner as they do in that of indigo,
because

because the manufacture of it requires a much greater dead stock than indigo does, and a great outlay at first. With respect to indigo, the outlay is annual, and the buildings are comparatively of small value. With respect to sugar, a large extent of country would be required under the control of an European, and he would have to construct very expensive and substantial buildings, and to erect machinery at great cost. The machinery now used in the East Indies is very inferior to that in the West Indies; but within these late years one or two sugar-mills have been sent out from England to India.

Gisborne, 1145.

The machinery is of the lowest description possible, merely a kind of wooden hollow cylinder to receive the cane, with a large post in the middle of it, which is pulled round by a bullock, and squeezes out the juice.

Bracken, 93.

There are no large sugar plantations in India. The quality of the sugar is complained of, and stated to be very inferior to West India. The first process of expressing the sugar from the canes is managed by the person who grows it, and he takes it then to a second party, by whom it goes through another process. It could be grown to any extent, and if capital were applied, the quality would be better; but it is doubtful whether there would be any immediate change; the sugar-cane itself in India, from bad management, is not equal to the West India sugar-cane. There would be no impediment to obtaining any extent of land for sugar, as the present cultivator would be as well disposed to sell or let his field for sugar as for indigo. There is also a great abundance of land at present unoccupied; and if the cultivation of sugar and other articles of export were considerably increased, by an outlay of capital, and the application of European skill, there would not of necessity be any diminution in Indian produce as applicable to the food of the natives.

Gisborne, 1056.

The quantity of sugar exported has rather increased, but its quality is so inferior generally to West India sugar that it cannot be brought into competition extensively with it; the grain is inferior, and it is much less perfectly freed from impurities in the manufacture. The sugar-cane is as good in Bengal as in the West Indies, and some of a superior quality has been produced, after undergoing an additional process in the manufacture; but it was generally at a cost too high to make it a profitable remittance.

D° 1086.
D° 1177.

If European machinery were used in its manufacture, it might be materially improved. The improvement of sugar is not likely to be effected by any other means than the employment of European skill and capital. The Company have made many attempts unsuccessfully.

Gordon, 619.

The manufacture of sugar could not be carried on under a system in which the government took half the gross produce; it requires too much capital.

Gisborne, 1063.
Rickards, 2830.

The Bengal sugar is very considerably inferior to that of China and Siam: the Chinese are more skilful than the Bengalese in the manufacture. The soil and climate of Bombay and Madras are suited to the growth of sugar; but no sugar is produced for exportation in Bombay.

Ritchie, 1416.

The sugar-cane is grown in almost every village, but it is not made into sugar. There is no manufacture there; it is imported from Bengal, China, Manilla, Mauritius, and occasionally Java.

Sullivan, 4768.
D° 4785.

The sugar-cane is common in Coimbatoor, and sugar in a rough state, called juggaree, is exported by sea from Coimbatoor.

Petition from London Merchants, March 31, 1831. Report 1830-31, p. 152.

Bengal sugar pays a duty in England of 120 per cent. on the gross price, which, after deducting freight and charges, is equal to 200 per cent. on the proceeds in England.

Coffee.

Bracken, 250.

There have been many attempts made by Europeans in the cultivation, but they have invariably failed. The Bengal sun is too powerful. An experiment has been tried, of planting the plaintain-tree between the coffee-trees for shade, as the plaintain has a very broad leaf.

Sullivan, 4768.
5075.

The cultivation of coffee has been tried to a very considerable extent in Coimbatoor, and found to answer remarkably well.

Rice.

Gisborne, 1066.

The exportation of rice from Bengal has increased very much within the last three or four years, to five times its former amount; principally owing to the invention of some machinery for freeing it from the husk after it arrives in England. It used to come with a great deal of dirt and much broken in the grain; and very inferior in colour to the American rice; whereas now, by coming in the husk, it arrives with the grains unbroken, and can be cleaned in this country so as to look as fresh and bright as the American. There has also been a reduction of duty.

Gordon, 2253.

If it could be cleaned in India as it is in Carolina, it would be brought in greater quantities. In 1829, the export from India of rice in the husk amounted to 1,000 tons, in consequence of being cleaned in this country by machinery better than by hand in India. In the husk it pays double freight, as it occupies double the space.

Cochineal.

D° 632.

The cochineal insect is collected in the Southern Provinces of Madras. It is very coarse and inferior as compared with that of Mexico. It was first introduced by a surgeon on the Madras establishment, about 30 years ago.

Gisborne, 1081.

The price of cochineal has fallen one fourth from what it was 10 or 12 years ago; caused perhaps by the lac-dye; but the imports have materially increased, which may have tended to its decline. None is imported from Bengal.

Lac-Dye

Is imported in considerable quantities. It was discovered by some Europeans who were Gisborne, 1074.
in the interior of India. Stick-lac is the gum, with the insect or the egg of the insect in it, from which the lac-dye is made. The dyeing particles are separated from the gummy particles, and the gum made into shell-lac. Lac-dye is used in the dyeing of scarlet cloths, as a substitute for cochineal, but it is not adapted for the finest dyes. The lac is employed very much as a varnish. Stick-lac used to be imported into Great Britain in considerable D° 1164.
quantities. It is much more bulky in that state than as lac-dye.

Paper.

The paper manufactured in India is very coarse and inferior. The Baptists' missionary Gordon, 2235.
factory at Serampore is the only paper manufactory.

Gold.

Gold has been found on the Nilgherries, and is collected of a pure kind, and in some Sullivan, 4769.
quantity, in the district of Wynaad, immediately below the mountains.

Copper

Has been found in the North-western Provinces of India. Bracken, 350

Stone.

There are many stone quarries. D° 329.

Iron.

Iron ore is abundant in most parts of India. It is worked by the natives, especially at Gordon, 2258.
Salem. At Ramnad it is sold at a higher price than British or Swedish iron; it is more pliable, and adapted to many purposes for the natives; but there is great waste in working it, and it is therefore expensive. The native-manufactured iron is very inferior to the English, owing to inferiority in the mode of manufacture. In the neighbourhood of Burdwan Bracken, 322.
there is a quantity of exceedingly fine iron ore, but the better kind is found on the Madras coast. It is not easily converted into steel, but when made the steel is remarkably good. An establishment has lately been set up near Madras, by Mr. Heath, as a regular iron-foundery. He has introduced European machinery. He has an exclusive privilege of Sullivan, 5033.
manufacture till the end of the charter. The iron is very superior to any in this country, D° 5035.
and even to Swedish. Iron ore is found in great abundance immediately upon the frontier D° 4768.
of Malabar; it is remarkably cheap in Coimbatoor. The iron of Cutch is particularly fine; D° 5031.
its ore possesses about 22 per cent. of iron, from 10 to 12 per cent. more than common iron Wildey, 2281.
ore. It is found principally on the surface; the natives gather it in baskets, and burn it with charcoal. The finest steel in India is made in Cutch; and the natives fabricate armour, sabres, &c. They are the best blacksmiths in Asia; their horse-shoes are particularly fine, and far preferable to those in England, being more malleable, and not so liable to break. The iron mines might no doubt be worked with advantage, if the Government gave encouragement.

Coal.

There are large mines in a district called Burdwan, 130 miles from Calcutta, now worked Bracken, 301.
to the extent of 14,000 or 15,000 tons annually. They were first worked about 14 years ago, but they have not been in extensive operation more than six or seven years. They are situated on the banks of a river, connected with the Hooghly. The bends of the river increased the distance from Calcutta to between 200 and 300 miles. There is only one season in the year in which coal can be brought down, as the river is shallow except during the rains; at that time 300 or 400 boats make three or four trips. The mine is extensive and of good quality; the seam is nine feet deep, and about 90 feet from the surface. From 2,000 to 3,000 people are employed. There is only one European in charge. The natives work well as miners; they receive from 6*s.* to 8*s.* a month; the overseers more. The coal is principally used for steam-engines, and is sent for that purpose to Singapore; it has also been lately applied to the burning of bricks. The Company use it extensively in their public works, the marine and mint departments. It is delivered D° 330.
in Calcutta at 20*s.* the chaldron; ships from London and Liverpool often take coal, but not in a large quantity, and sell it at from 30*s.* to 40*s.* The natives had never sunk shafts; they use it very little indeed as fuel in Calcutta and the Upper Provinces; in the Upper they use cow-dung, and in the Lower Provinces, wood; the latter is sold in Calcutta at 32*s.* for 8,000 lbs. The jungle is regularly cut for the purpose. Europeans have begun to use coal for culinary purposes. Coals are also found in Bundelcund. In most parts of Cutch coal D° 350.
would be found in abundance. The Cutch coal ignites more quickly than the English; Wildey, 2264.
and from the superior quality of the gas it contains, it would answer for steam machinery better than the coal which is generally used in this country; it would not encrust the flues of the engines as British coal does; it burns to a white ash, and is rather rapid of combustion,

Report on the Coal, 2290. bustion, but not so rapid as to exhaust itself in a very short space of time. It has not been used in the public works at Bombay. It is found about 30 miles from the sea; probably during the monsoon it could be brought down the river. The coal mines might no doubt be worked with advantage if the Government gave encouragement.

Steam Engines, &c.

Bracken, 304. Are increasing in India. The navigation from Calcutta seaward as been much improved by steam-boats. The tugs take ships out with great facility in one or two days; formerly a vessel was perhaps a fortnight in going from Calcutta to Saugur, in consequence of the detention arising from strong tides and freshes.

Gordon, 2233. Several steam-engines have been introduced into Bengal, almost exclusively in the neighbourhood of Calcutta, for pumping out docks, making and pressing paper, watering the roads, boring cannon, coining, grinding flour, spinning, weaving, and printing cotton. D° 2237. The flour mills are very extensive; the undertaking is new, and like most new undertakings not considered profitable. D° 2239. The machinery for spinning cotton has scarcely commenced its operations; lookers-on of course considered that the property was not promising.

D° 2241. The scarcity of fuel and the absence of falls of water are obstacles to the establishment of extensive machinery for manufactures; but it does not require many favorable stations to supply a lage extent of country.

Roads, &c.

Gordon, 803. It may be said that there are no roads or bridges whatever in the Madras territory. None exist beyond the town of Madras; the rivers are usually crossed on rude rafts of split bamboo and earthen pots. Sullivan, 5083. In Coimbatoor the roads are remarkably good; there are very few parts of India where they are so. Great efforts have been made to build bridges, and form roads, but very little attention has been paid to keeping them up; a road and a succession D° 5041. of bridges have frequently been washed away in one monsoon. A few small bridges have been constructed by Government in Coimbatoor; two most magnificent bridges have been built across the Cavery by a native, named Ram Sammy Moodeliar. Ritchie, 1532. The roads in Bombay have been much improved of late.

Gordon, 1014. The rate of travelling by dawk is about 1 *s.* a mile, beides a small gratuity to the bearers at the end of each stage.

Maclaine, 1744. There are beautiful roads from the one end of Java to the other; the cost is paid out of the revenues of the island, which are considerable; and the natives are obliged to give so many days' labour. The Europeans have made roads on their own estates.

Sullivan, 5037. Some old canals have been lengthened by the Government of India, but nothing more has been done. Such works are usully executed at the public expense, with money advanced from the public treasury; private capital might be so employed with great advantage. Gordon, 553. Madura depends upon artificial irrigation; the tanks are under the care of Government, D° 805. and are in the worst possible state of repair. D° 565. The whole system of cultivation is by irrigation, but there is no work for the purpose deserving of particular notice. In all parts of India irrigation might be carried, by a proper expenditure of capital and skill, to a much greater extent than it now is. There is a large field for the application of capital in economizing Sinclair, 4233. the water; many improvements might be introduced. Mr. Gordon's assertions with regard to the means of irrigation are not correct; one of the greatest works for irrigation perhaps in the world is the Annicut; it was not built by the Company, but there it is deserving of notice. The Company have built in Tanjore, in various parts, sluices and aqueducts of very great importance, and have materially improved the irrigation. The most minute attention is paid to the keeping of the channels clear, and to the promotion of irrigation by every means. Nor is it correct to say that dry land is of no value; in Tanjore and Ramnad Sullivan, 4729. it is of great value. The irrigation of the land is in almost all instances conducted by the capital of the Government, but Coimbatoor forms an exception: there the wells are made by the ryots' own capital. The large works, dams and tanks, are effected by money from the public treasury; but the great sources of irrigation are the wells constructed by the ryots Chaplin, 5280. themselves. In the Deccan there are very few tanks, but there are very many wells and other means of irrigating lands. Many of them were in a state of decay, and several have been restored by the British Government. In the Ceded districts of Madras, a large expenditure took place annually for the repair of tanks; wherever they are considered necessary, they are always made, with a view to the revenue; and Government are never backward in making advances for the purpose. Where there is sufficient population to make the Sullivan, 4768. means of irrigation available, the cultivation might be much extended by applying a portion of the revenue to the increase of irrigation. Coimbatoor is intersected by rivers, from which canals are taken off for irrigation; these, at a comparatively small expense, might be so prolonged and enlarged as to make a canal communication from one end of the province to the other, and to connect the eastern and western coasts.

India Trade.

Bracken, 4. There are five or six large and old established commercial firms in Calcutta; 12 or 14 have been established since 1815. The general business carried on by such houses is agency and banking in all its different branches; they advance money for commercial purposes; and they act as consignees of goods shipped from London and the outports. The mercantile transactions of Calcutta extend to China, all parts of India, America, France, the

the Persian Gulf, to a small amount to Holland and Denmark, and a very little to South America; the trade to the last country has fallen off much of late years. The commerce of Calcutta has increased very considerably, owing to the greater facilities afforded since 1818, by the opening of the trade.

In 1813-14 the Imports were - £. 2,120,000 - - - - Exports £. 5,390,000
1827-28 - - - - - - - 4,150,000 - - - - - - - - 8,730,000

The proportion carried on with Great Britain is about seven tenths of the whole; at the ✓ opening of the trade it was about five tenths. The principal imports of late years have been cotton piece goods and twist, metals (spelter or zinc is now very largely imported), woollens ✓ and wines, particularly sherry, which was a novelty in the Indian market. The spelter is of the same quality as tutenague, but not quite so good; the latter was chiefly imported from China, but the importation has now ceased; it is used with copper and tin for making pots, pans, and cooking utensils; they are generally made up in India, but some have been fabricated in this country, and have sold very well; there is scarcely a native that has not one such pot, and also a large plate or platter of the same material. The staple articles of Bracken, 49. export from Bengal, are indigo, sugar, saltpetre, and at one time cotton, but that has fallen ✓ off very much, and raw silk. There is a large trade in grain with the Isle of France, which is almost entirely supplied with rice from India. There are a very great number of native Ritchie, 1213. houses carrying on foreign trade; the native merchants consist of Parsees, Hindoos and Mahomedans. It is not the custom for the principal European mercantile establishments to have a native partner, but there are often native partners in particular speculations in the principal houses. The Parsees are the most intelligent; they are for the most part free D° 1218. from the prejudices of caste, and frequently embark as supracargoes, principally for China. ✓ The natives are much given to commercial pursuits, and well qualified to succeed in them. Rickards, 2839. They are sufficiently commercial to answer the highest expectations that can be formed with respect to trade between the two countries, but our local institutions must be greatly altered before they can become prosperous, so as to admit of an extensive commercial D° 2825. intercourse. Trade cannot be much increased unless the condition of the natives be bettered, Ritchie, 1532. so as to give them the means of paying for imports. There has not been much prosperity L. Smith, 5463. among the native merchants of late; they are not so rich as they were; they were immensely rich. The opening of the free trade of India has generally extended the commerce Gordon, 388. with that part of the world; Calcutta has been principally influenced by it. It has injured the re-export trade, for Calcutta was previously a sort of emporium, but it has greatly increased the import and export trade. The country shipping interest has suffered; the competition of British ships having injured it. In 1814 ships were chartered at 25*l.* D° 399. per ton, now at 30*s.*; the price of cotton was 1*s.* 3*d.*, it is now 5*d.*; of pepper, 1*s.* to 1*s.* 3*d.*, now 3*d.*

For 10 years from 1794, the American trade with Bengal averaged: Rickards, 2748.

	Exports - £. 464,357	- - Imports £. 390,606
In 6 years from 1802-3, all India - - -	1,154,494	- - - - - - 1,247,920
In 3 years from 1808-9 - - - - - - -	1,705,814	- - - - - - 1,627,612

It was said that the increase was owing to the state of war, and that it would fall off in peace; it did not fall off till a double duty was imposed on the neutral trade with India. ✓ In 1793 private merchants were partially admitted into the India trade, but the forms and restrictions were such as to be attended with much inconvenience; yet the imports from India by privileged traders were in 1793-4, 187,710*l.*, and in 1811-12, 1,169,023*l.* The Company's prognostication of the evils to result from the opening of the trade has not been verified. It is impossible to deny that the trade has vastly increased since 1793; that D° 2753. the increase embraces a great variety of articles formerly unknown or not used in India; and that the Company never have carried this trade, and never could carry it, to the extent of which it is obviously susceptible; there would not have been such an importation as Gisborne, 1021. there has been of British cotton twist, if the Company's monopoly had continued. In 16 Rickards, 2753. years the Company's trade has only averaged 1,882,728*l.*; the private, 5,451,452*l.* The private trade is, therefore, five* times as great as the Company's, which proves that the Company have not carried the trade to its fullest extent; that private traders are much more fit for extending the commercial intercourse with India; and that no definite limit can be placed to the extension of that trade, if our institutions abroad allowed wealth to increase among the natives. The extended and extending† consumption of British manufactures D° 2758. among the natives is to be ascribed to the circumstance of our manufactures and staples being perfectly suited to the wants and tastes of the natives, who will assuredly use them to the utmost extent of their means; to the great cheapness of the British articles consequent on the use of machinery; and to the opening of the trade in 1813. If greater facilities were given, a continued extension of the trade would go on, provided that those facilities were coupled with a salutary reform of the revenue and judicial regulations; for commerce with a wretchedly poor people can only be carried to a limited extent. The freight outwards is, on dead weight, 20*s.* to 30*s.* per ton; on light goods, 2*l.* to 3*l.*; homewards, about 4*l.*, D° 2763. and from 5*l.* to 6*l.* This freight has continued for so many years, that there is reason to suppose

---

* The one sum is not quite *thrice* the other.

† For the extent to which our manufactures are used among the natives, *see* Rickards, 2820. 1317; Wildey, 2296; Sullivan, 5102; Gisborne, 1142. 1035; Ritchie, 1531; Gordon, 410; Bracken, 18. And for the interference thereof with the native manufactures, *see* Sullivan, 5104; Rickards, 2853; Gisborne, 1038. 1142; Bracken, 18. 34; Ritchie, 1262.

suppose that the ship-owners must find their advantage in the voyage. The freight paid by
Rickards, 2769. the Company for the regular chartered ships, taken up for five voyages, is 20 *l.* or 21 *l.* At
the freights formerly paid by the Company, and at the present prices in England, it would
D° 2772. have been impossible to have imported cotton wool, sugar, saltpetre, &c. The obstructions
which still impede the extension of the Indian trade, are the forms and restrictions imposed
by law on persons and ships proceeding to India, the Company's interference with the trade,
D° 2774. the China monopoly, and, the greatest of all, the poverty of the people. The shipping of
this country has since 1823 been allowed to carry on the coasting trade of India, but vessels
must first clear out from England for one of the Presidencies; ships of a smaller burthen
than formerly can now proceed to India; vessels of 250 tons or less are the most convenient
size for Singapore and the Eastern Archipelago, and often better suited to the means
of persons carrying on the Indian trade. Cargoes arrive in as good a state in a small vessel
as in a larger; the rate of freight is the same, and the expense of sailing is less. Europeans
Gordon, 410. procure European articles at a much cheaper rate than they did formerly, and the natives
obtain better prices for their produce. The free trade has introduced into India new articles
of commerce, especially spelter and cotton goods. At the opening of the trade, Calcutta
exported to London two millions sterling of cotton goods, and now it imports two millions
sterling of British cotton manufactures. Since the opening of the trade many drugs and
dyes have been exported from Calcutta which were not exported before. The articles imported
Gisborne, 1018. into India by the private trade, are all kinds of cotton and woollen goods, copper,
lead, iron, spelter (to a considerable extent), glass, earthenware, and other articles suitable
to Europeans, in more limited quantities. The returns are in sugar, rice, indigo, coffee (not
much from Calcutta), saltpetre, cotton, silk, lac-dye, shell-lac and pepper.

D° 1021. The first import of cotton-twist was in 1823; in 1824 it was about 121,000 lbs.; in 1828,
4,000,000 lbs. From 1814 to 1824 repeated attempts were made to introduce it, but without
success, the price being too high for the natives to purchase, and it was also supposed
that it was not fitted for native use. There would not have been such an import if the
Bracken, 33. Company's monopoly had continued. There was no great quantity imported before 1824
or 1825. The value of the importation in 1827 and 1828 was about 190,000 *l.*; in the following
year it increased considerably; in 1829–30 it fell off; but the average of the three
years, 1827–8, 1829–30, was about 230,000 *l.*

Gisborne, 1173. The import of British white and printed goods into the countries east of the Cape was, in
1815, 800,000 yards, and in 1830, 45,000,000.

Ritchie, 1236. The value of the imports of cotton was in,

1829, into Calcutta -	£. 655,462	Bombay - - -	£. 570,626
1830 - - -	798,756	— - - -	618,174

Gisborne, 1084. The principal obstacles to the extension of commercial intercourse between Great Britain
and India, are the want of returns more suited to the markets of Great Britain, and the bad
quality generally of the products of India. If the cultivation were more extensively in the
Gordon, 410. hands of Europeans, those products would be very materially improved. The commerce of
Madras has not increased in a similar ratio to that of Bengal. The foreign trade of Madras
is not considerable. There is no good harbour along the Coromandel coast. The staple
D° 594. products of export from Madras are cloth, salt, and chanks; the cloth to most countries; the
salt to Bengal only. There is also an export of mineral alkali, called caramutti. The commercial
Ritchie, 1228. intercourse between Bombay and the United Kingdom has increased very considerably
since the opening of the trade. The principal articles of import into Bombay are
metals, woollens, cottons, and cotton yarn. In 1816 the consumption of British cotton fabrics
was very trifling; there was only one Indian merchant in the bazaar at Bombay in the
habit of dealing in British piece goods, and there was much difficulty in disposing of an
investment. The low price at which they can now be afforded from this country has caused
the consumption to become considerable, aided to some extent by the pains which are taken
to adapt them to the wants of the natives; they are made to imitate exactly similar
D° 1238. native goods. British metals are very largely imported into Bombay. The first import of
spelter was in 1822; previously, tutenague, a finer description of the same article, was
D° 1242. imported from China; that is now driven out of the market. The European manufactures
imported into Bombay are principally consumed at the Presidency, Surat, and other large
towns; latterly, a considerable quantity has gone to Malwa, in return for opium; much is
also carried up the country; and there is a large export to the Red Sea and Arabian Gulf,
D° 1292, principally to Bushire. The returns are principally bullion, and latterly silk in large quantities.
A great deal of the silk has of late years, in consequence of the reduction of duties,
and 1262. been re-exported to England; but there is also a great consumption of coarse silk at Ahmedabad.
Bracken, 266. Silks are now imported into India from England; they are subject to a trifling
Ritchie, 1242. duty. In 1823, in the southern parts of Persia, the bazaars were filled with British manufactures,
principally printed goods; the northern parts were supplied with German and
French productions: the latter are comparatively much dearer. In 1819 and 1820 there
were no British manufactures in Malabar and the internal provinces of the southern part
of India; they had scarcely reached so far, and they were at that time much dearer than
they now are.

D° 1497. In Bombay nine per cent. is the interest, and Europeans lend their money at nine; but
the interest with mercantile houses is only five. One per cent. commission is charged, not
on the loans, but on the account generally. The rate of interest is lower than in Bengal,
because there is not so much employment for money; a good deal of the Bombay capital
is employed in Bengal; the profits of trade are smaller and more steady. No advances are
made for agricultural purposes.

The export of Chinese articles generally from Bombay to the Deccan, and the export of metals, has decreased of late years, in consequence of Poona having ceased to be the seat of a government. The returns for British manufactures are made to Great Britain in produce of all descriptions, in bullion and bills; and by sending produce to China, such as cotton and opium.

Ritchie, 1526.
D° 1538.
D° 1318.

There have been considerable fluctuations; but upon the whole the India trade must have been profitable, from the immense increase that has taken place. Since the opening it has been a source of gain, but probably not to a very large extent.

Gisborne, 1088.
Ritchie, 1509.

The Company have made very considerable remittances of specie to this country of late years. Private merchants have also occasionally, but not at all extensively, resorted to the same means.

Gisborne, 1181.

No alterations are necessary for the trade between England and India, except the giving greater facilities for making returns from China, and taking off duties and the internal imposts. The India trade would be considerably increased by throwing open the China trade. It might be increased if the power of obtaining returns were greater; the absence of proper returns is the chief impediment to its great increase. At present the Indian markets are rather glutted. If there were proper returns to be sent, English manufactures could be sold all the cheaper for the profit made on those returns. A perfectly free intercourse between Bombay and China, and between China and Great Britain, would add facilities to the commercial intercourse between Great Britain and India. The trade has increased beyond all expectation. It is susceptible of still greater increase: a free introduction of capital, enterprise and skill, under proper protection, and just and equal laws, would facilitate the increase. The difficulty of finding adequate returns necessarily follows from the obstructions to the application of capital to the soil and to the industry of India generally. The products of India might be considerably increased and improved.

Ritchie, 1520.
Gisborne, 1154.
Ritchie, 1514.
D° 1442.
Crawfurd, 1848.

There is a great want of specie in India, owing to its being made a principal medium of remittance to this country; this may be ascribed to the increased exports from Europe to India. If the products of India saleable in this country could be increased in quantity and value, the inconvenience to India from the drain of specie would be remedied. The ryots in the Bellary district have required that the revenues should be taken in kind.

Sullivan, 4979.
D° 4951.

Comparing the duty in England with the price of many articles of Indian produce, it will be seen that the former is in many instances exorbitant; and a grievance common to all such articles is, that they can only be imported into a few of the ports of the United Kingdom, and cannot be removed thence (as goods from other countries can) without the duties being first paid. The evil is threefold: the trader is obliged to advance a capital of from 100 to 400 per cent. above the cost price, before the articles can be distributed for general consumption; the price to consumers is enhanced by the profit on the employment of a capital twice or five times as large as would otherwise be necessary; and the enhanced price operates as an incentive to adulteration.

Petition from London Merchants, March 8, 1831. Report 1830–1, p. 150.

The present scale of duties on East Indian goods shows a variation from less than one per cent. up to 400, on the present value of many important commodities; on some minor articles the duty varies from 1 to 1,000 per cent., and in one trifling instance the duty is 3,000 per cent. Such a scale requires revision, equally for the benefit of the revenue and the encouragement of trade.

Petition from London Merchants, March 31, 1831. Report 1830–1, p. 151.

The use of British manufactures might be greatly extended, if greater facilities were afforded for the returns of this country; all lowering of duties would tend to that effect, but what is principally wanted is the improvement of the quality of Indian articles.

Gisborne, 1176.

British manufactures pay on importation into Calcutta 2½ per cent. Indian manufactures pay on importation here a very high duty. If the duties in England were repealed, there would still not be a considerable import of Indian manufactures into England. The trade between India and England is limited by the heavy duties on some articles, particularly sugar* and silks, and to a certain extent, cottons.

Gisborne, 1185.
Bracken, 281.

If the India trade were left to the Company and the natives, it would dwindle away.

D° 279.

The insecurity of persons and property is the principal impediment to the growth of the trade of India. Private individuals cannot export arms and ammunition to the East; consequently those articles are chiefly supplied by Americans at Sumatra, Cochin China and Siam.

Gordon, 469.
D° 405.

The commercial intercourse between Bengal and Madras is one of export of grain from the former, and salt from the latter; but the monopoly interferes with the export of salt. It answers to import salt from England, notwithstanding what was intended to be a prohibitory duty. The salt imported into Bombay is sent from Madras, none from Bengal, in consequence of the cheapness of the Madras salt. Duties are levied between one presidency and another, as between foreign states. At Calcutta the rates of pilotage and mooring charges are very heavy; on the Coromandel coast there is no pilotage, but the anchorage is heavy on small ships. There is unnecessary delay in obtaining clearances.

D° 439 Forbes, 2421.2435. Mill, 4112.
Gordon, 465.
Mill, 4129.
Gordon, 471.

The duties in Ceylon are very heavy. If a more free commercial intercourse were allowed between Ceylon and the various parts of India, it would tend greatly to the advantage of both countries. It is usual for ships coming from India to touch at Ceylon, and the trade is certainly much impeded by the high duties. There is a considerable export of grain and rice from Bengal and the Malabar coast to Ceylon. The population is to a great extent dependant upon the foreign supply, as rice is their chief food, and very little is produced in Ceylon itself.

Stewart, 2461.

The

---

* Bengal sugar pays a duty in England of 120 per cent. on the gross price, which, after deducting freight and charges, is equal to 200 per cent. on the proceeds in England; p. 470 of this Paper.

Gisborne, 1000. The effect of free trade in Java was a very extensive demand for British manufactures; cottons (white and printed piece-goods), woollens and metals. From Java the returns to this country are coffee, sugar, rice; and sometimes to Calcutta, tin, japan, copper and spices.

Maclaine, 1570. Java carries on trade with the neighbouring islands, China, British India, Straits of Malacca, Europe, and America. The trade has increased considerably of late years; in D° 1835. 1828 the amount was three millions. The trade with the Company's possessions is consi- D° 1570. derable. There are no obstructions in the way of it. Articles of European manufacture are extensively consumed in Java, cotton piece-goods, iron, steel, glass, &c. The cottons are obtained from Belgium (not Holland), Great Britain, British India, and China. The first importations of British manufactures took place in 1814-15, about the commencement of the free trade. The largest importation was in 1823, amounting to 6,000 cases of British cotton goods, each case being valued at 50 *l.* From 1814 to 1821, the duty was 15 per cent. upon the invoice; afterwards there was an *ad valorem* duty of 26 *l.* 5 *s.* This turned the scale in favour of Belgian goods, but still a great quantity of British goods was imported. If it had not been for that duty, the consumption of British goods would have doubled. The greater part of the British goods imported, are white, and are afterwards dyed by the Javanese according to their tastes. Attempts have been made by the dyers here to imitate them, but not very successfully. In consequence of the facilities given to calico-printers by the recent repeal of the duty, their future attempts may be more successful. The Javanese have a coarse and substantial, but high-priced, cotton manufacture of their own. They formerly imported a large quantity of the cotton fabrics of Madras and Bengal. In consequence of the opening of the trade, the fabrics of Madras, being of a finer description, have been almost superseded by the introduction of European goods, but the coarse cottons of Bengal are still introduced largely into all the Malay countries. Upon the cotton goods of India imported into Java there is a duty of 15 per cent. upon D° 1835. the invoice; and the duties upon the other productions of India are equally low. English D° 1581. twist is sent to Java and woven there, but not in large quantities; not in such large quantities as to other parts of the East. About 3,000 tons of European iron are annually consumed in Java; both British and Swedish are used, but the latter is perferred. It is taken in an unwrought state, and fabricated there: a very small quantity of wrought iron is imported. Very little of that metal is produced in Java itself. The island is supplied with unwrought copper from Japan, and wrought, such as copper sheathing, from England. About 600 chests of opium are imported: in 1820 three fourths were from Bengal, and one fourth from Turkey; in 1829 three fourths were Turkey, and one fourth Bengal. The revenue derived by the Dutch from the monopoly and import duties is about 262,536 *l.* The monopoly increases the price from 600 to 800 per cent. In 1828 the other customs amounted to 225,405 *l.* The staple articles of export are coffee, sugar, rice, spices, tin, tobacco, indigo, sumac, and hides. Coffee is rather on the decrease; it is in great part a monopoly of the government; it is not of a very high quality. The government coffee is superior to that produced by natives; inferior to that cultivated by European planters. The cultivation of sugar is on the increase; there is a large field for the increase, if there were a foreign demand. In 1828 rice was extensively exported; 26,000 tons to the neighbouring islands, China, Europe, the Isle of France, and a small quantity to the Cape. The export of indigo was, in 1828, only 24,000 lbs.; in 1829, the production of the island was 152,000 lbs., and it is rapidly increasing, attributable chiefly to the encouragement of government. Some Chinese attempted the cultivation of it very successfully: the principal planter is a Chinese. Some samples were equal to fair Bengal, but owing to the chests being packed very unevenly, the buyers had little confidence in it: its being a new article was also against it. Tobacco is exported very largely, between 1,300,000 and 1,400,000 lbs., worth 4,000 *l.*; consumed chiefly in the neighbouring islands; a small quantity is sent to Siam and the Cape: the cultivation is in the hands of the Chinese. Spices are exported, but they are not grown in Java; the value of the export is 50,000 *l.* The production of Banca tin amounts to 2,000 tons, worth in Java about 100,000 *l.* Spices and tin are monopolies. A portion of the Banca tin is brought to Europe. An experiment has been made to produce silk, but it has not yet become an article of export; it promises to be successful; some samples have been thought nearly equal to China silk. The mulberry (the white and the Persian) grows luxuriantly. The worms are brought from China and Bengal. At present there is great difficulty in reeling the silk; machinery has been lately introduced from China: the difficulty may be easily overcome. Several experiments have been lately made in the cultivation of tea, cochineal, and cocoa. Tea has been introduced with good D° 1646 success. The commerce of the country is chiefly carried on by the Chinese; they are a more alert and active people than the Japanese; as merchants, they have much more enterprise and intelligence. The Chinese settlers trade extensively with the Eastern islands, with the Malay Peninsula, and also with Europeans. There are also settled in Java a considerable number of Arabs and Armenians. The Arabs are not equal in intelligence and enterprise to the Chinese; they are not so liberal in their dealings; a matter of business which would occupy an hour with an Arab, would be settled by a Chinese in a few minutes. The Javanese themselves are becoming more provident. There is a commercial association, in which the king of the Netherlands is the principal partner. It carries on a considerable part of the external commerce of Java. It has exclusive privileges, but the trade carried on by the company is not profitable; the opium branch is the only one that is profitable to them. The company has been very unfavourable to the general interests of trade in Java, by glutting the market with injudicious shipments from Europe.

Maclaine, 1785. There is a very considerable import and consumption of British manufactures in the Philippine Islands. The imports are chiefly cotton goods, iron, and steel. A considerable quantity of sugar is manufactured, and indigo, but of a very inferior quality. Hemp is an article of export, and is of good quality. Tobacco is extensively produced; it is exported in very large quantities in a manufactured state; it is considered to be the best tobacco in the East; it is a government monopoly. The manufacture of cigars is entirely conducted by women; about 5,000 are employed in Manilla. There is a considerable commerce between the Philippine Islands and China, carried on by Chinese junks, American, Spanish and Portuguese ships. The chief articles of import are tea, Chinese piece-goods, and provisions; of export, tortoise-shell, mother-of-pearl, and rice in large quantities.

Immediately after the last Charter, the Company made a speculation in claret, which Forbes, 2342. appeared to be undertaken without due consideration of profit to themselves, and solely with a view to injure the private trade. It was a new article of commerce with them, and some of it did not fetch the prime cost. The Company are not good traders; no sovereign Gordon, 642. ever traded to advantage. The separation of the Company's two characters of merchants Forbes, 2345. and sovereigns, would be attended with incalculably good effects, not only to the natives of India, and the merchants there and in this country, but also to the Company themselves. It is stated by the Company that they are under the necessity of carrying on what they call a remittance trade from India to this country; but such remittance would be infinitely better conducted through the medium of private trade than by the Company themselves, even to a larger amount than they require for their political payments in England. It is incalculable to what extent the trade between this country and India might be carried, if the Company went out of it, and a fair scale of duties was established by Parliament. The Company ought to carry on no trade either from India to China, or from India to Europe. It would D° 2374. be much more beneficial to the country generally, and to the native population in particular, Stewart, 2508. if the Company were to surrender their character of merchants in India, and confine themselves to that of sovereigns. Commerce would be carried on with much more confidence and vigour, particularly on the part of the natives. The practice of Government trading on its own account is very injurious to the private traders; it almost annihilates them. It is quite impossible for an individual merchant to compete successfully in the market with those who exercise sovereign power in the territory where the trading goes on. Although there is no forced delivery, the natives who raise the produce are influenced in giving the Company a preference in the purchase, by a fear of displeasing the ruling authorities. If a private merchant go into the market early in the season to purchase cotton, the growers will not sell, or make a bargain with him, until they know the extent to which the Company wish to purchase. They are no doubt influenced in a considerable degree by the hope of getting a better price from the Company, but also in a very great degree by the fear of offending the Government by selling their cotton before they know whether the Company require it or not. It is generally thought by the mercantile community of Calcutta that it is impossible Gisborne, 1090. for a large company and government together to act well as merchants, for it is found that D° 1147. the prices of all commodities in which they interfere are driven up to rates which make them unprofitable to those who deal in them; and the monopoly in some branches of trade, such as silk, altogether puts an end to the dealings of private merchants. The effect of Gordon, 2231. the Company's purchasing for remittance is to raise the price of an article in India and lower it in England. The injurious effects of the union of the two characters of sovereign and Forbes, 2313. merchant, as well to the true interests of the Company themselves as to that of individuals, are illustrated by the treatment of Mr. Wilkinson in the manufacture of saltpetre; also in their conduct with regard to Malwa opium, and cotton for China. Trade cannot be pro- Petition from Calcutta; Report, 1831, p. 339*. fitably conducted by a government without the unjust and impolitic advantages of a company; and a government trade in concurrence with that of private merchants †, must not only be attended with a waste of the public revenue, but be liable to come into unequal competition and injurious collision with the operations of individuals. It is expedient to divest the Company, while exercising any of the functions of government, of the few commercial establishments which still remain to them.

Previously to 1811, the Company's investment of piece goods was provided under a most Rickards, 2846. rigorous and oppressive system of coercion; the weavers were compelled to enter into 2853; engagements and to work for the Company, contrary to their own interests and inclination. Sundry regulations have been passed since that period for correcting the system, but they never can be effectual so long as there exists the present system of power and commerce united. Where the Company have ceased to trade, the natives have been comparatively also Gordon, 743. free from oppression. The Company also would be great gainers by the entire abolition of Rickards, 2851. their own trade; for while they would gain as sovereigns, they would also be saved from the heavy losses which are inseparable from their present commercial operations.

In the event of the British Government in India being relieved from all their commercial D° 2855. functions, there would be no inconvenience experienced in remitting the territorial revenue to England for political purposes; it might be remitted in good bills; if it can be remitted now under the existing restrictions, it would be more easily remitted when the trade became free.

Commercial houses discontinued their engagements in the production of raw silk, in con- Bracken, 65. sequence of the difficulties arising from the competition of the Company's commercial agents, which rendered it a hazardous speculation. But the Company's agents do not now possess

---

† See effects of the Dutch Company in Java, p. 476 of this Paper.

possess any peculiar advantage over the private trade, as the regulation which gave it to them has lately been rescinded. If the Company were to cease altogether to carry on trade in silk, the silk trade of India would increase under the exertions of individuals, for the mode by which the Company transact their business enhances the price very considerably; they do not enter into it as a mercantile speculation, but as a mode of remittance. Whenever it is known that the commercial resident of the Company is in the market, the price is raised beyond what an individual would think it prudent to give; the Company's agent is not so much influenced by such considerations, and he complies with the price affixed. The Company must in many instances, in sugar and silk, have sustained heavy losses. At present, the native weaver benefits by the prices which the Company give, because he gets a higher price than it would probably be worth the while of an individual to give; but its tendency is to limit the demand for that production of the country. Ritchie, 2065. The reason why Europeans do not engage largely in the manufacture of silk in Bengal is, that the Company engross the whole of the silk districts, and private merchants have therefore not entered into the trade; they are not placed upon the same footing, as they have not the same power. Saunders, 1998. Mr. Watson, a British-born subject, had considerable filatures, but the Company built factories close to his, by which means they took the whole of the cocoons and the produce of the districts round him: his silk was equal to the average quality of the Company's. D° 2022. Other persons have been compelled by the conduct of the Company's servants to abandon their factories. D° 2086. An application coming from a house in the silk trade, for a person concerned in that trade to proceed to India, has been refused by the Company. D° 2013. The native growers and producers of silk who had received advances from the Company were prohibited from selling their produce to other parties, even when the advance was small. Advances have been forced upon them. D° 2015. 2019. It is the practice of the Company's agents always to keep the silk-growers under advance. Orders were issued in 1829 for establishing an equality between the Company and private merchants, but they have not altogether had the effect, although the Company's monopoly is in some places broken through. Gordon, 2232. The condition of the weavers and people engaged in the culture of silk, is that of persons constantly in debt, under advances from the Company; and it is the system of the Company to keep them in that state. Saunders, 2034. The private merchant is obliged to make his prices depend on those of the Company, and therefore cannot tell what he will have to give till the Company's prices are known. D° 2053. In a review of the external commerce of Bengal, printed in Calcutta, it is said, "The trade in Bengal silk, both in its raw and manufactured state, has been almost entirely engrossed by the Company; or, at least, that portion which falls to the lot of private individuals has been so much enhanced in price by the powerful facilities of the former, that as an object of commercial gain it is impossible to stand the test of competition." It is difficult to foresee the result which is likely to crown this system of unprofitable traffic, pursued with so much avidity by the agents of the Company, who being remunerated in proportion to the quantity of raw material provided, have at once the power of crushing all private enterprise, and by setting up a strong competition among themselves, have raised the prime cost to the double of what it ought and might be. The consideration of personal gain has plainly introduced the most fatal consequences, and will ultimately lead to the total annihilation of so valuable a branch of Indian commerce. It would be judicious on the part of the Company, who are merely maintaining their exclusive traffic to enrich their servants, to prefer farming out their filatures to private enterprise, when the Company might purchase the produce in the bazaar at one half of what it now costs them, and it would then constitute a solid medium of remittance to Europe, whilst it now forms but a hazardous speculation.

Forbes, 2321. With regard to the cotton investments for China, great inconveniences and injury to the interests of the private merchants on the western side of India, arise from the Company going into the market to purchase cotton; the period of their doing so, and the quantity they require, being quite uncertain; insomuch that the cotton-growers and dealers will fix no price, nor enter into any contracts with private merchants, until they ascertain whether the Company are or are not to come into the market. As soon as the Company have made their engagement, for 20,000 or 30,000 bales perhaps, the price of what remains of the crop immediately rises, sometimes to an exorbitant sum, and the private merchant is obliged either to go without his investment, or to submit to purchase the article at a price which ultimately makes it a losing concern to him in the market of Canton: it is nothing uncommon for a rise of 10, 15 or 20 per cent. to take place in the course of a few days. The purchases of a large capitalist merely would not produce the same effect, because he would have only the advantage of his superior capital; but the Company bring into the field their weight as sovereigns. It is perfectly well known, that when the Company announce that they require a certain quantity of cotton, the growers and dealers look upon themselves as bound to supply it. It is impossible for the Company to lay aside, in their mercantile dealings, their character of sovereigns, so long as it is united with their character of merchants in India; it is also an unprofitable mode for the Company, as the accounts exhibit a heavy loss on the trade between India and China. The growers of cotton have been subject to oppression on the part of the Company's servants, from the system of being compelled to take advances, and deliver their cotton; it may not be the practice at present so much as it used to be. Private traders also make advances, but at the great hazard of never getting cotton in return: there are no legal means by which a merchant in Bombay can compel a grower of cotton in Guzerat, or any district out of the Company's dominions, to fulfil his contract, while the Company's name and authority are all powerful in India.

The

The Company's agents have a great deal of influence in their situation over individuals, Bracken, 206.
independently of the command of funds, though that command is probably the most material.
They are not skilful and economical agents. They have little or nothing to do. The D° 222.
commercial resident at Tinnevelly had, in 1823, only to furnish 8,000 bales of cotton: the Gordon, 638. 620.
annual charge of his establishment and commission is 5,000 *l.* They have been occasionally Gisborne, 1150.
employed by other persons to act as agents. They carry on trade on their own account, and Gordon, 623.
act as agents for private merchants, charging 15 per cent. for so doing, in consequence
of the advantages which they derive from acting as magistrates, and being able to dictate
the price. For similar agency 2½ per cent. is charged at Calcutta, and five per
cent. at Madras.

At Bombay there is no bank; at Madras there is one, entirely the Company's, which D° 2157.
receives deposits, discounts bills, and issues notes; the notes have no currency beyond the
town of Madras. At Calcutta there is one, a joint-stock company, with a charter, of which
the Company hold one fifth share. There are also four private banks; the latter have applied
for charters, and have been refused, because the Company are anxious to monopolize
the trade in money. In the Company's bank the original stock was 500,000 *l.*, and one
share, 5,000 rupees; a share is now worth 10,000 or 11,000. If the other banks were
chartered, it is probable that their profits, under private management, would be greater
than those of the bank directed by the Company, and administered in a considerable
degree by the Company's officers *ex officio*. The notes pass among the natives as specie,
without discount. They circulate beyond Calcutta among Europeans and private persons;
but they are not receivable in the Company's treasuries beyond Calcutta. The amount D° 2173.
of paper money in circulation is estimated at half a million. The notes were very coarsely D° 2179.
executed on thick paper, and with common letter-press; but it is understood that
copper-plate notes on thin paper have been since prepared. The commerce of the country D° 2173.
would immediately employ paper money to the amount of 50,000,000, if banks in
India were on the same footing as they are at present in England. The natives as well D° 2175.
as European capitalists would place confidence in European banking establishments, not
entirely from the personal character of Europeans and the integrity of their dealings, but
also from their connection with England. If a good system of banking were established Chaplin, 5294.
in the interior, so that money could be borrowed at a low rate of interest, it would be
advantageous to the community; but there is no part of India where banking establishments
do not exist conducted by natives. In Poona, and many parts of the Deccan, there
are shroffs or sahookars; who have correspondents all over the country, so that in most
of the large towns bills of exchange can be obtained on any part of India. If natives
accumulate capital, they generally bury it; there is no place where they would feel disposed Sinclair, 4380.
to deposit it; a bank might be of use. Under a free intercourse, provincial banks Gordon, 2153.
would be among the first undertakings of Europeans. The establishment of banks would Sullivan, 4728.
tend to encourage industry. There are native bankers in all the provincial towns, and
money-changers in every village. They discount bills at as high a rate as five per cent. per
month in small dealings. There is only one chartered bank in Calcutta, that of Bengal; Bracken, 195.
the shareholders are only responsible to the extent of the capital. There are two other banks;
one general bank, to which there are many subscribers, and that of Hindostan, with which
Alexander's house is connected; the smallest note they issue is for four rupees. The
notes circulate as far as Chandernagore and Serampore, 25 or 30 miles; but they do not
circulate in the villages to any extent. Any bank can issue notes. The banks pay interest
on deposits, two-and-a-half and three per cent. on such as are liable to be withdrawn at
a moment's notice. The rate of discount varies from six to twelve per cent. Houses of
tolerable repute had their acceptances discounted by the bank of Bengal, at seven per cent.
The circulation of the private bankers is very limited. The issues of the bank of Bengal
are about 80 lacs. In that bank there are private proprietors; Government hold 300
shares. They do not execute the Government business; the Government use no bank. D° 225.
The advantage which the bank of Bengal has over private banks is, that as far as Benares
their notes are received in payment of the revenue. The impression among the natives is
that the Government is responsible for the bank. There are no banks in the interior issuing D° 211.
notes. There are native bankers, called shroffs, principally engaged in discounts; they
issue bills of exchange, called hoondees, of which there is a large circulation; they are
generally drawn at 50 days; sometimes they are for so small a sum as nine rupees; the
inland business is principally so conducted. The great banking houses in Benares have
branch establishments in almost all the native cities; and a very large business is conducted
by hoondees. There is a stamp on bills of exchange, but it is much evaded. The provincial
bankers are almost entirely natives. There are no banks in Bombay; the circulation Ritchie, 1505.
is entirely bullion (silver). Banking establishments issuing notes are not required, as there
is more money than the mercantile world in general can employ. In Coimbatoor any quantities
of hoondees may be obtained, and for a large amount; the traffic in bills is very considerable; Sullivan, 5114.
all the great houses in Bombay have agents there, and bills can be obtained upon
any part of India. These shroffs have established themselves within the last 10 or 12 years.
The interest of money now is from 8 to 12 per cent.; it was 16, 18 and 20.

China.

THE disputes in 1829 arose from a desire on the part of the factory to ameliorate the Plowden, 3605.
condition of foreign commerce, which was very much embarrassed in consequence of the
reduction in the number of Hong merchants, and of the impending failure of one of them,
Chunqua. After a five months' stoppage of the trade, six of the requests made by the fac- D° 3748.

tory were conceded: 1. All fees on the creation of Hong merchants abolished. 2. The
Plowden, 3619. elder Chunqua ordered down to Canton. 3. A reduction of the port dues according to
& 3679. measurement. 4. Compradores' charges reduced. 5. Hong merchants to be no longer
D° 3655. responsible for each other's debts. 6. Payment of the import duties to be altered. Prior
to the last proposition, the duties on the import cargo were not demanded sometimes for
many months after a ship arrived, as they were only collected in the month of October:
the proposition was that they should be paid in five days. The delay in the payment had
the bad effect upon the merchants who were poor and had little capital, of inducing them
to speculate upon the certainty of their not being for some time called on for their duties;
D° 3663. they bought large cargoes, and added to their embarrassments. The Chinese decision was
D° 3623. that the duties should be paid in three weeks The debts for which the Hong were mutually
responsible were entirely due to foreigners: no distinction was made in the payment
D° 3643. between Englishmen and Americans, or other foreigners. Manhop, one of the Hong, who
became bankrupt in 1828, failed for about 1,500,000 dollars due to Europeans, and to the
D° 3653. government for duties. The payments made by the Hong on account of their bankrupt brethren, in 1828 and 1829, amounted to 668,894 dollars; and they paid on a similar account in
D° 3812. four previous years, about 1,200,000. The releasing the Hong from their mutual responsibility,
D° 3823. is a serious blow to the private trade. The release, and the reduction of the time for
D° 3830. paying the import dues, are injurious to commerce in general; but it is also injurious to the
general interests of trade that foreigners should deal to any great extent upon credit with
D° 3628. the natives. The motive of the factory in recommending the 5th proposition was, to relieve
the Hong from embarrassment; but the principal cause of their embarrassment was injudicious
D° 3633. speculation in trade. The factory invariably interfere when they are applied to for
any debts due to Englishmen. The chief Hong merchant, Howqua, generally undertakes for the other Hong merchants the management of the claims of foreigners; he brings his list to the chief of the factory, states that such sums are required to be paid on account of foreign claims, and knowing that large sums are about to be issued from the Company's treasury in the course of their current transactions, begs that they may be withheld in the treasury; but this has always been resisted by the factory, and has only been done on the Hong merchants, to whom the Company's money was due, consenting that it should be paid
D° 3664. to Howqua. The Chinese government refused to allow foreigners to hire warehouses, and
keep them under their own management; and they also refused to abolish the practice of security merchants.

Innes, 2734. The principal cause of the threats of the Chinese, in September 1830, which led to an
Blair, 2622. armed force being sent from the Company's ships to the factory, was the protection given
by the British to three Parsees who had killed Captain Mackenzie, a British subject, commanding a ship under Dutch colours. A jury, composed of foreigners and Englishmen, had sat on the body, and brought in a verdict of justifiable homicide. The Parsees were sent to Bombay. If they had been given up to the Chinese they would have been considered by them as murderers. Another cause of the threats was, the residence of the wife of the President in the factory, which was not customary, and is obnoxious to the Chinese.
D° 2677. In consequence of the example, American women came, and were ordered away, but did
Innes, 2741. not go, though the American trade was stopped. The trade of only one ship was stopped,
and the other Americans interfered and caused the ladies to be immediately sent down to
Blair, 2642. Macao. During the discussions with the factory there was no interruption of the trade.
Innes, 2732. If the lady had been the wife of a private individual, the trade not belonging to the Com-
D° 2740. pany would have been stopped.

Blair, 2660. There has been a reduction of port charges to the extent of 600 or 700 dollars upon each
ship. The compradores, the men who supply the ships with provisions, have the benefit of it; as their charge is as high as formerly. It does not appear that there is any reduction on the measurement.

Petition, dated The principal commercial disabilities to which private British merchants in China are
24 December 1830; subjected, are these: English ships were formerly admitted to trade at various ports, Amoy,
p. 337* of Report Limpo, and the islands of Chusan and Formosa; now the entire foreign commerce is
of 1831. restricted to Canton, where the exorbitant harbour dues operate as a virtual exclusion of
the smaller class of shipping, while the privilege of dealing with foreigners is confined to 10 or 12 licensed native merchants; the oppressive conduct of the local authorities is such that respectable and wealthy men cannot be prevailed on to accept the privilege; and as foreigners are prohibited from renting warehouses in which to deposit their cargoes, there is no adequate competition, nor any chance of obtaining the fair market value of a commodity, an evil the more deeply felt in consequence of nearly all the imports in the year necessarily arriving about the same time. The business of a foreign vessel is liable to be delayed by underlings of the custom-house on frivolous pretexts, for the sake of extortion; the duty on her import cargo is levied in an arbitrary manner, and exceeds by many times the rate prescribed by the imperial tariff, which appears to be in general moderate, but is little regarded in practice. Studied indignities are heaped upon foreigners by the acts of government, and by contumelious edicts exciting the lower orders to treat them with habitual insolence. Free air and exercise are curtailed by precluding access to the country, or beyond the confined streets of the immediate vicinity of their habitations. Husband and wife, parent and child, are separated by the prohibitions against foreign ladies residing in Canton. These evils are attributable to the nature and character of the Chinese government, and not to any want of proper spirit and firmness in the agents of the Company. The influence which the Company has acquired by its extensive dealings, furnishes the strongest evidence of the importance of foreign commerce to the Chinese. In order, however, to place the commercial interests of Great Britain on a fair and equitable footing, a higher authority

is

is required, emanating directly from His Majesty, as a medium of communication with the Canton government, as well as with the Imperial Court at Pekin, which would remove the impression prevalent among the Chinese authorities, that foreigners in China have forfeited the protection of their own sovereign. If this course cannot be pursued, the Government of Great Britain ought to adopt a resolution worthy of the nation, and by the acquisition of an insular possession near the coast of China, place British commerce beyond the reach of future despotism.

There is less trouble and annoyance in regard to loading, unloading, and clearing, and carrying on the business of a ship at Canton, than in almost any other port, and more facility is afforded to foreign trade. The customs and duties are regulated between the Chinese merchant and the government, which keeps foreigners from collision. Any irregularities are heard of through the security merchant. Blair, 2673.

The Hong are generally considered very liberal merchants; so little is there of want of faith in them towards foreigners, that there is often no agreement made with them, except verbally. Plowden, 3651.

It would not be advantageous to abolish the Hong, unless the whole system upon which trade is conducted in China could be improved. It is sometimes exceedingly difficult for ships to obtain security; all the Hong merchants of respectability decline becoming security, because it involves them in the probability of trouble. The fee paid to the security merchant is from 800 to 1,000 dollars for every ship. He is responsible for the good conduct of the officers, and that the ship shall not be engaged in smuggling transactions, and all other concerns of a similar nature. If any irregularities are discovered, the merchant is fined, and a port clearance refused, and all communication is stopped till the fine is paid, which is generally an arbitrary and most unjust exaction. There has been no instance of a ship absolutely failing to obtain a security merchant, though some have been obliged to go to one of the poorer merchants, and pay him a sum of money for becoming security. The difficulty in obtaining security has increased within the last six or eight years. D° 3665.

The establishment of a Co-hong, or any material reduction of the number of Hong merchants, would prove injurious both to the Company and to the private trade. The factory have always used their endeavours to prevent such a change. D° 3802.

The foreign trade of Canton is not an arbitrary system, left to the discretion of the local government, but is in the main grounded upon the instructions of the Court of Pekin. It is grounded on the principle of responsibility and security, and is not liable to frequent changes. D° 3771.

The British subjects resident in Canton, not connected with the Company, are not exposed to any oppressions or restrictions from the Chinese government, either in their persons or trade. Blair, 2665.

There is no doubt that the situation of foreigners in China is very humiliating and very unpleasant in general. They are confined to very narrow limits, and cannot walk out in the streets without being subject to insult and abuse, being pointed and hooted at. If they go beyond the suburbs of Canton, it is with the danger of severe annoyance and even beating. The language of the Chinese edicts is insulting and offensive. The limits to which they are confined are perfectly understood, and are the same as they have always been; if they remain within those limits they are not insulted, but they cannot go far beyond the factory without being subject to abuse. They are sometimes taken to the houses of merchants in the neighbourhood of Canton, under the protection of the Hong. Plowden, 3690.

There would be no interference on the part of the government or the people with persons going for the purposes of trade, except such interference as is by law established; for instance, being obliged to conform to the security system, &c. D° 3702.

A man delivered to the Chinese government on a charge of homicide, would have no D° 3775.
chance of a fair trial. They have, however, severely punished injuries done by Chinese
to Europeans, and are desirous of doing justice. It would be extremely difficult to make
any arrangement for the trial of Europeans for offences against Chinese, and of Chinese for
offences against Europeans; but such an arrangement might be made. The British autho- D° 3817.
rities are at present practically under the necessity of screening the guilty, in order to pro-
tect the innocent in cases of homicide. When such a case occurs, it almost invariably D° 3821.
occasions a supension of the trade, and great injury to the commerce of the port. The
privilege of open access to the tribunals of the country, and the placing of foreigners on D° 3765.
the same footing as natives, would not be attended with any practical advantage to
Europeans.

The privilege of having a British representative at Pekin would be obtained with very D° 3716.
great difficulty; it would be almost impossible to obtain it. A King's consul would not D° 3794.
be productive of the advantage contemplated; the Chinese would not regard the power of
a King's consul alone, unless supported by some other influence; it is the great trade of the
Company that gives weight to the Chief of the Factory. The Chinese government will not D° 3614.
receive communications from the factory unless they bear the signature of the Chief and the
seal of the Company.

The seizure of an island on the coast of China is not likely to be the means of forcing D° 3721.
any concession from the Chinese. Nor would it be likely to assist the trade in tea. If the D° 3729.
Chinese heard that we had taken possession of an island in their vicinity they would be
very jealous, and endeavour to impose restrictions to prevent their junks from going there.
The export of teas coastwise in Chinese junks, for the foreign trade at Canton, is strictly
prohibited. There still exists a natural feeling of jealousy towards foreigners; there is no D° 3700.
change in that respect. There is no feeling on the part of the Chinese authorities favourable D° 3731.
to the relaxation of the commercial regulations either of England or China; they have always

deprecated any sort of change in the present system. They are aware that it is possible that
the present monopoly may not continue, and in conversing upon it, they have always ex-
Plowden, 3697. pressed a wish that it may continue. They are not a people that would submit to coercion
D° 3710. from foreigners; more might be obtained from civil, firm and decided conduct, than by
endeavouring to intimidate them; there is a point beyond which they will not go. No
D° 3713. doubt, if an attempt by force were properly conducted and followed up by the Government,
D° 3718. it might succeed. Anything to improve the trade would be better done by means of repre-
sentation and strong remonstrance properly followed up, than by actual force; a representa-
D° 3719. tion to the government might have effect. It is much to be questioned whether any
reasonable proposition for the improvement of commerce, from the British authorities in
D° 3752. this country, would be likely to produce effect without the employment of force. There are
no other means than force that would produce such an effectual change in the system as is
D° 3769. desired by the petitioners from Canton. A firm and consistent line of policy will always
D° 3773. have its weight, and is the best mode of dealing with the Chinese; a direct appeal to their
fears would not be good policy.

D° 3705. The English in general in Canton and Macao conform to the regulations of the Chinese,
and are not more disposed to infringe them than other foreigners are.

D° 3787. The Russian government have an establishment at Pekin for the acquisition of the
Chinese language, in order to conduct the trade which is carried on at the frontiers, but they
have no political agent. They are excluded from the port of Canton, in consequence of
their having an inland trade on the northern frontier.

D° 3806. The Roman-catholic missionaries have been dismissed, and only enter China clan-
destinely.

D° 3723. A considerable portion of the China foreign trade is a smuggling trade; the whole of
D° 3673. the opium trade is so; the opium vessels have since 1820 remained at Lintin, outside the
port, out of the control of the government altogether, and therefore do not require a secu-
D° 3677. rity merchant. The American trade is a good deal conducted outside the port; they do
D° 3654. not go to Whampoa, but smuggle up their cargoes from Lintin. The Americans generally
confined their mercantile dealings to the outside merchants, who are merely shopmen. The
Hong, to whom the strict monopoly of foreign trade is by law given, perceiving that the
outside shopmen were, with the connivance of some of the Hong, carrying on a large trade
illegally with the Americans and others, endeavoured, in 1828, to put a stop to it by binding
themselves not to connive at it, but they broke faith with one another, and the Americans
appealed to the Chinese government, by whom the outside merchants were in consequence
allowed to trade in a number (about 60 or 70) of petty articles, the staple articles of com-
D° 3800. merce being still confined to the Hong. There is no confidence to be placed in the outside
merchants who are not licensed by the government.

Petition from Calcutta; Report 1830, p. 339*. The degree in which the monopoly of the tea trade contracts the extent of commercial
intercourse with China is well known. The people of England are thus indirectly taxed
more than twice as much as they would be directly, if the trade were opened, and the capital
stock of the Company (the dividends on which are now paid from the extra price levied on
the consumer) were added to the national debt. Of the ships that would then be engaged
in importing tea into England, some would take their outward cargoes to India, whence
there is at present a difficulty in procuring return cargoes; but that resource and con-
Plowden, 3795. venience to both countries is, with many others, prevented by the monopoly. Many of the
English residents and agents in Canton would be sorry to see the monopoly interfered with;
Forbes, 2375. some of the most respectable have stated so. The China trade ought decidedly to remain
with the Company; if it be taken out of their hands and thrown open, there will be great
Gisborne, 1155. danger of losing it altogether. If the trade with China were thrown open, the India trade
Rickards, 2772. would be considerably increased; for merchants would have the means, as opportunity
offered, of shipping the produce of Bengal to China, which is extensively done now, in
cotton, saltpetre, and opium, and having the proceeds of those things re-invested in tea, silk,
nankeens, &c. for shipment to England. At present as much as three or four millions of
dollars is sent back from China to India; at the same time there is a considerable import
of silver into China. The Americans import silver largely to pay for their China cargoes.
If a free trade were established, the same ship might carry British goods to India, and be
Ritchie, 1443. engaged in the trade from India to China, and from China to England. The permission to
ship tea from China to Great Britain and other countries would add facilities to the trans-
Bracken, 294. mission of funds from India to England. The trade between Calcutta and China is on the
increase. The articles exported from Calcutta are almost entirely opium and cotton, but
the Company now deal more largely in cotton than private traders do. The returns from
China are almost entirely bullion, and bills on the Bengal government. The bullion consists
chiefly of Spanish dollars; sometimes of Sycee silver (native silver of China in masses), but
Ritchie, 1319. that is smuggled. The returns from China were bullion, bills, and silk, nankeens, sugar,
cassia, &c. to England and India. The bullion and bills went to England in the Company's
ships; the other articles were taken to Sincapore or India in country ships; no use was
Plowden, 3831. made of foreign vessels. The trade carried on by individuals between India and China may
have proved, during the last year or two, a losing one in the article of cotton, but certainly
not in that of opium.

East India Company's Commercial Establishments and Proceedings in London.

THE Committee of the Court of Directors of the East India Company, called the Simons, 841.
Committee of Buying and Warehouses, buy all the goods which the Company export,
including military stores, in such way as they can most to the advantage of the Company,
but chiefly by public advertisement or circular letter. Some of the stores which do not
admit of being purchased by competition are bought of tradesmen, by private agreement;
small-arms, and things of that kind, are bought by private bargain; but every thing that
admits of being bought by muster is so bought. A special report is made to the Court by
the Committee of all purchases entered into, whether by advertisement, by circular letter,
or privately. The Company's commercial affairs generally, both at home and in India, are
entrusted to the Committee of Buying and Warehouses. There is another Committee for
Shipping, and they purchase naval stores and provisions, and manage the Company's ships.
The Committee of Correspondence, as the senior committee, occasionally take upon themselves
to make purchases of any thing out of the usual way; but this happens but very
seldom.

The number of persons employed in the warehouses of the East India Company in 1832, 861.
was 2,547. The expense of the warehouse department was 315,000 *l.*, under the following 863.
heads: for landing and housing goods, dock dues, cartage and materials, such as boards,
nails, &c. for warehouse use, 69,000 *l.*; daily wages, including medical attendance allowed
to the men, 160,000 *l.*; rent of hired warehouses and ground-rents, 24,000 *l.*; taxes and
repairs, 20,000 *l.*; salaries to clerks and warehouse-keepers, 42,000 *l.* These sums are independent 864.
of the expense of the department of Buying and Warehouses in the India House 871.
itself, and of any rental for the Company's warehouses, which are almost all freehold, or
built upon ground belonging to public companies, on long leases renewable on the payment
of fines. These warehouses are valued in the Company's books at 950,000 *l.*, and the expense 872.
of the department of Buying and Warehouses at the India House was, in 1827, 13,069 *l.*, 857.
being 3,205 *l.* more than its amount in 1817. This increase in the amount of salaries is 1181. 1184.
attributed to the lengthened service of the clerks. No reduction has been made in the
establishment, because although the commercial exports to India have ceased, the exportation 867.
to China has been as large in quantity as it was, and that of military stores much
larger. The details of miscellaneous business have also increased.

It is considered that the warehousing business of the Company is conducted at an unnecessarily Hall, 2510.
large expense; that more labourers are engaged than can have sufficient work
during the whole year, and that their wages are too high. Those at St. Katharine's Docks
receive 2 *s* 8 *d.* a day for eight hours' work, while those belonging to the Company receive
2 *s.* 9 *d.* a day for six hours, and 3 *d* for every extra hour, besides 6 *d.* a day extra if at 2531.
work on indigo, and 4 *d.* a day extra if employed at Blackwall; in addition to which the 2510. 2540, 2541.
men at the Docks are better looked after, more work is obtained from them from a spirit of
emulation and a desire of promotion in an establishment where appointments are not governed, 2501.
as is believed to be the case at the India House, by patronage and influence. At
St. Katharine's Docks only 150 labourers are permanently engaged. There is a second
class of 250, who are employed when there is work for them in preference to others; and 2528. 2535.
the Company have issued about 1,200 tickets to extra labourers, over and above the 250
preferable men, who, if not otherwise employed, attend at the gates ready for work: when
it is known that there is work for them, the average number so attending is between 800
and 900. The expense of the Dock Company in 1831, was, 19 directors, 2,950 *l.*; 2502.
78 salaried officers, 13,682 *l.*; wages for labourers, &c. 49,532 *l.*; stores and materials,
6,000 *l.*; fire insurance, 500 *l.*; rates and taxes, 6,500 *l.*; repairs, &c. 2,500 *l.*; incidental
charges, 5,000 *l.*; total, 71,132 *l.*, including 1,100 *l.* for a superannuation fund. To which 2503.
is to be added, 34,000 *l.* for interest on money borrowed beyond the capital of 1,352,000 *l.* 2504.
The total outlay on the Docks has been about 2,150,000 *l.* The quantity of goods landed, 2500.
housed and delivered during 1831, was 214,000 tons. The quantity deposited in the ware- 2499.

Hall, 2529. 2512. 2537. houses on the 1st of January 1832, was 52,000 tons; while the stock of bonded goods in the East India warehouses is not estimated to exceed 55,000 or 56,000 tons. It is, however, allowed that the chief branch of the Company's trade (tea), causes more labour than any article warehoused by other companies. The greatest portion of the increased labour on tea is in the mending of the chests, and the sorting of the various qualities and putting them on show, which is a very tedious operation, and the assortment and sampling require 2548. considerable skill; so do East India goods generally, but such skill may be acquired by other parties.

Simons, 1164. Private merchants dispose of their goods to a considerable extent at the Company's sales, and entrust the entire management to the skill and care of the Company's servants. The Company's system of management differs very materially from that at the public docks: the latter act simply as warehouse-keepers for receiving and delivering goods; the Company do the same, and in addition sell the goods and receive the proceeds, and in fact become the agents of the importers, a business which the public Docks do not undertake. The ware- 1167. house charges of the Company for landing and housing are about the same as those of the Docks. The charges for sale, and receiving and paying over the proceeds, are very reason- 1169. able. It is apprehended that they are lower than private commission merchants charge, because no person is compelled to bring his goods to the Company, and yet almost all the valued goods are brought to them. The Company have their own officers in all the public docks in London, where they receive charge of any goods housed there, which the importers are desirous to entrust to the management of the Company. After the Charter Act of 1813, 1170. which laid the trade with India open, the continuance to the Company of the housing and sale of Private Indian merchandize depended upon the holding forth such reasonable terms as the public might approve. Schedules of rates were promulgated, which have been varied from time to time to meet existing circumstances, and the periods for sales, &c. have been arranged with the concurrence of importers and buyers. These regulations are understood to be very satisfactory to the public, insomuch that many importers of Indian merchandize who choose to deposit their goods in the public docks still desire to obtain the advantage of the Company's system and management, and place the goods under the Company's control as if they were in the Company's warehouses.

Hall, 2514. The mode of levying rates by the East India Company is different from that of other dock companies. The Company levy their rates by an *ad valorem* per centage, varying from 2514. 2550. 1¼ to 7½ per cent., according to the tariff of the several articles. The principle upon which the rates of the St. Katharine's Dock Company are calculated is, 1st, with reference to the expense of labour; 2d, the cost of material; and, 3d, the profit added thereto necessary to produce a fair remuneration upon the capital invested. The *ad valorem* rate of charge of the Company is on a great number of goods extremely heavy, whilst on some few it is very 2515. 2548. low. Since the prices of some articles have been much depressed, about half a dozen of them usually lodged with the Dock Company have been placed under the management of the East India Company, as their *ad valorem* mode of charge did not cover the expense of working the goods: on the other hand, there are goods which, being of great value, the rates operate the other way, and the East India Company have nearly lost the whole of the sale of several commodities, such as cotton, saltpetre, sugar, drugs, &c. which at one period formed some of the chief articles of their periodical sales. The charge on indigo is extremely heavy, compared with what it would be if warehoused and sold by other parties. The 2516. St. Katharine's Dock Company would have no difficulty in selling the goods of merchants at periodical sales as the East India Company do, and at a reduced charge. A prejudice has existed in favour of the East India Company's management, and sufficient cannot be said in favour of it; but the charge exceeds in many instances the proportional advantage. 2543. No attempt had been made till lately to afford similar accommodation to merchants; and the agency houses preferred employing the East India Company, because they would have had more trouble and responsibility if the goods consigned to their care had been sold by 2517. a broker, or any other public company. The St. Katharine Dock Company would, in most instances, deduct one-third from the *ad valorem* rates now charged by the East India Company, and take such reduced rates as a remuneration for mere warehousing and management, charging for rent and delivery in addition, and assuming the privilege enjoyed by the 2520. East India Company of exemption from the auction duty, which on goods the property of 2522. the importing merchant, sold for the first time, is one-half per cent. On indigo, for instance, the East India Company charge 2¼ per cent upon the value. On a chest estimated at 75 *l.*, the rate and lot money would be about 32 *s.*; the St. Katharine Dock Company's consolidated rate on the same would be 17 *s.* 6 *d.*, to which add for management of public sale (free of auction duty) 2 *s.* 6 *d.* to 3 *s.* 6 *d.* a chest, making the expense, 21 *s.* as compared with 32 *s.*, about a third less. The difference would be greater on indigo than on goods generally, the article being of greater value.

2521. 2553. The East India Company have agreed to pay to the East India Dock Company 30,000 *l.* per annum for the use of their docks and warehouses; and have consequently issued directions to compel vessels on board of which goods are shipped on their account to proceed to the East India Docks to discharge, the object of which compulsion is to fill the warehouses there, and to derive the advantage of the landing and wharfage charges. These directions are inconvenient and expensive to the private trader, who would prefer landing his goods at St. Katharine's Docks; and the arrangement is also productive of charge to the East India Company, as in consequence of it, goods arriving in St. Katharine's Docks and placed under the management of the East India Company, are sometimes sent by lighters four 2521. 2554. miles down the river again to the East India Docks.

Simons, 912. The Company's broad cloths were, until lately, dyed in London; they are now dyed in the country,

country, and bought in a finished state. The camlets are bought in a dyed and finished Simons, 1240.
state at Norwich. Some are purchased in Yorkshire, but only occasionally, as that 914. 1263.
kind of manufacture is not so well understood there as at Norwich. The long ells are 917. 934. 1240.
still dyed in London, because no dyers in the west of England have offered to dye them. 919.
The principal colours are scarlet, purple, black, and blue; and the dyeing has, within the 920, 1246.
last two years, been executed by contract, circular letters being sent to the trade. Previously 922.
to that time the dyers were employed as regular tradesmen to the Company, the
business being divided into 36 shares, and one dyer having three shares, another two, and
another one, as they had obtained appointments from the Committee of Buying, in whose
patronage the shares were when vacancies occurred. The prices were fixed annually alike
for them all, but some of the dyers who had several shares were subject to a deduction.
The prices were fixed according to the price of drugs and the state of the markets. It was 926.
a very good business, and generally, but not as a matter of course, descended from father 932.
to son. If the dyeing had been performed by contract with one or two houses, it would 1236.
undoubtedly have been done cheaper, though the dyers always said that it could not, and 1239.
complained that they were not paid sufficiently.

The Company have ceased to export goods to India for sale since 1824-25: they continued 866. 891.
during the early years of the present charter to carry on trade as they had formerly 873. 875. 1134.
done, on the principles of profit and loss, as merchants. The export goods, consisting principally 1137. 1138. 1141
of copper and woollens, sold at a very good profit; and there was a profit generally 1143.
to the time the Company ceased to export. In 1826 the Court informed the Bengal Government,
that though it would be highly satisfactory to them to be enabled to continue to
furnish India, as they had long been in the practice of doing, with regular and ample
supplies of British staples, yet that, looking to the great difficulty which existed in obtaining
any articles of Indian produce or manufacture that would afford a remittance to London,
even at several pence in the rupee below the par of exchange; to the large balance due
from the territorial to the commercial branch, and to the extensive supply of military and
public stores then under provision, they had seen it expedient to determine not to export any
woollens, copper, iron, lead, or merchandise of any other kind, to any of their Indian Presidencies.
The exportation of wine to India, which commenced in 1808, arose in consequence 882.
of complaints that good wine could not be procured at reasonable prices; the export continued
for four or five years; but after the first year or two the trade was very disadvantageous. 884.

The Company's exports to China are reduced in some kinds of goods, and increased in 867. 892.
others. In 1813-14 the quantity of long ells and camlets was much larger than it now is; 995, 996.
that of broad cloth much smaller. The export of long ells has not been reduced within the 1253.
last 18 or 20 years. The total numbers of the articles exported have not very materially 868.
altered, but the cost price has fallen considerably; the superfine broad cloth which used to
cost 20 *l.* is now bought for 10 *l.*, and lead is now 13 *l.* instead of 40 *l.* a ton. The exports 874.
are in value about two-thirds of what they were. As the Company have the monopoly of
the China market, it would seem to follow, that if they had not supplied it with British
manufactures, they would not have been imported into that empire at all, or at least not in
sufficient quantities. The Court never contemplated not to supply China, when they ceased
to supply India. The exports to China are governed by the demands from the Company's
servants there; they annually send a requisition for the next season, which the Court in 896.
general exceed. The Company continued during very many years to export long ells to 898. 941.
China, knowing they would be attended with loss; they considered that the manufacturers 906.
in the west of England who made those long ells, had no other trade, and that China
was the only market, or nearly so, for such goods. It was computed that the Company's 907.
long ells consumed the fleeces of upwards of a million of sheep, and gave employment to
some thousands of people in Devonshire and Cornwall, who had no other trade. Long ells 1254.
have now become a profitable article of trade, owing to the great fall in the price of wool.
A change from loss to profit took place in 1829-30 and in 1830-31. There had occasionally
been a profit before, but it was greatly overborne by the loss. Broad cloths have been a 1267.
profitable article of export, and large purchases of them are made in Yorkshire; the mode
of buying them and camlets, &c., is to invite tenders by sending circulars to all the manufacturers 1269.
who will receive them.

The Company are not fairly undersold in any article in the China market; but they 1256.
cannot compete with the private traders in camlets, which are smuggled into Canton. The
market is chiefly supplied with camlets surreptitiously introduced; they are not prohibited. 905.
Nothing is prohibited in China, except opium; but the duty is very great; it is nearly equal 1259.
to the cost price in England. The duty is 18 dollars a piece, and the selling price without 905.
the duty, 22. On long ells the duty is more moderate, and there is therefore no inducement 1260.
to smuggle them, and the Company, consequently, are not undersold, so far as regards that
article.

Major Burney, the British Resident in Ava, stated that he saw in the market at Madé four Cabell, 1634.
or five pieces of broad cloth, which had the Company's stamp attached, and which had
evidently been imported at Canton. The head of the caravan said that it cost 2 ½ ticals
a cubit, in the part of China whence they had brought it; but that they could only get at
Madé two ticals a cubit for it. He declined separating the piece of lead on which the Company's
arms were stamped, from the cloth to which it was attached; a proof of the value
which the Chinese have for cloth bearing that stamp.

The leading articles of the Company's exports to China are the same now as they formerly Simons, 943. 1273.
were, that is, broad cloth and long ells; but the Company have exported British calicoes,
cotton twist, and a variety of other articles. They do not now export tin; their trade in that 945.
article was discontinued in 1816-17; some, however, was sent three years afterwards, but

none since 1821-22; it was first sent in 1788. Upon the whole the trade was unprofitable.
Simons, 954. The Company exported some cotton twist in 1820-21, and not again till 1827-28, when
they sent out 90,000 lbs.; in 1828-29 they sent 300,000 lbs.; in 1829-30 the same; in
1830-31, 480,000 lbs.; and they intended to send out the same quantity in the present year,
and had bought 240,000 lbs. in part, when information was received from China, that in two
districts in the immediate vicinity of Canton, and in another about 20 miles from it, very
serious commotions had taken place among the natives at the introduction of cotton yarn;
they loudly complain that it has deprived their women and children, who had previously
been employed in the spinning of thread, of the means of subsistence. They have resolved
Bracken, 1896. not to employ the cotton yarn in their looms, and have expressed their determination to burn
Simons, 962. any of it which may be brought to their villages. In consequence of this information, the
*961. Company do not intend to send any more during the present season. It is also stated that,
owing to the detection of a fraud in the manufacture of coarse satins for the Indian market,
by using twist of the high numbers instead of silk, it had become unsaleable at Canton,
960; 1274. and had been transshipped to Singapore and elsewhere. The first consignment of 90,000 lbs.
in 1827-28 was chiefly fine twist, and was sold at a great loss; the subsequent consignments
970. were of lower numbers, and sold at a profit. The net loss on the Company's exports for
26 years previously to 1818-19, was 1,668,103 *l.*; since 1820-21 the export trade has been
carried on very much more profitably.

The East India Company's Commercial Establishments and Proceedings in India and China.

Simons, 886. 1006. The commercial establishments at Madras are abolished; at Bombay there is one factory
886. 1186. for the provision of cotton to be exported to China. The Company have now no commercial
agents in India, except the silk-agents and the agents for cotton and saltpetre; they
1188. are selected by the Government from the covenanted servants of the Company who have
Wilkinson, 2274. proceeded to India as writers. In some instances they certainly are not well acquainted
with the business they have to manage, because they are occasionally removed from a
residency where there are no transactions in some one article to a residency where the whole
business consists in that article. They are not such persons as a manufacturer in this
country would select to superintend such establishments; but many of them take a great
deal of interest in their business, and are by no means above attending to it. They have,
Simons, 1192. until lately, been compensated by a monthly salary, and a commission upon the goods provided
Mackenzie, 669. by them, but within the last year this mode has been changed, and they are now paid,
Simons, 1195. by fixed salaries only. Previously to the year 1801, it seems occasionally to have been
found that the residents would, for the sake of increasing their commission, enter into engagements
in excess of the quantity of goods ordered from their respective factories. In
that year Lord Wellesley directed that they should not receive any surplus goods without
express permission; and in 1814 the Court limited the total amount of the commission and
salary to 40,000 rupees, and directed that the surplus should be carried to the credit of the
Company, with a proviso, however, that if an unusually large investment should be
ordered, the Government might pay to the resident a portion, not exceeding a moiety, of the
1207. surplus commission. A commercial resident has received 7,000 *l.* a year. Mr. Bayley, at
1209. Benares, received 9,000 *l.*, but then he was opium-agent also: his emoluments were as
1212. large as those of the highest political officers. The rate of commission allowed by the
Mackenzie, 673. Company to their servants, was considerably less than that paid by private merchants to
individuals; it was 2½ per cent., subject to limitation when it amounted to a certain sum.
Simons, 849. 1176. The salaries and establishments have been lately revised. The commercial servants regularly
1198. report all their proceedings to the Board of Trade, who exercise a constant superintendance
1225. over them. The Board are the functionaries to settle all commercial transactions;
they are in constant correspondence with the residents, and, if absolutely necessary, a member
proceeds to give his personal supervision at any particular factory. Any points deemed
1223. of sufficient importance would be specially reported by them to the Government, and by
1229. the Government to the Court. All the proceedings of the Board are recorded, and sent
home for the Court's information.

Mackenzie, 682. The largest amount of territorial revenue advanced in one year for commercial purposes
has been about two millions.

662. All civil servants, except the commercial servants, are restricted from trading on their
667. own account, and they are under restriction as to agency and partnership. In old times,
all were permitted to trade. The distinction between political and commercial servants
originated with the Act of Parliament prohibiting any person employed in the management
663. of the revenue, or the administration of justice, from being engaged in trade. The commercial
servants are chiefly the commercial residents and the officers of the Board of Trade
666. and warehouses; there are about 20 who are thus enabled to trade; some of them trade
to a considerable extent: they were formerly employed as agents to private individuals, but
681. there is now a prohibition against their being so employed. Medical officers when attached
professionally to civil stations, are allowed to trade. Military officers are generally prevented
664. from trading. All Government officers ought to be restricted from trade, and particularly
those who trade for the Company ought to be restricted from mixing up that
672. trade with a trade of their own. The captains of the Company's ships always carry on
677. trade on their own account. The Company's officers indiscriminately are allowed to be
shareholders in the Government Bank, and there is no objection to such permission.

Simons, 886. 899. In addition to ceasing to be exporters to India, the Company have also ceased to be importers
from India into England, except of raw silk, some silk goods, and saltpetre from
their

their own factories, and of indigo bought in Calcutta. Orders are now on their way to
India to discontinue the provision of sugar. They have abolished all the factories which
provided cotton piece-goods; the whole of the commercial establishments at Madras are
done away, and at Bombay nothing is left but one factory, for the provision of cotton to be
assigned to China. Except as above, the Company have in fact ceased to be traders.
Their import of silk bandannas has rather increased, but not materially; the remittance by Simons, 1276.
them is about 1 *s.* 11 *d.* the rupee.

The Company formerly imported from China raw silk and nankeens, but they became 975.
losing articles, and the Company discontinued them. At the sales in 1822, the loss on 976.
nankeens amounted to 21 per cent. on the prime cost and charges, and the Company therefore
directed the supracargoes not to enter into any further engagements for an investment
of that description of goods. In 1824 they gave similar directions with regard to raw silk. 983.
The sole article they now import from China is tea. 999.

Although the Company have found it expedient to discontinue the importation of nankeens 978. 984.
and silk from China, the home market has been very largely supplied with those articles by 987.
private traders. It is believed that it has been to them a decidedly losing trade.* 988.

The Company export annually to China a considerable quantity of cotton-wool from 1121.
Bengal and Bombay, and they did so from Madras until the factories there were abolished.

Union of Government and Trade.

The Government of India has quite enough to do in the political management of the Mackenzie, 214.
country, without having any concern with commerce; and they never have paid and never
can pay that attention to the commercial affairs of the Company which they ought to pay,
in order to trade to the most advantage. Then in the interior of the country, although the
regulations of Government and the constant injunctions of all authorities, both at home and
abroad, are directed to the abolition of all unfair advantage, it is next to impossible that
such orders or rules can practically be enforced: the commercial agents, as a part of the
governing aristocracy of the country, must, whether they will or no, have an influence that
does not belong to private traders. Every person they employ must, in some degree, have
a similar influence; and it is therefore utterly impossible, even although the regulations
should be as strict as words can make them against any unfair advantage, that a private
trader can go into a district in the immediate vicinity of a Company's factory, on a footing
of equality with them. There cannot be fair competition. If the Government agent be
a man zealous in his work, he must push his authority beyond its due limits; and if he is
an idler and careless about his work, the Government must, of course, lose: in both ways
the system has been found open to objection. The price of the important article of silk
was run up far beyond what was reasonable, in consequence of mismanagement, and the ✓
want of sufficient control over the commercial Agent's proceedings; and this in a degree
that could not have occurred with private traders. The Company's trade in that article
does injuriously impede private adventure. Even the purchases of Government in the
Calcutta market, though far less objectionable than the Government trade in the interior,
are open to serious objection on commercial principles. The private trader does not know
on what he may reckon: the Government may come one year with 700,000 *l.* to purchase
indigo, and another year, perhaps, purchase nothing. The uncertainty of the amount with
which the Government, looking to remittance not to profit, may come into the market,
must operate to derange private transactions, though the purchase of the article be conducted
on perfectly fair terms. All Government trade must be a monopoly, and the moment
it ceases avowedly to monopolize, it should cease to trade at all. Whether it should monopolize
is another question. It has in Bengal long ceased to claim a monopoly in its commercial
capacity, and it should long ago have ceased to trade in the articles not included in
its territorial monopolies. The manufacture of opium and salt is conducted with a view to 215.
revenue, not trade. The purchase of cotton for the China market falls under the same rule 218.
as the purchase of silk, though not open to the same degree of objection, because the trade
is comparatively free. But dearness, or inferiority of quality must, in the long run, be
apprehended, as the consequence of all commercial transactions in which the Government
engage, seeing that the commercial concerns of the Company have occupied very little of
the attention of the Government, contrasted with the largeness of the sum which has been
laid out. All articles produced by natives, as cotton is, would be brought to Calcutta 220.
without the intervention of any European, if wanted there; and the native establishments
are all economically conducted. The uncertainty of the Company's demand has an unfavourable 226.
effect on the price paid, in so far as regards the supply of the market, for the
advantageous regulation of which a steady demand seems to be very desirable; and any
thing which renders the demand unsteady and uncertain, must operate with prudent men
to cause the market to be supplied at a higher rate than if the demand they had to meet
were free from such uncertainty. In so far therefore as the Company's arrangements must cause
uncertainty, they are likely to enhance cost; but as that enhancement of cost will affect all
speculators equally, it does not appear how it should interfere with the Company's profit on
their immediate speculations: although, therefore, steadiness of demand be very important
to the general commerce of the country, and therefore to the Company as its rulers, that
unsteadiness of demand may not occasion a loss to them in their commercial dealings.
The discontinuance of the Government trade in India, and the free settlement of Europeans * 235.
there, would cause commerce to improve: the goods now imported by the Company must
take the place of goods that would be imported by individuals. All Government interference Bracken, 1893.

---

* *See* also proceedings of the Company under the heads "Silk," "Indigo," &c.

ference with manufactures is prejudicial: a Government cannot devote sufficient attention to
Mackenzie, 218. such concerns. They long paid for gunpowder more than they need have done, if the coun-
try had had a considerable number of intelligent men in it to compete with the Government
manufacture; the article is now comparatively cheap; but probably the same remark may
Larpent, 1973. still be made. The Indian trade is practically open now, except in such particulars as are
connected with political circumstances, residence of Europeans, &c. There is no impedi-
ment to carrying on trade freely with India: the only existing evil is the Company trading
themselves, as they do not trade on the ordinary conditions of profit and loss. The Com-
pany do not trade now as merchants, and the only trade they cling to is a trade of remittance.
There is no grievance suffered by private merchants under the administration of the Company
1975. in trade with India; they do not find any molestation from the Company's authorities; at
the same time, where the Company have mercantile establishments, it was exceedingly diffi-
cult for an individual to enter into competition with the Company until some late regulations
were adopted, which originated from a very strong memorial being presented to the Board
of Control, and by them to the Company. These representations received due attention,
and in consequence directions were sent to India to provide against the abuses arising from
the right of pre-emption enjoyed by the Company, and the advantages they possessed in
obtaining the priority of payment of their debts over every individual, where the Company
and individuals had made simultaneous advances; in such cases the Government swept
away the whole property. Nothing could be more correct than the views the Company
entertained and the regulations adopted in consequence; but still there is deference paid to
the Company, arising out of their union in India of the character of sovereign. No mercan-
1976. 1952. tile establishment would have dared to continue to give the prices for indigo which the
Company gave, in the face of a great accumulation of stock and an adverse state of the
market. It is the connection between the Company and the Government in India that has
1987. kept up the price there unnaturally, and produced the excessive quantity of indigo by that
1986. stimulus which would not otherwise have existed. The private traders, however, have im-
ported a much larger quantity of indigo at the high prices than the Company have. When
1976. the Company went out of the market and declined purchasing as heretofore, which they did
in 1830, the depression in price was so great as to be ruinous to many individuals. As
1977. little as possible has of late been done by the Company, for their whole object latterly has
been to trade for remittance, and not as a commercial body. Though the trading might
1979. bring the rupee to England a little above the ordinary rate of exchange, the Company pos-
sessed an unfair advantage, trading as they did with the revenues at their back, and it was
unjust to the mercantile adventurer. On the face of the Company's accounts it will appear
that, for the last five years, there has been a considerable loss both on indigo and silk. It
1989. was the unanimous opinion of the London merchants that it was desirable that the Com-
pany should not trade; they were all convinced, many of them having been in India, of
the incompatibility of the two characters of sovereign and merchant, and of the inconvenience
1991. which the trade suffered from the union. The separation of the two characters would tend
to increase the business of the agency houses in India, and of the commercial body gene-
rally; but it is desirable, not so much upon the ground of increased advantages to those
parties, as for the purpose of removing the difficulties and evils which are inseparable from
the mercantile body coming into competition with the Company, who do not trade on the
usual principles of profit and loss. It is not desired by the merchants so much under the
idea that they shall benefit by it, as from its ensuring the removal of the evils which they
Palmer, 1374. feel. The power might be left to the Company of occasionally making a remittance of
goods, not for the purpose of traffic, but they would never use it, if debarred from trade
1376. generally. It is always prejudicial in a great body like the Company acting occasionally
upon the market in India, by orders transmitted from this country. It is not desirable that
they should continue purchasers upon the system hitherto pursued, which has had the
effect of raising prices considerably, and thus stimulating an extra production, which, from
an unfavourable out-turn attendant upon the sales in this country, has been subsequently
checked, the extra quantity so produced thereby occasioning a glut in the market of India,
and consequently an undue depreciation.

Wilkinson, 2245. The Company's commercial agents are paid on a more costly scale than the agents of
Bracken, 1885. private manufacturers would be, because there is the dignity of the Company, in some
degree, to be upheld in the eyes of the natives. This necessity for increased expense is
perhaps a good reason why the Company should not engage in manufactures.

Simons, 1033. In the regular Company's ships chartered for six voyages, the freight paid by them is dearer than that paid by private merchants; but in ships hired for one voyage it is neither more nor less than a private person would pay. The system under which the ships are engaged was forced on the Company by law.

Mackenzie, 268. The conduct of the Government or its officers towards the merchants of Calcutta has not, in any essential degree, been influenced by considerations of personal favour. The introduction of the Stamp law is a case in point. Several of the merchants were very active in opposing it, yet they received at the very time, or immediately afterwards, considerable advances from the public treasury to assist them out of difficulty. Those advances were made without any reference to the favour or disfavour with which the individuals were regarded; and generally, the same system has prevailed; so that the merchants of Calcutta are little, if at all, dependant in matters of business on the terms on which they may be with the public authorities, they are as to all essentials independent of them.

Silk.

Wallick, 2330. There are in India two plants that are most extensively applied to the feeding of the silk-worm, the mulberry and the castor oil plant, or, as it is generally called, palma christi. The

mulberry

mulberry is infinitely the most important, both with reference to the extent of its cultivation,
and to the product of the silk worm reared by it. Inferior kinds of silk are also produced
from several plants of the laurel tribe, especially in the north-western provinces of Bengal.

The description of mulberry cultivated in India, is that called the Indian variety. The
trees are generally planted in rows about six or eight inches apart, and they are about three Wilkinson, 2127.
feet high; but sometimes they are suffered to run up in coppice, about six feet or more in
height, without being thinned. The leaves of the latter are reckoned more nutritious, and
the plant is also thought to suffer less from the weather; but the former is the general
custom, perhaps because it is the oldest, and that the other has not been introduced long
enough for it to be decided that it is actually superior. The cultivation of the mulberry Wallick, 2418.
might be improved. The natives will not rear the plant in such a manner as to make the
supply any thing more than a very scanty leaf. A man who can supply exactly the quantum
necessary for the filature in his vicinity would not take the trouble to exceed it. It would
be extremely well worth while to cultivate the arborescent kinds of mulberry. Throughout
the Bengal provinces, the dwarf kind only is cultivated, consisting in shoots, in cuttings that
are allowed to remain only a very few seasons. The extreme rapidity of the produce is that
at which the natives aim, that which will give them an immediate return; but that return is
not so great as it would be, if they adopted the mode pursued in the south of Europe, of
having mulberry trees in cultivation. The periods of gathering the crops vary in different Wilkinson, 2137.
districts; in some the gathering is in March and April, July and November. The crop in
the rains (July) is the most abundant. The leaves are first picked about four months after
the trees are planted; afterwards there is a crop every eight or ten weeks. In the first year,
there are about four crops, and in the second, six. The trees are planted generally about
the end of November, and the first crop of leaves is ready in the next January or February;
they are hoed and dug between the rows, not much watered, and weeded occasionally:
there is no irrigation. After the leaves are gathered, the plant is cut down to about a foot
from the ground; once in the year, at the end of November, it is cut down to the ground,
and at that time, but not at others, the ground is ploughed between the rows. A dry soil
is reckoned preferable for the plant: there is no fruit. There is not much care taken in the 2138; 2272.
cultivation. The ryots are the producers: there is no European superintendance at all. In
general the same parties grow the leaves and keep the worms. When the leaves are given
to the worms they are chopped small. A begah (about one-third of an English acre) of 2289.
plants will feed 1,000 worms a day.

There are two species of worms, the country worm and the large annual. The country 2161.
worm hatches four times a year, and the large annual only once. The one species is not
more hardy than the other, nor more prolific. There is more silk from a cocoon of the 2285.
annual worm, but the country or dessy worm is the best by far. The difference in the silk 2169.
produced seems wholly to depend on the season in which the cocoon is spun. The best
season is what is called the November bund, in which the cocoons are finished spinning
about the beginning of December, and the worst is the rainy. The quantity during the rains 2291.
is larger, but the quality is very much inferior. The two species of worms are quite alike as 2173.
to the treatment they require. Treatment makes no difference as to their health or produce.
The interval between the time of being hatched, and that of commencing the cocoons,
depends very much on the season in which they are hatched; sometimes it is between two
and three months; and in the hot season, from 25 to not much more than 30 days. No
artificial heat is used for hatching the eggs, but in the cold season there is a fire occasionally
for preserving the worms: they are kept in a place where the light is excluded when the
air is, because there are no glazed windows. It is a mere hut with a hole in the wall, before
which a screen is placed when it is desired to exclude the air; and that of course excludes
the light at the same time. This is done during the whole time the worm is feeding. Improvement 2282, 2310.
might be made by erecting the buildings more on the European plan. A dry soil is 2273.
reckoned preferable for the worms as well as the plant. The silk is reeled principally at the 2181.
Company's filatures, but partially by the peasantry at their own houses. The process is very
similar, but inferior, to that used by the Company. The cocoons are placed in hot water,
and wound off upon reels which are fixed. The coppers are set in masonry, having under
each a furnace for heating the water: the plan is entirely the Italian. The cocoons are 2293.
reckoned to give in silk about a twentieth part of their weight.

The rent of land for the production of silk is considerably higher than that of other land. 2318.
The Company do not deal immediately with the growers of the mulberry, nor with the feeders Simons, 1072.
of the worms. The agent who comes in immediate contact with the Company is a middleman, Wilkinson, 2208.
called a pykar, to whom advances of cash, on a rough guess as to the amount that will
be required, are made by the commercial resident, which the pykar circulates amongst the
breeders of silkworms throughout his district. The resident in no degree superintends the
production of the cocoon, or of the worm, or of the leaf. The price paid is always subject to Simons, 1800.
the confirmation of the Board of Trade; they determine the price according to the opinion
they can form upon the general information obtained from the silk residents. The silk is
inspected at the export warehouse at Calcutta, and commission would be withheld from the
resident if it were not of proper quality. Each of the Company's factories employs numerous 1227.
pykars, who give security for the money advanced to them. The pykars deliver the cocoons
into the storehouses of the factories, where they are reeled into silk by native workmen, hired
and paid by the factory. The filature gomastahs, that is, the natives employed under the Wilkinson, 2216.
resident, inspect the cocoons, and if any are very bad the resident rejects them. The resident
looks occasionally at the operation of winding the silk, but no one European could be constantly
on the spot, and it is mainly superintended by natives. The pykar is allowed to be
at the filature whenever he likes, to see that justice is done to himself. A settlement is made

Simons, 1227. with the pykars for each bund respectively, but this does not take place until all the cocoons
of the bund have been wound into silk. When that is completed, the resident proposes such
a price per seer for the silk produced, to be paid to the pykar, as he judges reasonable,
having given due consideration to the productiveness or otherwise of the season, and to all
the circumstances attending the provision of the silk: this price is reported to the Board of
Trade for their approval. This course supposes that each commercial resident fixes the price
for his own particular factory, without reference to what may be paid by the other residents
for silk of the same bunds; but in 1827, the Board of Trade divided the silk districts into
circles, and resolved that one rate of price only should be allowed at all the factories in each
1228. circle. The price is calculated upon the quantity of silk which the cocoons produce, and
depends upon the favourableness or otherwise of the bund. In March 1831, the Board of
1227. Trade re-considered the system for providing raw silk, and came to a resolution to discontinue
the practice of settling with the pykars after the silk was wound, and determined to fix
and promulgate the price which the Company would pay, before the bund commenced. The
result of this measure cannot yet be known in England. The court have no certain information
of the prices paid by the pykars to the rearers of silkworms. The above is the
Wilkinson, 2277. general system; but in some instances the residents obtain cocoons directly from the rearers,
2324. without the intervention of the pykar, which mode is called the neez cultivation; and they
2267. occasionally buy silk under contract. There are 12 residencies, all in the province of Bengal,
and each under the superintendance of one European civil servant. In some instances the
residents are certainly not persons fully acquainted with the details of the silk filature, because
they are occasionally removed from a residency where no silk is got up, and placed over one
where little or nothing else is worked. They are hardly such persons as a manufacturer
would select to superintend such establishments; but many of them take a good deal of
Larpent, 1966. interest in their business. In all business requiring advances to be paid before the article is
delivered, there is considerable loss from bad debts.

Simons, 1080. On an average number of years raw silk has been a good remittance. It has been 2 *s.* 8 *d.*
Simons, 1068. 1082. per sicca rupee, about five-tenths of a penny above that made by indigo. If interest were
Larpent, 1966. reckoned on the advances made from the time of receiving them until the shipment of the silk
at Calcutta, and if the actual rent, wear and tear of the buildings entered into the computation,
there would probably be no difference between the remittance by silk and that by
Simons, 1939, indigo, which the Company do not manufacture, but purchase in the market. The silk does
1084. not realize in London as much silver as it cost in Calcutta; it is so far a losing concern.

There has been a progressive rise in the price of raw silk in India from 1815 to 1830,
occasioned by the Company endeavouring to increase their quantity. The supply was not
equal to the demand, and the growers availed themselves of that circumstance. The price in
1090. London has not fallen in the same proportion as that of all other Indian commodities. The
consumption of silk is steadily increasing, and the Company have endeavoured by all proper
means to augment the quantity of Bengal raw silk, and have been successful, as also in
maintaining its quality. No more silk has been produced than the market required; of other
commodities there has been evidently too much.

1095. The Company introduced into India the Italian method of winding silk, and at a great
expense have maintained that kind of machinery. If the Company did not continue to
produce silk, the Italian method of winding it would fail, and the silk fall back to its old
1101. character. Many years of assiduous attention have been paid to the Bengal silk by the
Company, and further measures are at this time in progress to introduce European silk-
Bracken, 1890. worms and mulberries. At present the Company's silk is unquestionably better than that
Larpent, 1969. imported by individuals, though the latter has been advancing in quality. There is no
danger of the character of the silk deteriorating if wholly in the hands of private growers,
as the price depends much upon the quality, and that upon the care which the individual
exercises in the production. The quality is of great importance.

Simons, 1093. The trade in silk is perfectly free. Persons have gone from England and built filatures at
1097. a considerable expense, but they did not find their purpose answered. The silk trade
Bracken, 1881. depends upon the growth of the mulberry tree: it is believed that it will only grow in certain
parts of Bengal. In every eligible situation the Company have a large tract of country
under the influence of their silk agents: individuals could not establish silk filatures without
1888. coming into competition with them. About five or six years ago, a gentleman was unable to
obtain permission to proceed to India, in consequence of its being supposed that he was
about to embark in the silk trade. Other gentlemen have gone out for that purpose, but
Wilkinson, 2190. have returned to England, finding that they could make nothing of it. The great price that
the Company gave to the rearers of cocoons was beyond what a private individual could
give. This was attributed to different causes: one, that it was done with the express purpose
of excluding the competition of private merchants; another, that as the agents are paid by a
commission on the price, it was more to their interest that that price should be large. The
orders also from home had directed a larger quantity to be transmitted. In 1826 the Com-
2204. pany gave on the average 14 *Rs.* 6 *a.* a seer, and it was said that it could then be pur-
chased by individuals for 12 *Rs.* and made for 10 *Rs.* 8 *a.* In 1826, Mr. Wilkinson
2102. went to Bengal for the purpose of introducing an improvement in the reeling of silk,
invented by Mr. Heathcoat, of Tiverton. The Court of Directors would not undertake
the experiment themselves, but they were willing that Mr. Heathcoat should himself
try the plan. When Mr. Wilkinson reached India, he found that there were no
2116. 2315. private filatures, and on application to the local Governor, who gave him every facility,
2119. 2305. the experiment was tried at the Company's factories at Santipoor and Rungpoor. On some
of the bales so completed, there has been an acknowledged superiority; but in others the
experiment failed, owing partly to the want of staple in the cocoons of India, and partly to
the

the inattention and carelessness of the natives: they require more superintendance. The Court of Directors did not think the improvement of sufficient importance to warrant their Wilkinson, 2300. giving any thing for the use of the patent. Mr. Heathcoat having a patent right, would have expected to be paid so much per lb. The improvement has been very generally introduced 2189. in France and Italy.

The Company's filatures with the machinery are probably worth 20 lacs of rupees or more, Simons, 1093. if actively employed.

No man or body of men could be found who would take the Company's filatures at any 1102. thing like what they are worth; if they did, judging from what is seen of private trade, they would degenerate. If the Company were to cease finding silk themselves, no doubt there Bracken, 1883. would be persons who would enter into the silk trade, but they probably would not take the Company's filatures, as they have erected more expensive buildings than individuals might wish to purchase; that is, if the Company were to expect interest upon their outlay; but if the rent were such as a private merchant could afford to give, there would be no difficulty. No private merchant going into the interior to engage in the silk trade, would think of erecting the sort of houses in which the present commercial residents live. The price of silk might be very much reduced by private competition and private economy, and the silk trade would be greatly increased. Generally speaking, the silk establishment of Wilkinson, 2235. the Company is on a good economical footing. The salary of the chief native servant of a factory is about 20*l.* a month. The house of the commercial resident is large, but perhaps it cannot be called extravagantly so. Many comforts are required in India which are not needed in England; and the expenses are greater than they would be here, in house-rent, number of servants, &c. If private individuals were to form silk establishments in India, they would not maintain their principal agents on so costly a scale. The Company have their dignity to uphold. The merchants in Calcutta and Europeans in general live in India in a more splendid style than persons of the same class in this country. If the Company Larpent, 1968. went out of the trade altogether, no doubt individuals would be inclined to take their factories. Silk has increased so much in consumption at home, that capital in India would be invested in its production, as has been the case with indigo; indeed, it would be very desirable to have another article in which capital could be profitably invested.

The silk of Bengal is not so strong in its nature as the silk of Italy, France or Turkey. Simons, 1095.

Italian silk is good, French silk is good, and Indian silk is also good, each in its way; 1102. and Bengal silk is as much required as any other kind, if not more so.

The principal part of that which comes from Bengal is coarser than that from Italy, Wilkinson, 2185. that is, there is generally a smaller proportion of the fine than of the coarse silk ordered by the Company. By the method adopted in India, more attention is paid to quantity than to quality, in as much as it is more the interest of the people who are concerned, especially the natives, to get a large quantity than to get a good quality, because their gain in proportion is larger. The inferiority of the silk arises in a great 2198. measure from the carelessness of the reelers. It has been attributed to their inability to do it better, in consequence of being overworked; but if that is the case in some of the districts, it certainly is not so in all. They require much closer superintendance than is given. If Europeans or half-castes were employed in the filatures as overlookers, the silk would be wound in a much better manner. Silk wound under careful inspection has been pronounced worth 2 *s.* a lb. more than the ordinary silk from Bengal. The people are not at all inferior as workmen to those of Europe; and as far as winding is concerned, they would, if more looked after, be at least equal, if not superior. A very considerable improvement might be effected both in the cocoon as it is spun by the worm, and in the silk afterwards as it is wound from the cocoon. Nothing like the same degree of care is taken as there is in France and Italy. The silk is foul and uneven, and what is called endy, having many 2298. breaks in it, occasioned by the plan of cleaning it on the reel, when the skein is on the full 2311. stretch, and when consequently an attempt to pull off what they call a gout, must naturally break the thread. By attention and care it might be very much improved; but after all, 2310. the climate of India is certainly against it. Improvement might be made in the mode of Wallick, 2417. feeding the worms, and rearing the plants they are fed upon; but it is doubted whether an improved breed of the worm itself could be successfully introduced from the south of Europe. At Tiverton, the average quantity of a 15-cocoon silk reeled per day from one basin is 10 Wilkinson, 2205. ounces; in India, 8 ½ ounces from the best, and a smaller quantity from inferior cocoons, although in India two skeins are wound at once on the reel, and at Tiverton only one; if they had wound two, the produce would be at least 16 ounces.

The mode of obtaining the silk piece-goods is, the commercial resident issues advances to Simons, 1000. the head native weavers, under contracts for bandannas to be delivered in return. The 1276. import of silk bandannas has rather increased, but not materially: they come at a remittance of about 1 *s.* 11 *d.* The quantity of bandannas brought by the private trade considerably exceeds that imported by the Company.

Cotton.

The cotton of India is bad, but from experiments lately made, there is no doubt that if Mackenzie, 91, good seed was procured, beautiful cotton might be produced abundantly. The failure of Bracken, 1850. the natives in producing superior cotton is not so much attributable to their want of skill Wallick, 2391. as to that extraordinary feature in the character of the natives, that they will not do that, at a greater advance of capital, or with greater exertion, which would give them a better return, if they can get it for less trouble by the use of less capital; they are the most improvident of the whole human race in that respect. A native of India will never exert 2346.

himself beyond what is necessary to procure the minimum of profit. To this state of
Wallick, 2394. things it is owing, for one instance, that the cotton plant is almost always reared as an
annual in India, whereas in America and the Leeward Islands, it is triennial. India
2392. produces of itself every variety of cotton; the justly celebrated Sea-island cotton is
actually in cultivation in several places in India; but owing to the manner of husbandry
among the natives, it very soon loses all its principal characters for goodness, and
returns to the quality of the original wild species. Proximity to the sea appears to be
a necessary condition for continuing the excellence of cotton, but the miserable husbandry
2398. is quite sufficient to deteriorate any cotton. That brought home is extremely foul; the
people who deal in it do not take those measures which would at once prevent that circumstance.
From the manner in which the cotton is cleansed, parts of the oily substance
of the seed are allowed to remain, and that not only discolours the cotton, but gives it an
oiliness, and a peculiar liability to become mouldy. It is conveyed to Calcutta in badly
constructed boats, without any sufficient protection from the weather, and after lying on
board four or five months, it arrives, as might be expected, in a dirty and filthy state. It
is then put into cotton screws, which are not worked in a proper manner, and is subjected
to an unequal pressure. With a quantity of seeds screwed into it, and in the state of
dampness and mouldiness in which it is imported into Calcutta, it is sent on board ship
for England. It is impossible that the finest cotton could, under such treatment, arrive
Simons, 1121. here in a better state than the Bengal cottons do. The Company export cotton largely from
Bengal and Bombay; and they did so from Madras till the factories were abolished, for the
purpose of contributing towards the purchase of the tea investment in China. The cotton is
purchased by the Company's commercial agents at the principal marts in the interior of India,
Mackenzie, 218 and not immediately from the grower. The purchase of cotton by the Company for the
China market is as objectionable in principle as that of silk, but it is not open to the same
220. degree of objection, because the trade is comparatively free. All articles produced by
natives, as cotton is, would be brought to Calcutta, if wanted there, without the intervention
228. of any European, and at less expense. The Company have paid more for cotton than they
ought to have paid.

Indigo.

Simons, 1024. THE Court of Directors, in the month of June yearly, transmit orders to the Governor-general
in Council, signifying their view of the quantity of indigo which may be provided in
the succeeding Indian season, and the prices which may be paid for it. The annual arrivals
of indigo in Calcutta from the interior commences about the end of October, and an advertisement
is then published in the newspapers, signifying that the Board of Trade are ready
to receive sealed proposals from such persons as are desirous of selling indigo to the
Company. Those tenders which appear most advantageous in price are accepted, reference
Mackenzie, 222. being had to the quality, which in indigo varies considerably. This course is continued
Simons, 1025. from day to day through the months of November, December and January, or until the
Mackenzie, 221. desired quantity is procured. The amount to be purchased is always kept secret, or
intended to be so. Any quantity may be tendered, and the Government reserves to itself
the power of taking any portion of that tendered.

Simons, 1027. The Company commenced making larger remittances in indigo to this country in 1819-20.
1038. The average remittance per sicca rupee has been rather better than 1*s.* 11¾*d.*; but in
1050. making up the account, interest has not been computed on the capital advanced. The
Simons, 1030. remittance of indigo has of late been a loss to the Company, and to every body who engaged
Larpent, 1979. 1986 in it. Indigo and other goods have recently been hypothecated to the Company by private
persons, who give bills of exchange upon London in repayment. This measure, however,
Simons, 1946. has not succeeded, the whole amount of bills so obtained being only 400,000 *l.* in
two years.

1094. The real manufacture of indigo in India was created by the Company; the old Indian
way of making indigo was very imperfect; the Company advanced money to the indigo
planters. But that which caused the great and sudden prosperity of the indigo trade in
Bengal, was the destruction of St. Domingo, which supplied nearly all the world with
indigo previously to the French revolution, and, after the revolt of the blacks did not
produce a pound. The indigo factories were all destroyed in the early days of the
insurrection.

Mackenzie, 214. The uncertainty of the demand with which the Company may come into the market,
226. must operate to derange private transactions, although the purchase of the article be conducted
on perfectly fair terms. The Company may come one year with 700,000 *l.* to buy
indigo, and another year may purchase none. This uncertainty probably raises the price.
Palmer, 1377. It is not desirable that the Company should continue purchasers of indigo upon the
present system, which has had the effect of raising prices considerably, and thus stimulating
an extra production, so as to occasion a glut in the market, and an undue depreciation.
Larpent, 1952. The Company have given an unnatural stimulus to the growth of indigo, and by their
1976. 1987. buying so largely every year, a higher price has been fixed than was justified by the state of
the home market. They have submitted to prices which no other merchant would have given,
and on which a loss must have been sustained. When it is known that a public body is to
come into the market for an extensive purchase, and that their ships are ready, and that
a large supply must of necessity be sent home, the whole trade is thrown into an unnatural
1983. state. The reduction of the quantity more nearly to the level of the consumption will be
1986. attended with the ruin of many factories, and much individual distress. The private
merchants have, however, overtraded at the high prices to a greater extent than the Com-
1988. pany have, owing to the necessity on their part also of making remittances to England.

The

The indigo trade will not increase much beyond its present amount, unless there should be Bracken, 1878.
a great increase of manufactures in this country. At present the supply is rather above Larpent, 1971.
the demand. Wallick, 2386.

At the existing prices Bengal indigo will drive all others out of the market. The better 1879.
description of factories can afford to grow it even at the present prices, but it will only just
pay them; it will not give any profit to an intermediate person, but only to the planter
himself.

The French consumption of indigo has much increased, and there has been of late years 1932.
a very considerable augmentation of the number of French ships employed in the indigo 1927.
trade. We do not allow the products of India to be brought here in French vessels, and
they therefore will not allow those products to be taken to France in British vessels. Their
merchants must, therefore, employ vessels other than British to import their indigo, and as 1928. 1933.
there is an additional duty in France on indigo imported *viâ* England, they can import it
more cheaply from Calcutta than London. All the indigo that goes from England to Hall, 2526.
France is taken in small Netherlands vessels to Flanders, and so imported into France;
some perhaps is smuggled in, but the greatest portion is regularly imported.

There are several plants that produce indigo, and that from which it is now commonly Wallick, 2423.
obtained is not likely to continue the exclusive source of that branch of trade. The plant 2342.
as it is now cultivated (without reference to the manufacture) is probably not susceptible of
much improvement. Great improvements have been made by Europeans in the manufacture,
but those who engage in its cultivation are still obliged to continue the old method of
making advances to the ryots for the supply. The native indigo was beyond description 2420.
bad; but even their mode of manufacturing it has been improved by the example of Europeans.
The success that has attended the production of the plant by the natives, is 2419.
attributable to the extreme facility with which it is grown, and the abundant crop which
is produced in favourable seasons. It is an annual requiring little care, and bringing
a prompt return of money, with a small amount of labour; an object the natives always
have in view. The extent of country occupied by the indigo planter appears to be excessive, Mackenzie, 91.
for it is understood that it requires on an average 40 begahs of land to produce a maund of
indigo. Better farming would probably increase the produce.

Lac-dye.

SEVERAL plants produce lac-dye; many species of figs and of jujubes, the polash or Wallick, 2435.
dak, a sort of cytisus, and even a sort of mulberry, besides others. There has been improvement
in the production. The article itself is very important; but it is considered
inferior, because the operation employed in India for extracting it is very crude. It is a red
dye, used in the dyeing of cloths: it is not likely to interfere with indigo. 2434.

Sugar.

THE manufacture of sugar appears to be very ill conducted in India, and the land fit for Mackenzie, 91.
sugar-cane to be very abundant. The production of sugar might be extended by a better
mode of manufacture; and, independently of foreign export, there is a large demand for
sugar in India, which would be extended in proportion as it is more easily obtained. It is Wallick, 2388.
at present exceeded in consumption only by rice: a more judicious selection of cane, and,
above all, a more fit and economical extraction and conversion of the juice into sugar (the
present manufacture being of the rudest kind), would occasion a much greater demand for
the article. Sugar is likely to be an article of great commercial importance, if more 2386. 2412.
cheaply produced, as the only limit to its consumption is its price. Sugar manufactories on Bracken, 1863.
the West India process have been recently established.

The Company have a factory at Benares, with some established servants, who employ Simons, 1002.
agents to go about the country and buy sugar, after it has been refined, from the petty
manufacturers; but orders have been recently issued to discontinue the import of sugar. 1001.

Saltpetre.

THE import of saltpetre by the Company was, in 1814, 146,000 cwt., and is now 37,300. 1107.
The trade has been entirely free since 1814. Since the private trader has imported it, it
has fallen to so low a price that it has been bought as manure for land. In 1814 the price
was 89*s.* 6*d.* per cwt., and in 1823, 21*s.*; but it has since risen to 42*s.*, and is now 37*s.*
Previously to 1814 the import by the Company was profitable to them; since that period
it has been, until 1830, unprofitable. They manufacture it themselves: it can only be made
in the dry season.

Tobacco.

TOBACCO has no native name, a proof that it is not the produce of India, but it has been Wallick, 2425.
there from time immemorial. It is one of the smaller cultivations of India, and is only
produced for domestic use. The natives of Hindostan, high and low, Mahomedans and
Hindoos, consume it, but nevertheless the quantity of tobacco used is not large, as it is
not consumed in the raw state as in Europe, but mixed up with molasses, spices and fruits.
On very rich land there have been produced per acre eight maunds, that is, 80 seers, about
160 lb.; but on the average, four maunds would be considered a fair return in green leaf.
The tobacco in India is altogether bad; but there is a great probability that it might be Mackenzie, 91.
improved. India is capable of producing good tobacco; that grown in the Northern Circars, Wallick, 2428.

to a very limited extent however, and converted into snuff at Masulipatam, is much prized in England. Another esteemed kind, but also of limited produce, is grown at Bundlecund; and some exellent Havannah tobacco has been grown at Boglipoor. Some from the Wallick, 2427. Burmese country has been reported by brokers in London as equal to the best from the West Indies. Tobacco is used to a certain extent in China with opium.

Coffee.

2401. THERE is great room for improvement in the production of coffee. It is only since 1823 that it has been cultivated extensively. The Government then allowed planters to engage in the cultivation, under facilities which have never been conceded to any other branch of planters, namely, permission to hold lands for a long series of years, and to grow any other article on certain portions of those lands *bonâ fide* intended for coffee. In Lower Bengal 10,000 or 12,000 begahs (about 4,000 acres) have been laid out in coffee, principally by Europeans. A number of mercantile houses, as well as private individuals, have entered upon the cultivation, but coffee being a shrubbery plant, requires at least 10 years to come properly into the market. The coffee produced in the Botanical Garden at Calcutta was very good. Bengal and the Burmese territory are peculiarly fitted for the cultivation; the Upper Provinces are entirely unfit. The consumption of coffee in India is limited, as the Hindoos do not drink it, though it is not known that there is any religious prejudice against it.

Iron.

Bracken, 1841. MR. HEATH, formerly of the Madras Civil Service, has gone to that Presidency with a monopoly of the manufacture of iron, for the remainder of the Company's Charter. He has set up a foundery at Porto Novo. The iron cast there is of the best possible description, and is cheaper than the cast iron sent from this country. He has made knives and scissors considered equal to any from Sheffield; but it is likely that he will find it more to his advantage to send the iron to be manufactured into articles at Calcutta. There is also a great quantity of iron ore in the vicinity of Burdwan.

Coal.

Peacock, 1568. Johnston, 1709. CUTCH coal has not been found good for steam-engines. There is no coal on that side of India sufficiently good; and at Bombay English coal has been found cheaper and more available than that of India. The Burdwan coal is the best in India, and none other is used in Calcutta. The price is 10 annas (ten-sixteenths of 2*s.*) per bushel. It does not cake, Bracken, 1859. but burns to a white ash. It is not so good as English coal for the manufacture of iron. The coal-field at Burdwan is very extensive: the seam now working is about nine feet thick, and 90 below the surface; it extends in a nearly horizontal direction. The water, which is principally rain-water, is pumped out by a small steam-engine. There is another coal-field worked at Mirzipore, about 40 miles from Calcutta. This also extends over a considerable Johnston, 1780. part of the country. The best English coal is, in regard to strength, to the best Bengal coal, in the proportion of 5 to 3.

Timber.

Wallick, 2347-2356. THE timber of India might become a commercial resource of greater importance than it is at present. The forests contain every description of timber in the world, or a substitute for it. The principal kinds are, teak, saul, sissoo, toon, jarrool and mango: the last is ex- 2351. 2369. cellent for ordinary purposes. Saul is useful for ship and house-building, and also for gun-carriages, and other military purposes. 2358. There has been, owing to bad and extravagant management, a great falling off in the production of saul, sissoo and bamboo. 2356. There is a great abundance of pine and oak. If there is any point on which European skill might be profitably employed, it would be in establishing saw-mills, and local half-wrought material depôts, by which means the enormous risk that is experienced in floating down the timber entire from Cawnpore and Goruckpore might be obviated. But European agency would be still more advantageous with reference to the forests in Martaban and on the Tenasserim coast, which are not so destructive to Europeans as those in Hindostan; it 2360. would also be particularly applicable in the continuance of modes for conveying timber, now considered inaccessible, and in introducing a regular system of seasoning. The timber that is felled to-day is likely to come into the market to-morrow, and to this circumstance 2364, 2370. more than to any other is to be attributed the devastation by white ants and dry rot. The timber of India might become an article of foreign trade.

Steam Communication, by way of the Cape.

Peacock, 1450. Johnston, 1662. THE Enterprise steam vessel, of 120-horse power, was 113 days (103 of which she was actually under weigh) in reaching Calcutta from England, by way of the Cape of Good Hope. She used both sail and steam. The consumption of coal was 580 chaldrons. The speed of this voyage was not considered sufficient to warrant the expense and trouble; and it does not appear that a much better result can be expected, on account of the difficulty of obtaining relays of coals, and the time that must be wasted in getting them. Mr. Waghorn was very confident he could accomplish the voyage in 80 days; and Mr. Perkins proposed Peacock, 1452. to do it in a vessel of 1,000 tons, to carry 800 tons of coal, in 60 days; but the success of Johnston, 1721. such a plan is not very probable. The only advantage attainable by steam, in proceeding 1665. round the Cape, appears to be to have steam-engines of about 30-horse power fitted into sailing vessels, to cross the variable winds. The expense of the voyage of the Enterprise

Johnston, 1716. was 43,000 *l.*; she was sold to the Supreme Government for 40,000 *l.*, otherwise the proprietors would have sustained a considerable loss. It was expected that she would have made the voyage in 70 or 80 days; but her capacity was so great that her rate of speed was very slow; she was unfit for the purpose. Under improved arrangements a voyage from England to India may be accomplished with greater success. Vessels of the first class of speed should be employed: they should not carry more than 10 days' coal, and the depôts for that article should be so arranged as to leave not more than 1,200 or 1,300 miles between any two, and to be chosen at ports where the coal might be put on board with the least possible delay. The voyage might, on the average, be performed in 80 days, that of a sailing vessel being from 120 to 130. But in the present state of steam navigation it can never be accomplished but at a heavy sacrifice of money, and therefore would only answer if Government judged it expedient to have a quick communication without reference to the cost.

By way of the Red Sea.

Peacock, 1454. and 1584. The great objection to the steam communication between England and India, from Bombay by way of the Red Sea and Alexandria, is the enormous expense. The coals burnt in the Red Sea cost about 7 *l.* a ton; (30 *s.* cost in the Thames; 40 *s.* freight to Bombay; 50 *s.* from Bombay to the Red Sea, besides loss in removal and expense in landing, &c.) Each vessel employed would, at the lowest calculation, cost 25,000 *l.* a year; and four are required on each side of the isthmus. Steam-boats are the only vessels that can navigate the Red Sea with any certainty, in a reasonable time. The Hugh Lindsay, steamer, reached Suez from Bombay in 33 days, 20 working and 13 at anchor. The return voyage occupied 37 days, 20 working and 17 at anchor. At another time she went from Bombay to Cosseir in 22 days, five of which she was detained at anchor, principally for the purpose of getting coals. With respect to the transit of the isthmus, it is 70 miles from Suez to Cairo, usually performed on camels; from Cairo to Alexandria, by land, 140 miles; by the river, and round by Rosetta, 250. From Cosseir to Suez, by sea, is about 300 miles; from Ghenna to Cairo, which is the parallel part of the Nile, about 450; from Cosseir to Ghenna, by land, 120. The north wind blows down the Gulf of Suez all the year, except in December and January, which makes it advisable rather to go by Cosseir. At the mouth of the Red Sea the winds blow from the south-east from October to June, and in the other months chiefly from the north-west: at Socotra, from October to May, the winds are east, and from May to October west. There are no steam-boats on the Nile: the navigation would probably be favourable for them for a part of the year, from August to March. The canal from Alexandria to the Nile is not available for steam-boats. 1568. The coal sent to the Red Sea is usually coal which has been imported into Bombay from England. Cutch coal is not good for steam-engines, and the Burdwan coal must be sent from Calcutta. English coal is preferred, and has been found cheaper. 1503. There is no fuel on the Red Sea. If a ship canal were in existence from Suez to the Mediterranean, the trade between India and England might be carried on through that channel, and it would be the best of all for steam navigation, but it would give an advantage to Marseilles and all the French ports of the Mediterranean. 1512. In favourable seasons the despatches are received by way of the Red Sea in two months: perhaps with a better steam vessel and every thing favourable they might be received in six weeks.

Johnston, 1725. A monthly communication might be maintained between Bombay and Suez at an annual expense of from 45,000 *l.* to 50,000 *l.*, but not under existing circumstances. A different description of vessel must be built. It would perhaps answer ultimately as a commercial speculation, but it must be well established before any returns can be expected. A privilege of charging postage might be granted; but the principal returns would arise from the conveyance of passengers and packets. The British trade with India would not be materially affected by a ship canal uniting the Red Sea with the Mediterranean. The voyages would generally be longer by such a route than by the Cape; and the British trade might suffer from the advantages which such a route would give to other nations.

By way of the Euphrates.

Peacock, 1474. Cabell, 1649. From Bombay to Bussorah is 1,600 miles; from Bussorah to Beles on the Euphrates, between 900 and 1,000; and to Bir, 100 more. The Euphrates was formerly navigable; it has not recently been much used from Bir to Hillah: from Hillah to Bussorah it is still used by vessels drawing six feet water, almost all the year round; and the upper part of the river above Hillah is said to have more water. From Beles to Latichea, by Aleppo, the best route, is 160 miles; from Bir to Scanderoon, 120, but that road is troublesome. There is a great deal of wood and bitumen on the Euphrates; the two together make excellent fuel. From Aleppo to Bussorah, by land, is 718 miles. There is another land passage from Beles to Aleppo and Antioch; it would be a good deal nearer than Latichea, and it would be the best of all routes if the Orontes were made navigable to Antioch. The stream of the Euphrates runs at about three miles an hour. Peacock, 1500. The preferable communication with England would be by the Euphrates, if it could be rendered safe from the Turks and Arabs; but it would not answer for the purposes of commerce. Perhaps by that route letters might be received in five weeks. 1522. It would also be the cheaper route. Coals might be sent to Bussorah at 4 *l.* 10 *s.* per ton. 1584.

Appendix, No. 3.

On the Rivers of India.

Peacock, 1534. THE objects proposed to be accomplished by steam navigation on the Ganges are, the conveyance of public treasure; of commissariat, military and medical stores; of troops; of junior officers, who are generally sent up the country at the charge of Government; of stamped paper, &c. more expeditiously, cheaply and safely than at present. It is not considered that steam navigation could be rendered useful for the conveyance of bulky merchandise or of letters, as it is not expected to be sufficiently expeditious to supersede the common dawk.
Peacock, 1552. The expense for boats now is about 40,000 *l.* per annum. The estimated annual expense of the steam-boats is the same; but it is calculated that the public will defray a part of the
1542. expense by using them for the conveyance of treasure and small parcels. Iron vessels are
Johnston, 1754. to be constructed to draw only two feet of water. It is supposed that they will be able to navigate the Ganges as high as Furruckabad.

173. Almost all the eatables sent from Europe, cheese, hams, preserves, beer, &c. would be conveyed by steam to the Upper Provinces in a state of high preservation; their arrival in a fit state for consumption has hitherto been very precarious. The consumption of all articles of import would be much increased by an expeditious mode of conveyance to the Upper Provinces, and the quick returns to the merchant would much more than compensate for a small increase of freight on the most bulky articles, and on small and light packages the freight would be less than the charge by dawk. In descending the stream the advantage over the common country boats will not be very great. Steam navigation will considerably reduce the expense of water carriage to Government.

Peacock, 1557. The Indus is perfectly navigable from the sea for at least 1,000 miles. The entrance is
1567. bad. There are few rivers in the world where steam might be used with better effect; it
Cabell, 1645. 1648. has no rocks or rapids to obstruct the ascent, and the current does not exceed 2½ miles an hour. The absence of coal would be amply supplied by the great abundance of wood which the banks of the river everywhere furnish.

India Trade.

Bracken, 1801. THE commerce of Calcutta was in the hands of a very small number of houses before the opening of the present charter. Previously to that time the houses were chiefly formed of gentlemen who had been in the civil and military service, but who perhaps finding their habits better adapted for commercial pursuits, obtained permission to resign their situations and engage in agency and commercial business; they had of course a great many friends and acquaintances in their respective services who lodged with them their accumulations. This money they lent to others, or employed themselves for purposes of commerce; they were, in fact, at first rather the distributors than the possessors of capital. They made their profit in the usual course of trade by commission, and by the difference of interest in lending and borrowing money. In the course of time, by carrying on a successful commerce, many became possessors of large capital, and returned to England, leaving great part of it in India; but the persons who succeeded, generally came in without capital of their own: the same system was continued, and those houses became the usual depository of a great proportion of the savings of the military and civil services in India. When there were very few houses of business, very large fortunes were made by some of the gentlemen in them. After the opening of the trade other houses were established, connected more particularly with Liverpool and the outports, and that spread the business a great deal. The older houses have not now the same monopoly, as it were, which they formerly enjoyed; all the houses of agency receive deposits, pay drafts and discount bills, but only one of them issues notes. The charge for agency made by the native houses is nearly one-third less than that made by European firms; the latter would probably charge on the purchase of an invest-
1806. 1930. ment 2½ per cent. and the former 1¾: but the business of the native houses is confined almost exclusively to their acting as brokers for American vessels.

1798. 1869. There are about 30 or 40 mercantile houses now in Calcutta. There is little or no distinction between the credit of the old houses and those which have been more recently
Larpent, 1992. established. The Government might take bills of from 20 to 25. The usual practice is to consider about 10 of them as houses of undoubted character and extensive connections and means.

Bracken, 1914. The commercial transactions of Calcutta have very much increased of late years.

Simons, 881. The increase of exports from England to India is in British cottons: spelter has also been an increased article of trade, but there is no British spelter; and in that article the trade
Bracken, 1810. has been overdone, and the price consequently reduced. The principal increase of the trade has been in cotton manufactures; but even exclusive of them there has been an increase.
1795. 1934. There is not the slightest objection on the part of any native to use articles of British manufacture. The only check has been the want of means to purchase them. Even liquors are now consumed in large quantities by natives in Calcutta who can afford to buy them. The cotton piece-goods are almost entirely used by the natives, being converted into clothes for their own use. The cotton twist is worked up for the same purpose; the lower numbers into the very coarsest kinds of cloth, in which the English manufacturers have not yet been
Palmer, 1340. able to compete successfully with them. There do not appear to be any articles of exports from this country which India could take more than are now sent.

Twist mills have been lately established in India. It is doubtful whether they will be
able to compete with the cotton mills in England. There is great difficulty at present in Appendix, No. 3.
repairing the machinery employed. The cotton twist that has already been made at those
mills of corresponding numbers with those sent out from this country, has not been so much Bracken, 1838.
liked by the natives as the English; it bears a less value than the corresponding numbers
from England.

The products of India, which are more likely hereafter to be of commercial importance, Wallick, 2384.
are sugar, cotton, coffee, silk, indigo, tobacco, and perhaps tea, if the cultivation should 2455.
succeed. There are other articles which India has formerly been thought capable of supplying,
but which, in consequence of particular circumstances, have been abandoned; for
instance, hemp: it has been supposed that India produces kinds of hemp which are
unequalled for strength of fibre. The production of spices might be carried to such an Wallick, 2440.
extent as to be limited only by the demand.*

American Trade.

The decline of the supply of camlets for the China market by the Company, arises from Simons, 905. 1266.
the supply being illicitly introduced by the Americans; a matter which is as little to be
doubted as any thing which is taken on opinion and trust can be. Large quantities of
British manufactures are exported direct from this country to China by the Americans. 911, 938.
They purchase camlets, but not long ells to any extent, because the duties in China on the 1259.
latter are so moderate as not to afford any inducement to smuggling. The broad cloths
which are rejected by the Company are purchased by the Americans, they also have some 1271.
made, and they are now having some made rather of a better kind than the Company's.
The Americans have pushed the trade of British manufactures in China to a very considerable Bracken, 1899.
extent, and to an extent to our disadvantage. Their trade has decreased, but that is
attributable to the cessation of hostilities. When we were at war with the Continent they
carried on the whole trade between Europe and China.

In India the Americans generally employ native brokers to purchase their cargoes, as 1805. 1930.
their charges are about one-third less than those of the European agency houses. The
cargoes are in a great measure purchased by bullion, or by bills drawn, under letters of
credit, on Messrs. Barings' house, or Mr. Wiggins, or other houses in the American trade. 1807. 1924.
A very large amount has been raised by the Americans in that way, probably 200,000 *l.* or
300,000 *l.* in a year. One reason, perhaps, why they do not take merchandise is, that it is
subject to double the import duties imposed on British ships; they do, however, sometimes
take merchandise, and even English merchandise; but the relations of trade between India
and America are not the same as between England and India. They have from 15 to 20
ships every year in Calcutta. They take back indigo, silks, and a great deal of saltpetre. 1923.
The greatest proportion of them clear out for the United States, but they sometimes clear
out for the Mediterranean and the northern ports of Europe; they do not go from Calcutta
to China.

French Trade.

The French deal chiefly with the French mercantile houses which are established in Calcutta. Bracken, 1933.
They import a great quantity of wine, of which the natives now drink freely †;
champagne is their favourite. There has been a very considerable increase in the ships
under the French flag employed in the indigo trade. The French consumption of indigo has
very much increased lately. Owing to the treaty of navigation between this country and Bracken, 1927.
France, the indigo can be imported more cheaply from Calcutta than from London. As we 1929.
would not allow their vessels to bring Indian articles to this country, they will not allow
English vessels to take them to France. There is an additional duty in France on indigo
imported *viâ* England.

If some arrangements could be made with the French Government with respect to the Hall, 2523.
principles of our navigation law, which they now enforce against us in regard to goods the produce of India, it would be very beneficial; at present the French Government interdict the importation of all goods, the produce of Asia, direct from this country to France; they are therefore subject to the expense of a transit through Flanders, and thereby the direct trade between India and France is encouraged; but that trade is very limited; and provided the discriminating duties which exist in India were abandoned, it is possible that the French might abandon the restriction which affects the direct importation from this country. The French purchase in the Indian market at a great disadvantage: in indigo, for instance, there are only two or three qualities which are chiefly suited for their market; but they are compelled to buy an article which does not suit them to obtain one that does, and thereby increasing the cost of the former. In the outfit they have a difficulty in obtaining dead weight, and whatever freight of that kind they carry out must be attended with great expense. Not more than 10 or 15 ships go annually from France to British India. The quantity of wine shipped is not large, as it is understood that there is a predilection for wine which has been deposited in this country with some known mercantile house.

† See to the contrary, Dr. Wallick, 2415.

---

* For extracts from official papers relating to the trade with Ava, Central Asia, Persia, &c. *see* Cabell, 1631, *et seq.*

Opening of China Trade.

Palmer, 1426. The private trader is under great delusion as to the real advantage to be derived upon opening the trade with the port of Canton, particularly so far as regards the export trade from England in manufactures, and from other parts of Europe in articles of general produce for sale in Canton, for the purpose of purchasing the return cargo. He will not find that beneficial market which he contemplates for European articles; and as regards the article of tea constituting his return cargo, he will sustain this further inconvenience: the East India Company are obliged to keep a year's stock in advance, which must necessarily be brought into the market when they are no longer by law required to retain it in their warehouses, so that the private trader, after having sustained the natural effects of competition in the purchase at Canton, and bought the article at a high price, will be met in the home market by the Company's stock, and will consequently find a low rate of sale. Seeing the manner in which the common people of this country consume tea, and the price they pay for it, there appears no reason to suppose that if they could obtain double or treble the quantity at the same price they would not take it: the consumption might be increased to almost any extent.

Bracken, 1896. British manufactures would drive the native manufactures of China, or a great proportion of them, out of the market, if greater facilities were afforded to persons trading to Canton. In the article of cotton twist, there has been a growing demand; and one proof of its being very acceptable to the consumers is, that the Chinese spinners have become very jealous of it, and have tried to destroy it wherever they can find it. The Chinese are a very commercial nation, and in spite of obstacles presented by their government, trade would be carried on. The Americans have pushed the trade to a very considerable extent, and to an extent to our disadvantage; their trade is not so great as it was, on account of the cessation of hostilities: during the war they carried on the whole trade between Europe and China. 1910. If the trade were unrestricted, merchants would take out manufactures to India or China direct; if to India, they would there take in opium or cotton for China, and the same vessel might immediately come with a return cargo of tea to this country. The persons that go from Calcutta to Canton do not appear to fall into disputes with the Chinese.

Larpent, 1973. The trade to China should be as free and open as possible, with the only limitation arising from the peculiar nature of the Chinese, the apprehension of collision with them, and perhaps the advantage to be derived from having an intermediate body to deal with in the purchase of tea, in preserving it free from adulteration. 1942. 1995. Referring to the exclusion from Japan, a country somewhat similar, it is doubtful whether the agency of the Company ought not to be used in the purchase of teas. Their factors might, through the Hong, purchase the tea on a rated allowance per lb., or a per centage; and there is no doubt that, the general trade being left entirely free, merchants would purchase the tea of the Company, and bring it to England, and that by this mode every thing connected with China might be carried on with safety. The only questionable point in an entirely open trade, is the possible collision between the private purchasers and the Chinese sellers of tea. A provision, however, should be made in any new Act, that if it were found expedient at any time to throw open the purchase of teas, even that should be taken away from the Company, because a monopoly trade of any kind is not justifiable, except on the sole ground of its being dangerous to the existence of the trade itself to remove the restriction. In all ordinary trades, with ordinary nations, individual enterprise and skill will best accomplish the object; but considering what is known of the Chinese, and that the evidence is so conflicting, it would be extremely desirable to interpose in the purchase of teas a united body like the Canton factory to negociate with the Hong. It would oppose a combined strength to the combination that exists in the Hong, and prevent an undue enhancement of prices, or excess of charge on the tea; and, above all, it would prevent the adulteration of the article itself. The very danger to which we are now subjected in China shows the inexpediency of a consular establishment; for the recent collision is to be attributed, perhaps in a great degree, to the diplomatic or non-mercantile character of the present factory. The young men sent out are highly educated, and their feelings are more alive to the honour of their country and the political position in which they consider themselves placed, than influenced by the mercantile views which ought to govern them. Any thing in the nature of a consular establishment would at once bring the British into contact with the Chinese government, in which case we should be bound not to pass over insults which might be offered by the arrogance of the latter, and which might ultimately produce hostility; and a war to force a trade would not only be exceedingly questionable in its principle, and enormously expensive, but very problematical in its result.

Hall, 2562. If the Chinese trade were thrown open, and the tea trade confined to ports having bonded warehouses and docks, the revenue on tea would not be subject to any insecurity whatever. The St. Katharine's Dock Company could collect the revenue upon every article deposited in the docks, for the Crown, at a great saving of expense. The tea would be weighed on landing, and the chest emptied and tared, unless a fixed tare were agreed upon; the net weight of the tea would then be obtained, and the quality being valued on which the duty would be payable, provided the duty were taken on the landing weight, it would be inserted in the books of the Dock Company. There would be no difficulty in their selling the tea, and

and collecting the duty *ad valorem.* Competent persons might be found to judge of the tea, as the East India Company's warehousemen do. If there were any combination among parties to sell or value the tea at too low a price, the revenue officers might take it for the Crown.

Currency.

Mackenzie, 312. THERE should be one currency for all India, and that should be equivalent to the Madras rupee, as a rupee of that value is the most extensively circulated. There would be the saving to Government of the expense of a re-coinage, in the case of a remittance, which frequently happens, of money from one part of the country to another; and the loss and inconvenience to private merchants would be obviated. Now, the rupees of one place are received merely as bullion in the other; and, excepting at the mints, are not legal tenders at all. If there were but one currency, the mint expenses might probably be reduced, and perhaps the Madras mint abolished. Any addition to the number of coins current would be a source of vexation and annoyance to the people, and the great object should be as far as possible to simplify the currency: the poorer classes are always subject to loss in exchanging money. The silver coin in Calcutta is the sicca rupee; the gold mohur is also a legal tender for 16 rupees, but as the relative value of gold has risen much (one-eighth) above the mint rate, and the mohur consequently may be sold sometimes for 18 rupees, it has ceased to be current, and therefore, practically speaking, the only legal tender is the sicca rupee. Palmer, 1331. The value of gold has risen gradually since 1793, and there has been a considerable increase since 1814. Gold neither does nor will circulate to any extent as current coin in India, where silver forms the actual currency, and is a legal tender. It is doubtful whether it would be proper to introduce gold as the current coin. Mackenzie, 327. Since 1793, all other rupees than the sicca have been received at the mint, but not re-issued by Government. If the deficiency on the old coins does not exceed about two grains, they are received as of full weight; if it exceeds that allowance, they are received only as bullion, but they are not subject to any mint charge for re-coinage; whereas, since 1812, there has been imposed on other silver bullion a seignorage duty of two per cent. 632. If the silver is below the dollar standard, which is five or six worse than the rupee, a charge is made for refining, according to the degree of inferiority: of late comparatively little coin has been taken for re-coinage. When the bullion is delivered into the mint it is examined, weighed, and passed through the fire, and specimens sent for assay. The proprietor receives a certificate of the amount of coin due to him, which is intermediately receivable in payment of Government demands, and the coin is issued in about three weeks. The coinage is at present very well executed by machinery from England.

The difference between the Calcutta and the Madras rupee is about 6⅝ per cent. 355.

The Bombay is now of the same value as that at Madras; it was formerly a trifle less valuable.

Silver should continue to be the currency, and gold be left to fluctuate as merchandise. 361.

There is no restriction on the export of the coin from India. 386.

Copper money is issued at Calcutta at the rate of 64 for the rupee, which is above 100 per cent. above the value of the copper. 641. Several millions of pieces have been struck, and the demand, it was understood, was not confined to Bengal, but extended to the eastward. There has also been a scheme under discussion for coining spelter, in the expectation of displacing the cowries now used as a currency in petty market dealings.*

Banks.

Mackenzie, 135. MESSRS. ALEXANDER made an attempt to establish a bank in the interior, at Bhauleah, but it did not succeed.

Bracken, 1803. Mackenzie, 529. There is only one private banking house in Calcutta that issues notes. There are only two private banks that issue notes at present; the bank of Hindostan, of which Messrs. Alexander are proprietors, and which has been established 60 or 70 years, and the Union Bank, supported by an association of subscribers. There were two other banks; one belonging to Messrs. Palmer, and another managed by Mesrrs. M'Intosh, called the Commercial Bank, but they have ceased. The circulation of the Bank of Hindostan was at one time between 40,000 *l.* and 50,000 *l.*, but their issues have been much contracted since those of the Bengal Bank have increased, and since the shock occasioned by the failure of Palmers' house.

389-610. The Government Bank was first established in Bengal in 1809: it has been a source of great convenience both to the community and to Government, especially in Calcutta, where its notes have chiefly circulated. They have also afforded an advantageous means of remittance to and from the districts, and the necessity for bullion remittances has been much lessened. The circulation depends chiefly upon the Government treasuries which receive the notes. In the interior they are almost immediately paid into the Company's treasury, and although they furnish the merchants and the Company with a convenient means of remittance, they can scarcely be said to exist in the interior as a paper currency. Payments are made in such small sums, and the population is so poor, that there is scarcely room for a paper circulation. The currency used by native dealers is the coin of the country. The Bank

---

* As to Paper Currency, *see* Banks.

Bank does not keep accounts with individuals in the country, its transactions are confined to Calcutta. It is a bank of discount and of deposit: it does not allow interest on deposits. Its largest issues are in loans for three months or less, upon the security of the Company's paper. It also discounts Government bills, and private bills with two good names. The loans on Government paper are to the advances on private bills as 50 to 15 or 20. The average of the Bengal Bank paper circulation is about 800,000 *l.* The notes vary from 10 rupees to 20,000. The largest proportion of the circulation is in notes of 100 rupees and upwards. The greater part of the payments of 10 rupees even in Calcutta are made in coin, not in paper. The average dividend has been 9 or 10 per cent., and the stock sells at about 50 per cent. premium. There is no prescribed maximum of dividend. The bank is under a charter, granted by the Governor-general in Council, by virtue of powers vested in him by Act of Parliament: there is no other chartered bank. The chartered privileges are, that it can sue under its common seal, and that the proprietors are not liable beyond the amount of their subscription. Besides these privileges, the bank has the advantage of the resolution of Government to receive the notes of no other bank in payment of the Government demand. The taking the notes would be a recognition of their security, which the Government would not be justified in giving, without an inspection of the proceedings. The Government are in part proprietors; they advanced 100,000 *l.* out of 500,000 *l.* The share which the Government has had in the management has been advantageous to the public. Its proprietorship has not biassed its conduct, as the largest possible dividend on 100,000 *l.* must be a matter of comparative insignificance to the Government. The capital is divided into portions of 1,000 *l.* each: no proprietor can hold more than 10. There are three directors appointed by Government, and six elected by the other proprietors. The president is elected by the directors, but he has always been a Government officer; he takes the lead in the business of the bank; he is elected once a year, but he may be re-elected. The Government directors are all official men. The other directors are generally, but not always, chosen from among the principal merchants. The private directors are sufficiently independent of Government to resist what they think wrong, and are in fact free agents, yet the Government directors have, from the force of their official situation, considerable influence over them. None of the directors are paid: natives may become directors. Some of the proprietors are residents in Calcutta, but a considerable number of them are retired civil and military officers. The Company's servants are allowed indiscriminately to be shareholders, and there is no objection to such permission. The proprietors can vote by proxy. Twice a year a statement of the affairs of the bank is submitted to the proprietors, and sent to the Government. It is not published, but it is read at a general meeting; that meeting, however, is seldom attended by more than one proprietor, besides the directors. There has been no collision between the Government and the other directors, but there has often been a good deal of discussion. The directors, or a part of them, meet once a week to examine the state of the accounts, to determine the extent and rates at which accommodation shall be given, and to settle other matters. In the intermediate days private bills offered for discount are sent in circulation in closed boxes, and referred generally to two of the private directors and to one Government director. Complaints have not unfrequently been made by the public with regard to discounts. At the commencement of the Burmese war, the Bank, having large funds unemployed, subscribed 25 lacs to the loan then opened: they have not on any other occasion made advances to the Government. Afterwards, when the state of their funds rendered it necessary, the bank got rid of the Government paper by a re-sale, with the view of extending its loans and discounts; but it is considered that they had locked up on that occasion too much of their capital, which would have been better employed in loans and discounts. They have always held a certain sum in the Company's securities, but these have been generally purchased in the market from individuals. The amount however so held has sometimes been larger than it ought to have been, and it has been found that it could not be sold so easily as the bank wished when money was wanted. The bank has lost considerably by bad debts, and still more by forgery, the Company's paper deposited with them for advances having turned out to be forged. The bank do not act as Government bankers; the Government keep their own treasury quite distinct; but they frequently hold a considerable sum in bank notes. The general rule was, that there should be no accumulation of notes in the Government treasury, beyond what it was convenient to have for the transaction of business; and though it was an object to avoid suddenly returning large sums upon the bank, or any measure that should unnecessarily interfere with the equal course of its operations, the end aimed at was the advantage of the public, and the promotion of the Government revenue, not the separate interest of the bank. The control exercised by the Government directors is the only direct control exercised by the Government over the bank, but it now holds its charter at the pleasure of Government. In 1823 it obtained a new charter for five years: under the old, the notes issued were confined to the amount of the subscribed capital, 500,000 *l.*; and the cash fund was to be equal to one-third of the issues. Under the new charter the cash fund is reduced to one-fourth, and the notes issued may amount to 2,000,000 *l.* in value, but there has never been a demand nearly to that extent, though the former circulation was too restricted, and the notes sometimes bore a small premium. The Government formerly required the bank to lodge 20 lacs of the Company's paper in the general treasury as a security for the notes which the Government take, but that condition has been relinquished since the renewal of the charter in 1823. It is not necessary for the due execution of the financial operations of Government that they should have a bank to which they can occasionally resort for accommodation. It might be beneficial to reduce their balances, and apply to the liquidation of debt a sum that now lies idle in the treasury. In this way the existence of a wealthy

Mackenzie, 677. 420.

a wealthy bank, which could make advances equivalent to the demands against which Government has now to reserve funds, would be a convenience, but it is not necessary. And it is, on the other hand, rather undesirable that the Government should rest upon a bank, from the danger that if it do so, it will often draw so much from it as to interfere with its advances to individuals. At the very time of difficulty when it is pressed, it would come upon the bank, and that is the time when the bank should support the merchants. The bank might in a considerable degree supersede the general treasury as an engine of payment, and there might in that way be some saving of charge; but there is the danger of the funds being diverted from their proper use if the establishment became a Government bank. It would be unsafe for the bank to be exposed to all the demands which the Government has to meet, unless (which would defeat the object of the arrangement) the bank kept in its coffers the money which the Government now reserve in their treasury; for the demands upon the Government are too uncertain, and too large contrasted with the ordinary commercial transactions of the bank, to allow of its applying the same principle to both; and embarrassment would probably result from the Government being too large a customer for a bank of so small dimensions. The interference of Government through its officers, as directors, has been very useful, and should be continued, but not for the purpose of inducing the bank to make advances in aid of the public resources. The object should be to see that the business of the bank is so conducted as best to promote the commercial interests of the place, including the important dealings of the salt and opium merchants. In that way Government is much interested in the management of the bank, and it should not look to getting a direct advance. The establishment of other chartered banks would diminish the value of the present bank stock, but the effect would depend principally upon the Government receiving their notes in payment of its revenue. The Government ought not to refuse a charter to another bank, because it is part proprietor of the present bank; but before chartering a bank, it seems to be necessary to fix precisely the rules on which it is to be conducted, and the subscribers should be required to allow their dealings to be controlled by the Government, for a charter from the Government would in India give a bank the character, to a certain extent at least, of a Government institution. With that proviso, there is no objection to perfect freedom of banking in India.

There is no bank at Madras precisely similar to that at Bengal. Mackenzie, 393.

And there is no bank at all at Bombay. Some years ago the Government proposed to 394.
establish a bank there; but the proposal was disapproved by the home authorities, and their 406.
opinion appeared to be generally averse to having new banks established by authority.
Their reasons were, the danger of abuse; the difficulty of exercising an effectual control;
and the apprehension that the grant of a charter must, in the public estimation, constitute
a bank a Government concern, even though they should have no other connection with it.
It was also thought that the circumstances of Bombay did not require the establishment. 486.

Remittance.

There ought not to be any difficulty in remitting to England the supplies necessary to 233.
meet the Government payments. In order to remit a certain amount, it cannot be necessary
for the Company to trade. The facility of remittance by bills must depend on the course of
trade. The discontinuance of the Government trade in India, and the freer settlement of
Europeans there, would cause commerce to improve, so that not only there should be no
increased difficulty, but additional security and means of remitting. The goods imported by
the Company must take the place of goods that would be imported by individuals. A remittance
to England might be advantageously made through China, as is now in fact done by
the Company, the drafts of the Supracargoes on the Bengal Government forming virtually
a remittance from Bengal to England. The trade in opium, of which the proceeds in China
are upwards of two-and-a-half millions, seems to afford a large means of remittance by way
of China, so long as England shall have to pay a balance to that country for tea, &c. The
Government should look to the rate of a bullion remittance, and if they could not get good
bills at a rate as advantageous, they should import bullion. Prices would then change, and
the consignment of goods, against which bills would be drawn, would become profitable.
The amount of bills required should be periodically advertised, and tenders invited both in 298.
this country and in India, with the understanding that none would be accepted at rates less
advantageous than a bullion remittance. Any delay that might occasionally arise from the
necessity of remitting bullion, might be met by temporary loans from wealthy individuals or
establishments. If secured by goods, bills would be safe from whomsoever taken, but bills
drawn or accepted by wealthy individuals might be taken without security. In some cases
the security of fixed property in India might be given; and when the bills of lading are
required, it would be too strict as a general rule to advance only three-fourths of the value.
But in the present condition of the trade of India there are circumstances which may require
particular precaution. If a discretion were left with the officers employed to purchase bills,
they might exercise it so as not to injure private credit, and yet to secure the Company,
provided they acted upon a broad rule, that no bills should be taken to which the slightest
doubt attached. The money market of London, and the credit of English houses might be
greatly relied upon when once the system of remittance was established as a permanent
arrangement. One essential facility would result from the connection between persons settled 298.
in India and respectable houses at home, who would grant credits to enable them to
negotiate bills, as funds might be required by them in India, in the same way as Americans

Appendix, No. 3.

Mackenzie, 245. and French now take to Bengal letters of credit from houses in London. There is no sufficient ground of objection to the export of bullion from India; but the state of the two currencies, that of England being gold, and that of India silver, renders the out-turn of remittances from the latter somewhat uncertain. It is difficult to say what the comparative value of the rupee now is, and India must suffer by the price of silver bullion in England. When the Government offered to buy bills in Calcutta, a difficulty was experienced in getting them, at any rate which they would accept. Whether the trade between India and China were conducted by a free competition of individuals or through the agency of the Company, would not directly make any difference as to the means of India to remit home, but indirectly, if the exports from England to China increase very greatly, the balance of trade between China and England may be so altered as to render China no longer a part of the chain between India and England; because if England fulfils its obligations to China by goods, that will for a time at least get rid of the necessity of making use of the bullion due by the latter country to India; and *vice versâ*, if by an enlarged export from China to Europe, the debt due to that country be increased, then the trade between China and India may be expected to be still further used as a means of remittance to England. 626. There is no reason to suppose that if the Company's trade were to cease, there would be combinations among the mercantile houses so as to command the rate which the Government should pay for remittance; and if the resort of Europeans were unrestricted, there would probably be more mercantile houses and less of monopoly than there now is.

Palmer, 1282. The financial remittances to this country might be made with perfect facility, without the Company carrying on trade. Three millions and a half might be remitted without difficulty from China and India together; and the mode in which it should be done would be with reference to bullion and the general exports. The trade itself will furnish a value of three-and-a-half millions as at present existing; and if bills of exchange secured upon that trade were tendered to the Company at the bullion price, there is no reason why those goods should not be deposited in the possession of the Company until the bills were paid. The invoice value of the goods upon which this opinion is formed, is nearly three-and-a-half millions from Bengal, and two from China. The remittances ought to be effected at the bullion price, from 1 *s.* 11 ½ *d.* to 2 *s.* per sicca rupee. A bill at the same rate of exchange which bullion would give, is preferable to bullion, from the security of the payment of the bills by the triplicate copies; and that notwithstanding the facility of insurance, because there are always legal questions to which the holder of a policy of insurance is liable. The import of bullion into this country from India is likely to be extended, because the goods sent out within the last 10 or 12 months have been remitted home by bills at six months, at from 1 *s.* 10 ¼ *d.* to 1 *s.* 10 ½ *d.* per sicca rupee, whereas rupees or other silver bullion would give 1 *s.* 11 ½ *d.* and upwards per rupee, and therefore orders have been transmitted from England to remit the bullion. The remittance from China for manufactured goods sent out is so small as not to attract notice. From the well-founded apprehension that an export of coin will produce a scarcity of money, an attempt has been made by the Indian merchants to retain the bullion in India, which it is quite impossible for them to do. They have an idea that they can regulate the remittance by fixing arbitrarily their own rate of exchange. Commerce would not be promoted by the introduction of our coin into India: it is immaterial what the coin is, when the fineness is known. It would be beneficial that the same legal standard should prevail in England and in India, and indeed in all countries. The capability of the Company to draw bills on India, and dispose of them to merchants in this country, would depend a good deal upon the state of their own imports from India and China: if they are not importers of produce, a considerable portion of the funds necessary in England might be obtained by their own bills on the treasuries in India: to a certain extent, such a mode of remittance would afford accommodation to the private merchant, especially in so far as may relate to the European and foreign capital embarked in the India and China trade. But in trade with distant countries the exchange operations generally originate in the distant country, and not in London. The consequence of the measures originating in India, and the parties not taking any quantity of money or bills from hence, would be to throw an excessive amount of bills into the market of India, which might so raise the exchange as to force bullion from this market for the purpose of meeting those bills, in the event of their not being readily taken out of the market for the Company's remittances to Europe. No bad effect need be apprehended from combination among the mercantile houses to raise the price of remittance, as it is presumed that the Company will at all times order bullion to be transmitted, if bills are not procurable at the bullion rate. The people of India, however, may suffer very considerable pecuniary distress by the sudden withdrawing of bullion from a country only supplied with it from a distance. It is very doubtful whether if the Company ceased to trade, any great increase would take place in the number of mercantile houses in Calcutta. The Company would not, and could not with safety, take the bills of any house without collateral security; and to prevent reflections upon individual credit, there should be a general rule always to take security. The transactions, however, should still be with houses of credit, otherwise the Company would have imposed upon them the duty of examining more nicely than might be convenient the quality of the goods that were shipped, and the correctness of the invoice cost.

Bracken, 1798. The number of mercantile houses in Calcutta is not sufficiently small to produce any thing like a combination to influence the exchange unduly. There are now 30 or 40, having different interests; but if a combination were to take place, Government could always check it by remitting in bullion. Competition is more likely to arise than combination. Independently of the European houses, there are several Native establishments which, from their

Appendix, No. 3.

Bracken, 1870. 1821.

comparative cheapness, transact a great proportion of the American business. These Natives constantly take American bills, which they sell to the houses of agency, and it would be in the power of Government to purchase those bills. The bills of from 20 to 25 of the mercantile firms might be taken without other security than their own credit. If the China trade were thrown open to Europeans, one of the channels of remittance would be by sending Indian produce to China, purchasing cargoes of tea, and drawing upon England for the proceeds of those cargoes; but if the exports and imports between London and Canton equalized each other, China would still have to pay Calcutta for its opium, and the proceeds of that opium, even if all the tea sent was paid by the manufacturers of England, would still be available to be returned to Calcutta, or sent on to England in bullion. Whatever facilities opium now affords as a remittance would still be afforded. It would be only a matter of calculation whether it were better to send the value of it back directly to Calcutta or on to London. If the restrictions on the resort of Europeans to India were removed, it is probable that British capital would be transferred to India; and in that case the Government would certainly be able to sell in London the bills on India, as a mode of furnishing that capital in India. There could not be any great demand in this country for bills on India, unless parties were desirous of transferring capital for the purchase of lands or other permanent investment in India. In some cases it might be more advantageous for persons in London to get a bill on the Bengal Government, rather than a letter of credit from an agency house; but letters of credit have this advantage, that you do not take up money unless you want it.

Larpent, 1941.

The amount to be provided for in India for remittance to England is taken at seven millions, and recourse must be had to a combined operation with China, for the purpose of bringing that sum home. The plan of taking bills, and at the same time the security of goods, would not be operative to any great extent, except in a peculiar and distressed state of the money market of Calcutta. The exchange never can be much above a bullion exchange. About 10 mercantile houses in Calcutta are considered as of undoubted character and extensive connections and means. The Company could procure by tender the bills which they would want. It is difficult to attempt to enter into the details of what may be required in adopting a new system; but if it were left to the agency of commerce to make remittances to this country, checks would, on the one hand, be instituted by the Government, and securities would, on the other, be afforded by the commercial body; with due vigilance, and under a fair exercise of competition, both parties would, no doubt, be able to accomplish the object.

[For remittance by Silk, Indigo, &c. *see* those heads.]

Appendix, No. 4.

Appendix, No. 4.

Trade with India: Answers to Queries.

ANSWERS to QUERIES proposed by the Board of Control, upon Subjects relating to the TRADE with INDIA.

LIST OF QUERIES.

I.—WHAT facilities have been afforded to persons trading with India, since the opening of the Trade in 1814, by the repeal or modification of Duties or of Regulations in India injuriously affecting the Commercial Transactions of Individuals?

II.—To what extent has the Trade with India increased since 1814, and with regard to the Exports from Great Britain, what degree has the Increase consisted of British Staples?

III.—What is the system pursued by the Company in the conduct of their Commercial Transactions in India, whether in the interior or at the respective Presidencies?

IV.—What are the practical effects of the union of Government with Trade in India? In point of fact, have the powers of Government been employed to place rival Merchants under any unfair disadvantages in Trade? Has rivalry in Trade been found to be productive of any undue bias to the proceedings of the Government as a Government, when rival Merchants are concerned? If any inconveniences to the public do in fact arise from the union of the two operations, do they or do they not outweigh the advantages to the Company?

V.—What is the system pursued by the Company in the conduct of their Commercial Transactions in England; and have their proceedings proved prejudicial or advantageous to the general interests of Indian Commerce?

VI.—Does the necessity of their effecting a large Remittance to England without primary regard to profit operate detrimentally or advantageously upon Commerce, and to what extent; and could a similar remittance be conducted through private agency, and with what effects?

VII.—In what modes and upon what terms have Remittances been effected between England and India, or India and England, and between the principal places of Commerce in India and Asia, with each other; and to what extent and with what degree of regularity are the operations of Foreign Exchange and Remittance conducted by European or Native Merchants as a distinct or separate business?

VIII.—Whether and by what means the Funds required for Territorial purposes in England could be regularly supplied, and the Government effectually secured from loss by bad bills, were the executive authority in India to cease to carry on Trade, and at what rate is it to be expected that such Remittances could be realized?

IX.—What are the present arrangements with Foreign States in regard to Trade with India, and can any improvements be suggested in those relations?

X.—Are there any and what benefits derived by the Revenues of Great Britain from the present system for conducting the Trade with India and China, which would be lost by a change of system?

XI.—Can any measures not involved in previous questions be suggested calculated to advance the interests of Indian Commerce; such as the improvement or increase of the exportable productions of India, &c. &c.?

Appendix, No. 4.

Trade with India: Answers to Queries.

QUERY 1.—WHAT facilities have been afforded to persons trading with India, since the opening of the Trade in 1814, by the repeal or modification of Duties or of Regulations in India injuriously affecting the Commercial Transactions of Individuals?

Mr. Larpent.

ANSWER.—THE import duties on the manufactures have been reduced to 2½ per cent. *ad valorem*, and many of the staple articles admitted free of duty.

Regulations have been made to prevent, if possible, the injury sustained by the private merchant when in competition with the Company in the provision of silk, and the purchase of other articles.

Transit duties have been modified and drawn back in many instances.

Permission is given under the Regulation of the 7th May 1824, then applicable to coffee, subsequently extended to indigo, to British subjects to hold lands in their own names on leases for 60 years.

Liverpool East India Committee.

THE modification and partial repeal of duties which took place in India immediately after the opening of the trade in 1814, we believe to have been a measure contemplated and agreed upon at that period between the Government and the East India Company on the renewal of the Charter; since that period we are not aware that any facilitates have been afforded to persons trading with India, beyond the removal of the restriction upon British ships under 350 tons from trading to India, which took place in 1823, through the interference of Parliament.

Mr. Sullivan.

SINCE the opening of the trade in 1814, all inland duty on cotton has been taken off; when exported to China the duty has been lowered to five per cent., and if the cotton is exported to England, no duty whatever is levied.

The Honourable Company's cloth investment has been discontinued for some time, all the weavers to the southward have been at the private merchants' command, to make up any quantity of cloth they might wish for.

Mr. Bracken.

THE facilities in Bengal, with which part of India I am more particularly acquainted, have been very few and very recent. After numerous applications, the most vexatious clauses of Regulation XXXI. of 1793, were repealed by Regulation IX. of 1829.

The local government relieved commerce also of some inconvenience by substituting bonds in lieu of cash payments for the transit duty on indigo. Previously, cash was paid at the custom-house nearest to the place of manufacture; and a drawback was allowed to the full amount; less fees on exportation. I have heard that a reduction has been made since I left Calcutta in the rates of pilotage, applicable to vessels taken to sea by steamers. I am not aware of any other facilities to the trade in India.

Mr. Crawford.

By the Charter of 1813, no British ship could clear out from a port of the United Kingdom (but she might from any foreign port) to any principal port of British India, which were four in number, without a licence from the East India Company, or to a subordinate port, without a special licence, and after having first visited and cleared out from a principal port. By the construction put on the Act, the trade to British registered private ships from port to port, or the Indian carrying trade, was erroneously deemed to be illegal. The Indian trade was altogether interdicted to private ships of a less burthen than 350 tons, under pretext of danger from piracy and smuggling, a fear which the experience of the last nine years has shown to have been utterly futile and groundless; and fees were demanded at the India House for licensing all vessels, the amount of which from 1817–18 until 1822–23 inclusive, appears to have been 6,714*l.* 15*s.** These absurd and pernicious restrictions were persevered in for 10 years after the passing of the Charter Act, and finally removed only through the interference of Parliament on the recommendation of Committees of both Houses.

---

* Rep. 1831, p. 714.

With respect to the condition of British merchants on their arrival in India, although all the laws and regulations relating to the residence of British-born subjects stand unrepealed, as they existed in 1818, many of them have, through the increasing liberality of successive local administrations, become in a great measure a dead letter, always however excepting the most important, the prohibition to hold land or take a legal security upon it. From this liberality, however, the entire territory of Madras must be exempted, where, from all accounts, the ancient rigour of the restraints on the settlement and freedom of British-born subjects are at the present moment in as full force and operation as in 1814, or even before that period.

With respect to duties, the Statute of 1813 enacted, that no new tax should be imposed without the sanction of the home authorities. A new schedule of reduced duties was accordingly transmitted from England, and passed into a law by the Indian governments in 1815. Fortunately for the commercial intercourse with Great Britain, the rate of duties then adopted has in general been steadily adhered to.

There has been one positive act of the local government of India highly beneficial to the commercial intercourse of Great Britain with India, to which it is necessary to refer—the establishment of a commercial emporium at Sincapore, and the exemption of merchandise from all imposts, both at that and the neighbouring settlements. This measure has been the means of opening a commercial intercourse with some countries of Asia, with which Great Britain had no commerce for several ages, and of greatly extending our trade with others, with which we had previously very little.

Manchester Chamber of Commerce, and East India Committee.

A Free Port has been created at Singapore, and the prohibition of the use of ships under 350 tons burthen has been removed; both of them measures of great moment, and followed by commensurate advantages.

Glasgow Chamber of Commerce.

WE beg to refer for an answer to this Question to the Evidence taken by the Committee of the House of Commons last session of Parliament.

The admission of woollens, metals and marine stores into India, free of duty, has undoubtedly given great facility to the trade in these articles; and much benefit has also been felt to result from the removal of the restrictions on the size of ships, and on what is called the circuitous trade.

Mr. Mackillop.

SO far as the East India Company are concerned, it appears to me that every facility has been given to the trade with India, calculated to promote its increase, the duty on imports into India of British manufacture being moderate.

Hull Committee.

WE believe that no facilities have been afforded to persons trading with India since 1814, with the exception of a trifling modification of the duties at that time agreed upon between the Government and the Company, and the removal of the restriction upon British ships under 350 tons, through the intervention of Parliament.

QUERY 2.—TO what extent has the Trade with India increased since 1814, and with regard to the Exports from Great Britain, what degree has the Increase consisted of British Staples?

Mr. Larpent.

ANSWER.—IN the Account No. 3, p. 10, Papers presented to Parliament 4th June 1829, the amount of value of British manufactures exported in 1814–15 to all parts of India, &c. (excluding China) by the East India Company, was - - - £. 787,961

Private Trade - - - - -	1,048,132
Say Parliamentary Papers, 9th Feb. 1830, No. 37.	
1814: East India Company - - - -	826,558
Private Trade - - - - -	1,048,132
	£. 1,874,690

By a Statement taken from my own accounts of the export trade of the United Kingdom to Bengal, Madras and Bombay, I calculate the amount of exports in the year 1830 to be 3,032,658*l.*, of which the British staples were as follows:

Exports

Exports 1814–15.			Prices in 1814.	Prices in 1830.
	Metals:	£.	£. £.	£. s. £. s.
239,822	Copper - - -	414,463	120 to 140	90 - to 94 -
109,927	Iron - - -	84,298	7 to 9	4 15 to 5 5
4,379	Tin Plates - -	8,180		
12,143	Lead - - -	22,312	28 to 34	13 - to 15 -
7,766	Steel - - -	13,622		
372,037	- - - - -	542,875		
109,480	British Cotton goods	1,241,763		
23,434	Linen - - -	8,760		
255,364	Woollens - -	259,237		
7	Yarn - - -	278,610		
760,322	- - - - -	2,331,245		
71,899	Ironmongery, Hardware, &c. - -	60,000		
832,221	£.	2,391,245		

Calcutta, Madras, Bombay.

The *real* value of the imports from India in 1830 appears to be - £. 4,199,039. - -

	£.
Goods,	3,384,039
Bullion,	815,000
	£. 4,199,039

The amount of the imports during 1814 † are before Parliament; but in judging of the *values* at the two periods, the great difference in price on all articles, whether British or Indian, exported or imported, should be duly considered, prices in 1814, at the termination of the war, being 100 to 200 ‡ per cent. above the present.

† £. 8,643,275; including all places except China. Per Parl. Papers. - In 1829, £. 6,218,284 including all places except China.

‡ *See* following Statement.

Mr. Bracken.

IT has increased very considerably, particularly with Bengal and Bombay:

		Imports.	Exports.
BENGAL:			
	1813-14	£. 877,917	£. 2,767,624
	1827-28	2,232,725	4,898,018
BOMBAY:			
	1813-14	92,698*	305,154
	1827-28	819,693	508,592

In the year 1828-29 there was still a greater increase at Bombay; the imports amounting that year to 781,248 *l.*, and the exports to 833,767 *l.* In the same year there was a decrease in the whole import and export trade of Bengal with Great Britain of 421,364 *l.*, occasioned by the decreased exports of the East India Company†; otherwise there would have been an augmentation; the private trade having increased 260,604 *l.*

The trade of Great Britain with Madras has also increased, but not to the same extent.

	Imports.	Exports.
In 1813-14	£. 271,749‡	£. 436,513
1827-28	258,740	715,873

Of the increased exports from Great Britain to India since 1814, a large proportion is formed of British staples and manufactures, embracing British capital and industry. The following particulars are not unworthy of attention, more especially cotton twist:

---

* This sum has been converted from the Bombay rupee, at the same rate as the sicca, although there is a difference of 7 or 8 per cent. in their value.

† £.686,970.

‡ As above.

£.	656,286	3,224,075	2,567,789

* In 1827, the exportation of spelter to Calcutta was much larger - £.104,822.

Mr. Crawford.

THIS Question will be better answered by official returns than by any reply which I can give to it. I am not aware that the documents which would furnish this information in a complete and satisfactory form, are as yet before Parliament or the public. The trade between Great Britain and India, to be fairly stated, ought to be given for a series of years in two periods, and to embrace all countries to which the East India Company had an exclusive trade before 1814, classifying and distinguishing the exports to and imports from each particular country. The exports to and imports from China, the only country with which the monopoly is entire, ought to be stated for the same periods, in order to exhibit a just comparison between the results of the close and open trade.

The increase which has taken place in the exports from Great Britain to India since 1814, is, I believe, unparalleled in the history of commerce. In 1814 they amounted to 1,874,690 *l.* declared value, and in 1828, the last year which the public documents in my possession enable me to quote, to 4,467,673 *l.*, showing an augmentation of 2,592,983 *l.* This sum, however, does not express the actual increase. The currency in which the value of the exports of 1814 was expressed, was depreciated below the standard metallic value, and of course the value in 1828, by between 25 and 26 per cent. Mushet's Tables, quoted by Mr. Tooke.—High and Low Prices, Appendix, No. 1. The actual exports of 1814, therefore, were 1,403,362 *l.*, so that in 14 years' time the increase was more than threefold, not to say that the prices of 1814 were high war prices, and those of 1828 low peace prices.

The exports have generally consisted of British staple manufactures, and the following short enumeration will show the increase between 1814 and 1828; it being recollected that a considerable portion of the exports of the former year resulted from the free trade, during near nine months of which it had been in operation.

——	1814.	1828.	Absolute Increase	Increase per cent.
Copper (wrought and unwrought) - - - *cwts.*	37,619	41,742	4,123	10.95
Iron, bar, bolt and cast - -	186,454	438,629	252,175	135.19
Lead - - - - - -	9,520	36,080	26,560	278.99
Earthenware - - *pieces*	819,978	1,919,357	1,099,379	132.85
Broad Cloths, Stuffs & camlets	17,790	49,502	31,712	178.20
Calicoes, plain, printed, &c. *yds.*	680,234	34,843,110	34,162,876	5,022.22
Cotton, Twist - - - *lbs.*	8	4,558,185	4,558,177	56,977,212.50

The query put by the Board refers especially to the increased export of British staple manufactures; but it does not appear to me of any very material consequence whether the

the increase be in such staples directly or in foreign commodities, for which British manufactures must, in the ordinary course of trade, have been exchanged.

It had been confidently predicted before 1814, that there was little probability either of increasing the quantity or of multiplying the number of British commodities suited to the consumption of the people of India, and as little of augmenting the amount, or increasing the variety of the articles which India could furnish in exchange. The public records afford the best refutation of this mistake; and I shall barely enumerate a few of the articles which the free trade has either added to the commerce of India since the period in question, or for which it has created a new demand and a new market. These are,

Imports into Europe:
Siam Sugar
China ditto
Manilla ditto
Rice in husk
Madder
Safflower
Bees wax
Barilla
Castor oil
Cubebs
Sapan wood
Ebony
Lac-dye
Manilla hemp
Antimony ore
Hides
Buffalo horns
Orpiment
Pearl sago.

Exports from Europe:
Cotton piece-goods
Cotton yarn
Spelter
Tin plates
Cast iron utensils for native use
Cutlery for ditto
Fire-arms and cannon for ditto
Gunpowder for ditto
Glassware for ditto
Porcelain for ditto
Copperas
Verdigris
Salt
Chalk
Flints.

In the London price currents of 1814, none of the import articles here given, with the exception of lac-dye, which had been recently discovered, are quoted; and in the Calcutta price currents of a corresponding period, the only European articles of sufficient importance to be deemed worth inserting, are copper, iron, lead, canvas, tar, cordage and some paints. At present, European importations are regularly classified, and in reality constitute nearly one-half the entire imports, being estimated at about two millions sterling per annum.

German spelter or zinc, paid for generally in British cottons, is a case in point; and as the export of this article affords a remarkable illustration of the beneficial effects of the free intercourse with India, I shall offer a few observations upon it. It was first exported to India in 1820, to the amount of 420 cwt. The quantity exported in 1828 was 84,980 cwts., and in the nine years ending with the latter, the total quantity exported was nearly 40,000 tons. Before 1820, all India was supplied with this extensively consumed metal by smuggled exports from China, it being unknown down to that time, except to scientific persons, that the Chinese article differed only in name from the European. The Chinese article has now not only disappeared from the Indian market, but German spelter is largely imported into China itself, forms a regular article of quotation in the Calcutta price currents, and is even re-exported. In 1815, the quantity of Chinese zinc imported into Calcutta was about 20,000 cwt., and the price to the consumer was 90*s.* per cwt. In 1827-28, the importations of German zinc amounted to 107,246 cwt., and the price was about 20*s.* per cwt. In other words, the supply had increased in more than a fivefold proportion, and the price had fallen to less than one-fourth of its previous amount. These facts speak sufficiently for themselves, and demand no comment. One other example may be given. It will be seen from the Table that the increase in the exportation of copper from Great Britain is but inconsiderable. This is very easily accounted for. The Indian market has been supplied in a good measure with unwrought copper from the southern provinces of Russia through Persia, from Japan, and above all, from South America. This last article had been paid for in British manufactures, for which, through India or China, it has formed a convenient remittance. In 1814-15, the copper imported into Calcutta amounted to 53,000 cwts., and in 1821-22, the latest year to which I can refer for quantity, to 83,000 cwts. In 1813-14, the value of copper imported into the same place was about 230,000*l.*, and in 1827-28, the price having fallen 20 per cent., about 400,000 *l.* Zinc and copper, the two metals to which I have now alluded, form the materials of almost all the culinary and domestic utensils of the natives of India; and it is not necessary to insist upon the great advantages which they at least have derived from a free commerce, which furnishes them with the increased supply at reduced prices, implied in the statements which I have now submitted.

In 1813-14, the value of the opium exported from Calcutta amounted to about 730,000*l.* In 1827-28 it amounted to above 1,200,000*l.* Previous to the opening of the free trade, the quantity of Indian opium annually consumed in China did not exceed 2,500 chests, nor the value more than half a million. In the three years stated below, the quantities and values were as follow:*

In

---

* Canton Register and Price Current.

YEARS.	CHESTS.	——
		£.
In 1821-22 - - -	4,628	1,662,920
1827-28 - - -	9,475	2,976,428
1830-31 - - -	18,760	2,580,006

It will appear from this statement, that through the operation of the free trade, for it is impossible to trace it to any other source, this branch of commerce has in quantity been multiplied in more than a sevenfold proportion, and in value in above a fivefold proportion. It would be useless to go farther; and I shall only observe generally, that wherever a field has been opened for free trade, it has invariably been occupied.

The quantity of lac-dye and of shell-lac imported into Great Britain in 1814 and 1828 was as follows:

	1814.	1828.
Lac-dye - - -	*lbs.* 278,899	*lbs.* 728,240
Shell-lac - - - -	– 110,670	– 461,477

Lac-dye is now extensively used for dyeing scarlets, as a cheap substitute for cochineal;* yet in 1815, but a few years after its discovery, the following is the commercial report made upon it in London and Calcutta, as I find it in the observations of a price current of the latter place for October 1815: "The last reports on these articles from the London market are "unfavourable indeed, as will be seen by the following extracts from a letter of the first "authority: 'London, May 10.—Of lacs, we could heartily pray not a chest were to be "'destined this way for years, for not a chest can we induce any one to look at, even at "'the most reduced prices.'" In the year in question, it appears that the importations had been doubled; next year they fell off to one half of this quantity; and the supply suiting itself to the demand, the consumption has gradually and largely increased, the quality of the drug having at the same time been greatly improved. The augmentation in the consumption of shell-lac, which I understand to be used in the manufacture of hats and other manufactures, has been still greater, for I find that in 1829 it amounted to 725,780 pounds weight, being more than sixfold greater than it was in 1814.

That the people of India have benefited largely by the free trade, confining its operation to mere price, is, I think, obvious. Whatever foreign commodities they consume, they receive at a reduced price, and for the produce of their soil, or for such productions of their skill as are suitable to their industry, they have not only a wider market, but for the most part equally good prices as under the monopoly. This may be satisfactorily shown by comparing the prices at the period of the opening of the trade with the present ones. The following are examples.

These statements are taken from Calcutta price currents for the months of September 1815, and August 1831. An earlier period than the first would have afforded a more favourable result as far as relates to exports, but the materials were not within my reach. It will be seen, that with respect to the imports, a great reduction has taken place in every article, while some commodities now reach the consumer at one-half what they cost in 1815. With respect to the exports, there has been an increase of price in eight out of the sixteen articles named. In others, the fall of price is not considerable. It has been large, as might be expected from the competition of British manufactures in the finer cotton fabrics, but in the coarser, where this competition does not exist, there has been a rise. The fall in the price of some articles, as lac-dye, may, I believe, be fairly ascribed to greater skill and economy in the process of manufacture. The fall in the cost of silk manufactures, according to the statement, is 16 per cent., but as averages only are given, even this is probably overstating it, for the highest prices of 1831 considerably exceed those of 1815; the greater range of quotations in the first year accounting for the discrepancy*.

As the producer, trader and carrier of Great Britain are satisfied with the results of the opening of the trade in 1814, and anxious only for further extension, or as they are at least convinced that the profits are not smaller than other branches of the foreign trade of the kingdom, and it is quite impossible they should be larger, I shall proceed to show what the effects of the free trade have been on the interests of the British consumer, by comparing the prices paid for Indian commodities in three periods, namely, when the monoply was entire; when it was partially broken in upon by the Act of 1793, and at the present time. This is done for a few principal articles in the following table, of which the first two years are taken from Prince's London Price Current, quoted by Mr. Tooke, and the last from schedule annexed to the petition of the London Merchants, given in evidence to the select committee of the Commons in 1831.

	1793.		1815.		Increase per cent.	Decrease per cent.	1831.		Increase per cent.	Decrease per cent.
	s.	*d.*	*s.*	*d.*			*s.*	*d.*

---

* Highest price of 1815, rupees 145.
Ditto - of 1831 - 150.

It will be seen from this statement, that the price of every article, except those absolutely or virtually under a monopoly, viz. cinnamon and raw silk, has fallen to about one-half what it was in 1815. The fall of price seems to be in proportion as the trade in each commodity is free. Pepper, which is the produce of a great many countries, and in which the trade is quite unshackled and the competition active, is the most remarkable example. It has fallen to one-third of the price it bore in 1815, and to nearly one-fourth of that which it bore in 1793, when it was a monopoly of the East India Company. The fall in the price of sugar has also been great, but not so considerable; but this is in some measure accounted for by the superior quality of the article now imported. In raw silk, the fall in price between 1815 and 1831 has barely amounted to one-fourth part; not much more than will account for the different value of the currency in the two years. The fall in the price of cinnamon has not much exceeded one-third part; and the decline has been produced in a good measure by the competition of cassia, which is rapidly taking its place, and in which the fall of price has been very great*. One advantage to the consumer, and also to the merchant, derived from the open trade, is the steadiness of price which has resulted from it. For some years back there has been very little fluctuation in the price of any Indian commodity, of which the production and commerce has been free. On the contrary, during the close monopoly, the fluctuation of prices was extremely violent even within the same year. In 1792, for example, a year of profound peace, I find the quotations of cotton wool of the same quality, as low as 11 *d.* per pound, and as high as 1 *s.* 3 *d.* In the same year, the same quality of black pepper is quoted as low as 1 *s.* 4 *d.*, and as high as 1 *s.* 11 ½ *d.* per lb.; and the same saltpetre is quoted at 40 *s.* and at 63 *s.* per cwt. within a few months of each other.

Glasgow Chamber of Commerce.

FOR an answer to this Question, we would refer to the official returns of imports and exports, which alone can give an authentic and full view of the matters embraced in it. From these it will be seen that the increase has been very great.

With regard to the exports, it has consisted chiefly of British staples, and as regards this port in particular, of cotton piece-goods and twist.

Manchester Chamber of Commerce and East India Committee.

THIS Query will be best answered by official returns. The increase in the staples of Lancashire is believed to be without a parallel. The export of British cotton manufactures and twist to India and China, in the years ending 5th January 1815 to 1831, is exhibited by the annexed table, framed from papers presented to the House of Commons.

—	White or Plain Manufactures.	Printed or Dyed Manufactures.	TOTAL.	Cotton Twist.
	Yards.	*Yards.*	*Yards*	*Lbs.*
1815 - - -	213,408	604,800	818,208	8

---

* In 1814, the price of cassia was from 20 *l.* to 25 *l.* per cwt.; it is at present from 4 *l.* 10 *s.* to 5 *l.* The consumer may now have for the same expenditure 10 lbs. of cassia for one of cinnamon, the difference of duty excepted, which is a bonus paid to the cinnamon monopoly. In 1814 he could barely have got 3 ½ lbs. of cassia for one of cinnamon. The importations of these two articles in 1814 and 1828 were as follow:—

—	1814.	1828.	Increase per cent.
Cassia lignea and cassia buds - *lbs.*	173,988	571,560	228
Cinnamon - - - - - -	276,982	337,482	21

The following table, showing the total value of merchandise imported at Calcutta from Great Britain, by the private trade, for 15 years, say from 1813–14 to 1827–28, has been communicated by a merchant of Calcutta, now in this country, by whom it was extracted from a work on the Commerce of Bengal, by H. H. Wilson, Esq., Assay Master to the Government Mint in Calcutta. The continuation of the table for the two years 1829–30 and 1830–31, is taken from Bell's Comparative View of the Commerce of Bengal. The particulars of the year 1828–29 are wanting.

Commercial Year.	Total Value.	Copper.	Iron.	Woollens.	Cotton Goods.	Twist.
	£.	£.	£.	£.	£.	£.
1813–14	5,376,775	78,581	230,547	184,521	91,835	Nil.

Mr. Mackillop.

THERE has been an increase in the annual imports from India since 1814. Indigo, for instance, the most valuable export from India, has increased since the above period fully one quarter in quantity, though this will not appear by the returns of the trade to this country, as during the war very little was exported from India direct to the Continent, and consequently no comparison can be made with the direct trade to the Continent of Europe now existing. Prior to 1814, cotton piece-goods were shipped extensively to England from Bengal, and a considerable supply of raw cotton was also sent frequently from both Bengal and Bombay; the great increase which took place in the manufacture of cotton piece-goods in England, soon after the general peace, occasioned an unusually large supply of raw cotton to be brought from Bengal and Bombay for two or three years. At present, the import from the former place is small, owing to the superior quality and the low cost of the cotton grown in the United States of America, and with which Bengal cotton is not likely to compete successfully during a free intercourse with America. The import from Bombay (where the quality of the cotton is superior to that of Bengal) continues, but on a limited scale with reference to the shipments of 1815, 1816 and 1817. The imports of raw silk have increased during the present Charter, but this article is chiefly in the hands of the East India Company. The imports of saltpetre have also increased; and Bengal will probably continue to be the chief source of supply, the cost of production being low, and thereby enabled to compete with Peru, from which country some shipments have recently arrived. The imports of lac dye, shellac, and various articles usually denominated drugs, have gone on increasing; and as a general remark on this subject, I may observe, that at present, and for some time past, the trade has been decidedly profitless.

The exports to India have increased considerably since 1814; then, for instance, spelter, cotton yarn, and cotton piece-goods were usually imported into Europe from India, but now they are all exported from England in very large quantities: but I may here observe, that the export of all these articles is more owing to the reduction that has taken place in their cost in this country (either of which can now be purchased at one-half or one-third under their value in 1814), than to the facilities which have been given to the trade with India: it is not necessary I should more particularly notice the articles of which an increased export has taken place, as the reports from the custom-houses of this country and of India, afford ample details.

Liverpool East India Committee.

THE increase of trade with India since 1814 has been enormous, as appears by the Parliamentary Returns, and the exports consist almost entirely of British manufactures; it may also be safely asserted that such foreign produce as has been exported to India, has been purchased virtually by a similar amount of British produce.

From 1794 to 1814, the export trade in the hands of the Company had greatly fallen off, the official value of the exports to India (including those to China which varied little) having been on the average of the first six years of that period, 2,924,820 *l.*, and of the last six years,

years, 1,699,123*l.*; but upon the opening of the trade in 1814 (though the Company's exports have further fallen off) the increase on the whole has been most rapid, as appears by the following comparative view:

Declared Value of Exports to India (excepting China):

—	Company's.	Private Trade.	Total.
Average of three years, 1814—1816 -	818,784	1,524,518	2,343,302
Average of three years, 1827—1829 -	576,266	3,825,110	4,401,376

The Exports of 1829 exceeded those of 1814, as follows:

—	Company's.	Private Trade.	Total.
1814 - - - - - -	826,558	1,048,132	1,874,690
1829 - - - - - -	434,586	3,665,678	4,100,264

and it is believed that a return of exports for 1830 and 1831 would show a still greater increase; but these returns have not reached us.

These statements give, however, but an imperfect view of the subject, as from the great decline in the price of commodities, which has been taking place for many years past, the actual increase in the quantities imported and exported, greatly exceeds the apparent increase which the declared values indicate.

Hull Committee.

THE Parliamentary Returns show the great increase of the trade with India since 1814, when it was partially opened, and consists almost entirely of British staples. In that year, the declared value of the Company's Exports amounted to

£.826,558, and of Private Merchants £.1,048,132 = £.1,874,690;
and in 1829, to £.434,586, and of Private Merchants £.3,665,687 = £.4,100,273:

but when the depreciation in the price of commodities that has taken place since 1814 is considered (being nearly 50 per cent.), the *quantity* greatly exceeds what the declared value indicates of those years. Under the estimate of this decline in prices, it appears that the quantity exported by the Company in 1814 varied little when compared with that of 1829, while the quantity exported by the Private Merchants has increased sevenfold.

Mr. Rickards.

IN the "Papers relative to the Finances of India and the trade between India and China, February 1830, a return is given of the export and import trade with India for 16 years subsequent to the year 1814, in which the Company's trade is distinguished from that of individuals*. It is accordingly certified in this official document, that the trade with India has increased much more than the most sanguine could have anticipated within so short a period, and that this increase is wholly to be ascribed to the enterprize and intelligence of individuals, the Company's trade appearing stationary, as to amount, throughout the period, whilst that of individuals gives an average of nearly three times the amount of the Company's trade.

The principal articles imported into India from Britain, are cotton piece-goods, twist, woollens and metals, including spelter. To these may be added almost every other description of British manufacture, such as hardware, glassware, porcelain, jewellery, &c. Of the increase of British manufactured articles which has taken place in the period alluded to, some idea may be formed from the following facts given in evidence. The first import of cotton twist into India occurred in 1821. In 1824, about 120,000 lbs. were imported; in 1828, about 4,000,000 lbs. In 1815 the importation of British white and printed cotton goods into India, was about 800,000 yards; in 1830, it was about 45,000,000 yards. It will also be seen on reference to the evidence and official documents therein quoted, that the increase of British exports to India includes a great variety of articles formerly unknown, or not used in India, and that this extension of commercial intercourse is wholly to be ascribed to the enterprize and operations of private merchants.

* *Vide* No. 40 of Papers referred to, and Evidence, July 1831, Answer 2754, *et seq.*

	Rupees.
The document here referred to states the average of the Company's trade, export and import, for 16 years, to be - - - - - - - - - -	1,88,27,825
Whilst that of the present trade for the same period is - - - - - -	5,45,14,520
But the average of the Company's exports to India in goods and treasure is only	50,71,344
Whilst that of the Private Trade from Britain, Foreign Europe and America, is -	2,82,54,537

Or upwards of five times the amount of the Company's exports.

QUERY 3.—WHAT is the System pursued by the Company in the conduct of their Commercial Transactions in India, whether in the Interior; or at the respective Presidencies?

Mr. Bracken. *ANSWER.*—IN Bengal, I have understood, the Board of Trade issue instructions to the commercial agents, to make advances for such quantities of silk, sugar and cotton, as they may deem requisite, under the orders of Government, for the Home and China annual investments. They report to the Board the rates at which the same are or may be procurable. Provision is made for the advances, by orders on the neighbouring collectors. To places in the vicinity of Calcutta, cash is sent from the general treasury. When Government determine to purchase indigo for shipment to London, an advertisement appears in the Gazette inviting tenders, stating the quantity, the quality, the district of manufacture, the planter's name, the distinguishing marks, and the price, to be sent in to the Sub Export warehouse-keeper, who is authorized to accept or reject them.

Mr. Crawford. THERE are several gentlemen now in England whose experience will enable them to afford far more valuable information in reply to this question, than it is in my power to supply. At some of the out-settlements in the Eastern Islands where I served, the Government, as usual, was in the habit of keeping what may be called an open shop for the vend of European manufactures, where a yard of broad cloth might have been purchased. When I took charge of the settlement of Singapore in 1823, I found a warehouse of this description in existence; and a large quantity of pepper bought as an investment for China, was made over to me by my predecessor.

Mr. Mackillop. THE chief articles which the East India Company export from Bengal (with the trade of which I am better acquainted than that of the other Presidencies, having resided in Calcutta nearly 18 years) are silk, indigo, cotton, sugar and saltpetre. The investment of silk is provided by the Company making advances in the districts where it is produced to the natives, who cultivate the mulberry plant, and superintend the reeling of the cocoons at the Company's filatures. The Company do not cultivate or manufacture sugar, cotton, saltpetre or indigo; they purchase the three first of these articles at the marts in the interior, from the native dealers, who collect them in the districts where they are produced or manufactured; the latter they purchase in Calcutta, from the agents of the parties who manufacture it, chiefly in the districts of Bengal Proper; the only other articles, which the Company now manufacture or purchase to any great extent in Bengal and dependent provinces, are salt and opium; the former they manufacture, and having a monopoly of the supply of the wants of their own provinces, a large revenue is derived from the sale. For opium, advances are made nearly in the same manner as for silk, but when brought to market, instead of being exported on the Company's account as silk is, the opium is brought to public sale, and generally sells at a great profit; but as, according to the system of the Company, salt and opium must be considered as being sources of revenue rather than articles of commerce, it is not necessary I should further advert to them. The Company's imports into Calcutta of European goods used to be disposed of at public sales, recurring periodically to suit the convenience of the public. I am not aware these sales affected the markets more than the same quantity of goods would have done if brought to sale by individuals; but this branch of trade has, I believe, been latterly abandoned by the Company.

Mr. Sullivan. IN realizing the Honourable Company's investment of cloth, I entered into an agreement with the brokers, or it may be called a contract; these brokers are the head weavers of their respective villages, chosen by the weavers themselves to represent them to the resident, and to adjust their accounts; these weavers again enter into a contract with the broker for the delivery of a certain quantity of cloth monthly, to whom they give a trifling per-centage, which is included in the price of the cloth. The same procedure has been followed with regard to hemp.

Glasgow Chamber of Commerce. THE best answer to this Question will, we presume, be found in the Evidence taken by the Committees of the Two Houses of Parliament. The members of this association cannot be competent to answer it so satisfactorily.

Manchester Chamber of Commerce and East India Committee. THE members of this Board, not having any of them been in India, cannot answer this Question so satisfactorily as they could wish; but no doubt the fullest information might be obtained through other channels.

QUERY 4.—WHAT are the practical Effects of the Union of Government with Trade in India? In point of fact, have the powers of Government been employed to place rival Merchants under any unfair disadvantages in Trade? Has Rivalry in Trade been found to be productive of any undue bias to the proceedings of the Government as a Government, when rival Merchants are concerned? If any inconveniences to the Public do in fact arise from the Union of the two operations, do they or do they not outweigh the Advantages of the Company?

Liverpool East India Committee

ANSWER.—THE system pursued by the East India Company in the conduct of their commercial transactions in India may generally be said to be oppressive to the native merchants, opposed to the interests of the British merchants, and unprofitable to themselves. This statement is founded chiefly upon the Evidence laid before Parliament, and assisted by information derived from private sources. That it is oppressive to the native dealers we think is fully shown by the testimony of Mr. Joshua Saunders, (*vide* Minutes of Evidence, 17 March 1831, p. 108 & 109), when speaking of the Company's mode of purchasing silk; and by the evidence of Sir Charles Forbes, (*vide* Minutes, 14 April 1831, p. 135), when speaking of their purchases of cotton and their monopoly of salt. That it is opposed to the interests of private merchants is shown in almost every page of the evidence hitherto taken before Parliament; and that it is now, and has been, unprofitable to themselves, is very evident from their total abandonment of many articles, and their diminished transactions in others.

We believe that the practical effects of the union of government with trade in any country must be prejudicial to the general interests of commerce; and that this has been the case with the East India Company there is abundant evidence to prove. It has been shown that the powers of government in India have been employed to place rival merchants under unfair disadvantages in many instances, and to exclude them entirely in others. It appears by evidence given before Parliament, that the Indian Governments have, on different occasions, declared particular branches of trade to be open to private individuals, and after allowing them to embark their capital in such trade, have afterwards declared it to be shut. Of this a remarkable instance is given in the evidence respecting Mr. Wilkinson's case in 1811, and later in the act of the Bombay Government in 1828, when the trade in Malwa opium was declared to be free; and afterwards, in the course of a few months, when it suited the views of the Company, the monopoly was resumed.

It has been shown that the native dealers in India are both afraid and unwilling to dispose of those articles of produce to private merchants, which the Company are in the habit of purchasing, until they have first ascertained their wants, and the wishes of their commercial agents; and it must be obvious, that where the public revenue of the State is brought into collision with the capital of private merchants in the same market, the result must be disadvantageous to the latter.

British merchants trading with India have still to complain of many regulations in that country injuriously affecting their commercial transactions; and of these we would particularly point out the restraints imposed upon the resort of merchants to India, the necessity of procuring an expensive licence at the India House before they can proceed to reside in India, and the necessity of applying for a further licence from the local Governments before they can remove from one district to another, after their arrival in that country; the necessity too of applying for and obtaining a certificate of good conduct from the local Governments on leaving India, (which document must be produced at the India House along with every application for permission to return a second time to that country), is calculated to lower the character of the British merchant, and is galling to the feelings of the individual. The power at present possessed by the local authorities in India, of withdrawing the licences of individuals without assigning a reason, and of sending them out of India at a moment's warning, (however seldom it may be acted upon) is calculated to place the property entrusted to such persons in unnecessary jeopardy, and thereby narrows the freedom of intercourse between the two countries. As a measure more immediately and injuriously affecting the export trade of this port to Calcutta, we must notice the imposition, in 1817, of a heavy and prohibitory duty upon all salt imported into India from this country.

Mr. Sullivan.

THE observations I am about to make I beg may be understood as only applicable to the southern provinces of Madras, Tinnevelly and Ramnad, having resided in those districts upwards of 28 years, in realizing the Honourable Company's investment in cloth, and afterwards in cotton; rising progressively from the appointment of an assistant to that of commercial resident, the last 17 years of that time being resident.

The length of residence in those districts must of course have given me many opportunities of hearing complaints made by private merchants that they had not been able to purchase for ready money cloth which the weavers had by them, as well as gunnies, which is the outer covering of the bales of cloth or of cotton, made from hemp. In the districts I have mentioned only one merchant resides, but there have been occasionally agents from Madras, who have come up to make purchases; and of late years a Mr. Gordon has been speculating in Ramnad.

I never heard of the local authorities obstructing a merchant in the prosecution of his mercantile engagements, and it stands to reason that they would give every encouragement to their exertions, for the more the trade is extended, the greater will be the revenue.

The little I have said on the Honourable Company's investment will, I think, be sufficient to show that while they were under my management there was no monopoly, and that my engagements were as free as any private merchant; but, nevertheless, the Honourable Company paid more for their goods than the private merchant, which may be accounted for as following: no public agent can ever procure any large quantity of goods at the same price the private merchant does; the private merchant's purchases are limited, and when he does not wish to exceed a stipulated sum, and cannot procure the article he wants on his own terms, will decline purchasing. With the public agent it is different; the native agent knows as well as the resident that he has received certain orders to purchase a certain quantity to be ready by a certain time; they keep up their price, and make the resident on most occasions come into their terms. The charges on the Honourable Company's goods are great, from the nature of the carriage, and I do not think they can derive any advantage from their trade except by way of remittance.

Manchester Chamber of Commerce and East India Committee.

THIS Board is not aware that the powers of government have ever designedly been employed to place rival merchants under any unfair disadvantages in trade; but there can need no proof at this day, that when governments act as traders, their operations will of necessity be productive of such an effect; nor can it be necessary to urge arguments in support of what has long been admitted to be a commercial axiom, the incompatibility of the twofold character of sovereign and trader. Whether these disadvantages "do or do not outweigh the advantages to the Company" is an inquiry which it might seem presumptuous to attempt to answer absolutely, without a fuller knowledge of the bearing of all the trading operations of the Company than this Board possesses; but so far the Board may venture to say, that it is not aware of any commercial operations conducted by the Company which might not be at least as effectively, economically and advantageously performed by private merchants, allowing only reasonable time for carrying the change of system into effect.

Glasgow Chamber of Commerce.

WE have no practical experience on the subject of this question; but it would appear from the Evidence already referred to, that the growth and trade in silk has suffered great disadvantages from the rivalry of the East India Company's commercial servants; and on general principles it must always be injurious to private merchants when the sovereign of the country is a rival trader.

Mr. Mackillop.

I SHALL perhaps best answer this question by stating that I am not prepared to say objection exists to the mode in which the Company conduct their commercial transactions in India, nor that these transactions have been practically detrimental to the equitable government of their dominions. I have already adverted to the manner in which their investments are provided. Their purchases, when made in the interior, are effected through the agency of their commercial residents (civil servants, and generally of long standing), who have not, that I am aware of, unfair advantages over other persons purchasing in the same markets; while the Company's purchases being made periodically, and nearly to the same extent annually, the knowledge that goods will be required must be an incitement to the natives to grow or manufacture the goods required for the public investment.

In the attempts made by private persons to manufacture silk, disputes have frequently arisen between those engaged in them and the residents or agents of the Company, in consequence of a collision of interests, but this is only what often happens between neighbouring indigo planters, and arises out of the plan on which both the indigo and silk business is conducted; for instance a ryot (or small landholder) will take an advance for the cultivation of a certain piece of ground, either for mulberry or indigo plant, as the case may be, and it is not unusual for him also to take from another party a similar advance for the same piece of ground for the like purpose, and thus the produce of the ground for which advances have so been made, becomes matter of dispute between the parties. The regularity of the Company's investment and command of money have given them advantages over individuals.

Mr. Bracken.

IF we refer to the transactions of private merchants not exposed to a government rivalry, we arrive at the following results. The total export of British merchandize to Bengal were,

In 1813-14 - - - - - - - - - -		£. 1,574,707
Of which Private Trade - - - -	£. 1,253,472	
Of East India Company's - - - -	321,235	
		1,574,707
In 1828-29 - - - - - - - - - -		£. 3,034,464
Of which Private Trade - - - -	£. 3,019,273	
Of East India Company's - - - -	15,191	
		3,034,464

exhibiting an increase of the private export trade of about 150 per cent., and a decrease of the Company's of about 2,000 per cent. within these periods.

Could the East India Company have exercised sovereign power at Manchester or Glasgow, and applied that power to the production of cotton twist or piece-goods, who so bold as to assert that the consequences would have been the same? But even in India itself, wherever the Company's direct interference has been relaxed, the course of trade has been followed by results similar in principle.

In 1813–14, East India Company's imports	- -	*S. Rs.* 99,49,193
Deduct raw silk	- - - - - - -	42,20,000*
		57,29,193
Private Trade	- - - - - - -	3,55,40,438
In 1828–29, East India Company's	- - -	*S. Rs.* 1,63,71,594
Deduct raw silk	- - - - - - -	78,39,654
		85,31,940
Private Trade	- - - - - - -	5,02,81,959

exhibiting an increase of the former, at the rate of about 30, and of the latter, of about 75 per cent.

The clauses of Regulation XXXI. of 1793, repealed by Regulation IX. of 1829, combined with other disadvantages, arising from the general character of the Company's commercial agencies, and to which I shall more particularly allude hereafter, had almost driven private competition from the raw silk market, on which branch of trade, practically, the Regulation in question bore with the greatest detriment.

In 1827–28, the value of raw silk exported from Calcutta was

† East India Company's - -	*S. Rs.* 78,63,080	or	£. 786,308
Private Trade - - - -	3,15,592	-	31,559

The whole export trade in produce for that year being

East India Company's -	*S. Rs.* 2,05,32,676	or	£. 2,053,267
Private Trade - - - -	3,89,94,428	-	3,899,442

The Regulation IX. of 1829, was followed by a considerable increase in the private trade in raw silk; for the relative export in 1828–29 was,

‡ East India Company's - -	*S. Rs.* 78,39,654	or	£. 783,965
Private Trade - - -	14,09,170	-	140,917

exhibiting a slight decrease in the former, and an increase in the latter, as compared with the preceding year, of upwards of 400 per cent. Possibly other circumstances may have contributed to this result, but the coincidence is remarkable.

The effects are to destroy private competition, and consequently to create a monopoly, enhancing cost and limiting consumption. In the instance of raw silk, produced almost entirely by the Company, the quantity exported by them to Great Britain has increased from 844,961 lbs. in 1814, to 1,030,629 lbs. only in 1828, whilst the cost at the agencies, exclusive of all charges, has increased from about 9 to 15 sicca rupees per seer; or from 9*s.* to 15*s.* per lb. without any corresponding improvement in the sale price.

To show the prejudicial influence of the East India Company on the transactions of private merchants, it is only necessary to refer to the continued operation for so many years of the Regulation XXXI. of 1793, which it is impossible to suppose would ever have been enacted, unless the interests of traders had been combined with the power of sovereigns. And although I am prepared to admit that some Governors-general and some members in Council have been honestly desirous to place all traders on an equal footing, I am equally prepared to assert, that such desire has been inevitably rendered nugatory by the nature and character of the commercial agencies, by the machinery employed for their own commercial purposes.

The natives regard the commercial resident as a man of authority, not as a mere merchant. He resides in a palace, and is surrounded by all "the pomp and circumstance" of high station, and to those who have been in India, the moral effect of this position is sufficiently obvious. Correct too and honourable as he himself may be, the details of his duties mainly devolve on sircars and other subordinate employés spread over the district with much real and more assumed power, and more or less corrupt, from the inadequacy of their salaries, contrasted with their means of extortion.

No man feels himself quite secure in entering into engagements with a private trader, until he has a tolerably certain assurance that he is not likely to be required to take advances from the residency. An attempt to make himself independent might expose him to much vexation and injury. Indeed, the records of the Bengal Government will show many instances of silk filatures destroyed by the peons of the commercial residents, and of indigo plant ploughed up on allegation that the ryots had engaged to cultivate the mulberry. In Commercolly, I have understood the latter circumstance has been of frequent occurrence.

Some light is thrown upon the compulsory tendency of the Company's commercial system by the 8th paragraph of the Board's letter, dated 27 April 1827, which is as follows:

---

* I deduct raw silk, as it has been virtually a monopoly.

† *Vide* Append. III. Affairs of Hon. East India Company, printed 1831.

‡ Ditto.

Appendix, No. 4.

Trade with India: Answers to Queries.

"It will therefore be your duty to explain these matters fully to the peons and rearers of cocoons employed under your factory, *so as to prepare their minds to submit, without murmuring, to the prices you may deem it necessary, under these orders, to determine on granting them* for the silk and cocoons produced during the several bunds of the year; impressing it at the same time upon them, as a matter of absolute necessity, that they will seek in vain to elude the operation of the system now about to be established, by carrying their cocoons away from their own factory, in order to deliver them into a neighbouring factory for the sake of obtaining increased prices, because they will by so doing, inevitably meet with disappointment; it being our firm determination not to allow any resident to give a higher price for silk or cocoons than his neighbouring resident within the same circle of locality; and should any resident, contrary to his duty and all just expectation, be found to countenance and encourage such a proceeding, his conduct will be noted with merited animadversion."

Again, the Company's agents not fixing the price they propose to give to the rearers of cocoons until the silk is reeled off, the private dealer has frequently, if not always, been compelled to make his purchases dependent upon their rates also, thereby exposing himself to a price the prospects of the market may not warrant. It cannot create surprise that these causes have almost ruined the private trade in silk; and although the repeal of Regulation XXXI. of 1793, is something gained, I anticipate little or no permanent improvement in quantity or quality, or reduction in cost, until the Company's interference in the production be withdrawn. How desirable such improvement in the raw material would be to the silk manufactures in this country, it is unnecessary for me to dwell upon.

In respect to whether "rivalry in trade has been found to be productive of any undue bias to the proceedings of Government as a government," I am much afraid I must state my belief in the affirmative. To begin at no earlier date, if we turn to the correspondence between the Court of Directors and Government preparatory to the renewal of the present Charter, and to the evidence than delivered before the Committees of both Houses of Parliament by the Company's servants, one cannot fail to be struck by the spirit of jealousy and hostility displayed towards persons desirous of resorting to and residing in India for commercial purposes. Commercial rivalry, indeed, could not with any decency be urged as the ground of excluding or of subjecting Europeans not in the service to restrictions, or to arbitrary acts of transmission, and therefore a more plausible objection to a free intercourse was taken, to which, unfortunately for India and for England, the Legislature, in ignorance, and in a blind reliance on authorities, whose motives were obviously questionable, or whose information was defective, gave a very undeserved attention.

I have given my attention particularly to this part of their policy, because I was exposed to some inconvenience from it, and might have suffered much greater at the commencement of my own career in India. After passing three or four years and taking my degree at Oxford, I went to India in 1811, in the Company's cavalry, and shortly after my arrival resigned, for the purpose of joining the house to which I now belong. But I could not obtain permission to remain there, and was compelled to return to Europe. But on the present Charter being granted, I was allowed to go out again. To many persons this double voyage might have been ruinous; and I was naturally anxious to ascertain what sufficient grounds existed to expose the prospects of individuals to disappointment under such laws.

To a feeling of commercial jealousy also, I must attribute the alleged refusal of the Company to give their sanction to British merchants engaging in the trade between China and continental Europe, a trade in which they themselves were not interested, unless, indeed, they anticipated that the facility with which English merchantmen took in their cargoes for Bordeaux or Amsterdam, might create some wonderment that such ships could not land them in London or Liverpool.

In regard to "whether, if any inconvenience to the public do in fact arise from the union of the two operations, do they, or do they not outweigh the advantage to the Company?" I believe the existing system is, with reference to India, an unqualified, unmitigated evil; that no advantage whatever, in any shape or way, has been derived by the Company from the union, or could be derived by any government so constituted.

From the papers at present laid before Parliament, the extent of the Company's losses by their Indian trade cannot be accurately ascertained; there is no account that can strictly be called a commercial one. Indeed, it seems to be very doubtful whether any balance has ever been struck between their Commercial and Territorial branches; or whether the statements applicable to the former do or do not include some of the most important items affecting its results, viz. outlay for commercial buildings and houses of residents, interest on the same, repairs, outstanding balances, distinguishing recoverable and irrecoverable. In the Supreme Court in Calcutta, during the cause of the "Bank of Bengal *v.* the East India Company," respecting certain forged promissory notes of the Government loans, it was stated by Mr. Oxborough, who had been 17 years in the Accountant-general's office, "that in their books the two branches had never been balanced," and that "money for commercial purposes was furnished from loans bearing interest;" but I am not aware that the latter has been charged in the accounts before Parliament. It is possible more clear and explanatory accounts can be furnished, but at present I am led to infer that nothing but territorial revenue has supported the Indian commerce, and if this be so at all, or to any extent, questions of the utmost importance will arise. It never can have been in the contemplation of the British Parliament that the people of India should be taxed to their utmost power of paying, to make good the commercial losses of a trading company. In justice to India, and in vindication of England, these points require the closest examination.

Mr. Crawford.

IT does not appear to me, in the present state of our knowledge, to be at all necessary to adduce any new argument to prove that the union of trade and sovereignty is an insuperable vice in any administration, and that the business of the merchant and the duty of the sovereign are utterly incompatible with each other. Under all the native governments of Asia, with which I have any acquaintance, China excepted, the trading propensities of their respective sovereigns oppose the chief obstacle to a commercial intercourse with them, nor can I conceive how the British Government of India can be made an exception to a principle of universal application. If the Company pay for the commodity it deals in what the commodity is worth, and as much as any other trader would give for it, it certainly cannot sell it in any open market for more than it is worth, or for more than what any other merchant would obtain for it. It is in evidence that the Company pays higher freights than others. Their establishments are more cumbrous and expensive than those of private merchants. Their agents have neither the expertness, vigilance, experience or forecast of private agents, and many of them being employed in important political functions, would themselves think it an absurdity even to pretend to be so. If, under all these disadvantages, and when private merchants are obliged to content themselves with the slenderest profits, the Company were found to carry on trade without loss, the result would be sufficiently startling, and it would amount to a miracle if they were found to carry it on with a profit. For the first few years after the opening of the free trade, they exported European manufactures and other commodities, in what experience has shown to have been a hopeless competition with the free trader. One article was taken up and relinquished after another, and for the last five years they seem to have prudently abandoned the whole of this branch of their commerce.

The great evil of the silk trade is the interference of the Company in the production of the raw material; an interference which has had the effect of virtually excluding private adventurers, and, consequently, the wholesome effects of an active and intelligent competition. The Board of Commissioners is fully aware that the Regulations of the monopoly for securing the Company's investment, as modified by Lord Cornwallis in 1793, were in full force in Bengal, down to the year 1827, or for thirteen years after the legal opening of the trade, and that they were not abrogated until after repeated representations from the merchants of India, when the necessary orders were at length transmitted for that purpose from England, and, as is generally understood, through the interference of the Board of Control. The modified Regulations of Lord Cornwallis enacted, that no party contracting to furnish the Company's investment should be permitted to work, either for himself or for a third party, until he had completed his engagements. It authorized the commercial agent to place the contracting parties under the *surveillance* of their native officers, in order to expedite the completion of their contracts. It forbad, under heavy penalties, private persons from taking goods supposed to be produced by the advances made by the Company; and it rendered it an actionable offence in such persons to dissuade any party from accepting the Company's advances for investment. These are a few of the provisions of a Regulation which, though no longer believed to be law, appears from the evidence given before the Select Committee, to have been in virtual existence down to 1830. The effect of it has been to raise the price of silk without producing any improvement in quality It appears from the account already quoted, that the Indian cost of the Company's raw silk in 1814–15, was but sicca rupees 419 per maund of about 74lbs., whereas in 1829–30 it was sicca rupees 497, showing a rise of about 18 per cent. If we go back to an earlier period, we shall find that the rise in silk has been immense. I have a Calcutta price current by me of 1780, by which it appears that the price of the Company's raw silk was but sicca rupees 320 per maund, upon which the price of 1829–30 shows an advance of no less than 55 per cent. But even this was an enormous enhancement upon former prices; for in the very year specified, the Directors of the East India Company complain that they were paying above 40 per cent. more for silk of the same quality than they had done fifteen years before. With respect to the assertion which I have made, that no improvement has taken place in quality, I proceed on the distinct opinion offered on this subject by the witnesses examined by the Lords' Committee on Trade of 1820 and 1821. It was then stated, that after the first establishment of the Italian mode of reeling in Bengal, which I think was about the year 1772, no improvement had taken place down to the period when the evidence was given, and I do not believe that it is alleged that any has since taken place.

Regulation 31, of 1793.

Report of 1831, p. 106.

9th Report, House of Commons, 1785.

From these facts, and many others which might easily be adduced, I do not hesitate to join in opinion with many experienced persons, in considering the Company's interference in the silk trade as the principal cause which has hitherto prevented India from supplying this country with a large and cheap supply of good silk, such as would enable us to compete on fair terms with other European nations who can command supplies of the raw material, not accessible to us on the same conditions. If an open competition had existed in silk, as in some other Indian articles, such as indigo and lac-dye, it is difficult to believe but that the same enhancement would have taken place both in its quantity and quality as in these. The quality has been stationary for near sixty years, and the quantity amounts in value, as estimated by the exports from Calcutta, to but *one-fifth* part of that of Indigo, although the manufacture was established above twelve years earlier.

In 1817, the home authorities sanctioned Regulations proposed by the Indian Government for imposing a duty of three rupees per maund on salt, equal to about 4*s.* per bushel; and of 24 rupees per seer on foreign opium, equal to about 24*s.* per pound weight. The avowed object was the protection of the Company's monopolies of these two articles. These enactments have all the appearance of being at direct variance with the provisions of the Act of Parliament, which expressly directs "that all goods, wares, and merchandize of or belonging to the said Company, exported or imported from or into any parts or places under the government of the said Company in the East Indies, or other places within the limits of the said Company's charter, shall be subject to the payment of the like rates, customs, and duties of import and export as the goods, wares and merchandize of the same kinds or sorts exported or imported in private trade, under the authority of this Act, are or shall be subject or liable to be charged with.*" The operation of these Regulations, as far as salt is concerned, is exactly the same as if His Majesty's Government were to throw open the tea-trade on a specific duty, for example, of 3*s.* per pound to all private merchants, permitting the East India Company to import the article duty free. In this case, the Company would receive as a profit the whole amount of the duty, and no tea could be imported unless the Company's profit exceeded the amount of such duty. The unfair profit received by the cultivators of tobacco in Ireland, until the Act passed last year, prohibiting the growth of this article, is another illustration exactly in point. To fulfil the intention of the Act of Parliament, the same specific duty ought to have been levied on Indian and English salt, and the Company's monopoly to have been abandoned; a course which would not only have been consistent with the Act, but with sound policy.

The fee demanded from a private person proceeding to India to reside under covenants, is the same as that demanded from a captain in the army, or a writer, and more than twice that demanded from a subaltern officer; and the fee demanded of the description of persons called "Free Merchants," is twice as much as that demanded of a covenanted civil servant of the rank of a factor.

Mr. Larpent.

THAT it is injurious to the private trader is my most decided opinion; and in this I am borne out by the testimony of the London merchants (*see* Resolutions, dated 2d March 1830, several of whom have had much practical experience in India as well as in England.

MEMORIAL OF LONDON MERCHANTS.

To the Honourable the Court of Directors of the United East India Company.

Honourable Sirs,

WE, the undersigned merchants and agents in London, connected with the trade of the East Indies, beg leave to acquaint your Honourable Court, that urgent representations have been made to us by certain British merchants in Calcutta, on the subject of the very serious disadvantages which the private traders have to encounter in their endeavours to procure articles of the produce or manufacture of the interior of India, for the purposes of a return investment, in exchange for the produce and manufactures of this country, in consequence of the existing commercial regulations of the Bengal Government.

Impressed with the importance of these representations, we have comprised them in the following statement, to which we take the liberty of soliciting the attention of your Honourable Court.

It may be assumed that the Act 55 Geo. 3, c. 155, by which the charter of the East India Company was modified and renewed, had distinctly for its object a separation of the several capacities of the East India Company, as ostensible sovereigns of India, and as a trading corporation.

Any regulations, therefore, of the East India Company, or its governments in India, tending to render its political power subservient to its commercial interests, may unquestionably be considered a contravention of the spirit of that Act. It is the object of the present remarks to show that so long as the 31st Regulation of the Bengal Government, of the year 1793, remains unrepealed, the East India Company avails itself of its political authority to increase its mercantile profits; and by narrowing, if not altogether excluding, competition, secures to itself an undue preference over the private trader:

That Regulation is intituled as follows:

"A Regulation for re-enacting, with modifications and amendments, the rules passed on 23d July 1787, and subsequent dates, for the conduct of the commercial residents and agents, and all persons employed or concerned in the provision of the Company's investment."

And the following is an analysis of its provisions, so far as the public is interested:

"No person in *balance* to the Company, in any transaction connected with the provision of its investment, or under engagement, can withdraw from its employ until such balance be paid or goods delivered." Sec. 2. "Persons who have dealt with the Company on account of its investment, must give the previous notice of two weeks before they can withdraw." Sec. 3, cl. 3. "The goods manufactured by persons under engagement or indebted to the Company, are liable first for the claims of the Company; the parties cannot work for themselves or others. Penalty." Sec. 3, cl. 4 & 6.

"When a contractor has not performed his contract for delivery of goods, he is to be put under the restraint of peons." Sec. 3. cl. 5. "List of persons employed in the Company's investment to be exposed in the cutcherry of the pergunnah, to be regularly corrected and sent quarterly to the Court." Sec. 4.

"Penalty for persons who may buy of the producers, with a knowledge of their engagements to the Company, the knowledge to be evidenced by circumstances, or the fact of the goods having the Company's mark upon them." Sec. 5.

"Persons not to interfere in any way to prevent people from treating with, or taking advances from, the Company." Sec. 6. "Officers of Government, landholders and others, are not to behave with disrespect to the commercial residents or their officers, and to afford assistance

---

* 53 Geo. 3. c. 155, s. 24.

assistance for the protection of persons employed by the Company, and the security of the investment." Sec. 7.

" No person employed in the provision of the Company's investment shall be liable to be summoned by a zemindar or his officer on account of the ground-rent. The goods and advances belonging to the Company shall not be distrained for ground-rent." Sec. 9, cl. 2.

" Persons prosecuting individuals employed in the Company's investment, must allege the fact. The prosecuted exempted from the ordinary process of the courts, and to be proceeded against through the commercial resident, or his deputy appointed by him. These may tender security themselves, or decide on the sufficiency of that tendered by the prosecuted." Sec. 10, cl. 1.

" Persons employed in the Company's investment not liable to the ordinary criminal process." Sec. 10, cl. 4 and 5.

" In cases where manufacturers are employed by several parties *other than the Company*, they shall deliver goods according to priority of engagement." Sec. 11.

" Where a decree may be passed against a person employed in the Company's investment on an engagement subsequent to the origin of the party's dealings with the Company, it shall provide for the prior satisfaction of the Company's claims. Before execution of any decree against a person registered as employed in the Company's investment, the judge shall require the commercial resident, 1st, to state whether, at the time of the engagement decreed, the party was in the employ of the Company; 2d, to state whether the Company have any and what claim on him; 3d, to prove such claim. The claim of the Company shall be first made good out of the defendant's property, whose person shall not be liable to attachment for the claim of the individual." Sec. 12.

" The commercial resident, in dealing on account of his own private trade, shall not make the *Company's* prices the standard of his own." Sec. 15, cl. 4.

When it is considered how strong the habitual feelings of deference to authority are in India, and the mode in which the raw produce or manufactured goods of that country are obtained, namely, that of advance, the character assigned to this Regulation in the preceding paragraph will not be thought too strong. By it, no persons in balance to the Company, or engaged in any way in the provision of their investment, can withdraw from their employ; they cannot work for others or for themselves. If they do not fulfil their contract they are put under the restraint of peons, and the goods they manufacture, or their articles of produce, are liable *first* to the Company, although they may be indebted to others: thus, if a private merchant has contracted with a producer and made advances, the moment the latter gets his name enrolled in the list of those employed in the provision of the Company's investment, the Company take precedence, both in obtaining his produce and preventing his working for any other person. Inducements are, moreover, held out by certain immunities which are granted to those employed under the Company. Sec. 6 & 7 directs the officers of Government, &c. to afford them protection. By c. 2, s. 9, no person so employed shall be liable to be summoned for ground-rent: and by s. 10 such persons are exempted from the ordinary process of courts of justice, and can only be proceeded against through the commercial resident who has the charge of the Company's investment.

Whilst the Company in their commercial capacity enjoy the restrictive privileges which the Regulation in question confers, it can hardly be denied that they possess a virtual monopoly in every article of the internal trade of India which can be selected for investment.

Raw silk, saltpetre, and cotton, are at present the principal articles of trade which the Company purchase in the interior through the agency of their commercial residents.

It has long been a subject of great complaint with the private merchant that he was unable to obtain a sufficient supply of raw silk; and the relative proportions of the import by the Company and private traders of this article, now become of great importance to a rising manufacture in this country, will illustrate the correctness of the conclusions deduced from the provisions of the Regulation under examination. The Company, under the exercise of this assumed authority, shut out the private trader from a fair competition in the purchase of this important article, and thereby securing to themselves a monopoly of the industry of the native population, they check that excitement to exertion, and consequently to production, which the simultaneous demands of the private merchants and the Company, if placed upon an equal footing, would necessarily create. Muslins, piece-goods, and other articles, have been and may be again objects of the Company's investment, as their funds accumulate, and we have recently seen their attention directed to indigo; so that if they were to bring into general exercise the power assumed under the Regulation now complained of, they might effectually crush the enterprize of the private merchants, exclude them from the possibility of effecting returns for the increasing trade to that country in British manufactures, and curtail the general advantages which would otherwise be derived by Great Britain and India from the connexion subsisting between the two countries.

It ought also to be observed, that whilst the private trader is thus excluded from a fair competition with the Company, the Company's commercial residents are permitted to engage as agents in the purchase of goods, and derive from their official influence an obvious advantage over any private competitor.

Appendix, No. 4.

Trade with India: Answers to Queries.

In forwarding to your Honourable Court the above statement, we cannot refrain from respectfully repeating, that the principle on which it proceeds is, that the Regulation in question, by giving undue advantage to the Company in their commercial character over the private merchant, is contrary to the spirit and letter of the Act by which the trade of British India was opened to the public, and opposed to the present liberal policy of the times. It appears to us that it was not the intention of the Court of Directors on the passing of that Act that any existing Regulation having such a tendency should remain in-force; and this may be inferred from the instructions transmitted by the Honourable Court to the Bengal Government in their public letter under date the 6th September 1813, para. 23, wherein they observe, "We cannot omit, upon the present occasion, expressing our expectation that all our servants shall conduct themselves with liberality and candour, and act up to the full spirit of the Legislature; so that if the traders should be disappointed in their views, they may have no ground for imputing their disappointments to any deviation on our part from the principle on which the trade is opened to them."

It may, however, be alleged, that the Honourable Company, without contending for their rights to the powers enjoyed by them under this Regulation for the purpose of commercial rivalry with the private traders, may fairly demand their continuance as indispensable to the regular and certain remittance of that part of the revenues of British India applicable to the payment in this country of territorial and political charges, which, being connected with the sovereignty of the Company, the Regulation is considered justifiable, and consonant therefore to the provisions of the Act.

The question thereby assumes a new shape, and the parties at issue will be, not the East India Company, as merchants, against individual merchants, but the East India Company, acting for the benefit of the people of India, against merchants influenced by their own particular interest, and therefore that the private interests of the latter should be made to yield to the more extensive benefit to be reaped by the whole Indian community.

If this argument were sound it would be a conclusive bar to the prayer of the private merchants; but they contend that it is altogether untenable and incorrect upon general principles, and that the circumstances attaching to the particular case in question do not form any exception thereto. The object of the Company is, how best to supply funds in this country to meet their present and growing expenses of a political nature. Upon general principles, it can scarcely be doubted that, to enable this remittance to be made with the least burthen to the people of India, the wisest plan would be to encourage the increase of capital in India; to insure its distribution into the most natural, and therefore the most beneficial channels; and, by wise legislation, to promote the cheapest cultivation of Indian produce, and the best mode of its remittance to this country.

To effect this, it appears to us expedient that the restrictions placed by the Regulation in question upon the industry of the native population should be removed, and a free and unshackled competition allowed to the private merchants, correspondent to the principles on which they were admitted by the Legislature into a participation of the trade with India.

We have the honour to be, &c.

Making the balance written off for bad debts 15,452 sicca rupees from 1809 to 1829. *See* Evidence.

In India the deference paid to the sovereign does practically give the benefit of preemption to the Company in whatever articles they deal. In the production of silk, notwithstanding their recent measures to prevent abuses, these still exist; and the Factory bad debts and losses are supposed to be very different indeed from the statement given in the Parliamentary Return, No. 9, p. 579. Oct. 1831. The high price of production, which has gradually risen from 10 to 15 rupees per seer, is noticed by the Board of Trade; and whilst this business is managed by public servants, remunerated by commissions on their produce, there will be waste and extravagance, and an undue excess in quantity.

Net Loss - -	*S.Rs.* 15,452	2	7			

Vide Commons' Report, Oct. 1831, Appendix, p. 579.

The above are the sums written off as Losses or Gains which have been ascertained to attach exclusively to Raw Silk. In the other items written off in the period it is not distinguished to what description of goods the several amounts have reference. In the amount of Outstanding Balances upon the books of the Commercial Agents transmitted to this country, those balances which may have arisen from advances made on account of the provision of Silk cannot be distinguished from advances on account of other articles of investment provided at the several commercial residencies; a Return, therefore, of the Outstanding Balances of Raw Silk cannot be furnished.

East India House, 3 October 1831. (Errors excepted) (signed) *T. G. Lloyd.*

Mr. Rickards.

Vide Appendix 5 of Rickards' Speeches 1813, and Evidence, July 1831, Ans. 2846, whence this quotation is taken.

IN a publication of mine in 1813, sundry extracts are given from the Diary of the Commercial Board at Surat, in which the following facts will be found to be fully substantiated, as the ordinary course of proceeding of the Company's commercial servants, between the years 1796 and 1811, viz. "That the Surat investment was provided under the most rigorous and oppressive system of coercion; that the weavers were compelled to enter into engagements and to work for the Company, contrary to their own interests, and of course to their own inclinations, choosing in some instances to pay a heavy fine rather than be compelled so to work; that they could get better prices from Dutch, Portuguese, French and Arab merchants, for inferior goods, than the Company paid them for standard or superior goods; that this led to constant contests and quarrels between the agents of the foreign factories and the Company's commercial residents, and to evasion and smuggling on the part of the weavers, for which on detection they were subject to severe and exemplary punishment: that the object of the commercial resident was, as he himself observed, to *establish and maintain the complete monopoly, which the Company had so sanguinely in view, of the whole of the piece-goods trade at reduced or prescribed prices;* that in the prosecution of this object, compulsion and punishment were carried to such a height, as to induce several weavers to quit the profession; to prevent which, they were not allowed to enlist as sepoys, or even on one occasion to pass out of the city gates without permission from the English chief; that so long as the weavers were the subjects of the Nabob, frequent application was made to him to punish and coerce weavers, for what was called refractory conduct, and when severity was exercised towards them, the Nabob (who was but a tool in the hands of the British Government) was desired to make it appear as the voluntary act of his own government, and to have no connexion with the Company or their interest, lest it should excite ill-will or complaint against the Company's servants; that to monopolize the piece-goods trade for the Company at low rates, it was a systematic object of the resident to keep the weavers always under advance from the Company, to prevent their engaging with other traders; while neighbouring Princes were also prevailed on to give orders in their districts, that the Company's merchants and brokers should have a preference to all others, and that on no account should piece-goods be sold to other persons; that subsequently to the transfer of Surat to the British Government, the authority of the Adawlut (our own court of justice) was constantly interposed to enforce a similar series of arbitrary and oppressive acts."

As long as the Company continued to trade in piece-goods at Surat, this was the uniform practice of their commercial servants. It may be taken as a specimen of the practice of other factories, and nothing more than the natural consequence of uniting power and trade in the same hands.

In Lord Wellesley's well-known letter of 19th July 1804, to the Madras Government, a similar course of arbitrary proceeding is detailed as being the practice of the commercial factories under that Presidency. If reference be had to that letter, it will be seen, on the faith of the highest official authority, how the power of the sovereign has been arbitrarily and habitually exercised, not only to favour and promote his own commercial dealings, but to throw obstructions in the way of private enterprize, fatal to the interests and pursuits of the regular and more legitimate traders of the country.

In the districts subject to the Company's government in the west of India, yielding cotton, the same exercise of power was uniformly displayed, up to 1804-15, to sustain and promote the Company's commercial operations. A large quantity of cotton being required annually for transmission to Canton to barter for teas, the Company's government abroad compelled the inhabitants of their own districts to give up the whole of their produce, one half as revenue, that is, in discharge of that enormous land-tax fixed at one half the gross produce of the soil, and the other half at a price fixed by the judge, the collector, and the commercial resident of the district; and in which the ryots or sellers of the cotton were not allowed to have a voice. These proceedings were explained by me in a memorial to the Court of Directors in September 1812, of which, to save the trouble of reference, an extract is annexed to this answer. Orders, it is said, were sent to India about the year 1814, to alter this system, to what extent I know not; but it is more than probable that coercion or influence, or both, are still exercised, as the same spirit prevails in every other part of the Company's dominions. I cannot explain myself better on this head than in the words of an answer to my examination of July 1831: "A commercial resident, anxious to promote the Company's interests, or dreading the consequences of disappointment in completing the Company's investment, naturally desires to secure in its favour all the advantages which power can give it. To this end arbitrary and oppressive acts are encouraged or connived at, till the commission of them comes to be considered as zealous performance of official duty; and this must ever be the case where power and commercial dealings are committed to the same hands,"

Vide Evidence annexed. Also Evidence, April 1831, Ans. 2321, *et seq.*

Vide Examinations, 19 July 1831; and for this Extract, *vide* Ans. 2846.

In Mr. Saunders' evidence, of March 1831, this spirit is stated to prevail, and the most arbitrary and oppressive acts to have been committed up to the year 1829, in those districts of Bengal where the Company's silk factories are established. Mr. Saunders' evidence is very important, in distinctly showing not only that a practice very similar to that above described as the former practice at Surat, prevailed in the Bengal silk factories up to the latest period, but that the Company's interference had the effect of raising prices upwards of 40 per cent. between the years 1815 and 1821; and that this high price continuing, so that great losses were sustained on the sales in England, an attempt was made in 1827, by an equally arbitrary proceeding, to reduce the prime cost of the article, and orders were accordingly given to cause it to be fixed by the *buyers* of the commodity, without the least reference to the will or the interest of the *sellers.*

Vide Evidence, March 1831, Ans. 2000 to 2091.

The evils arising out of the unnatural union of power and trade in the same hands, is also ably explained in the evidence of Sir Charles Forbes, and illustrated by examples highly deserving of attention, such as the case of Mr. Wilkinson's losses by an arbitrary act of the local Government; the various monopolies in India, including the cinnamon monopoly on the island of Ceylon, the details of which, as given by Sir Charles Forbes and confirmed by Mr. Stewart, clearly show that the evils alluded to are not peculiar to the Company's territories, but are equally ascribable to the King's insular government; in short, prove to demonstration, that when a sovereign exercises trade, or a merchant is allowed the use of power, that power is, under all circumstances, and by whomsoever administered, sure to be abused, and perverted to the most pernicious purposes.

Vide Evidence, April 1831, Ans. 2313 to 2550.

EXTRACT from *R. Richards*'s Memorial to the Court of Directors, dated 9th Sept. 1812.

" GUZERAT COTTON.

" 32. THE next occasion of the Honourable Court's displeasure was a representation by the house of Forbes & Co., and Bruce, Fawcett & Co. in January 1810, of the ruinous price which cotton had attained in 1809; begging Government to withdraw its competition for a season from the market, and offering to supply, at its actual cost, the quantity of cotton they might require to purchase for the Company's China trade in the current year, a proposal in which Government then thought it expedient to acquiesce.

" 33. On this head it will only be necessary to premise that the Company take the cotton of their own districts in Guzerat in kind, partly as revenue and partly otherwise, at a reduced price,

price, and that for any additional quantity wanted they enter the general market as purchasers: in which view the merchants thought that the Company's competition was, at least, one cause of the high prices of which they complained, and solicited that the effects of its removal might at all events be tried.

" 34. In the Honourable Court's animadversions on this transaction they are pleased to assume the following as facts; viz. That the Company exercise no monopoly in their own cotton districts, or throw the least obstruction in the way of private buyers: That their servants only take from these districts the amount of the established revenue in cotton: That this is accounted for to the ryots at a price equivalent to the general market rate of the season; and that they do not exercise power or influence to get the commodity 'at a less price than the said market rate, or than the owners are content to sell it at,' admitting, at the same time, that if this were really the case, there 'would then be at least a consistency between the alleged cause and the alleged effect.' Their competition in the general market is also supposed to be attended with no injury whatever in its effects.

" 35. From some of the more partial statements entered on the public records, it is possible these inferences may have been deduced; and I have no doubt that these are both the conviction and intention of the Honourable Court, as well in reference to their own ryots as the merchants residing under their authority in India. But the real state of the case is widely different:—Their records contain unequivocal proofs of the following facts, as I pledge myself, if necessary, to exhibit in the official reports of their servants, and an uninterrupted series of orders by the local Government.

" First, That the Company monopolize the cotton in their own districts, or at least of the tulput or government lands, taking not only the whole revenue of this district in cotton, but the 'surplus' produce, at the reduced price fixed by their servants. Thus, let us suppose the whole produce of the tulput district to be as 10, of which the grain produce is 2 and the cotton 8.

" The Company's share of revenue will be in all 5, but of the cotton only -	4
" The remainder of the revenue is grain, convertible, according to the established usage, into a money-payment; but for this cotton in kind is also substituted, and therefore takes another share, or - - - - -	1
" There then remains 'a surplus,' the unquestionable, exclusive and allowed right of the cultivators, of - - - - - - - - - -	3
over which the Company can have no possible claim but that of absolute force; yet this is also taken from the ryots at the reduced price fixed by their servants, making - - - - - - - - - - - -	8

or the whole cotton produce of the district, without leaving any portion of the avowed share of the ryots at their own free disposal.

The produce of the tulput lands of the Broach collectorship in cotton is estimated on record at 12,000 or 14,000 bales; that of the free lands at 3,000; so that the Company monopolized in this collectorship, in the first instance, four-fifths of the whole produce. The remaining fifth belongs to the actual proprietors of estates, called Grassias and Wuzeefaders, and whose rights as such are undisputed; of these it is recorded in 1808, that the commercial resident attempted to take their produce on the same term as that of the tulput lands; the Wuzeefaders strenuously resisted, the commercial resident loudly complained, a reference was made by order of Government to the judge of the district; and, through his interference, the Wuzeefaders conformed to what was called the common practice of the pergunnah. It would seem from the record, that the Wuzeefaders only submitted to this system in 1808; though the orders of Government, as seen in their proceedings, uniformly required the whole produce to be appropriated to the use of the Company.

" Secondly, That this monopoly is a continuation of that established in 1791, under Scindia's government, and retaining some of its features, is thereby calculated to keep up the original sense of its injustice, and to level our Government, in the estimation of the natives, with the despotism which preceded it. The plea of perpetuating the practice of the old Government is only good in relation to usages, whose proved utility may have rooted them in the attachment of the people; but no justification of the rapacious exactions of a Mahratta fouzdar; and, the more especially, when even the pretence of antiquity cannot be advanced to lay claim to our respect.

" Thirdly, That this monopoly has been uniformly authorized, and even required by the orders of Government, from the first of our footing in Guzerat, to the positive exclusion of all private buyers from the Company's districts; though such a measure is now declared to be contrary to the intention and understanding of the Honourable Court.

" Fourthly, That this monopoly has had the effect of nearly doubling the price of cotton in Guzerat.

" Fifthly, That if the Company were now to relinquish this monopoly, and the trade were thrown open, the price would materially fall; whence it follows, that the Company's interference not only raises the market price of the article to buyers generally, but that the Company's agents still withhold from the ryots that market price which their own competition has materially contributed to enhance.

" Sixthly, That this cotton is taken from the cultivators in the first instance, without any price being either fixed or intimated; the reduced price is only pronounced at the close of the season, after all the cotton has been disposed of, and sent off to Bombay; it not being right, as the report observes, 'to fix it at the commencement of the season, when the price is high and expectation great, lest it might, perhaps, create some degree of discontent among the ryots.'

" It follows, from this rule and the orders of Government on which it is founded, that the price of cotton is fixed by the agents of the buyers alone, *i. e.* by the judge, the collector, and the commercial resident, who exercise the whole civil authority of the district over, generally speaking, a slavish, patient and forbearing people; and that the settlers are, in reality, allowed no voice in the value of their own commodity, or even suffered to know what they shall get for it, till after it has been far removed from their reach and the country, by previous exportation to Bombay.

" Seventhly, That orders were issued for a further reduction of price, if practicable; and that the servants to the northward thought it their duty, in pursuance of these orders, to offer it as their opinion, that a further reduction of 10 or 12 per cent. might be unobjectionably effected.

" Eighthly, That this further reduction of price was not meant to be attended with a corresponding diminution of revenue, although the payers of this revenue are avowed to be the only sufferers by the reduced price of their cotton.

" Ninthly, That Government, on this very report, and in reference also to the Honourable Court's orders of the 30th April 1806, expressed in December following their expectation, always tantamount in its effects to an order, to the northern servants, that the price of the Company's cotton to the ryots should be fixed at 10 or 12 per cent. lower than the same class of people get for it in the neighbouring Mahratta pergunnah. The Company's price to the ryots has consequently been always under, and in 1809 was 30 rupees per candy, or 25 per cent. under the general market rate. Whatever may be said of the Company's right to the revenue cotton at this reduced price, it is for the Honourable Court to judge how far it should also be applied to the 'surplus' cotton, which the ryots have certainly an exclusive right to dispose of, if they please, in the general market; but which, contrary to the declared intention of the Honourable Court, it is thus seen they are positively restrained from selling:—and,

" Finally, That though the Honourable Court's orders of 30th April 1806 evidently refer to a general reduction of the price of cotton, to save a branch of trade to the western side of India, which it was otherwise expected to lose, yet the views of their servants in India never extended beyond reducing the cost of that portion which was intended to constitute the Company's annual investments to China. It is remarkable that the object of the Honourable Court's orders was thus wholly defeated. They intended good, but produced in their operation a material aggravation of the very evil which the Court proposed to remedy. By their servants withdrawing a large portion of cotton from the ryots, or sellers, at a reduced price, and the other means recurred to, to give effect to these orders, the residue of the commodity became materially raised in price in the general market.

" 39. On the head of competition in the purchase of cotton I shall, for the same reason as adduced in the 36th paragraph, say but little. All I ever advanced on this head was, that the Company's competition was one, though not the sole, cause of the high price which cotton had obtained in Guzerat; the undue competition of the private merchants another. The Honourable, Court, however, insist on the latter fact, and deny the former altogether, on the authority of a report to this effect by the commercial resident at Surat; yet, if the Honourable Court will be pleased again to refer to the records of 1809, they will find the same commercial resident avow, in the very same year, and when not personally accused himself of injudicious acts or heedless purchases, that, 'on the 11th March he had every hope of purchasing cotton at moderate rates,' whilst, on the 25th following he adds, 'it has been unfortunate, however, that the Honourable Company's views were publicly known at Broach before he received his orders, and the consequence was such an immediate influx of competitors as to occasion a considerable rise in the market price. By withholding for a day or two, I, however, was enabled to conclude engagements for about 1,400 bales, packed at 150 to 151 ½ rupees per candy, being 1 to 1 ½ less than it had risen to at first; but it immediately afterwards obtained 155 and 156 rupees, at which it has since continued.'

" 40. In 1798, the commercial resident at Surat was first employed to purchase cotton (I believe about 2,000 bales) for the Company. If the Honourable Court will please to refer to their diaries of that period, they will see a series of mysterious proceedings, with injunctions to the strictest secrecy in this trifling purchase, and merely that the price of the article might not be affected by the Company's competition, or obstacles thrown in the way by a knowledge of their intentions.

" 41. Just before I quitted the Council Board a letter was received from another commercial agent, ordered by Government to purchase timber, in which he remarks, 'I have, in consideration of the tendency which the Company's wants *always* have to raise the market, entrusted this business also to Mr. Crokonden's management, and he has sent trusty people, fully instructed, to make such arrangements as they may find practicable.'

" 42. To multiply proofs of this description is, however, quite superfluous; for the records are full of them.

" 43. Some years ago it was stated, on good authority, that 70 rupees per candy of cotton, to the grower, was equal to the average which grain yielded. In 1808, the judge of Broach observes, that 30 rupees per bhar, *i. e.* 79 ½ rupees per candy, would afford a good profit to the cultivator. At this rate the ultimate exporter might expect to get cotton at 100 rupees to 110 rupees per candy to the northward, and therefore 120 to 130 rupees in Bombay, at which rate it would admit of consignment to China; but when the northern price is so high, that the average of the season gives, as in 1809, 175 rupees

per

per candy, on the Bombay Green, there is an end of all profitable speculation to China by private merchants."

When I was in India, several treaties existed with Native Princes, in which, where any branch of the Company's trade was concerned, or likely to be promoted, stipulations were invariably inserted, either for a monopoly of such branch in favour of the Company, or to give the Company's agents a preference in their dealings therein over all private merchants. The history of Bengal contains a series of the most iniquitous proceedings founded on such treaties with the Nabobs of Bengal, both previous and subsequent to the year 1765. In my time the most arbitrary and unjust measures were in like manner followed up in other parts of India, of which a specimen is given in a preceding answer. Other instances will be found in my publication of 1813, in reference to treaties with the Rajahs of Malabar and of Travancore. Various others might be quoted, all framed in the same spirit, and all as arbitrarily acted upon. I believe the same principles to be in force to the present day, of which some notable examples may be found in the history of late transactions regarding Malwa opium, and treaties with Malwa Princes. If, however, the Company's trade be now abolished, as I conceive it ought to be, as well for their own advantage as that of the public, this further improvement would result from it, that we should be relieved from the disgrace of these relations with independent or allied states, and from the stigma of imposing terms on them which nothing but the dread of our power could induce them to submit to. When, therefore, gentlemen urge that it is but just the Company should be allowed to enter the markets of India like all other traders, but with the advantages they naturally derive as merchants from the employment of their "large capital," and from long-settled commercial establishments in various parts, let the plausibility of this argument be compared with the numerous treaties, or articles of treaties, here adverted to, with the whole series of their commercial records, and the compulsive exercise of both their power and influence in the procuring of those goods in which they have chosen to deal; and then let any impartial arbiter say, if he can, whether the Company ever did, ever could, or are ever likely to enter the field of Indian commerce as fair competitors; the thing is absolutely impossible.

Vide Rickards's Speeches, App. 9, p. 134.

QUERY 5.—WHAT is the System pursued by the Company in the conduct of their Commercial Transactions in England; and have their Proceedings proved prejudicial or advantageous to the general Interests of Indian Commerce?

Mr. Mackillop.

ANSWER.—THE goods imported into this country by the Company from India and China are sold at public sales regularly held, and their exports are chiefly purchased by contract, in nearly the same manner as the transactions of individuals are managed.

Manchester Chamber of Commerce.

AS the Company are large importers of Indian produce to England, the market is very much ruled by their determination to sell or to hold, and thus an increased degree of uncertainty attends the prices of the articles they deal in, and the operations of private merchants are thwarted, their calculations defeated, and their interests injured.

Glasgow Chamber of Commerce.

THE system pursued by the Company in the conduct of their commercial transactions in England is not much noticed or directly felt in this quarter; but they are considered dangerous competitors in some of their purchases, profit, on their own admission, not being always their primary object.

Mr. Bracken.

I AM not acquainted with the details of their management at home, but I imagine that any body, constituted as the East India Company is, must necessarily have the means of injuring the general interests of trade, by glutting or narrowing the market according to its own real or supposed advantage, or its expectations of embarrassing private competitors.

Mr. Crawford.

ALL exports to India having ceased for some years, this question can only refer to the Company's management with respect to the imports. This comes under two heads, the sales of their own imported goods, and the sales of those of private merchants. The same objections, though to a smaller degree, owing to the greater extent of the market, the greater number and the greater activity of the competitors, apply in England as in India to a trade carried on with the funds of the State, and avowedly without primary regard to profit. It perplexes and distracts all regular commercial speculation, and sets the ordinary calculations of regular trade at defiance.

With respect to the Company's management of the sales of private goods, I am not in possession of the details; but I believe that considerable pains have been taken since the commencement of the present Charter for the accommodation of private merchants. The duty was repealed by the Act of 1813, the charges have been reduced, and the declarations of of sales on many goods, instead of being periodical, are now governed entirely by the wishes and convenience of the proprietors. Notwithstanding these accommodations, it is to be inferred from the statement submitted to Parliament, that private sales are considered by the public more convenient than those effected under the auspices of the Company, for the charges and profits of the Company on the sale of private goods have gradually fallen off in amount from 1814-15 to 1828-29, having been in the first year 220,668 *l.*, and in the last but 122,152 *l.*[*]

Under the former Charter, the Company was authorized to charge a duty of five per cent. on private goods, besides warehouse rent and charges of management, and the goods could only be sold at the periodical sales of the Company, which by statute was empowered to regulate the conditions[†]. Had the system been persevered in, it is a matter of certainty that not a pound's worth of Indian goods would have been committed to the Company's management.

Mr. Larpent.

THE system recently pursued by the Company has been to obtain funds in England without direct trade; and they have opened their treasury in London to receive money for bills on India, and have purchased bills in India on London, secured by goods consigned to them. The first of these measures failed, because they proposed to draw at a higher exchange than the parties remitting could afford to pay; and the second has been very limited, and but for the state of the money market in Calcutta in 1830 and 1831, would have been nearly inoperative.

Liverpool East India Committee.

THE import of tea being the most important part of the Company's commercial transactions in England, our observations will be principally directed to it.

The monopoly of this trade by the East India Company is productive of almost incalculable loss to the country.

When trade is free the supply of commodities adapts itself to the demand without any interference of Government; but the Legislature, in order to ensure a regular supply under the monopoly, provided in 1784 that the Company should always keep a stock in its warehouses equal to a year's consumption, and it is in evidence (*see* Mr. Melville, Q. 4300, of 1830), that the tea remains, on the average, 20 months in the Company's warehouses before it is put up for sale. Now it is well known that fresh tea sells in every market in the world at a considerably higher price than old tea, and yet the regulation alluded to effectually prevents the British community from ever purchasing fresh tea.

It was one of the regulations under which the importation of tea was confined to the Company, that whenever the price on the continent of Europe should be below the price in this country, licenses for the importation should be granted to free traders. Now it appears by the evidence taken before the Parliamentary Committee as to the value of tea samples procured by the India Board from ports on the continent of Europe and the United States of America, that in any of those countries tea may be purchased very much below the price of the Company's sales. But the protection afforded by the Act of 18 Geo. 2, against exorbitant monopoly prices, which have subjected the country to an enormous annual loss, has been withdrawn, inadvertently we presume on the part of Government, by the repeal of that amongst many other Acts relating to the customs, by the 6 Geo. 4, c. 105.

The upset prices of tea at the Company's sales are composed, in addition to the fair first cost, of loss on the Company's exports to China, and of rates of freight, and exchanges and charges far beyond what the free trader would incur, thus making the upset price not what the Legislature intended it to be, but a fictitious estimate of the cost; the consumer however has no alternative but to pay the price, for there is no other party from whom he can purchase.

To China the British merchant is now prohibited from exporting the manufactures of his country, and the consequence is, that the Americans have for several years been, and are now, engaged in carrying on a very extensive and lucrative trade in the export of manufactures from Great Britain to China. (*See* the evidence of Mr. Bates, Mr. Brown, Mr. Everett, &c.)

The Americans likewise carry on a considerable trade in exporting Turkey opium from Europe to China, which the British merchant is prevented from doing.

The exports to China by the Company are stated in the evidence before the Select Committee to be laid in about six or seven per cent. dearer than by the houses which manage the American trade from this country to China (*see* Mr. Bates, 3383, of 1830); they are also conveyed at higher rates of freight than they would be by the private trade; these circumstances must necessarily tend to limit the consumption of such exports, by raising the price at which they can be afforded.

Hull Committee.

THE most important of the Company's commercial transactions in England is in tea, and the system pursued in the conduct of that article is highly prejudicial to the general interests

---

[*] Papers relating to the Finances and Trade of India and China, 1830, p. 48.

[†] 33 Geo. 3, c. 52, s. 101.

interests of the nation. At Hamburgh, and the ports in Holland, as well as in North America, the average price, under the system of free trade, does not exceed 1 *s*. 6 *d*. per lb.; but in this country, the East India Company, by their monopoly, exact an average price of 2 *s*. 4 *d*. per lb. exclusive of the duty, being 10 *d*. per lb. more than what it is sold for at Hamburgh, in Holland, and North America, and what we should obtain it for if the trade was released from this oppressive monopoly. The high price which it occasions in this necessary article is far beyond the means of many, and is so important to all as to cause the necessity of the greatest economy in its use; but a reduction of 1 *s*. 8 *d*. per lb. (being 10 *d*. in the price, and consequently 10 *d*. in the duty) would enable millions to enjoy this cheering beverage, and at the same time would extend its consumption to more than double the quantity now required, thereby giving a most important addition to the revenue.

Mr. Rickards.

IN reply to this question, I would beg leave to refer the Board of Commissioners to Part IV. of my work on India, lately published, in which a sketch is given of the Company's commercial and financial history from the date of their first charter in 1600, but entering more into detail from the year 1765, or the date of the Dewanny grant. The former period exhibits the Company in a continued series of difficulties and contests, sometimes striving with enemies and rivals for superiority, and sometimes struggling for existence. Competition in trade was always their greatest dread, and often threatened them with extinction and ruin. They appear, therefore, at this time, to have contracted heavy debts both at home and abroad. Subsequently to the Dewanny grant, the Company's trade was supported by large sums annually furnished from the Territorial revenues, till in 1793 a crore of rupees, or 1,250,000 *l*. was annually appropriated by Act of Parliament to this purpose; and in no printed or published account that I have yet seen, have these liberal advances been satisfactorily accounted for: the statute book, on the contrary, abounds with Acts of Parliament between 1765 and 1793, and afterwards to 1813, passed to relieve the Company's commercial distresses. In, and previously to 1813, all the great commercial towns of the kingdom called aloud for an opening of the Indian trade; the Court of Directors, on the other hand, vigorously opposed it. The discussions of that day may still be referred to, as containing useful and instructive lessons. The advocates of free trade not only set forth the most powerful arguments against the injustice and absurdity of monopoly, but insisted on their means of extending our commercial intercourse with India far beyond anything that had been effected by the East India Company, and enumerating many of the manufactures of Britain that were likely to find a sale in the East. The Company, on the other hand, insisted that the expectations then entertained by British merchants as to the advantages of an open trade, were mere delusion; that if opened, all who embarked in it would be ruined; that the abolition of the Company's commercial privileges would be the destruction of the whole Indian system; that the trade of India was carried to the highest pitch of which it was susceptible, by the operations of the Company, and that any further extension of it, such were the prejudices of the natives, was impracticable; with many pages of declamation in the same strain. They further added, on the same occasion, that if the Indian trade were opened to the out-ports of Britain, the most ruinous consequences would ensue. "The immense interests," they observed, "which the port of London, with all its descriptions of merchants, tradesmen, tea-dealers, factors, brokers, dyers, packers, calenderers, inspectors, labourers, ship-builders, ship-chandlers, ropemakers, shipowners, mariners, and all their train of establishments, warehouses, wharfs, docks, yards, premises, shipping, formed in the course of two centuries, would all be involved by the opening of the trade to the out-ports, the Company's periodical sales interfered with, and their very large property in warehouses and other buildings deteriorated; in short, all the institutions, public and private, of the capital for carrying on the Eastern trade, would be shattered or broken down.

Vide Rickards's India, Vol. ii. p. 596 to 604.

Vide Evidence, July 1831, Ans. 2747, *et seq*.

These are the predictions set forth on both sides in this interesting discussion; and with the mass of facts now before us, it does not require uncommon sagacity to discover which of the parties in this contest were the true, and which the false prophets.

From this overstrained zeal of the Court of Directors (natural enough, it must be admitted) to protect the interests of their monopoly, there can now be no question as to their proceedings in England having been conducted in error as to the true nature of this trade, and its susceptibility of increase, and that the limitations and restrictions hitherto imposed to favour the monopoly have, in a national view, proved highly prejudicial to the general interests of Indian commerce.

Vide preceding Answers, and Documents referred to.

Although this discussion is now a matter of history, and chiefly of importance as a lesson or guide for the future, I have noticed it here for another purpose, and that is, to bring forward a grievance as connected with the system pursued by the Company in England, which has never yet been duly attended to. In the strenuous opposition given by the Court of Directors in 1813, to the opening of the trade, they persuaded Government at last not to allow of its being extended to more than 12 ports of the United Kingdom; and such is the case at present. The consequence is, that East India goods bonded at any one of the said ports cannot be removed to any other port without the merchant trading therein paying the whole duty (and this duty in many instances enormous); as if the goods were taken out for actual consumption. Indian commodities are thus subject to unjust restrictions from which all other goods are free, inasmuch as all foreign merchandize but East Indian may be removed under bond to and from 66 different ports of the United Kingdom.

Appendix, No. 4.

Trade with India: Answers to Queries.

QUERY 6.—DOES the necessity of their effecting a large Remittance to England, without primary regard to Profit, operate detrimentally or advantageously upon Commerce, and to what extent; and could a similar Remittance be conducted through Private Agency, and with what effects?

Glasgow Chamber of Commerce.

ANSWER.—THE purchases made by the Company in India with the view stated, operate very detrimentally to the private merchant, and their proceedings must have proved prejudicial to the general interests of Indian commerce, from the sudden fluctuation in prices of produce which they have caused; similar remittances might be conducted through private agency without such injurious effects.

Liverpool East India Committee.

THE Company's purchases of produce without a primary regard to profit, have had and cannot fail to have a very injurious effect upon commerce; for the fact of so powerful and lavish a body being known to be desirous either of purchasing or contracting for any particular description of produce, has generally had the immediate effect of raising its price, and thereby of excluding the merchant, who buys only with this object in view. In many cases the rise in price from this cause has been destructive of the interests and prospects of the private merchant. We see no reason to doubt the practicability of effecting remittances to this country both through private agency and otherwise, to the full extent of the Company's wants, with perfect security to themselves, and without the disadvantages which have hitherto attended their remittances in produce.

Mr. Bracken.

THE necessity of such a remittance is in itself an evil, and seems to me a powerful reason for making it by the cheapest channels. On the grounds stated in the answer to question the 4th, I believe those channels will be found in the transactions of private trade which lead to reduction in cost and increase of consumption. To the extent of such results would be the advantage to commerce generally, and to the Indian Government in particular.

The commercial residents are comparatively ignorant of, and indifferent to, the state of the home market. They have in the collector's treasury a ready supply of cash for their purchases, have no very pressing interest in the result of their consignments, and consequently may be reasonably expected to overlook many circumstances to which those engaged in trade, as a pursuit involving their success in life, must necessarily devote the minutest attention.

Manchester Chamber of Commerce, and East India Committee.

THE necessity of effecting a large remittance to England, without primary regard to profit, must unquestionably operate detrimentally to commerce, and to an extent proportionate to the extent of the operation. The object of commerce being to distribute over the globe, at the cheapest rate, all the various commodities applicable to the comfort and enjoyment of mankind, whatever disturbs the natural equilibrium of prices must be injurious to commerce. To make heavy remittances, without regard to profit, must, of necessity, unduly advance prices at certain periods and places, and as unduly depress them at others; and these fluctuations will be found to exceed in extent the amount of the disturbing cause, and will produce further injurious effects, through the uncertainty and hazard they occasion to the commerce pursued, on other principles, by the private merchant. The second part of this Query, viz. "could a similar remittance be conducted through private agency, and with what effect," is perhaps the most important and the most difficult question in the series. This Board, however, does not hesitate to answer, that, to the best of its knowlege and judgment, such remittance could be conducted by private agency, and it believes with effects which on the whole would be beneficial. It must be borne in mind, that the commodities which constitute the remittance referred to are already brought from the East to this country. The practical inquiry therefore is, would this branch of business be taken up by private merchants, if it were abandoned by the Company, and how could the proceeds be placed at the disposal of the Company? The primary requisites for the undertaking are capital and enterprise; the existence of which to the necessary extent, it is presumed, will not be doubted. The next requisite is adequate motive, and in this the difficulty may be supposed to lie; for it being understood that the Company often import with a certain prospect of loss, from the necessity they are under of providing for their large periodical payments in England, business which must be undertaken with such a prospect would not be entered upon at all by private merchants. But the necessity on the part of the Company to have such remittance made, combined with the resolution of the private merchant not to trade, knowingly, to loss, would, it is believed, overcome the difficulty, by operating conjointly on exchanges and prices, and so produce that relative correspondence of markets which admits of and stimulates to healthy and active business.

Mr. Mackillop.

THE amount invested in indigo being in some years small and in others extensive, has occasioned fluctuation in prices, and proved prejudicial to the regular course of trade. The large extent of the Company's purchases in latter years, has occasioned indigo to sell at high

high prices at Calcutta, and thereby encouraged an increase in the cultivation, so as now to yield a supply beyond the consumption, necessarily followed by ruinously low prices in this country.

It is not improbable individuals may have been deterred from entering into the manufacture of silk from believing the Company would always provide a supply equal to the demand in Europe, and knowing that the extent of the investment would be less regulated by the prudential considerations that govern the transactions of private merchants, than by the necessity the Company are under of bringing home extensive funds annually.

Mr. Larpent.

WHEN the Company goes into the Indian market to buy, for remittance, indigo, sugar or cotton, they fix the price for the season, and that price is seldom calculated upon the state of the home-market; for the sovereign does not trade on the principles of an ordinary merchant, to whom profit on the average is the condition of supply. In the natural course of trade, if there be an excess of production on any article, the merchant must speedily adjust the balance between supply and demand, or he is ruined. Not so the sovereign, whose servants press business to increase their commissions, and in whose concerns the action of a commercial loss upon such a mass of revenue and political resources is not soon perceptible, and when felt, its recurrence is not soon prevented, and certainly not prevented without a very severe pressure upon the community, from the extent of its dealings. The article of indigo is an instance of the correctness of the above reasoning.

The Company raised the prices in Calcutta by buying for their remittances without regard to the state of the home market or to the consumption. Thus a stimulus was given to production, and we are now suffering from the reaction. The Company saw their error (in 1830), and retired from the trade; and the depression in price occasioned by this change of system has been ruinous. In the home market too the effects of a body like the Company trading are very injurious; what they buy, without regard to profit and loss, they sell also in the same manner, without judgment, and often at an enormous sacrifice.

See following Statement, showing the Company's purchases in the face of increasing stocks at high prices, and the increased quantity produced.

A STATEMENT of the Annual Produce of *East India* Indigo for 20 Years, commencing in 1811 and ending 1830; also the Annual Consumption during the same Period, computed by an Average of Four Years; and the Stocks in the Public Warehouses at the close of each Year.

FINANCE (Trade).

Appendix, No. 4.

Trade with India: Answers to Queries.

But though these evils are inseparable from the union of the commercial and sovereign character, the main question still remains unanswered. If three millions sterling are wanted in England for territorial purposes, how are they to be obtained? Perhaps the best way to find a satisfactory answer is, to analyse the present trade between England and India:

1st. There are required to pay the territorial charges in England - -	£.3,000,000
2d. A demand for remittance of savings, private family expenses in England, &c., estimated, at least - - - - - - -	1,500,000
3d. There is the return for the outward trade, about - - -	3,000,000
Together - - -	£.7,500,000

These returns must be made through commerce, whether in the hands of the Company or of individuals. It is the produce of India that in some way or other must, when brought to England directly or circuitously, satisfy all these demands. The skill and management in effecting this object must materially affect the result, and with the result the prosperity of the trade both of India and Great Britain. If too great supplies of Indian produce are brought direct from thence, derangement at *first* in the sale markets at home, and *next* in the purchase markets abroad, are the inevitable consequences. If to remedy this specie be abstracted from India, a fall of prices in India will immediately ensue, which will stop the import into India of British manufactures, where introduction has been occasioned by their cheapness at home, and which cannot bear any fall of price in sale in India. In fact, the remittance trade of India has been for some time past a very dangerous one; the increased demand for remittance has already occasioned an over import of many Indian articles beyond the wants of the home market; and if this is checked by a substitution of bullion, the outward trade is injured, and India suffers from a change in prices, and in the value of all its property and produce.

In such a trade, therefore, every thing depending upon skill and judgment, every reasoning *à priori* should induce the Legislature to trust to individual interest rather than to the operations of a large company, especially if that company be sovereigns also; and to give the private merchant every advantage, no country, especially one yielding an article of such universal consumption as tea, should be taken out of the sphere of his operations. The trade left to itself would soon fall into its natural channels.

The mercantile community of India, though depressed formerly by the existence of the Company's monopoly, is now quite adequate to any operations required for remittance to Europe. The danger of combination against the Company is purely chimerical. There would soon be a commercial community, branching either from India or Europe, or both, in China, Singapore, &c., adequate to bring home the teas, and to manage the home trade as it now does the large Indian country trade.

Mr. Rickards. *Vide* Evidence 22 March 1830, Answers 3488, 3511. Also 3 Mar. 1831, Ans. 1146, *et seq.* And 21 April 1831, Ans. 2508, *et seq.*

THE Company's interference in the buying market in India, which never fails to produce a very injurious and *unnatural* rise of prices, destructive of the natural order and principles of trade. I have explained in evidence that this rise of prices is of no consequence to the Company, who trade on a capital supplied annually from the revenues, and to whom profit is therefore no consideration; but ruinous to private merchants, to whom profit is every thing. The commercial transactions of individuals are most materially injured by this interference; and the injury will infallibly continue *as long as the Company are allowed to supply themselves in India with funds or investments, either for the Home or the China market.*

It has been proved by several witnesses in the late examinations, and the fact is indubitable, that whenever the Company's commercial agents appear in the Indian market as buyers, the price of the commodity in demand is immediately raised 10, 20, 30 or 40 per cent. It is raised, in fact, above its *natural* price; the legitimate operations of commerce are disturbed; the prime cost and charges exceeding the sale proceeds, private merchants are seriously injured, sometimes ruined; the means of remittance between India and England greatly obstructed; and the commercial intercourse of the two countries thereby cramped within narrow limits, which might otherwise be incalculably extended. This is a serious national evil, which *nothing but the entire abolition of the Company's trade can effectually remedy.*

But the Company's advocates, never at a loss for specious argument, dwell with peculiar complacence on the Company's "*large capital;*" of their just right to turn it to the best account, by entering the general market on the same footing as private traders; and that the latter have no good reason to complain of the Company's competition, merely because *the largeness of their capital* may give them advantages over the holders of smaller funds. A large capital, it may be observed, is no objection in any country or market, but the reverse, provided it be subject, as other capitals are, to the natural laws and chances of trade, without which there can be no fair or legitimate competition. But besides the glaring absurdity and injustice, as a general principle, of a sovereign trading in his own dominions, the mischief in this case is not from the Company's competition as large capitalists, but from their entering the market without any real trading capital at all. If there be any truth in the official accounts submitted to Parliament, this one fact is as clear as day, that ever since the year 1765, the Company's trade has been wholly supported and carried on by large sums annually supplied from the revenues of India. Being thus furnished from year

Appendix, No. 4.

Trade with India: Answers to Queries.

to year with artificial means of support, their trade is prosecuted with a reckless indifference as to profit or loss. The Company, for example, have no occasion to care for actual loss to the extent of 10, 20 or 30 per cent. on any annual adventure, being assured in the next year of their one or two millions from the revenues of India, just as if no such loss had occurred. The Company may therefore prosecute trade under a series of losses from year to year, which would soon reduce legitimate merchants to bankruptcy. They have not the same cause to be scrupulous about the prime cost of goods, as private merchants have, to whom profit on the returns is of vital importance. Under such circumstances, to hold out the East India Company as fair competitors, is mere delusion. It is, on the contrary, obvious, that if the surplus revenue and loans of India were but sufficiently productive, the Company, in their present united character, would possess the means of effectually crushing the private trade.

Mr. Crawford.

THE inconveniences and disadvantages to the private traders from bringing the revenue of the State, to which profit or loss must be matter of comparative indifference, into competition with their capital, must be so obvious that I need hardly dwell upon them. It is only necessary to look at the account furnished by the Company, to see the capricious manner in which the public funds are likely to be applied to such a purpose. In the first year of the Company's speculations, the sum invested in indigo was about 26,000 *l.* Next year it was more than treble this amount. In the succeeding year, this last amount itself was more than trebled. In the following year the amount invested fell off by 30 per cent. In the following it rose to be higher than ever. In 1827–28, the amount invested was 716,000 *l.* Next year it was less than half this sum; and in the last year of the statement the investment was nearly doubled again. While no power can increase the demand, the violent and injurious fluctuation in trade, which must be the consequence of the public revenue being employed one year in the purchase only of the twentieth part of the staple produce of a country, in another of a fifth part, and in a third of a tenth part, as has been the case in the Company's purchases of indigo, may readily be imagined. Indeed, the account exhibited by the Company shows the enormous amount of the fluctuations which have taken place, and which, I believe, are unprecedented in any commodity of the same description. In the first year of the Company's speculations, the price per maund paid was but sicca rupees 157. Next year it was 50 per cent. more, and in the third year very nearly 100 per cent. more. In the last year the price was near 40 per cent. less than in the third year.

The silk trade is of a far more objectionable character, in so far as the State is more directly implicated in all the operations connected with its management.

QUERY 7.—IN what Modes, and upon what Terms, have Remittances been effected between England and India, or India and England, and between the principal places of Commerce in India and Asia with each other; and to what extent, and with what degree of regularity, are the operations of Foreign Exchange and Remittance conducted by European or Native Merchants, as a distinct or separate business?

Mr. Lloyd.

ANSWER.—PRESUMING that the question refers to the mode and terms by which the Company have effected remittances from India, I have to state that they have effected remittances,

1st. By direct consignments of merchandize to England.
2d. By consignments of bullion.
3d. By bills of exchange remitted by the Indian Governments.
4th. By bills drawn upon the Indian Governments.
5th. By supplies furnished the Canton treasury.
6th By repayment of advances made in India to the King's Government.

As the proceeds of these several modes of remittance are realized at various periods, some short and others more protracted, the rates necessarily contain a compensation, in the nature of interest, for the period between the advance and the realization of the money.

A remittance by consignment of merchandize is realized at a more protracted period than by a bill of exchange at 12 months date; and the proceeds of a bill of exchange, drawn from England upon India, are realized at a shorter period than a bill drawn from India upon England; whereas the proceeds of a remittance through China are realized at a still more protracted period than by the other modes.

Appendix, No. 4.

Trade with India: Answers to Queries.

The rates thus adjusted are as follow:—

Upon all the Company's Transactions from 1814-15 to 1830-31,

	Per Sicca Rupee.	
	s.	*d.*
By sales of consignments of merchandize to England direct from India - -	2	1.76
By consignments of bullion direct from India in the years 1821-22, 1823-24, 1827-28, 1829-30 - - - - - - - - - - -	1	10.46
By consignments of bullion from China, paid for by drafts of the supracargoes upon Calcutta, in 1829-30 and 1830-31 - - - - - - -	1	10.93
By bills of exchange remitted by the Indian Governments in 1829-30 and 1830-31	1	9.90
By bills of exchange drawn upon the Indian Governments in 1830-31 - -	1	9.31
By supplies furnished the Canton treasury for the provision of the tea investment	3	4.21
By repayment of advances made in India to the King's Government - - -	2	1.65
As respects the Territorial branch, separately considered, the commerce pays for each rupee - - - - - - - - - - - - - -	2	3.84

From an inspection of the above rates, the advantage or disadvantage of each mode of remittance may be gathered.

Mr. Hill.

I UNDERSTAND this inquiry to embrace the whole commercial and pecuniary dealings between the countries to which it refers; and I answer, that remittances, in that large sense, have ordinarily been effected in the course of trade, and that the terms on which they have been effected have, in each instance, depended upon the out-turn of the mercantile adventure. The balance remaining due has been settled by a remittance, in the limited and usual sense of the expression, that is, by a payment in bullion, and the terms have been the intrinsic value of the remittance, less the charges incurred in making it. The Government of India, combining a commercial with a political capacity, has in the same manner effected its ordinary remittances by means of trade, and occasionally, when those means did not answer, has effected them by sending bullion, and more rarely by purchasing bills from private merchants. Its remittances by means of trade, I believe have, on an average, proved much more profitable than the out-turn of bullion remittances: those by private bills less so. As the course of trade leaves due a large balance from China to India for opium, cotton, &c. and a large balance from England to China for teas, there is obvious advantage in this channel for the remittance of the funds required by the Government of India for its large payments in England. The remittances of those funds completes the circuit of the transactions between the three countries.

Glasgow Chamber of Commerce.

REMITTANCES to India from Great Britain are generally made by bills of exchange. From India to Great Britain by bills of exchange, produce, bullion or specie; the rate of exchange, Calcutta upon England, has been very steady for several years past, being from 1 *s.* 10 *d.* to 1 *s.* 11 *d.* per sicca rupee for bills at six months sight; London on Calcutta, 1 *s.* 8 *d.* to 1 *s.* 9 *d.* per sicca rupee; from Calcutta and Bombay to China the balance of trade is always greatly against China, which has consequently to make large remittances to India in bullion and specie. The extent of business in exchanges betwixt Calcutta, Bombay and England is very considerable, and is conducted with the utmost regularity; but we are not aware that it has yet become a distinct or separate business of any European house.

Liverpool East India Committee.

REMITTANCES have been and are now made on account of private merchants, either, as the case may be, by bills on India or on England, with the greatest facility and regularity; and we learn from the best authorities that remittances are effected in the same manner, to great extent and with perfect regularity, between the principal places of commerce in India, both by Native and European agents.

Manchester Chamber of Commerce, and East India Committee.

REMITTANCES between England and India, and India and England, are regularly effected by means of bills of exchange, and of specie. As there is a larger amount requiring remittance from India to Great Britain than from Great Britain to India, few bills, comparatively, are drawn in Great Britain on India, but there is a constant exchange on London in Calcutta and other commercial towns of the East. This exchange fluctuates according to circumstances, within the customary limits imposed on the exchange operations of all countries, viz. the cost of the transmission of the precious metals. Specie is freqently transmitted to and from India, in consequence of which, undue fluctuations in exchange are checked and corrected. With the exchanges between the principal places of commerce in India and Asia the members of this Board are not minutely acquainted, but exchange operations do exist between such places, and are conducted both by Native and European merchants, but banking is pursued more as a branch of general business than as a separate trade.

Mr. Bracken.

PREVIOUSLY to the renewal of the present Charter, and indeed for some years after it, bullion formed a considerable portion of the remittances to India; but when the exchange on London to Calcutta fell below 2 *s.* 3 *d.*, the quantity very much decreased. In India the case is reversed, and bullion has lately been in the course of extensive shipment, and will continue so no doubt as long as the exchange is scarcely at a bullion level. The only check to exports of bullion from Calcutta will be an improvement in the quality, and a reduction in the cost of its raw produce, with diminished duties here. From most parts of Asia returns to Calcutta are mainly in bullion. Bills from China to a large amount sometimes come. Government bills too are frequently drawn at Bombay on Calcutta, remitted for the purchase of opium; and the Bengal Government have also purchased private bills in Calcutta on Bombay. I think we sold about 20,000 *l.* just before I left India. The operations of foreign remittances and exchange are not conducted as a distinct and separate business, but the internal exchanges are almost entirely managed by native shroffs as an exclusive business.

THE Government advertises for the purchase of bills drawn against consignments. Such consignments are sent to the Company's warehouses for inspection, and if the quality be approved of, and the estimated value, cash to the extent of two-thirds thereof is advanced on the bills, which with the bill of lading are sent to the Court of Directors. On the consignees satisfying the Directors of the due payment of the bills, the goods are handed over to them. The goods are in all cases required to be landed in the East India Docks.

Mr. Wood.

THE Government remittances between the ports and Presidencies have been effected by bills in general; and when bills could not be negociated at the Presidencies, requiring supplies from Bengal on equal or more favourable terms than the Government could effect a cash remittance, the cash has been remitted. The same system has been pursued with China, but cash has seldom been forwarded; and I only recollect one instance, and on that occasion the remittance was sent back without being landed. The remittances required in England have been effected principally through the Honourable Company's trade, direct and indirect, through China, and occasionally by cash remittances, when the Calcutta sicca rupee, after paying freight and insurance, has yielded 1 *s.* 10 ½ *d.* I am unable to state, from my own information, what the out-turn of the Honourable Company's mercantile transactions have been, and what the rupee has yielded, but a reference to the accounts of the India House will show.

Mr. Crawford.

THE Calcutta sicca rupee which contains 175.9 grains of pure silver, is equal intrinsically to 26.15 *d.*, and is reckoned in sterling money at 24.056. In exchange it used ordinarily to be reckoned at half-a-crown, or 2 *s.* 6 *d.* This rate seems to have been early assumed in converting the British pay of the troops into Indian money. Thus, a captain's pay of 10 *s.* per diem was estimated, and continues still to be estimated, at four sonat rupees, although the latter, a money of account only, be 4 ½ per cent. less valuable than the sicca rupee. During the existence of the monopoly, the Company was the sole, or at least the great and principal remitter, and I know no other way of accounting for the exchange being continued at 2 *s.* 6 *d.* or above it, except its having been so arbitrarily fixed by the principal remitter. When the currency of this country became depreciated, the nominal rate of exchange rose, and I have myself received from houses of the first credit in Calcutta, bills at the rate of 2 *s.* 9 *d.* per sicca rupee. I have, indeed, been told of its having been as high as 2 *s.* 10 ½ *d.* This happened when the depreciation of the English currency was at the highest, or from 1812 to 1816. I have at the same period received five guineas per ounce of standard gold remitted in bullion, and if it were worth while, could produce the account sales. The exchange continued after the opening of the trade, down to 1819, at from 2*s.* 6 *d.* to 2 *s.* 7 ½ *d.*; and in 1821, as the currency of Great Britain was righted to its just standard, it fell to 2 *s.*, beyond which it has not since risen.

IF the import trade of the East India Company into India be objectionable, and its abandonment seems to admit the fact, the export trade appears to be liable to equal, and indeed to weightier objections. In this, however, the Company still perseveres, confining the commodities it deals in at present to indigo, raw silk, a few silk piece-goods and salt-petre. The indigo is purchased in the open market of Calcutta, and considered as a mere commercial transaction, is so far quite unobjectionable. An account exhibited by the Company shows the result of their speculations in indigo for 10 years, ending with 1829-30. According to this statement, the remittance made on the whole period gave a return of 1 *s.* 11 ½ *d. nearly* for the sicca rupee. For the first seven years, the account exhibits a profit of 349,040 *l.*, and for the last three years a loss amounting to 291,455 *l.*, making the net gain on 10 years' transactions only 57,585 *l.*, or little more than one and a half per cent., which I think can hardly come under the denomination of a mercantile profit. The Account, however, exhibits internal evidence of being nothing beyond a mere estimate. The invoice price does not include a share of the general charges of the commercial establishment, nor warehousing charges in India, nor interest from the period when the advances are made from the territorial treasury, until the shipment of the indigo: and the charges in England, taken at the round sum of five per cent., are avowedly an estimate, and can hardly be supposed to cover a due share of the heavy commercial establishments at the India House, amounting, according to a recent document, exclusive of the rent of the India House and warehouses, to above half a million per annum. The Indian charges on the whole period amount to no more than two and a quarter per cent. Now the private rate of commission,

Rep. 1831, p. 179.

including

including brokerage, at Calcutta, is three per cent., and to this must be added packing, porterage and conveyance to the Company's ships by a river navigation of 100 miles. The Company's charges are represented, therefore, as being probably little less than one-half of those of private merchants. The fallacy of this statement is easily proved. The fixed commercial offices and establishments of the Company in Bengal in 1826–27, amounted to sicca rupees 9,35,178,* and the total exports and imports, exclusive of military and naval stores and bullion, was sicca rupees 1,70,68,953. Here alone, then, excluding all minor ones, we have a charge of nearly five and a half per cent., or double the amount given in the statement. According to the Company's statement, the advantage gained by remitting in indigo instead of bills, has amounted to no more than 392 decimals of a penny per rupee; but even this very inconsiderable one, I presume, would disappear if an actual account were drawn out exhibiting the items which I have suggested.

Of the remittance effected through the medium of raw silk, the Company has rendered an account for the last 16 years, ending with 1829–30, showing a profit of 1,027,636 *l.* on 11 years, and a loss of 223,980 *l.* in five years, which gives a total profit on the 16 years operations, on a capital of 11,198,770 *l.*, of about 7.1 per cent. The account is more unsatisfactory and imperfect than that rendered of the indigo investment. The charges down to the arrival of the silk in Calcutta are mixed up with the cost, so as not to be distinguished, and whether the rent of silk filatures, interest from the period when the money is borrowed from the territorial treasury until the shipment of the article at Calcutta, be added, or allowances be made for bad and irrecoverable debts, cannot possibly be ascertained. The rate of freight charged on silk is the same, or rather more than on indigo for the 10 corresponding years of the two statements, although in private freights the latter be estimated at 40 per cent. more than the former, on account of its greater bulk; a proof that this part of the statement is certainly an estimate. The same round sum of five per cent. for all the London charges is made on silk as on indigo, although it be a commodity of double the price for the same weight. If an actual account of the silk investments of the Company had been given instead of an estimate, I am convinced, that instead of a profit of seven and a half per cent., a considerable loss would have been exhibited, most probably indeed a very large one.

In reply to the Query respecting the mode of conducting foreign exchanges and remittances among the English, the business of merchant, agent and banker are not conducted separately; neither, I believe, is this in general strictly the case with natives, although, among the higher classes of Hindoo bankers, the separation is more complete. Bills of exchange have been known to the people of India for many ages; and as their name Hoondee, or more correctly, Hindi, implies, were introduced into Lower Bengal by the Mahomedans. In all the principal commercial towns of Bengal these native bills of exchange are easily obtained upon any other considerable place, and in a few towns, even upon places beyond the limits of India. Bills drawn at Benares on Calcutta, at 20 days' date, may generally be discounted at one per cent., which I understand to be the same rate at which the bills of European merchants or agents are discounted. Formerly the native bankers had private posts or expresses, but at present avail themselves of the conveyance of the general post. At Calcutta, bills may be obtained from European houses of business on London, Liverpool, Canton, Bordeaux, New York, &c., and the exchanges on London, Madras and Bombay are regularly quoted in the price currents. At Canton, bills of exchange are drawn on London, Calcutta and Bombay, and the rates are regularly quoted in the printed price currents of that place. The same is the case at all the European settlements in the Eastern Islands. In the latter, except Java, where the Dutch have introduced the guilder, the Spanish dollar, divided into a hundred parts, is the universal, cheap and very convenient currency. This extends even to Canton so far as concerns foreign commerce, all articles of trade being there quoted in the Spanish dollar, with the exception of the two great staples, raw silk and tea, and occasionally of cotton wool. The rate of exchange between Canton, the Eastern Islands and Calcutta, was formerly fixed by the Company at the rate of sicca rupees 209 for 100 Spanish dollars. The par, looking to the quantity of pure silver in the Calcutta sicca rupee and Spanish dollar respectively, is 210.8 per 100 dollars. The exchange, when left to regulate itself, has fluctuated, taking Canton for the example, at from sicca rupees 200 to sicca rupees 205 for bills drawn at 30 days sight. It is to be recollected that there is a charge at Calcutta of two per cent. for the coinage of standard silver, and an additional one of from one-fourth to two and a half per cent., if it be not standard.

Mr. Mackillop.

TO a question so general, I may remark, that remittances from India to England, and *vice versâ*, are conducted on the principles that regulate the exchanges in the transactions of all other parts of the world; but there is no class of men in India, that I am aware of, who confine themselves exclusively to this branch of business; unless it be some of the old shroff establishments (native bankers), who formerly had extensive business in bill transactions, confined however entirely to the interior of India, but which is now greatly diminished by the facilities afforded by the public treasuries in different parts of the provinces drawing on each other.

I HAVE

---

[*] Return of all Commercial Offices and Establishments under the Presidency of Bengal.—Report of 1831, p. 672.—Wilson's Review of the External Commerce of Bengal, Tables, p. 16.

Mr. Mackenzie.

I HAVE not the means of answering this question with precision. The officers of account at the India House can readily, I imagine, show the result of all transactions between England and India, as well as the rate at which supplies have been furnished to and from China, and the financial records of the Government will explain how they have been transmitted between other quarters. I can venture only upon a few general remarks; 1st, as to supplies from England to India. I am not aware, that during the period under review, any goods have been sent to India with the view simply of remitting funds there; and the Company's import trade in that country being now altogether inconsiderable, it can scarce be worth while to discuss whether, and how, it should be carried on.

The remittances from India to England have been made chiefly in goods, with occasional consignments of bullion, and a very small amount of bills on private merchants.

I presume the Company have well considered the expediency of excluding from their ships the main article of traffic between China and India, *opium*. Remittances between other parts of Asia are always made in bullion or by bills, chiefly by the sale of bills; and though much is left to the discretion of the several officers in charge of treasuries, and I am far from supposing that the management has always been good, it does not strike me that any other course can be pursued. Local circumstances do not, I apprehend, admit of that free competition which would be our best guarantee against loss by exchange. I can only therefore suggest that the provoking embarrassment which arises out of our continuing to have four currencies, may be removed as speedily as possible.

Mr. Rickards.

THE whole business of remittance and exchange between the different countries of India, and between India and foreign parts, is as regularly conducted in that country, and on the same principles as between any or all of the commercial states of Europe; the remittances required by the Company for necessary political payments in England may therefore be as securely effected, and more to their own advantage, as well as that of the public, through the medium of private agency or dealers, than in the method now adopted.

QUERY 8.—WHETHER, and by what means, the Funds required for Territorial purposes in England could be regularly supplied, and the Government effectually secured from Loss by bad Bills, were the Executive Authority in India to cease to carry on Trade; and at what rate is it to be expected that such Remittances could be realized?

Manchester Chamber of Commerce and East India Committee.

ANSWER.—OTHER countries besides India have to make large annual remittances to Great Britain for interest on their public stocks, which is accomplished without their respective governments putting on the character of merchants, and consequently through the instrumentality of private commerce. The sum annually required by the Court of Directors in England from India must of course be paid over to them through the medium of bills of exchange, which may either be drawn by the Company in London on their Treasury in Calcutta, and sold on the public exchange, like other bills of exchange, for the best obtainable price, or the Government in Calcutta may there, in like manner, buy and remit mercantile bills on London. There might occasionally appear to be considerable loss to the Company by such exchange operations: but this loss would be apparent rather than real, for the Company would probably obtain a higher average rate of exchange on these bill transactions than they have been accustomed to realize by their remittances in merchandize. The only difficulty that exists in the case is in the extent of the amount so required to be remitted. By making the change of system gradual, this would be overcome, and the change might probably be facilitated by making an alteration in the Company's system of payments, whereby a part of the sums now paid in this country might be transferred for payment to India; and it may be worth consideration, whether the 2½ per cent. import duty now payable in India on imports from this country, might not be levied here at the time of shipment, without producing much inconvenience.

IN reply to the inquiry, "by what means the Government could be effectually secured from loss by bad bills," we candidly own, that we know of none. As regards drafts on India, issued in London, there could be no risk to the Company, and with respect to mercantile drafts on England, purchased in India, the Company must be content to take that degree of risk which is borne by merchants, and which, from the nature of things, is incidental to such operations; but the same caution and foresight which govern the conduct of the private merchant will equally protect the corporate body; and they need not subject themselves to the danger of a greater rate of loss than falls on the private merchant. This risk, like others dependent on mercantile operations, resolves itself into a moderate average loss, and must, necessarily, be less mischievous and embarrassing in the operations of a great Company, possessed of unbounded credit, than to the private merchant. The inquiry would almost seem to imply, that the Company are supposed now to get home their remittances free from any risk of loss; but if a fair calculation be made of the cost and proceeds of their different mercantile investments for remittance, (always excepting their unjust monopoly of the tea trade) it would probably be found that their losses on these investments considerably exceed any they would be likely to sustain on bills.

The inquiry, at what rate it is to be expected that, under other arrangements, their remittances could be realized, scarcely admits of a positive answer. This Board sees no circumstances in the transfer of mercantile business from the Company to private merchants which ought permanently or seriously to affect the rates of exchange. If the same quantity of commodities continue to be transmitted from India to Great Britain, and from Great Britain to India, the average rate of exchange might be expected to remain the same.

Losing markets check shipments; gaining markets encourage them; and the exchange will, as usual, vibrate in one direction or the other, according as one or other of these two states, prevails; but these vibrations have their natural limits, and there always exists a strong tendency to an equilibrium.

Glasgow Chamber of Commerce.

WERE the executive authority in India to cease to carry on trade, we have no doubt the funds required for territorial purposes in England might be regularly supplied, and the Government effectually secured from loss by bad bills. The simplest and safest mode of obtaining such funds would undoubtedly be, by opening the Indian Government treasury in England for money against drafts on the Indian Presidencies. On the other hand, the Government in India might remit from thence the bills of private merchants of undoubted solidity, at short dates; and, if thought necessary, the bills of lading for the produce against which such drafts might be drawn, could be lodged in the hands of the Government till such bills were accepted in this country; besides which, the Government in India might occasionally find it advisable to remit from thence in bullion or specie, which of course it would be their duty to do whenever such a mode would yield a more favourable exchange than could be procured from private merchants, and which must always be regulated by the price of bullion; it must be obvious, however, that were the Company's trade entirely to cease, private bills would be more plentiful, and the character of mercantile transactions with India would be still more secure.

A very favourable means of making remittances through China from India to Great Britain will be one of the benefits attending the opening of the trade from this country to China.

Liverpool East India Committee.

WE have already stated our belief, in answer to Query 6, that remittances might be made to England to the full extent of the Company's wants, by various means, were they to cease to carry on trade.

They might open their treasury in Leadenhall-street for money against bills on the Indian Governments; they might at the same time make remittances in bullion or specie, as favourable opportunities of doing so occurred, from India to this country; occasionally too undoubted bills might be purchased, (or as is practised by the Government of the United States in remitting the interest of loans payable in Europe, advertize for such bills with two unexceptionable indorsements,) but we would particularly press upon the attention of the Board the mode of remittance by respondentia, as being one which is free from many of the objections that apply to other private securities, and which is at present practised by merchants to great extent in effecting remittances between India and China.

Mr. Hill.

THIS inquiry embraces two points, viz. 1st. The existence of the funds required for territorial purposes in England; 2d. The command of those funds. As far as commercial intercourse between England and India is concerned, I do not conceive that the existence of such funds would be materially affected by the Indian Government ceasing to carry on trade. The trade which they now carry on would, as far as it might be profitable, be taken up by private merchants when they left it off. I think too that the command of those funds would still be within the reach of Government, even after they ceased to trade, although they could not expect to obtain them on better terms than those of a bullion remittance, which would be less favourable than the out-turn of their mercantile adventures, or than the rate established by the Board of Control.

If the Indian Government should cease to trade between India and China, and between China and England, there would unquestionably be a hazard that the funds required for territorial purposes in England might cease to exist, or cease to be readily available for that purpose. In my reply to the 6th head of inquiry, I have explained the mode in which those funds are obtained under the present system. After the abandonment of that system, by Government ceasing to trade, the supply of tea from China might be interrupted, which would cut off the supply of the requisite funds in England; and if that interruption occurred for a season or two, or were repeated several times, it seems probable that the national taste for tea in England would change, and would never return. That risk is guarded against at present by the stock of tea required by law to be kept on hand. It is expected by the advocates for opening the trade to China, that the measure might greatly increase the demand for English manufactures. Were that effect to follow, it would proportionally reduce the funds made available by the China trade for the territorial purposes of the Indian Government in England.

Assuming that the China trade were not liable to interruption on the new system, and that it still brought available funds to England on the same scale as the present system, the Indian Government would be exposed to the hazard both of loss and of litigation in obtaining the command of those funds by means of private bills. Experience alone can

Appendix, No. 4.

Trade with India: Answers to Queries.

determine the amount of that hazard, or of the expense at which it might be guarded against. The Government would also be liable to have the hardest terms imposed upon them which the circumstances of the case would permit, and could never expect them to be more favourable than the out-turn of a bullion remittance.

The remittance constantly required from India to England on the Government account is a disbursement for which India receives no return, and may be regarded in the light of a national tribute. To that remittance have to be added the funds required for the use of private individuals, for which, in the same manner, no return is made to India. The total amount of this tribute is so large that the payment of it requires to be facilitated as much as possible, both by fostering the resources of India, and by promoting a demand for her products on the part of other countries. If this great duty be not attended to in both its parts, India may come to be unable to satisfy the exactions of England. Whatever augments the surplus produce of the country will enable it the better to bear the burden we have laid upon it.

Mr. Langton.

THE transmission of property between India and England is of a twofold character: the interchange of commodities in trade, and the remittance to England by the Government of India of a tribute, or what is equivalent to a tribute, viz. that part of the salaries of public functionaries which is sent to England; the retiring pensions of those who have no longer any functions to perform, and the interest on the debt; no return being made to India for these.

Individual merchants, who know well that their interests will suffer from an injudicious selection of the commodities they export, as well as from incautious expenditure in the conduct of their operations, will be more quicksighted and economical than the officers of Government, or a Board of Trade can be expected to be, who have not the slightest interest in the eventual proceeds of such shipments. Executive governments will therefore rarely, if ever, gain in an *open* trade, in competition with private individuals, though the latter may be occasionally ruined by the fluctuations caused by the large scale of operations of the former. Since the trade with India has been thrown open, the East India Company have experienced how little able they are to compete with the private merchant, and have nearly abandoned the field to him; but the Indian Government still continues to ship merchandize in reimbursement of the territorial charges paid in England; and the Company have held out that it is the best, and indeed the only practicable way of effecting that reimbursement; but it may be assumed, and I think without fear of contradiction, that private merchants *now* import from India, in addition to the merchandize shipped by the Government, all the products of that country for which a market can be found in Europe, at prices that will repay the cost of production and transport, and give a very moderate profit to the importer; and that, *were the Government to cease to ship merchandize*, that merchandize, or a superior selection, would *also* be imported by the private merchant.

It would, therefore, be wiser in the Indian Government to follow the example of the Company in abandoning trade, and, instead of merchandize, to transmit the tribute in bullion, which it could do on equal terms with the merchant. But it would be still better to reimburse England for her outlay through the medium of bills of exchange, either drawn in London on the Indian treasury, or bought at the Presidencies from the merchants*, to whom, in the rate of exchange, a small profit would be included for transmitting the bullion. Whatever articles of merchandize, in addition to those interchanged in the course of trade, admitted of being sent to Europe with greater advantage than bullion, the merchants would not fail to discover, and no more coin would be sent out of the country than was necessary to cover the balance.

As to the loss by such remittances, instead of making the reimbursement in current rupees at the Board rates, it might amount perhaps to near 20 per cent. But the loss is ideal, and its amount immaterial; since, if the territory now pays in India only 10 current rupees in reimbursement of the pound expended in England, which 10 rupees when remitted or consigned to England yield only net 16 *s.*, the territory will appear to have saved, and the commerce to have lost, 4 *s.*; but 4 *s.* less in surplus profit will have to be applied in liquidation of Indian debt. Were the surplus profits to cease altogether, either from a change of system or from misfortunes in the Company's trade, the Board rates could not be sustained a day, and the actual rates of exchange must be at once resorted to.

The loss by remitting bills instead of bullion would be merely the small profit alluded to, as, whenever the difference between the rate of exchange and intrinsic par exceeded materially the cost of transmitting bullion, the bullion itself would be sent.

If this view of the subject be correct, the same reasoning will apply, whatever may be the amount to be remitted from India; but it is impossible not to feel the wish that an operation so prejudicial to the welfare of India, and to the increase of trade with that country, may be rather diminished in its extent than increased.

---

* These bills might be obtained with the security of bills of lading till accepted; and American accepted bills on first London houses to a large amount are frequently in the Calcutta market.

Mr. Mackillop.

IF the East India Company ceased to export goods from India, their place would be supplied by private merchants; and I can have no doubt Indian produce would be imported to the full extent the markets of Europe would take off, with the prospect of moderate benefit to those engaged in the trade. It follows, that under this system means would be afforded of effecting remittance of part of the sum that the Company must yearly bring from India for the payment of their home disbursements; and the mode of effecting that object would be by the Government of the Presidencies of India purchasing the bills of exchange on England of the shippers of goods, the bills so drawn to be collaterally secured by the bill of lading, and policies of insurance for the goods shipped, the amount of the bills of exchange in each case to have reference to the value of the goods, in order to guard against loss by the fall of markets. In this manner, doubtless, remittances could be annually effected, but their extent must necessarily depend on the encouragement afforded by the state of the European markets, for private merchants would be guided by the cost of goods in India, and the probable result of their sale in Europe, profit by shipments being their only object. It is therefore impossible for me to say "to what extent" these remittances would be made annually, because that must depend, as already observed, on the state of markets

I have already observed that the manufacture of silk is chiefly in the hands of the Company. Supposing them to cease to be interested in that branch of business, I am not prepared to say that individuals would immediately embark in it to the same extent. There would in that case probably be a diminution in the supply of this article, and also a falling off in quality, at all events for some time. Certain it is that no Europeans have hitherto engaged extensively in this business, though attempts have been made, and which, I presume, were not attended with success.

The rate of exchange will fluctuate more or less; but till there be a greatly improved demand for the produce of India, the exchange of bills is not likely to be more advantageous than bullion; say about 1*s.* 11*d.* per rupee. The exports from India must increase, or the exports from this country be diminished, to effect a material alteration in the rate of exchange; and, judging by appearances, I think there is greater probability of the exports from this country continuing to increase than those from India exceeding what they now are, unless circumstances shall arise to reduce the supply of cotton from the United States of America, or that other articles can be imported from India which cannot now be so with advantage. I think the East India Company might remit, in the manner I have suggested, in bills, with little or no risk of loss; but if any risk shall exist, it will be much less, with ordinary caution, than must attach to the importation of goods, as the advance to be made for bills of exchange should not exceed a certain proportion of the value of the goods assigned as security, say two-thirds. Bills drawn in India on England are usually at 12 months' date: and in the arrangement I have proposed, it will be necessary that the consignees of the goods have the power of selling them, though possessing no control over the proceeds till payment of the bills, for which the goods are collateral security.

It will be understood that the foregoing observations have reference only to the trade with India, and chiefly with that of Bengal. The Query I have now to notice refers to the trade with China as well as that of Bengal. While I resided at Calcutta I was engaged in the trade of that port with Canton, and since my return to this country I have continued to be so in a less extensive degree; but having never been in China, I am not prepared to afford information derived from local experience as to that country, and I would therefore wish to avoid making any remarks on the subject, did not one of the primary objects of your inquiry appear to be to ascertain the best mode of effecting the remittance of a large sum of money annually of the Indian revenue to this country. It will I think be evident, on giving consideration to its actual condition, that the trade from India does not afford or supply sufficient means; for 1st, the remittance of the proceeds of goods sent annually from England; 2d, the remittance of the private fortunes of individuals, having disbursements at home, or themselves returning to England; and 3d, the amount required at home by the East India Company. As India does not produce either gold or silver beyond a trifling amount, any system which would have the effect of draining that country of the precious metals, would prove highly disadvantageous to its interests. The only eligible mode therefore by which that part of the Indian revenue required for the purposes of the home government, that cannot be remitted direct, is by the course now pursued of making shipments of goods from India, applying the proceeds thereof to the purchase in China of the tea and other goods shipped to England; the value of the annual shipments from China being far greater than the cost of the goods imported into that country from England. Thus it is, that the trade with China from Britain and from India seem to be dependent on each other. I have already stated how far I think a change in the Company's trade with India may take place, without injury to the public interests as they now exist; and on this point I ought, perhaps, to express my belief, that it is only of late years that individuals would have supplied adequate funds for carrying on that trade, which to a great extent has hitherto been supported by the capital of the Company. As to any change in the system of conducting the trade with China, that is a subject on which I have already said I feel myself less qualified to give an opinion.

TO

II.
FINANCE (Trade).
Mr. Wood.

TO answer this question I must be informed of the return of the Honourable Company's trade.

30,00,000
20

2)6,00,00,000

116)3,00,00,000(2,58,62,000
2,32

680
580

1000
928

$$\frac{30,00,000}{1s.\ 10\tfrac{1}{2}d.} = 3,20,00,000$$

$$\frac{30,00,000}{2s.} = 3,00,00,000$$

If the Calcutta sicca currency were remitted at 2 *s.*, or 1 *s.* 10 ½ *d.*, the difference between the out-turn and 2 *s.* the current rupee would be as follows:

2 *s.* the current rupee, three millions equal - - -	2,58,62,000
2 *s.* the sicca rupee - - ditto - - - - -	3,00,00,000
	41,38,000

2 *s.* the current rupee, three millions equal - - -	2,58,62,000
1 *s.* 10 ½ *d.* the Calcutta sicca rupee, ditto - - -	3,20,00,000
	61,38,000

If the remittance were made at the rate of the intrinsic par of the silver currency of England, compared with the Calcutta sicca rupee, it would be at the exchange of 2 *s.* 2 ½ *d.* *Vide* page 63, of Mr. Wilson's Report; and at this rate.

Three millions would equal - - - - - - -	2,71,69,811
At the rate of 2 *s.* the current rupee, and 116 current rupees the 100 sicca - - - - - - - - -	2,58,62,000
	13,07,811

If it were required to remit money from England in aid of the finances, in the event of war, the sum saved in India by the services of the three Presidencies, for purposes of retirement, and the education of children in England, amounting to about one million, would be available, and might be secured by bills at a rate more advantageous than the importation of bullion; and if the natives of India enter more largely into the export trade of their country, it is probable that they would prefer realizing the out-turn of their speculations through the medium of the Government bills than trusting to a return of goods.

So long as there is a surplus in India to meet the demands of the Home Treasury, I am of opinion the surplus may be remitted in bullion, and that it will make no difference whether the surplus receipts are sent home or locked up in the Indian treasuries; and I do not apprehend that any inconvenience would be felt from a scarcity of currency to carry on the retail business of the country; the surplus in this case would be gradually withdrawn from the circulation, and would be replaced by hoarded treasure. Although I am of opinion that it will make no difference whether the treasure is remitted or locked up in the Indian treasuries, I am of opinion that it will make a great difference to the country whether the treasure be sent home, or laid out in India in the production of goods for the home market. Should there be no Indian surplus to remit to England, it will then be necessary to raise the deficit by loan; and in this event inconvenience may be experienced by suddenly withdrawing too large a portion of the currency from the circulation at the Presidency, where paper money so largely enters into the currency, and would require being converted into specie before it could be made available for a remittance. In this case it would be cheaper to raise the amount required by loan in England on the security of the Indian revenue, and remit the interest, which would become a charge on Indian territory.

Mr. Bracken.

I THINK that the discontinuance of trade by the executive authority would tend to enlarge rather than contract the existing channels of remittance; but it seems to me that the amount of remittance is susceptible of great reduction. I anticipate little or no difficulty in providing a great portion of military and other stores in India.

By the removal of all restrictions on the settlement of the civil and military officers retired from the service, some deduction in the amount of pensions payable in England might follow.

By discontinuing all bills for the interest on Government loans, not already guaranteed by the Company.

By substituting a more economical form of home government, which I conceive may be done

done without the slightest diminution of efficiency. The people of India may be said to pay at present for three governments.

Sources of supply for home wants would be found by the sale of government bills on India, by bills drawn in India, purchased from the resident mercantile community, or from American and other foreigners bringing letters of credit to Calcutta on houses in London; by bullion, if unfavourable rates of exchange were proposed. In all commercial bills there must be some risk, but there would not be greater there than elsewhere; and I understand in Europe government remittances are constantly effected through such channels. Bullion would always be a resource against any combination of the Calcutta merchants to obtain undue advantages in exchange, if such combinations were probable, which I do not think from the present number of persons engaged in the trade of the two countries, and which may be expected to increase.

I have not taken into consideration remittances *viâ* Canton, because I doubt the policy of the India government relying on the China trade to provide the means, directly or indirectly, of defraying any part of its territorial expenditure; but so long as the exports from England are less than its imports from China, there would always be a balance available for that purpose. With an equalization even of exports and imports between China and England, the returns for India opium might continue to afford a channel for remittance to London.

Mr. Crawford.

THE present rate of exchange, drawing on England at twelvemonth's date, is 1 *s.* 10 *d.*, at which I received a remittance a few days ago. Drawing on India, I am told that the present exchange is 1 *s.* 8 *d.* to 1 *s.* 8 ½ *d.* Allowing five per cent. for the twelvemonth's interest, the difference would scarcely be more than one halfpenny, which may be considered to the drawer in England as the price or value of his security in receiving money in hand instead of bills. If the Company, therefore, could draw on India for the whole of the funds required for territorial purposes, there would be entire security and no loss in the operation. The estimated amount, however, namely, 2,685,459 *l.*, is at present far too great to make it practicable to draw on India for the whole, without greatly depreciating the rate of exchange. The most important consideration, therefore, is, how the charges payable in England may be reduced. These charges, according to the estimate submitted to Parliament, are the following:

Rep. 1831, p. 559.

Interest on part of the Territorial debt - - - - -	£. 875,000
Expense of St. Helena - - - - - - -	90,054
Political charges incurred in England - - - - -	1,720,405
TOTAL - - - £.	2,685,459

The first item may as well be paid in India as in England, if, as I believe is the case, there be nothing contrary to the obligations of public faith in doing so. The second item, considering the object, is so enormous, that it is difficult to believe that it might not be very greatly reduced. The neighbouring island of Ascension, not so easily defended as St. Helena, is maintained by His Majesty's Government for fewer hundreds than St. Helena costs thousands of pounds. Of the third item, the heaviest, no particulars that I am aware of are given in detail in any document laid before Parliament; but in the Appendix to the Report of 1831, page 178, there is an abstract giving the actual charges for 1828–29, and the probable ones for 1834–35, being 1,720,405 *l.* The first particular here is "political stores," estimated for the last-named year at 350,000 *l.* The Company has given up its export trade as unprofitable, and it is therefore very unlikely that they can send out stores more cheaply than merchandize. The whole, or very nearly the whole of the civil, military and naval stores might be purchased more cheaply in the market of India than it is possible for the Company to send them out; and such as could not be so purchased, might easily be obtained on contract, payable on delivery. To show that this is practicable, it is only necessary to refer to some of the particulars of these stores, as they are detailed in the account of exports from 1828. For apothecaries' wares, apparel, wrought copper, cordage, glass and earthenware, hardware and cutlery, bar and cast iron, leather and sadlery, machinery and mill work, stationery, musical instruments, &c. alone, the declared value is about 270,000 *l.* All these are mere articles of merchandize, and there appears to be no earthly advantage in the Company sending them out on their own account. Connected with the political stores is the political freight, amounting, exclusive of 60,000 *l.* per annum for the passage of troops outwards, which might also be paid in India, to 95,000 *l.*, being 27 per cent. on their prime cost. These two sums being saved, would reduce the sums to be drawn for on India by from 400,000 *l.* to half a million per annum; or including payment for "the passage of troops," by a sum exceeding this last. The large sum of 475,405 *l.* is the estimate for the "pay to officers on furlough and retirement, and for off-reckonings." Of this amount, the off-reckonings at least might be paid in India, where the clothing of the troops ought to be made up. Indeed, some part of them is, I believe, already so paid. Eventually, and as early as can be done consistently with good faith to vested interests, the whole amount might be so paid. For political charges general, absentee allowance to civil servants and expenses of Tanjore commission, &c., the charges on the treasury of England amount to 400,000 *l.* Of the "political charges general," amounting to 350,000 *l.*, there is no specification whatever in any of the accounts, but I presume they allude exclusively to the offices, establishments and contingent expenses of the home administration. This immense sum, which greatly exceeds the expenditure of any corresponding department under the administration of the Crown, and which appears to arise to a considerable extent from much supererogatory labour, will no doubt be diminished on a revision of the system, and reduce the necessity of drawing largely on India.

After reducing the charges to be disbursed from the Home treasury to the lowest practicable standard, the obvious course appears to be to draw bills on the Indian treasury to the utmost limit that may be practicable, without depreciating the rate of exchange, and to remit the balance in bills or bullion from India, as may be found most advantageous. The suggestions which I have thrown out would seem to show that the disbursements from the Home treasury might be reduced in time to about one-third of their present amount, or at least to a sum not exceeding one million per annum, instead of 2,685,459 *l.*

Mr. Larpent.

THERE is no more necessity for the India Company to trade itself for the purpose of buying warlike stores than there is for the Government of Great Britain to do so to buy Russian hemp or Indian saltpetre; contracts with individuals might effect the object.

Payments of pensions, interest of debt, might be placed in England, as in all civilized countries such like operations are performed, by commerce. During the war, subsidies and monies for military purposes were placed all over the Continent through the means of individual agency, and ultimately of commerce.

The jealousy of the Legislature to preserve the monopoly of the home money-market to its own government for borrowing, has hitherto prevented the Indian government from contracting for loans in this country; but it cannot now be maintained that such a protection is necessary, when every State in Europe and America borrows in England. Under a different system the India Company might manage their loans so as to reduce their interest to what their high credit would justify. It is certainly desirable to have a portion of the Indian debt held by the natives*; but it is equally expedient to encourage investment of capital in the Indian loans for persons returning to Europe; and which cannot now be done with any satisfaction, as there is no registry in England, and no means of transferring or selling in the home market upon fair terms.

Such a change might lead to a larger sum than heretofore being paid annually in England for *interest* on loans, but it would encourage capitalists to leave their savings in India, rather than remit them to England; and thus the *absolute* amount of remittance annually would be diminished†.

The Company also might safely advance on shipments of private merchants, either from India or China, and no commercial establishment would be required. The goods would be secured in the docks; and to the merchants ultimately interested in the out-turn of the goods the sale of them might safely be left.

India sends opium, say   per annum, to China, and raw cotton, and receives back so little, comparatively, that the balance is paid in dollars, of which not less than 1,500,000 *l.* are annually sent up to Bengal. But China takes little from Great Britain; and Great Britain requires three millions' worth of tea from China. Thus, by a skilful combination, the tea purchased by the produce of India may be brought into the remittance trade of India, the absurdity of exporting to China to a loss abandoned, and the evils above stated very greatly mitigated.

Mr. Mackenzie.

THE only question of importance is, how far the territorial stores have been advantageously supplied, and on this head I should have little doubt of the expediency of having recourse to the market of England rather than trust to that of India, if the business be well managed; if the necessary means be taken to confine the supply to the necessary demand; if no improper favour be shown in the contracts; if the checks be sufficient to prevent abuse, and be applied by persons possessing the requisite knowledge without unnecessary vexation or delay; and if the attention of the local government be kept sufficiently awake to the resources of the local market. There is however great danger, lest indents for stores on Europe should be passed by the controlling authorities much more carelessly than an equal demand requiring the immediate issue of money; and I fear there has been a want of care on this point productive of considerable waste. So also in supplying a distant government, the revenues of which are to bear the burthen, it is likely that there will be a less powerful sense of responsibility and less attention to the cheapness and good quality of the articles furnished, than would influence officers immediately superintending the provision of their own departments; and just in proportion as circumstances may exclude the motives of personal interest and reputation in favour of the public interests, it may be expected that cumbrous, inefficient, and expensive forms, (for every delay, uncertainty or vexation, must be paid for,) will be had recourse to. Nor is it favourable to economy on the part of the local government, that they know or believe the increase of their indents to be regarded at home without any very serious criticism. Bullion remittances to India are not likely again to become the subject of consideration, at least for a considerable period; and it would be of little use to inquire, whether, when made, the arrangement was altogether judicious.

The supply of the Indian treasury by the issue of interest bills has not, I think, been very happily arranged. Judging by the light of actual experience, one cannot well deny that the condition attached to the loans was improvidently made, and the rate of the bills issued on payment of the interest of the five per cent. loans should have been sooner reduced, though I should still have thought it proper to give the public creditors resident in England the benefit of a public agency in effecting the remittance of their property at a bullion rate.

The objections on general principles to a government trade are so strong, that I should have been for discontinuing the consignments of merchandize, even though the transaction had been more profitable than it appears to have been. There has been, I conceive, an unreasonable dislike to the remittance of bullion, as if it must not follow the course of trade, and as if there were any other way of bringing round exchanges in the absence of other means affecting prices in India and demand in England. And the plan of purchasing bills in England, or selling bills in India, cannot be said to have had a sufficient trial. My notion in short, is, that the remittance to England should be made wholly in bills or bullion, the Company absolutely giving up their Indian trade: that the sale or purchase of bills to the amount required by the Home treasury, should become an established part of their financial arrangements, with no other limit than that suggested by the out-turn of bullion; that the local government should have a discretion in taking bills without security, or with any good security which the parties might prefer, in giving up their bills of lading, and that when bills of lading are required, all restrictions as to the docks and warehouses to be used should cease. Remittance to China from England and India, may, I conceive, be made wholly, as they have hitherto been chiefly made, through the means of merchandize, either the Company's, or that of individuals; the proceeds of private consignments being drawn into the Canton treasury by the sale of bills. At least the impression upon my mind is, that in the cases within my recollection, in which a bullion remittance has been required by the Select Committee of Supercargoes, the circumstance may be traced to some want of foresight or defective management, if I may use those terms without implying blame. How far the Company should consign goods to China, is a question on which I cannot venture an opinion without more information, and much more time to use it than I possess. Its solution must of course be greatly affected by any change that may take place in the trade between England and China; but supposing that to remain on its present footing, it may be worth considering, whether part at least of the freight now taken up for voyages to China *viâ* Bombay, Madras or Bengal, might not be advantageously obtained by hiring in China private ships that proceed thither from India with little chance of a full return cargo, and whether funds now provided by the Company's consignment of cotton and sandal-wood might not be better raised by bills.

I have little or no doubt that it would be beneficial to the government of India to cease from commerce; and to leave to individual merchants the silk and indigo which the Company now import into England, trusting to bills and bullion for an equivalent remittance. A little time would doubtless be required for the advantageous disposal of their silk concerns, and for the transfer of private capital to supply the place of the Company's advances; but I should not anticipate any serious difficulty on this head, though probably there must be some sacrifice of the nominal value of the Government commercial stock; and I can see no sufficient reason for thinking that the Indian government, when clear of commercial dealings, is, more than any other government, likely to experience embarrassment in remitting the funds required by it in any quarter of the world; the terms of the remittance by bills must depend on the course of trade; it ought never to fall below what a consignment of bullion will yield; and it cannot, I conceive, permanently continue so low. I think it likely that the silk trade would thrive better if the Company had nothing to do with it;

and if so the means of remittance would be proportionably extended. The Government purchases of indigo, though being confined to Calcutta, they are less objectionable, must, I apprehend, operate in some degree to disorder commercial speculation, and, in the long run, to injure trade and diminish the means of remittance; but the hope of any considerable improvement in remittance from India must rest mainly upon the introduction of new, or the improvement or cheapening of the old, articles of export. Whatever may be the result of agricultural and commercial speculations, such as I now advert to, and howsoever the amount of the tribute payable by India to England may be affected by the arrangements of Government, or by those of individuals, it does not occur to me that the state of the question how funds shall be provided for by the home treasury will be much changed; the chief difficulty it appears to me, refers not to the mode, but to the amount, or rather, I should say, to the sufficiency, of the Indian revenues to meet the charges of that country.

If India has really a surplus after paying all its expenses at home and abroad, including of course any loss by remittance which the state of trade may occasion, I should not be afraid of any embarrassment in bringing home the requisite funds; and I should certainly not reckon upon the commercial profit of an Indian investment as a means of supplying any deficiency.

If the question refer to the China trade also, it is much more important; because, I apprehend, that from such a source, a large supply has been drawn in aid of the Indian revenue; and the exclusive privileges to the Company in respect to tea, take that article out of the scope of the reasoning applicable to general commerce. By the operations of such privileges, it is clear that a considerable deficit may, in future, as in times past, be covered; and other things being assumed as equal, no one can well deny the advantage of having such a resource. But here again we come to the real cause of difficulty, the want of funds, or the apprehension of such a want; and if satisfied that India would have abundant means without support from the China monopoly, we might, I conceive, rest this question of remittance upon the effect, good or bad, which the proposed change is likely to have upon the commerce of the country. If freedom in trade with China shall be beneficial in that respect, I can scarcely imagine that, as far as concerns the mere transfer, and not supply of funds, the discontinuance of the monopoly can injuriously affect the territorial interests of the Government of India. I presume, that in estimating the home demand at three millions, the amount of interest bills has been taken according to the average of past years; but under this head there will be a considerable reduction, also probably some reduction in the supply of stores; and it does not appear to me that much stress can justly be laid on the extraordinary purposes referred to in the last part of the question. It is no doubt true that the payment of the remittable loan may be much facilitated by the command of money in England; but I do not see why, if the measure be clearly an advantageous one for the nation, (and if not advantageous it should not be adopted,) the necessary funds may not be temporarily raised, without the intervention of the Company. In 1812, under circumstances of the greatest possible pressure upon the national finances, the Parliament sanctioned a loan for a similar purpose; and as the nature of the public debt of India becomes better understood, I can scarcely anticipate any serious difficulty on raising, upon the security of its revenues, a much larger sum than any which the Commercial Treasury is likely to be able to afford. If, indeed, the whole matter of Indian finance shall not be dealt with as a national concern, with all the advantages of the national guarantee, and of that wholesome jealousy of expense which is likely hereafter to prevent the accumulation of debt, and to prove the best security for the discharge of what has been incurred—nay, on the score of economy, I cannot help thinking, that the less the Indian governments are allowed, excepting on special cases, and with special sanction, to rest upon aid from England, the better is the chance of solvency abroad—there must always be a danger of their thinking too lightly of that part of their charge which is incurred here, unless compelled on the instant to provide an equivalent from their own treasuries, just as the subordinate governments of India who had unlimited credit upon Bengal, appear to have thought too little of the cost of measures from the financial effects of which they were relieved. And I should therefore be disposed, even at the risk of some immediate loss, to meet all demands on England, such as the question under reply refers to, by a positive assignment on the General Treasury at Calcutta, placed in the hands of individuals or corporations, who had nothing to do with the Government but to make the most of their demand upon it.

I have only now to state generally, that, in order to get bills on the most favourable terms in any condition of trade, every reasonable facility should be given to the merchants selling them; and the purchase of them should be rendered, as far as possible, a fixed part of the financial arrangements of Government, with the restriction merely that a bullion remittance shall be preferred when more profitable. Nothing probably could tend to facilitate bullion remittances so much as having one currency, which, however, seems to imply that the currency of England shall be silver, not gold—a point too important to be discussed here.

To render bullion remittances unnecessary, every effort should be made to promote the export trade of India.

Mr. Lloyd.

UNDER the circumstances herein contemplated, the Government can only be regularly supplied by the usual channels through which a remittance is conveyed from one country to another; that is, either by consignments of bullion, or by bills drawn upon, or remitted from, India, or by these means combined. The most secure, and, at the present time, the most productive, is remittance by bullion; this, however, cannot be constantly depended upon to the extent required, inasmuch as the abstraction of the precious metals, adequately to meet the demand of this country, cannot fail to produce great inconvenience in India generally, and more especially with reference to the collection of the revenues. To secure the Government from loss by a bill-of-exchange remittance, the most effectual mode would be to draw bills upon the Indian governments, and dispose of them in this country; or should money be advanced to individuals in India, for their bills on England, the hazard of dishonoured bills will be avoided by the mode adopted by the Company of advancing two-thirds of the value of merchandize to be consigned to them, as collateral security for the bills; but this course would involve the question of trading, or the necessity of employing agents, and would be inconsistant with the contemplated course of Indian government assumed in this Query, and probably, by encumbering the usual mode of bill transactions, might operate unfavourably on the rate of exchange. With respect to the probable loss, it must be entirely a matter of conjecture; circumstances affecting the state of trade, as well as the political relations of India, will materially affect the question. A bullion remittance may realize in England 1*s.* 11*d.* per sicca rupee, and the loss to India on a comparison with the Board's rates would be sicca rupees 54,42,279. India being required to send rupees 3,13,04,348, instead of 2,58,62,069, to pay 3,000,000 *l.*; assuming the out-turn of bullion, at the intrinsic par of 2*s.* 0.566*d.* there would be a loss of sicca rupees 19,95,547.

Silver at 5*s.* 2*d.* 2*s.* 0.566*d.*

As to the question of loss, by obtaining the necessary supply by bills of exchange, whether drawn upon, or remitted from, India; without insisting particularly upon the consideration of the certain and extended annual demand for bills, and the tendency of such demand to lower the exchange, as it has been assumed that this effect would be counteracted by the discontinuance of trade by the executive authority in India; it is, I apprehend, undeniable, that no individual will take up money for the purpose of trading, without prospect of gain by the adventure: the rate of exchange will thus be mainly regulated by the value of the merchandize at the place to which it is consigned. Looking at the produce per rupee, by consignments of merchandize from India, I do not think that the present rate of exchange at Calcutta, say 1*s.* 11 *d.* per sicca rupee, can be maintained for bills, under the circumstances of a demand for remittance to the extent of 3,000,000 *l.* per annum, unless there be a fall in the cost price of merchandize in India, or an augmented sale price in Europe; but taking it at that rate, the loss, as compared with the Board's rates, would be sicca rupees 54,42,279; and as compared with the intrinsic par, the loss would be sicca rupees 19,95,547; were bills sold in England, the exchange would be still less, probably 1 *s.* 8 *d.* per sicca rupee, and the loss, as compared with the Board's rates, would be sicca rupees 1,01,37,931, and with the intrinsic par, sicca rupees 66,91,199.

probably not 1*s.* 9*d.* per sicca rupee.

Bullion remittances are now adopted by private merchants to a great extent.

In the event of extraordinary circumstances, such as the occurrence of war, the Indian governments would necessarily be straitened in their resources; the regular course of the remittance would, as it appears to me, infallibly be interrupted by the exigency of the moment; many occasions, since 1814, of partial suspension of investment, or of extraordinary remittances from England, have occurred when the Commerce was largely in advance to the Territory. With all the advantages hitherto possessed by the East India Company, of remittance both by India and China investment, a large debt from Territory still remains. As to the occasions of liquidations of India debt, the present constitution of that debt cannot be expected to lead to the same consequences as have formerly occurred; before 1814, increase of the Company's bond debt, and the assistance of Parliament, were required to discharge bills drawn in liquidation of debt; and so late as 1824, upwards of 3,000,000 *l.* in one year was drawn upon the Court for the same purposes, and although directions were given to the Bengal government to remit bullion to the extent of one crore of rupees per annum for two years, to provide for these extraordinary drafts, one crore only was remitted on that occasion, the exigencies of the Indian government preventing a full compliance with the Court's orders.

The total amount of Territorial payments made in that year by the Commercial branch was £.5,291,586.

From these considerations the consequence appears inevitable, that even in the event of a regular system of remittance being established, the same measures would not be sufficient to furnish additional funds for extraordinary purposes, and that the reimbursement by India, of the sums required by such augmented territorial expenses at home, must of necessity be temporarily suspended.

Hull Committee.

WE cannot entertain any doubt of the practicability of remittances being made from India to this country, with perfect security to the Company, through the medium of private agency or otherwise; and that the system, which has been very disadvantageous to the Company, of forwarding their remittances in produce, is quite unnecessary. The same modes of making remittances to India, as well as between the principal places of commerce in India and Asia, as are practised by private merchants with the greatest facility, security and regularity, in bullion, in bills, or respondentia bonds, may be pursued by the Company when they cease to be traders.

IF the East India Company's trade should be wholly discontinued, and the Court of Directors be empowered, as at present, to administer the political affairs of India, I cannot conceive there will be either risk of disappointment, or difficulty in providing for the remittance from India of such funds as may be required to make territorial payments in England. We have only to reflect on the ordinary operations of trade with all other countries, and the principles of exchange, to be assured of this fact. The Court of Directors assert that their trade in goods is necessary to ensure the requisite remittance of funds. This of course supposes the goods to be in demand in the home market; whence it is clear, that on the Company's trade ceasing, these very goods would be conveyed to England by private merchants; as the bills of exchange between one country and another are always proportioned to the exports and imports thereof, so in this case there would be an additional quantity of private bills in the market, which the governments abroad might buy up. The goods thus drawn against being consigned to the Company, with bills of lading and policies of insurance, the most ample security would thus be given for payment of the said drafts. Another source of supply would be by the Directors opening their treasury in London for bills on their several governments abroad; and a third source, by their being reimbursed in England for the large advances they have constantly to make in India on account of His Majesty's service. From these combined sources, there cannot be a doubt that the means of remittance would never be wanting to meet all the Territorial payments required to be made in England. Of these payments it may be further observed, that the amount will be greatly diminished by causing all payments, on account of either principal or interest of Indian debt, to be in future made in India; whilst, on the termination of the Company's trade, particularly the China monopoly, it may be confidently predicted that the channels of remittance to England would be so greatly enlarged, as to render disappointment to the Company, under any circumstances, almost, if not quite, impossible.

It has been set forth as an argument for the continuance of the Company's trade in goods, to make sure of remittance, that if their trade were to cease, a combination of merchants abroad might be raised to force their bills on the government at a disadvantageous rate of exchange. This appears to me to be the vainest of imaginary fears. The competition among applicants for money on good bills, particularly if the China monopoly were abolished, would be so great as to render it inconceivable that any such combination would ever be attempted, or if it were, government might at once counteract it by a large export of bullion, the mere dread of which, if only threatened, would speedily dissolve any illegal conspiracy of this nature.

The remittance here suggested by private bills, so far from injury, would be a decided advantage to the Company; for no course of events, not even a conspiracy of bill-holders, were it practicable, could possibly reduce the exchange so low as that which has of late years resulted from the Company's consignments of indigo and silk.

But to dissipate the phantom of a conspiracy or combination of merchants to defraud the Company of a fair, that is, the real market rate of remittance to England, let us for a moment reflect on the nature of the export trade of India, and the exchanges dependent thereon. If any such combination could possibly exist, it must be by the supposition, among the principal mercantile houses at the different Presidencies, the object of whose combination would be to lower the exchange, that is, to compel the Company to take their bills on England, say, for the sake of illustration, at 1 *s.* 9*d.* per sicca rupee, when the course of trade would yield a profit to the merchant at 1 *s.* 11 *d.* or 1 *s.* 11 ½ *d.* But there are hundreds of others, besides the Company, who annually require a remittance of funds to England, and who would not be satisfied with 1 *s.* 9 *d.* for their rupee. If then the trade between India and England would admit of a remittance at 1 *s.* 11 *d.* per rupee, hundreds and thousands would at once rush into the trade, ready to take up money for unexceptionable bills at this rate, and thus leave the conspirators to the disgrace and loss of utter discomfiture. Before, therefore, any such combination as above apprehended could take effect, impossibilities must be overcome; there must be a union of irreconcileable interests to accomplish it; a union of parties dispersed all over India, separated by thousands of miles from each other, and as much divided in respect to their several views and pursuits, but who must all be brought to concur, and many by a sacrifice of their own concerns, before the conspiracy could be effected, or before it would be possible to reduce the current rate of exchange below its natural level.

Although 1 *s.* 9 *d.* per sicca rupee is assumed as a suppositive rate of exchange in the preceding paragraph, it must be recollected, that, whenever the current rate falls below that point at which it would be profitable to remit in bullion, bullion will then be exported. If the average rate of private remittance is therefore 1 *s.* 11 *d.* per sicca rupee, the exchange will for the most part vibrate a little below or a little above this standard; but if it should perchance fall much below this standard, the governments of India having, by the supposition, in their treasury, in gold mohurs and silver rupees, the amounts which they desire to remit to England, have only to embark the said mohurs and rupees, which, after paying freight and insurance, would yield a remittance of about 1 *s.* 11 *d.* per rupee, and the Company is thus effectually secured against disappointment. It is not, however, recommended that the governments abroad should have recourse to this alternative, except in cases of necessity; unexceptionable bills, on the contrary, should always be preferred, inasmuch as a large annual export of specie from India would, as was fatally experienced in the days of Mr. Verelst and Mr. Hastings, very materially disturb the internal concerns of the country. The amount of the Company's annual remittances to England should also, as above suggested, be confined within as narrow limits as circumstances will admit of, because their remittances, being of the nature of a tribute, would have the same effect as an extraordinary import of commodities into India; in other words, it will occasion an extra demand for bills on London, over and above the *natural* state of debts and credits between the two countries, and by this increase of demand for bills tend to lower the exchange as against India. But this would be a far less injury than is now experienced from the Company trading in goods to "effect large remittances to England, without primary regard to profit."

In reply to the latter part of the Question, I would observe, that if 1*s.* 11*d.* per sicca rupee be the average rate of private remittances, it is a proof that the profits of the trade, combined with the real value of the currencies of the two countries, will not admit of the dealers in bills or consignors of goods granting a higher rate. This, therefore, may be taken as the standard about which remittances, whether on account of the Company or individuals, may or can in future be effected. My own opinion, as above stated, is, that it is a more advantageous rate than the Company could otherwise realize; for if private merchants, with all the economy and vigilance usually practised in the management of their concerns, can only remit at this rate, it is altogether incredible that the Company, whatever statements or estimates may be produced to the contrary, can remit in goods on better terms.

But if the Company, as supposed in the question, should altogether cease to carry on trade, it would then become the wisest policy of the governments abroad, in the exclusive exercise of their sovereignty, to take up bills when required, at that rate of exchange which the course of trade had established as being best suited to the interests of all concerned, consequently to give every possible facility to the interchange of commodities between the two countries, and to avoid or discountenance those unnatural exports of specie which have of late years been made to England, partly to supply the Company's wants, and partly occasioned by the difficulties in which, as explained in the answer to the 4th query, private merchants are now placed to make saving remittances in goods.

QUERY 9.—WHAT are the present Arrangements with Foreign States in regard to Trade with India, and can any Improvements be suggested in those relations?

Mr. Larpent.

ANSWER.—THE trade of foreign nations with British India is permitted under the 37 Geo. 3, c. 117, under certain rules to be framed by the East India Company, as provided by that and by subsequent Acts.

The latest Regulation of the Company for foreign trade is No. 2 of 1830, 26 January, which rescinds the Regulation No. 7 of 1818, and prescribes the mode by which the trade is in future to be carried on, removing the distinction previously existing between foreign European States having settlements in the East Indies and those that have none; placing all on the same footing, and opening British India equally to the ships of all, whether coming direct from their own countries, or from a port in the East Indies; also extending the same advantages to the empire of Brazil. The relations with the United States of America are left to be regulated by the Convention between them and Great Britain, dated 3d July 1815.

The duties are levied in Bengal under Regulation No. 15 of 1825, and the only distinction that exists is between imports and exports on a Foreign and British bottom.

RATES of DUTY chargeable on GOODS imported by Sea into *Calcutta*, or any Port or Place belonging to the Presidency of *Fort William.*

	Country articles not enumerated in this Table, and which have not been specifically exempted from duty by this Regulation, shall, if they are not liable to any transit or town duty, pay, on exportation	2 ½ per cent.	nil.	5 per cent.	nil.	5 per cent.	nil.	10 ditto	nil.

Note.—The above Duties and Drawbacks are to be charged and allowed on Goods duly covered by Rowannahs evidencing the payment of Inland or Town Duty. No Drawback shall be allowed on any of the said Goods which may be brought for Exportation without a Rowannah, or with a Rowannah of which the period has expired; but on the Exportation of such Goods (except in cases wherein the whole amount of Inland Duty is drawn back), an Export Duty shall be levied, in addition to that specified in the Table, equivalent to the prescribed Transit Duty chargeable on the like Goods, minus the Drawback receivable on the Export of the same.

The extent of the foreign trade to British India may be estimated by the following Statement, showing the tonnage entering Calcutta in the years 1827-28, 1828-29.

	1827-28.		1828-29.	
	Ships.	Tons.	Ships.	Tons.
British - - -	251	97,882	234	101,145
French - - -	25	8,147	34	10,564
Rest of Europe -	11	3,443	3	928
America - - -	10	2,788	11	3,526

SUMMARY of FRENCH SHIPPING.

Arrivals.		Departures.	
1828 - - - -	23 ships.	1828 - - - -	23 ships
1829 - - - -	24 –	1829 - - - -	27 –
1830 - - - -	20 –	1830 - - - -	17 –

Of the French trade the largest item is indigo, which forms of their exports from Bengal 22 out of 26 parts of the whole trade. On this indigo, say 20,000 maunds, the duty charged on its export on foreign bottom is 5 per cent. on the maund, valued at 100 rupees, this being the transit duty which is drawn back upon export on British bottoms. The average price of indigo for nine years, from 1822 to 1830, was 240 rupees per maund, the duty therefore on French shipments is 2½ per cent. only on its real value. The object of the French government, since 1815, seems to have been the increase of the direct trade between France and British India, and to this the French tarif has been directed. Upon the introduction of indigo into France by a French ship,

The duty is - - - - - - -	1 –	franc per kilogram.	
From European entrepôt - - - -	3 –	ditto	ditto
From any entrepôt out of Europe - -	1 40	ditto	ditto

Thus the admission of indigo direct from England, or by English ships, into France, being prohibited by the French navigation laws, indigo sent *viâ* Ostend is charged with three times the duty levied on indigo imported direct from India on a French ship, and *viâ* America 40 per cent. only. The effect of this on a maund of indigo may be estimated as follows:

DIRECT:				LONDON:		
						Francs.
1 maund, cost -	200 rupees			1 maund, cost -	200 rupees	500
Duty - -	5 –					
			Francs.	Import:		
	205	or	525	Freight at -	– 8 6	
				Insurance -	– 10 –	
Freight, about -	14 –			Charges -	– 12 –	
Insurance - -	20 –					
Duty - -	33 –				1 10 6 =	38
Charges, 2 per cent.	11 –					
			78	Export:		
		Cost	603	Com. brokerage	– 12 –	
				Charges -	– 2 –	
				Freight & charges	– 8 4	
					1 2 6 =	28
						566
				Landing charges in France	10 francs	
				Duties - -	99 –	109
						Fr. 675

Thus giving a much greater advantage to direct shipments than to the entrepôt imports. Hence the result has been, that the exports of colonial produce from British ports, since the new regulation of the French tarif in 1825, have nearly ceased.

Reduced 95 per cent.

The right of France to encourage her direct trade cannot be disputed; but it is a question whether, as it is equally the right of Great Britain to impose such a duty in India as would bring the indirect trade through England by English ships to a nearer level with the French direct trade, it would not be expedient to do so by increasing the duty levied on export in India.

The

The trade between France and British India is chiefly carried on by British capital, by credits from English houses.

The entrepôt trade *viâ* Ostend is carried on principally, though not exclusively, by Belgian ships to Ostend, where the goods are unloaded in port, and French ships receive them and carry them to a French port.

Under this head of inquiry some observations may be made upon our relations with the Netherlands, and the infringement by its government of the treaty with Great Britain of 1824, who have imposed duties upon British manufactures imported into Java almost prohibitory.

See Evidence, Maclean Deans, &c.

In the latter part of the year 1824, strong remonstrances were made upon this subject to the India Board; and under date 30th January 1826, the following communication was made to the London merchants from the India Board, "That Mr. Secretary Canning had addressed to the Netherlands Government remonstrances on the duties in question, as being in opposition to the object and spirit of the treaty of the 17th March 1824; that in reply, assurances had been given on the part of the King of the Netherlands of his disposition to consider the subject with a view to the modification of the duties." But since that period, although repeated applications have been made, no decisive answer has yet been returned by the Netherlands government. The duties remain, and the trade is almost gone from Great Britain.

How far, under the altered circumstances of the Netherlands, and the separation of Belgium from Holland, by which it no longer becomes the policy of Holland to protect the Belgian manufactures, it may not be advantageous to press the subject on the attention of the Dutch government, is a matter which must be left to the discretion and superior knowledge of Government,

By the Treaty, the duties on British manufactures, where there are none levied on Dutch articles of the same kind, ought to be 6 per cent., and where the Dutch are 6 per cent., British should pay 12 per cent. The double duties on foreign fabrics being the principle adopted.

The existing duties are,—on woollens and cottons, Dutch, 6 per cent.; British, 25 per cent. and 5 per cent. thereon, making 26¼ per cent., and the articles are subject to an arbitrary valuation every three months.

On hardware, on a valuation taken at 30 per cent. above the invoice, British pay 12 per cent., whereas the Dutch pay 6 per cent., and upon the invoice.

Manchester Chamber of Commerce.

ALL that seems necessary to be done is to go into a careful revision of the existing system of duties and restrictions, and to modify them in whatever degree may be found to be at once beneficial and practicable.

Glasgow Chamber of Commerce.

FOREIGN States are perfectly free to trade with India, and ought, in our opinion, so to remain; but the free port of Singapore has been hitherto shut against American ships, under some doubts of their right by the treaty with the United States to admission there; it is understood that that restriction has lately been taken off, though we have not seen any official notice of it.

Liverpool East India Committee.

GOODS by foreign vessels, as well exports as imports, are subjected to duties in the ports of India, from which those by British vessels are either entirely exempted, or pay a lower rate.

With a view to the great object of the advancement of India, we conceive it would be expedient to abolish these extra duties, in order to promote the free intercourse of foreign countries with India. Their continuance may also drive foreigners to resort to French, Dutch, or other settlements, in preference to the ports of British India. But the direct trade between India and China, and Great Britain, ought of course to remain in the possession of the British and Indian shipowner.

Mr. Mackillop.

FOREIGN ships trading with India are subjected to additional duties, and I am not aware any change could be made as to foreigners, for the benefit of India, without prejudice to the interests of this country.

Mr. Bracken.

FOREIGN bottoms pay double duties, I think, on all imports. I see no reason why they should not be put upon an equal footing.

Mr. Hill.

THE trade between foreign States and India is subject to double duties. The general interests of commerce would be promoted if it were subject only to the same rates of duty as the trade between India and Great Britain.

Mr. Langton.

I HAVE never heard it complained that the present arrangements with European or American) foreign states, in regard to trade with India, stood in need of improvement or alteration.

Mr. Wood.

ALL foreigners are allowed to resort to the ports of India on payment of the port charges, and to purchase whatever articles they may wish, and to ship them for Europe or elsewhere, on payment of the custom duties; and inasmuch as the foreign trade is not exempted from the payment of the customs, in the same way as the exports to England, Territory benefits more by the trade of foreigners than by the trade with Great Britain. Foreigners, with the special sanction of the Government, are permitted to establish themselves in the interior of the country, and some of the indigo factories are, I believe, carried on partly with foreign capital, although not to any great extent.

Mr. Lloyd.

I AM not officially cognizant of the arrangements with foreign states with regard to trade with India; the Indian duties upon foreign trade are double, as compared with the duties upon imports by British ships; but in whatever degree foreign trade can be encouraged, it will tend to augment the resources of India, and may give facilities by indirect means in accomplishing the annual remittance required by England, provided it does not displace an equal amount of British trade.

Mr. Mackenzie.

THE rules applicable to the trade of Europeans, Foreigners and Americans, will be found stated in Regulations VII. of 1818, and XV. of 1825, of the Bengal code. Native traders are not distinguished from British subjects. I am not aware of any change that could be made likely materially to affect the commerce of the country, though I might be disposed to get rid of the restrictions to which foreigners are subject in regard to the destination of the goods exported by them; and the excess of customs charged on their imports above those chargeable on articles imported on English bottoms, should I conceive be a distinct tonnage duty, not a per-centage on the value of the goods. On the other hand, in stipulating for the admission of British manufactures into foreign states or their colonies, we should have looked more to the cargo and less to the vessels employed.

Mr. Crawford.

THE general rule, with respect to the duties on foreign goods, is to impose a double duty on all merchandize imported on a foreign bottom, and when the article would be free in a British bottom, to charge the lowest British duty, namely, two-and-a-half per cent. With respect to exports the duties are always inconsiderable, and the difference between those imposed on merchandize exported, under the British and American flag especially, are very inconsiderable. The higher duties imposed on importations under a foreign flag appear to me to throw needless impediments in the way of the trade of India, and to afford no necessary protection to British trade, which stands on higher grounds,—its capacity to furnish the consumer at a lower cost, and to give the producer a higher price. This assertion, I think, may be easily proved. The subjects of the United States are the only rivals from whose competition we can have any reasonable ground for apprehension. In the three years ending with 1810–11, and when their only competitor was the East India Company, their exports from British India amounted to 1,705,814 *l.* In 1828–29 they fell to 162,258 *l.**, or to less than *one-tenth* of that amount. It is certainly not the rate of duty, but the open competition of the British merchant which has brought about this result, for the duties were far heavier before the opening of the free trade in 1814 than they have since been, or than they are at present. The monopoly of the colonial or carrying trade of India is a sufficient, perhaps more than a sufficient, protection for British commerce, and the effects of the competition of this branch of our trade with the Americans and with the East India Company, as far as they admit of fair comparison, may be adduced in proof. In 1813–14 the export and import trade of private British ships with Canton amounted only to 9,897,044 Spanish dollars, or to less than two millions sterling per annum, while in 1829–30 it rose to 31,368,300 Spanish dollars, or to upwards of six millions sterling. The trade of the East India Company with Canton, including that of England and India, amounted in 1813–14 to 13,650,700 Spanish dollars, or to about 2,700,000 *l.*, and in 1829–30 it had fallen off between 300,000 *l.* and 400,000 *l.* The means do not exist of instituting a fair comparison between the British country trade of India and that of the Americans. In 1816–17, the first year after the war, in which the American trade with Canton was re-established, the exports and imports amounted to 11,312,600 Spanish dollars, and in 1829–30 only to 8,026,243 Spanish dollars, showing a decline of above 600,000 *l.* A part of this decline may be ascribed to the competition of the free trader in the articles of opium, raw silk, cassia, camphor and other Chinese exports, of which three last commodities† the Americans may be considered until of late years as having enjoyed a monopoly. It is proper, however, to state, that other obvious causes have been in operation to reduce the amount of the American trade. The American teas have been in a good measure excluded from the ports of France and Holland by protecting duties, and from the British possessions in North America by the recent exercise

---

* Report of the Committee of Correspondence of Court of Directors, 1813.—Report of Select Committee of 1831.

† These articles can only be imported into Great Britain in the open trade after trans-shipment at a British port in India. In the accounts, they are consequently represented as Indian importations. The raw silk cannot be distinguished from Indian, but the following Statement will show the increase in camphor and cassia, the peculiar products of China, and I add the article of tortoise-shell, which, although not the produce of Chinese industry, was for the most part imported from that country before 1814.

———		1814.	1828.	Increase per Cent.
Camphor - - - - -	*lbs.*	248,754	373,428	50
Cassia and cassia buds - - - -	–	173,988	571,560	228
Tortoise-shell - - - - -	–	3,775	27,361	624

India Finance and Trade, 1830.

exercise, in these, of the Company's monopoly; and bills having been substituted for dollars in the imports, their amount is necessarily excluded from the estimated value of the whole trade. For the reasons now stated, I am of opinion that countervailing duties are not necessary for the protection and security of the British trade with India, and that as far as foreign competition is concerned, all that is necessary to it is unfettered freedom. I am equally of opinion that the confiding the American trade to four ports of British India is vexatious and uncalled for; and as far as relates to its exclusion from Singapore in particular, I am convinced, from personal experience, that it is highly prejudicial to the interests of British commerce, the operations of which are narrowed and restrained by it.

Hull Committee.

WHILE we recommend that a liberal policy should be observed towards foreign states in their intercourse with India, the trade between India and China and Great Britain should most decidedly be secured to the British and Indian shipowner.

QUERY 10.—Are there any, and what, Benefits derived by the Revenues of Great Britain from the present System for conducting the Trade with India and China, which would be lost by a Change of System?

Mr. Bracken.

ANSWER.—I cannot contemplate any loss whatever to the revenue by throwing open the trade to the fullest extent. On the contrary, I calculate on an increase of consumption, the duty remaining the same, consequent on reduced price. The evidence, however, on the China trade is so complete and conclusive, that it is unnecessary for me to make any observation regarding it.

Glasgow Chamber of Commerce.

WE are of opinion, that no benefits derived by the revenues of Great Britain from the present system of conducting the trade with India and China would be lost by a change of system. In a free and open trade with China, the duty on tea would of course have to be collected, at the different ports of Great Britain, in the same manner as the duty on tobacco, brandy, &c. This might occasion a little additional trouble, and, perhaps, expense, at the different custom-houses, greater than is incurred by the present method of collecting it through the East India Company, but which would, we have no doubt, be much more than compensated by the increase in the consumption of that article.

Liverpool East India Committee.

WE believe there are no benefits derived by the revenues of Great Britain from the present system for conducting the trade with India and China, which would be lost by a change of system. When a free trade in tea is permitted, there may either be a specific duty according to quality, or an *ad valorem* duty may be collected upon the auction sales made at the different seaports, in the same mode, and with equal security, as the duty on the Company's sales is now collected.

That there will be a material increase in the consumption of tea, consequent upon such a reduction of price and improvement in quality as will be experienced under the free trade system, there can be no doubt, the duty on which increase will fully compensate for the effect of lower prices; and there is every ground for believing that the removal of those restrictions which now prevent the resort of British shipping to the Chinese seas, would lead to the development of new branches of trade with ports rarely if ever previously visited, and would tend materially to increase the trade and prove a fresh source of revenue to this kingdom. So far therefore from the revenue being impaired by a change of system, we feel assured it would be greatly benefited thereby.

The risk of loss to the revenue by smuggling will, in the article of tea, be lessened by the opening of the trade, as the temptation now held out by the high monopoly price of the East India Company, compared with the price in the neighbouring Continental ports, would be entirely removed, for there can be no doubt that British merchants in a free trade would import teas at least as cheaply as French, Dutch or other Continental merchants can do.

Manchester Chamber of Commerce.

THE Board is not aware of any. The monopoly by the Company of the trade with China has been occasionally represented by their advocates to be beneficial to the revenue of Great Britain, but from this doctrine we must entirely dissent. It has been satisfactorily shown, in the evidence taken by the Parliamentary Committees during the present inquiry, that tea could be imported cheaper by the private trade than it has ever been by the Company. If this fact be acknowledged, it follows that the article might, if necessary, be made to yield even a heavier revenue than it does at present, instead of its becoming smaller.

Mr. Lloyd.

AS to the benefits derived by the revenues of Great Britain from the present system of conducting the trade with India and China presuming this question relates mainly to the tea trade, it may be assumed as admitted that the present system of ascertaining and collecting the duties upon tea is not susceptible of improvement; by the plan of public sale and great competition the full value is obtained, a point most essential in the case of a duty *ad valorem* of 100 per cent.; and by the duty being received by the Company, and

paid

paid over to the Crown without any charge in respect thereof, the large revenue of 3,300,000 *l.* is realized in the Exchequer at an expense of about 10,000 *l.**

In the event of any extensive alteration of the present system, such as the free admission of the British public to the trade in tea, it is presumed that neither the same protection to the revenue, nor the same economical mode of collecting it, can be expected; the duty must be either an *ad valorem* or a rated duty.

If a duty *ad valorem* be continued, and that value is to be ascertained by a declaration of the value by importers, a wide door will be opened for fraud upon the revenue, by reason of the difficulty of forming a judgment of the value of an article requiring most elaborate examination to ascertain its quality.

See Evidence before the Lords:
Mr. Nicholas, Commissioner of Excise.
Mr. Roe, Commissioner of Customs.
Mr. Wilson - - ditto.

Evidence before the Commons:
Mr. Vivian, Solicitor to the Excise.
Mr. Roe, Commissioner of Customs.
Mr. Larken, Tea-broker.
Mr. Venn - Ditto.
Mr. Styan - Ditto.

According to the Evidence given in the year 1813, before both Houses of Parliament, by Officers of His Majesty's Customs and Excise, and by intelligent tea-brokers, the substitution of a rated duty, so as to protect the revenue, appears also to be beset with difficulties, arising from the varied qualities in teas of the same general denominations. In addition to these considerations, it is presumed that under the present system, from the absence of all personal interest in the issue of smuggling transactions, there is another important protection to the revenue.

The economical collection of this revenue at present is undoubted; the gross charge of collecting the excise duties, tea included, is stated in the Public Revenue Accounts to be 4 *l.* 18 *s.* 9½ *d.* per cent.: if the tea revenue, and the expense of its collection, be deducted from the gross Excise revenue, the per-centage of all exciseable articles excepting tea would be 5 *l.* 16 *s.* 9 *d.* per cent.; the expense of collecting the tea duty is about 6 *s.* 1 *d.* per cent.

All these considerations lead to the conclusion, that the probable effect of an extensive alteration of the present system will afford facilities for defrauding the revenue, and that the expense of the collection will be materially increased; nor does it appear to me that any equivalent advantages can be secured under the alteration.

A considerable reduction of the rate of duty would probably be the only mode of preventing smuggling, under the altered system.

Mr. Langton.

THE alleged cheap collection of the duty on tea is an obvious and gross exaggeration; not the lockers only in the London tea warehouses, as pretended by the Company, but the inspectors of wholesale and retail stocks throughout the land, a proportion of the charges of the Preventive Service, of the Excise Board, and even of the Customs, constitute the expense of collecting this duty.

It has been said that an *ad valorem* duty could not be collected on this article in the outports; but if an *ad valorem* duty should be found preferable to one by the weight, according to the description of tea, as in America, there is no doubt it could be levied as correctly in the greater outports at least as in the ports of London.

If a change in the system of this trade should reduce the sale price, and with it the duty, the consequent increase of consumption would probably more than compensate for such reduction, independent of the benefit which would result to the revenue, the manufactures and general commerce both of this country and of India, from the increase of old and the development of new branches of trade, with countries rarely heretofore visited by our commercial marine or our merchants, owing to the rigid exercise of the exclusive privileges of the East India Company.

Mr. Crawford.

I AM not aware of any benefits which the public revenue derives from the present system of conducting the trade with India and China, which would be lost by abandoning what remains of the system of monopoly. In the discussions which preceded the Charter of 1813, it was warmly argued that an open trade would inevitably give rise to extensive smuggling, and, with a view to restrain this anticipated contraband trade, many needless precautions were taken by the Legislature. The most important of these have since been wisely abandoned, and the experience of near 18 years has proved that they were utterly unnecessary. There has been no smuggling in the Indian trade. I am not even aware that since 1814 a single allegation has been made to this effect. A small quantity of teas, silks, and perhaps some other Indian commodities, has, since the commencement of the present Charter, no doubt, been smuggled into the kingdom, but not through the regular shipping carrying on the trade between Great Britain and India, but, as had been early predicted, from the far more convenient position of the opposite coast of the Continent.

Before the commencement of the present Charter, the duties on all articles imported from the East Indies and China were, with inconsiderable exceptions, paid by goods imported by the East India Company. At present the Company may be said to contribute to the revenue only through the importations of tea, leaving all other articles to the free trade. The effects of the monopoly and of the open trade, in so far as concerns the public revenue, may therefore be seen by comparing the amount of duties on tea and on all other articles before and since 1814. I have not at hand any document to refer to for the precise amount of the revenue derived from East Indian importations prior to 1814, but to the best of my recollection they amounted, tea excepted, to about . In 1828, not a productive year, they amounted to 761,156 *l.* This at least shows that the free trade has proved far from detrimental to the revenue. The increase which has taken place is the more remarkable

---

* Evidence before Committee on East India Affairs, 3 June 1830.

able, when we consider the great reduction which in most instances has been made in the rates of duty, as will appear by the following short enumeration.

GOODS.	DUTY in 1814.	DUTY in 1828.
	s. d.	*s. d.*
Coffee - - - - - - - - -	- - -	– 9 *per lb.*
Cotton Wool - - - - - - -	16 11 *per* 100 *lbs.*	6 *per cent.*
Indigo - - - - - - - - -	– 2½ *per lb.*	– 3 *per lb.*
Saltpetre - - - - - - - - -	– 4½ - *cwt.*	– 6 - *cwt.*
Raw Silk (Bengal) - - - - - -	3 9 - *lb.*	– 1 - *lb.*
Ditto (China) - - - - - -	5 7½ - *lb.*	– 1 - *lb.*
Ginger - - - - - - - - -	22 11½ - *cwt.*	11 6 - *cwt.*
Pepper - - - - - - - - -	1 10½ - *lb.*	1 – - *lb.*
Sugar - - - - - - - - -	30*s.* a' 33*s.* *cwt.*	37 – - *cwt.*

The revenue derived from tea in Great Britain and Ireland, in the eight years from 1814–15 to 1821–22, and in the subsequent eight years ending with 1829–30, were respectively as follow:

First period - - - - - - - £.30,504,615
Last period - - - - - - - 29,838,601

This exhibits a falling off of above 600,000 *l.*, or at the rate of above 80,000 *l.* per annum, although the duty in the last period was generally four per cent. higher than in the first*. The advantages to the revenue, therefore, as far as the imperfect materials within my reach afford me the means of judging, seem all to be in favour of those articles which have come under the management of the open trade. Under the free trade, with reduced duties, the revenue has advanced: under the monopoly, with increased duties, it has declined.

A note to the return of the tea revenue, given in to the Select Committee of the House of Commons in 1830, states, that "the tea duties are collected by the East India Company, and paid over to the Crown, without any charge whatsoever in respect of such collection;" and it was attempted to be shown before the same Committee, that the whole excise charges on account of the collection of the tea duties were under 11,000 *l.* per annum. Upon these extraordinary assumptions comment is hardly necessary. The vigilance of His Majesty's navy, of the preventive service, and of the establishments of the customs and excise, are equally exercised, as every one is aware, in the protection of the tea duty as in that of any corresponding branch of the public revenue, and if they were not so exercised, it is plain enough that no duty could be collected. Tea, therefore, in common with tobacco, foreign spirits, and similar commodities, is justly and properly chargeable with its due share of all the establishments employed for the security and collection of the general revenue. By the regulations established at the India House, under the sanctions of Acts of Parliament, the purchasers of tea pay the whole duties before the tea is delivered. All that remains to the Company to do is to pay them over to the Excise. For the performance of this easy function, the cost to the State appears to me to be, without reference to the restraints imposed by the monopoly on commerce, exactly the difference of price between the cost of tea under the present system and in an open trade. Judging from the fair and ample experiment made under the sanction of the Board of Control in 1830, this difference, calculated upon our present consumption, is not less than 1,800,000 *l.* per annum†. It is obvious that this amount might be taken by the State in the shape of revenue, without enhancing the price of tea to the consumer one farthing. It is a charge of collection, therefore, independent of a proportion of the usual establishments engaged in the protection and collection of the general revenue, of certainly not less than from 50 to 60 per cent, viewing the services of the East India Company merely in a fiscal point of view. This will sufficiently show that the tea duties are not only not collected "without any charge whatsoever," but that they are infinitely more costly in the collection than any similar branch of the public revenue, indeed, than any branch of it whatever. I will add, that a revenue collected at such a charge, and supposing no cheaper means could be devised of realizing it, is one which ought not to exist at all in any well-regulated country. In so far as the services of the Company are concerned in the collection of the tea duty, the result is this, that for every 20*s.* taken from the pockets of the people, scarcely 13*s.* find their way into the Treasury.

Mr. Hill.

THE benefits derived by the revenue of Great Britain from the present system for conducting the trade with China is, that a large amount of revenue is paid into the Exchequer, without risk and without expense. The effect of any extensive alteration in that system

---

* Appendix to First Report of 1830, pp. 84 & 90.

† First Report of 1830, p. 493, and Appendix.

Appendix, No. 4.

Trade with India: Answers to Queries.

would certainly be to subject this branch of revenue to the ordinary charge for collection, and probably to a great risk of smuggling. I apprehend there would be much difficulty in levying an *ad valorem* duty as at present, and that, to escape as much as possible from that difficulty, the duty would need to be made either more burdensome or less productive.

The most serious objection to any extensive change of system is, in my judgment, the hazard, to which I have already adverted, of a repeated or protracted interruption of commercial intercourse with China, which would not only affect the revenues of Great Britain when it occurred, but would probably affect them permanently, by putting an end to the national preference for tea.

Mr. Mackenzie.

ON this point I have nothing to communicate to the Board, to whom it would be useless to state the facts and arguments, which will be much more ably, and with fuller information, urged by the gentlemen, of the existing system, still more those which will reach them from a thousand quarters in recommendation of a change. I do not understand that the Board desires, and I cannot imagine it would value, my bare opinion upon such a question.

Mr. Mackillop.

IT will be obvious to you that the revenue of India is deeply interested in the trade with China as well as that of Britain, and any interruption to that source of supply detrimental to the one, would in all probability be equally felt by the other. The most direct answer I can give to your Query is, that the risk of loss to the revenue of both countries will depend on the extent of any change that may be made in the present system. I presume any alteration which it may be proposed to make, will have in view the increase of the export of British manufactures, and larger import of tea at a cheaper cost. These are doubtless objects of great importance: but in seeking to obtain them, we must be careful to avoid the risk of losing what we already possess. I consider our commercial intercourse with China as being of a somewhat uncertain character. It is not secured by treaty; it is, in fact, rather permitted than sanctioned by the Chinese government, and subject to the whim and caprice of a despotic power.

Mr. Larpent.

THE care and facility with which the revenue on tea is now raised is certainly *primâ facie* a cogent argument for the maintenance of the present system; but what reason is there for supposing it would diminish upon a change of system, and the substitution of private for the Company's trade? The immediate effects would probably be a rise of price of tea in China. The demand of private speculators would probably be excessive, as it always is on the opening of a new trade; and the necessity of bringing home return cargoes for speculative exports to China would induce the owners of ships from London and the outports to bring more tea than the market would consume, and at higher prices than the Company's supply. The check upon this would be, the want of arrangement in China until commercial establishments are formed, and if that operates strongly, the supply of tea may be smaller; but this difficulty would soon be overcome, and meanwhile the two years' supply of the Company would feed the home market: and if the home prices were raised, the revenue would rise with them. But in a short time, it is to be presumed, the average supply will be furnished as heretofore, and if an excess of the present supply, and prices fall in England, the duty will be on a larger quantity; and the consumers of tea, having a surplus of the money heretofore applied to its purchase, may afford to increase their consumption of sugar or other highly-taxed article.

How would the year's supply left in the Company's hands when the charter expires affect the market as respects the private trader?

Thus far as to amount of revenue under a change of system. As to security of revenue it does not seem probable that if all tea cargoes were compulsorily brought into docks with bonded warehouses, and the dock companies allowed to take the duty, that the revenue would be less protected, or collected at a greater expense than as at present by the East India Company.

The charges of collecting the revenue generally might be reduced by employing Dock Companies.

Again, the introduction of tea into the bonded warehouses of Liverpool or Glasgow, and perhaps an extension of an *internal* bonding system, would bring tea cheaper to the consumer and increase his consumption, and the cheapness would not be on the *upset* price to affect the revenue, but on the retail price; so that the country, the manufacturers, and others in the lower and middle classes, would benefit, and the revenue not be diminished.

Import, wholesale.

But whilst the advantages to India of opening the China trade, in a commercial point of view, are thus set forth, and it is attempted to be proved that the revenue would not suffer, there is much yet to be considered before the agency of the Company in the China trade be entirely done away with.

The substitution of cheap ships and moderate freights for the present expensive vessels of the Company, and the admission of private enterprize and skill into the trade, both as respects India and England, are obvious advantages; but the attempt to purchase them may be inexpedient, if there be any real danger of shutting out the British trade altogether from China in making the experiment.

The evidence before Parliament as to the temper and character of the Chinese government is conflicting. That the trade between China and England is more advantageous to the latter than the former cannot perhaps be denied.

What

What has been done in Japan against Europeans may be done in China. A recourse to arms to compel the Chinese to trade would be an experiment of which the injustice and expense would be certain, and the result very problematical. On the other hand, the existence of the American trade, and of the Indian country trade with China, affords a strong argument for the expediency of trying the open system; but as these trades have grown up under the East India Company, their existence is not perhaps conclusive evidence of the safety of a free trade without the Company.

Will the Chinese bear the introduction of British manufactures? *See* the account of riots upon the use of British yarn. The Chinese follow the old mercantile European system, and confine the tea trade to Canton, though the tea be grown in a distant province, in order to give employment to their people to carry it to Canton.

A gradual enlarging of the private trade, taking away all that is not absolutely of benefit to the Company, opening what the Company do not use themselves, that is, giving to the private trade all but the purchase of tea, might be attempted on the renewal of the present Charter, and a clause inserted for the power of a gradual change to an entire free trade, to be reserved by Parliament, on certain conditions to the Company as to their dividend, &c.

If the outward trade to China were perfectly free, and the Company's exclusive privilege be confined to the purchase of tea from the Hong, and its sale to the exporter or his agents, the prejudices of the Chinese might not be shocked, and the oppression and chicanery of the Chinese might be resisted more successfully than by individuals, and adulteration of the article prevented, which, if carried to an excess, would stop its consumption.

The free traders might employ the Company's Factory or not as they pleased; and the Company's Factory should be confined to a certain limited per-centage on the cost; or, to prevent abuse, a certain rated charge per pound weight.

The Company's Indian treasury might provide a large portion of the funds for the purchase, and pay the Territorial charges at home, by the bills drawn against the tea payable in England. The consumption of tea is too general, the demand too certain, to entertain a doubt of the private trader taking off the tea from the Company; and the suggestion is offered only as a mode (complicated perhaps, and therefore not desirable) of avoiding collision with the Chinese, and the possibility of a rupture with a nation so singular and so jealous, and consequently of the loss of so valuable and important a branch of trade.

WE cannot contemplate the loss of any benefits derived by the revenue of Great Britain from the present system of conducting the trade with India and China, should a change of system take place; on the contrary, we believe the revenue would be materially benefited by the increased trade we anticipate, but particularly by the importation of tea.

Hull Committee.

I BELIEVE I am not outstepping the bounds of discretion when I assert, that if the Company's trade to India and China were entirely abolished, the commercial intercourse of Great Britain with the East would speedily be increased to tenfold its present amount; if so, it is obvious that the public revenue, so far from losing, would be benefited in proportion by this auspicious change.

Mr. Rickards.

QUERY 11.—CAN any Measures, not involved in previous Questions, be suggested, calculated to advance the Interests of Indian Commerce, such as the Improvement or Increase of the Exportable Productions of India, &c.&c.

ANSWER.—THE measures proposed to benefit Indian commerce are,

Mr. Larpent.

1. A remodelling of the Customs table; for the expediency of which, *see* Statement delivered to the Board of Trade in 1831.

Sir C Forbes' Evidence.

2. Equalization of the duties on Indian sugar; difference 10 *s.* per cwt.
3. Reduction of duties on Indian cotton and silk manufactures, which pay here 10 and 20 per cent. *ad valorem*, whilst British manufactures in India pay 2½ per cent. only; and alteration in mode of taking the same on silk piece-goods, in London by Company's sales, in Liverpool by valuation.

See Petition from Natives.

PETITION of Natives of Bengal relative to Duties on Cotton and Silk.

Calcutta, 1st September 1831.

To the Right Honourable the Lords of His Majesty's Privy Council for Trade, &c.

The humble Petition of the undersigned Manufacturers and Dealers in Cotton and Silk Piece-Goods, the fabrics of Bengal;

Sheweth,

That of late years your Petitioners have found their business nearly superseded by the introduction of the fabrics of Great Britain into Bengal, the importation of which augments every year, to the great prejudice of the native manufactures.

That the fabrics of Great Britain are consumed in Bengal without any duties being levied thereon to protect the native fabrics.

That the fabrics of Bengal are charged with the following duties when they are used in Great Britain:

On manufactured cottons, 10 per cent.
On manufactured silks, 24 per cent.

Your Petitioners most humbly implore your Lordships' consideration of these circumstances, and they feel confident that no disposition exists in England to shut the door against the industry of any part of the inhabitants of this great empire.

They, therefore, pray to be admitted to the privilege of British subjects, and humbly entreat your Lordships to allow the cotton and silk fabrics of Bengal to be used in Great Britain "free of duty," or at the same rate which may be charged on British fabrics consumed in Bengal.

Your Lordships must be aware of the immense advantages the British manufacturers derive from their skill in constructing and using machinery, which enables them to undersell the unscientific manufacturers of Bengal in their own country; and although your Petitioners are not sanguine in expecting to derive any great advantage from having their prayer granted, their minds would feel gratified by such a manifestation of your Lordships' good-will towards them; and such an instance of justice to the natives of India, would not fail to endear the British Government to them.

They, therefore, confidently trust, that your Lordships' righteous consideration will be extended to them as British subjects, without exception of sect, country or colour.

And your Petitioners, as in duty bound, will ever pray.

Signed by 117 natives of high respectability.

4. Opening new ports for the importation of Indian goods, and extension of the bonding system into the interior of the kingdom on articles heavily taxed.

5. Encouragement to persons to settle in India.

Colonization is neither practicable nor desirable: but the settlement of respectable persons is most important for the improvement of Indian produce.

Whilst the law remains as it is, respectable persons will not subject themselves to the power of deportation; and to control the idle and adventurous persons who go out under the existing regulations that power may be necessary. Practically, at Calcutta, Madras or Bombay, the trader is secure; but to make him and his skill and capital useful to India, he should be encouraged to go into the interior, and his rank and station, in relation to the covenanted servants of the Company, improved. The question, however, is one of much difficulty; and it is not easy to make any single alteration in so complicated a system with safety; the change must be general, and of the system itself.

RESOLUTIONS of London Merchants.

AT a Meeting of the Merchants and Agents in London connected with the Trade of the East Indies, held at the Office of the East India Trade Committee, Broad-street, on Tuesday, March 2, 1830; Richard Campbell Bazett, Esq. in the Chair;

The Report of the Committee appointed at a previous meeting, consisting of the following gentlemen: Edward Fletcher, Esq., David Clark, Esq., William Crawford, Esq., G. G. de H. Larpent, Esq., and James Mackillop, Esq., having been read and discussed, it was resolved unanimously,

1st. That the time has arrived when it has become advisable that the opinions and views entertained by the East India merchants and agents resident in London in relation to the inquiries now pending in both Houses of Parliament, as connected with a renewal of the Charter to the East India Company, should be publicly declared.

2d. That it is the opinion of this meeting, from the experience obtained since the opening of the trade to the East Indies, by the 53d of Geo. 3, and subsequent Acts, that the manufacturing, shipping and commercial interests of the United Kingdom have derived very important advantages therefrom.

3d. That this meeting confidently relies that, in any renewal of the Charter to the East India Company, due provision will be made to allow such free intercourse of British subjects with India, and to give to them such right of settling therein as shall (consistently with the security of the British Government and the welfare of the native population) be best calculated to promote the full development of the internal resources of that country, and, by the application of British skill and capital, improve its various products, especially those of sugar, cotton, silk and tobacco; these being the principal means by which, in the opinion of this meeting, a further extension of the valuable trade with India, now obstructed by the difficulty of obtaining returns, may be facilitated.

4th. That, adverting to the fact of the Government of India having recently imposed a heavy and most vexatious burden on the commerce of that country, through the operation of the "Stamp Regulation," it is, in the opinion of this meeting, due to the commercial interests of India that the trade should be at once relieved from that Regulation, and protected against the imposition of any tax whatever by the local Government, without a fair opportunity being afforded to all parties affected thereby of canvassing its merits and provisions, and of submitting to the Government such objections as they may entertain to the measure previously to its acquiring the force of law.

5th. That it is the opinion of this meeting, and is supported by the personal experience of many of the members now present, that commercial dealings on the part of the Government of of India, whether as merchants or manufacturers, are destructive of fair competition, and are, in consequence, calculated rather to depress than excite commercial enterprise through the countries subject to their dominion. It is therefore most important to the mercantile prosperity of India that the Government of that country should be entirely restricted, from all commercial dealings, save and except, in reference to the export trade from India to Europe, it be absolutely necessary to buy produce in open market for the purpose of remittance in aid of the territorial demands on the London treasury, when no other means of supply can be obtained.

6th. Whilst this meeting expresses this opinion as to the bounds which should be set to the commercial interference of the government of India, it desires to be distinctly understood not to uphold the usefulness or necessity of even such limited transactions, believing, as it does, that the condition of India will, under a free and open competition of commerce, afford further proof to the experience furnished by all other countries in the world, that the work of remittance can be best performed by means of the industry, intelligence and economy of merchants individually interested in the result of their undertakings.

7th. That this meeting refrains, at this time, from making any declaration on the important question of the monopoly in the supply of tea to this country now vested in the East India Company, because, in the opinion of this meeting, that subject is interwoven with various other considerations, besides those purely commercial, which render a full investigation indispensably necessary for establishing a fair and just decision as to the course which it may be wise to pursue in furtherance of the common interests of our country.

8th. But pending the consideration which is now giving to this most important object, this meeting cannot withhold the expression of its opinion, that the interests of British merchants, shipowners and manufacturers, ought not to be any longer disregarded in relation to the commerce of China; nor the expression of its hope, that merchants of this country shall be no longer excluded from the exercise of their skill and the employment of their capital in a lucrative branch of the commerce of the world, open to all other nations of Europe and America, whilst the exclusion of the private merchants of the United Kingdom has, without producing any corresponding benefit to the East India Company, had the direct effect of checking the general commerce of the country, and narrowing the consumption of its manufactures.

It was further resolved,

That the foregoing Resolutions be embodied in Petitions to the two Houses of Parliament respectively, and that the same be prepared for presentation with as little delay as possible.

R. C. Bazett, Chairman.

Mr. Mackillop.

THERE has been an increase in the annual imports from India since 1814. Indigo, for instance, the most valuable export from India, has increased since the above period fully one quarter in quantity, though this will not appear by the returns of the trade to this country, as during the war very little was exported from India direct to the Continent, and consequently no comparison can be made with the direct trade to the Continent of Europe now existing. Prior to 1814, cotton piece-goods were shipped extensively to England from Bengal, and a considerable supply of raw cotton was also sent frequently from both Bengal and Bombay. The great increase which took place in the manufacture of cotton piece-goods in England, soon after the general peace, occasioned an unusually large supply of raw cotton to be brought from Bengal and Bombay for two or three years. At present, the import from the former place is small, owing to the superior quality and the low cost of the cotton grown in the United States of America, and with which Bengal cotton is not likely to compete successfully during a free intercourse with America. The import from Bombay (where the quality of the cotton is superior to that of Bengal) continues, but on a limited scale, with reference to the shipments of 1815, 1816 and 1817. The imports of raw silk have increased during the present Charter, but this article is chiefly in the hands of the East India Company. The imports of saltpetre have also increased; and Bengal will probably continue to be the chief

chief source of supply, the cost of production being low, and thereby enabled to compete with Peru, from which country some shipments have recently arrived. The imports of lac-dye, shell-lac, and various articles usually denominated drugs, have gone on increasing; and, as a general remark on this subject, I may observe, that at present, and for some time past, the trade has been decidedly profitless.

It is my opinion, that every means should be used to induce the Government of China to admit of our having a settlement on their coast similar to the Portuguese possession of Macao, or in some contiguous island, for the residence of British subjects, and as a safe depôt for goods. Between such a settlement and the Chinese, there is every chance of an intercourse being speedily established, and an extensive trade carried on, unfettered by the system of monopoly existing on the part of the Chinese at Canton. This arrangement would probably afford the means of getting our manufactures introduced into various parts of China, which experience shows can only be done to a limited extent through Canton, unless some depôt of this kind can be established; and so long as our shipping have only access to the port of Canton, I see no reason to calculate on an early increase of our exports; the attempt would, in all probability, be attended with serious loss. While the import and export trade of China continue to be controlled, as at present, by the Hong, my belief is, that tea, the principal import into England, ought to be more cheaply purchased at Canton, by only one party buying, than if there were a great many buyers in the market. It would, in fact, be one monopoly opposed to another; and I see no reason why a public body should not, as to freight and other charges, bring tea to this country as cheaply as could be done by individuals. It will be understood that this opinion is founded on the present state of our commercial intercourse with the Chinese. Tea is the only article the East India Company export from China. The raw silk and other goods brought from that country are imported by individuals, either in the privilege tonnage of the Company's ships, or *viâ* Sincapore.

It would obviously be to the advantage of exporters of goods from this country, were the duties reduced on the importation of Indian produce into England. I allude particularly to sugar, silk piece-goods, pepper, and almost every description of spices, &c. It is acting inconsistently to encourage the exports of a country, and at the same time to repress the importation of the productions of the state to which the exports are sent; it is, in fact, a system of trade not calculated to be beneficial to either party.

The circumstance of the Company having to pay a large sum annually in England out of their Indian revenue, tends to encourage the import of Indian produce into this country; but, on the other hand, it has the effect of discouraging the export of goods from this to that quarter, as the funds prepared by the Company for remittance to England come into competition with those arising from the proceeds of goods sent from this country, either in the purchase of goods or bullion for shipment to England, or bills of exchange, thereby rendering each of these media of remittance less favourable for those who require to send funds than would otherwise be the case. For several years great inconvenience and difficulty have been experienced in bringing home funds. Shipments of goods have been frequently attended with loss, and the consequence is, latterly bullion has been imported from the several Presidencies of India by individuals as well as by the Company. It is obvious, therefore, that the trade from India, in the present state of the European markets, cannot be increased with advantage, unless by encouragement to the import of such articles as are alluded to in my answer to the second Query.

I am not aware that any facilities can be given to encourage the increase of the trade from India beyond those I have already adverted to. The Governments of India ought to afford every encouragement for the production of exportable commodities at the lowest possible cost; for, as I have explained, very great difficulties exist in effecting remittances from India. To illustrate how this difficulty operates, I may observe that a great portion of the indigo, and also other articles imported during the last two years, have not realized here more than 1*s.* 3*d.* per rupee, while the mint value of that coin may be stated at 1*s.* 11¾*d.*; and hence it is that individuals, as well as the Company, latterly have effected remittances by bringing home silver instead of goods. But this mode of remittance from India or China, if continued, must check the import of goods from this country; for as neither India nor China produce the precious metals, the withdrawing any considerable part of the currency of these countries will diminish their ability to make purchases, unless a supply be derived by them from other countries, which does not seem likely to happen as respects India; for North and South America and Persia, which formerly sent extensive supplies of bullion to India for the purchase of silk and cotton piece-goods, and more particularly the latter, are now supplied from England.

Manchester Chamber of Commerce, and East India Committee.

THE improvement and increase of the exportable productions of India would doubtless be a great good to India, and not to India merely, but to this country. The improvement in the quality of Indian cotton is an object of paramount importance to the prosperity of the cotton manufactures of Great Britain; so much so, that every facility should be afforded to the speedy development of whatever India is capable of accomplishing in this way*; but

---

* The estimated consumption of raw cotton in Great Britain in the year 1831 was not less than 260,000,000 lbs., of which the whole of the British colonies (India included) did not furnish more than 15,500,000 lbs.

but we have no specific measure to suggest, unless it be the obvious one of permitting British subjects to hold land. If injurious restrictions be removed, and latitude given for the natural operation of British capital, skill and enterprise, in aid of the fertility of the soil of India, and the industrious habits and peaceable disposition of its inhabitants, every thing will be done that is requisite, and more certain and permanent improvement be made than could be calculated upon from any forced measures.

Glasgow Chamber of Commerce.

EVERY improvement or increase of the exportable productions of India would, no doubt, have that effect; and, with a view effectually to promote such desirable objects, we earnestly hope that the licence system by the East India Company shall be entirely abolished, and every encouragement and facility, consistent with the safety and tranquillity of India, will be granted to British subjects going there, from whose skill, capital and enterprise most beneficial results may reasonably be expected.

We shall briefly mention some other measures which we consider would greatly promote the interests of Indian commerce:—viz. 1st. The reduction of the duty on the importation of salt into India from this country. This article is strictly monopolized by the Company, as, though nominally allowed to be imported, the duty being three rupees per maund, or about 8 *l.* per ton, it is virtually prohibited; such a reduced rate of duty as would admit of the article being extensively imported into India, would afford an equivalent to the Government for the profits of their present monopoly, and greatly promote and extend the Indian trade.

2d. The utmost facility should be given to the inland trade of India by the abolition of all transit duties.

3d. A Government establishment of sailing packets or steam-boats betwixt India and Great Britain, for the more speedy and regular conveyance of letters and despatches between the two countries.

4th. It may not be out of place here to mention the very great benefit which Indian commerce would derive from a reduction in the duties on the importation of East India products into this country, say on sugar, coffee, pepper, sago, dye-stuffs and drugs. The trade in these articles might be greatly increased, to the mutual benefit of the people of India and of this country, were the import duties not so exorbitantly high. Wheat has of late become an article of import from India, and, on a moderate rate of duty, promises the double advantage of an additional security against scarcity at home, and of providing against an extreme depression of the rates of freight in India.

A practical illustration of the benefits to be expected from a reduction of duties is to be found in the article of rice, the importation of which has increased since the duty was lowered, to a very great extent.

Liverpool East India Committee.

WE would in particular suggest that encouragement be given to men of talent, particularly acquainted with the best modes of raising and improving the different products of India, to settle in the interior of the country; that encouragement and protection be given to men of capital to invest their property in land by grants in perpetuity on easy terms; and that facilities be afforded for the establishment of a free intercourse between different parts of the country, by the construction of bridges and roads.

We would suggest, that the present vexatious and expensive licensing system be abolished, and that persons engaged in trade be allowed to proceed to India, to reside there, to proceed to all parts of that country, without being subjected to further restraint than the carrying of a passport, or such other document as may serve to afford them protection, while it does not occasion any unnecessary expense or delay. That security of person and property be afforded by a prompt and equal administration of justice in all parts of the country; and that the power at present possessed by the local governments of ordering the summary expulsion of Europeans from India be withdrawn.

That no new duties or taxes be imposed upon produce or property in India without the sanction first obtained of the British Parliament; and that such scale of import duties be adopted in this country, as shall place the products of India upon a footing approximating more nearly than at present to those of other British colonies; that all monopolies now held by the East India Company be entirely abolished; and that, if they be allowed to retain the sovereignty of British India, they be prevented from engaging in any trade themselves, or from entering into any treaties or other engagements with native powers, of a nature calculated to repress or throw impediments in the way of commercial dealings between the natives of those countries and the British merchants in India; and lastly, we would suggest that, in connexion with the opening of the trade to China, a representative of the British nation, with powers emanating directly from the Crown, be appointed to reside in China for the protection of our commerce, in the room of the present objectionable system pursued in that country by the East India Company.

The most important object now in the contemplation of the merchants and manufacturers of Great Britain is a free trade with China, and a perfectly free importation of tea on the expiration of the present Charter, permitting it to be brought from any ports in China, from Sincapore, or even from foreign countries in British ships.

The manufacturers of the United Kingdom will in such case participate largely in the export of goods on their own account, for they can of course furnish them at the lowest rate;

rate; and the impediments so generally felt in our export to foreign countries, namely, the want of returns, will in this case be provided against by the great extent to which the importation of tea will probably be carried; the advantages which Great Britain possesses for a free trade with China are so great, that it is highly probable this country would become the great mart for the supply of tea to the principal places in Europe and America.

Hull Committee.

BY abolishing the present odious system of licences, and allowing persons to proceed to all parts of India without any injurious and vexatious restraints; by allowing the investment of property in land, and the establishment of settlers free from summary and arbitrary expulsion, the great object would be attained of securing the advantages of British skill and management in the culture of those products which now rank low in estimation, but would thereby be improved in their quality to the highest state of perfection, and extended to whatever the world may require.

The same degrading rule still continues in force against all British subjects settling in any place within the extent of the Company's dominions, except under their licence and during their pleasure; and so jealous is the Company of commercial interference, that the natives are deterred from disposing of their products to private merchants, and the extension of commerce, beyond what the caprice and interest of the Company allow, discouraged; all private trade, therefore, must be placed in hands doubtful and objectionable; and in order still more to check or suspend such traffic, the transit duties are varied, and the trade in any articles suspended or declared free, as suits the interest and views of the Company in their capacity as merchants.

Since the Directors of the Company have been the monarchs of our vast possessions in India, no facilities of communication with the interior by roads have been afforded, nor has any improvement in the culture of its soil and its various products been made; with one solitary exception (the culture and manufacture of indigo), these valuable and extensive regions still continue under the ignorant and careless management of the natives, whom it has been the strange policy of the Company to keep in their original, degraded and idolatrous state. How widely different would the condition be of this important part of the globe, and its vast population, were the Company to confine themselves to their magisterial duties, and no longer act on the narrow principles of rival and monopolizing merchants! The advantages arising from such a change (the right of colonization being granted) would be incalculable, both to ourselves and the native inhabitants of India: to ourselves it would afford a most inviting opportunity for the investment of capital; be an inexhaustible source for the extension of our commerce and manufactures, and for the employment of our shipping; a source in these respects more highly important, because free from foreign competition and control. It would afford inducements to the emigrant far beyond either Canada, the United States, or New Holland; and would greatly and permanently improve our national as well as individual prosperity. As to the natives of India, this change of system would tend, by their increased intercourse with Britons, to enlighten and civilize them, to dispel the horrors of their superstition and idolatry, and greatly to facilitate their improvement, general welfare and happiness.

Mr. Wood.

IN addition to a change in the system of allowing the produce of the Lower Provinces to be exported free of duty, canals of irrigation and tanks may be executed whenever the outlay on such works is likely to be repaid; and it is little creditable to our Government that these works have been allowed to remain much in the same state as we found them, with exception to the canals in the Dooab, and the Delhi canal, which have been recently opened. I was present at the opening of the latter, and witnessed the delight of every class of the population: I asked an old man if it afforded satisfaction to his countrymen? He replied, "Look around you, Sir; see the crowds that have come out to see your great work; observe the women, who on this great occasion have been allowed to enjoy the sight, and expose their persons to the gaze of the public, a circumstance you are aware which is never allowed, and then judge of the satisfaction we experience." Roads and canals of communication may be made whenever their construction will facilitate the transport of the produce of districts not settled in perpetuity to a market, or whenever they will repay their cost; and there is no country which offers so many advantages for the construction of canals as the province of Bengal, from its being level. Very little has been effected by way of opening the communication with the Presidency by land, and the roads have been left in a much worse state than when under the government of the Moguls; the remains of their roads and bridges are to be seen throughout the country; and although we have been so long in possession of the country, the roads within 30 miles of Calcutta are impassable for carriages in the rainy season. It is probable, that if the convicts were stationed on the line of the great routes of communication running through the country, and their labour directed by skilful officers of pioneers and engineers, that the construction of good paved roads might be effected at very little cost to the State, which would be the means of keeping the communication open by land at all seasons of the year; and my experience tells me, that the cost of constructing roads with such aid would not exceed 2,000 rupees a mile, if paved with brick, and nothing like the sum if other materials were procurable. As the revenues of the country must depend on the producers having at all times an unrestricted sale for the produce of their labours, it must be an object to ensure to the landholders of the districts a free market. The Government should only come into the markets for commissariat or other purposes on the same footing as the private merchant, and only purchase under contract for delivery *at the places of consumption*, and on no account interfere with the transport of the country by land or by water. If the transport of the country is not allowed to be interfered with by the commissariat and other government officers, and is left to the competition of private individuals, unaided by the government officers, it will, on most occasions, be found ample to convey the supplies required for our armies, on much cheaper terms than they can be obtained through the medium of government cattle or government agents, whose zeal for the public service too often operates to their own disadvantage, and to the great detriment of the interest of private individuals, and the Government.

When the private merchant, in times of scarcity, can make it answer his purpose to transport grain from the banks of the Indus to Calcutta, 1,500 miles, he can have no difficulty in supplying the wants of our armies, wherever they may be obliged to move, provided he is not molested in his arrangements, and there is sufficient competition amongst the natives to ensure the Government from loss from combination. The commissariat has, I fear, been established on the principle of making the Government independent of the public, and with this feeling it has been made too dependant on the civil power for its supplies in times of war and difficulty. If on the contrary it had been established on the principle of being quite dependant on public competition for its supplies, under contracts for delivery at the places of consumption, and the civil power had been directed to withhold its aid, it is probable that private individuals, with the aid of the country transport, would have supplied the wants of the Government much cheaper than they have been; and the landholder would have been benefited by obtaining a better market than he has had in times of difficulty, owing to the transport of the country being pressed for government purposes.

It may be asked if the labourer in India is placed on a par with the labourer of Europe. When works are going forward in India there is always great difficulty in procuring labourers, and the inhabitants of the hills and neighbouring states are enticed to quit their homes by wages which are insufficient to induce the labourer of our own districts to quit his village, and take the employment of the public. In India, within our own provinces, it may be said there is no distress, excepting in times of scarcity; and since we have ensured to the grain merchant the unrestricted sale of his grain, prices have adapted themselves to the productiveness of the crops; and there has been no scarcity or famine similar to what was known when the grain merchant was forced to sell his grain at whatever price the Government of the country was pleased to dictate. In India, the labourer of our provinces has no difficulty in maintaining himself and his family in independence, without resorting to the charity of the public, and we know the reverse to be the case in our native country.

I know of nothing that will so much aid the remittances required in England from India as lowering the duties in England on the import trade of Indian produce on all articles, and more particularly on articles produced in the colonies of European states for the consumption of Europe, such as sugar, silk, indigo, cotton, &c., so as to favour India. By such liberal policy towards our Eastern colonies, the trade of India will be increased, and the land will be brought into cultivation, from which the state derives its revenue.

Under the present system, Great Britain prohibits the Indian Government from raising a revenue through the customs on the principal articles of commerce exported from India to Great Britain, and makes India pay her an annual tribute to the amount of the duties she levies in England on the exports of India, amounting to 700,000 *l.*, and forces foreign states to pay her a portion of the duty, on the consumption of such of the Indian exports as are re-exported from England to the Continent. If the exports from India were liable to a duty in India, Territory in this case would realize a revenue on all the products of India required for consumption in foreign Europe as well as in England. In addition to the duty levied on the importation of Indian products, England derives a revenue from the imports from China; but as China is a foreign state, India suffers no loss by the arrangement; but it may be worth considering whether there should not be a different scale of duty established for the importations from China and from our Indian territory, so as to favour the latter. If by any change in the system of conducting the Indian trade the price of its products could be reduced, the interests of the Indian cultivator or producer would suffer. A high price in India operates as a premium to industry, in the same way as a high price of corn in England; and if the price of sugar, indigo, or cotton, were to fall, it would cause the land producing the same to be thrown out of cultivation, or to be cultivated by some crop which would yield a greater return than the articles now cultivated for exportation. If the freight were reduced, and by any economy the imports from India could be conveyed in fewer ships, or if the present ships, by making their voyages within the year, would render fewer ships necessary, the shipping interest would be improved, and India might benefit by an enhancement of prices equal to the saving of freight; but at the present prices it cannot be expected that more indigo, cotton or sugar can be raised when the natives are at liberty to grow on their lands whatever they please, and are sufficiently alive to their own interests to grow whatever will yield them the best return. Great Britain, in addition to the tribute she makes India pay her through the customs, derives benefit from the savings of the service at the three presidencies being spent in England instead of in India; and in addition to these savings, which probably amount to near a million, she also derives benefit from the fortunes realized by the European mercantile community, which are all remitted to England.

PRIVATE

PRIVATE merchants carrying on trade between India and England, and in the interior of India, meet with many grievous obstructions, which are at variance, as I conceive, with the intentions of the Legislature, as expressed in the Act of 1813. In my several examinations before the East India Committees in 1821, 1830 and 1831, I have enumerated these obstructions at considerable length. They may be reduced to the following heads:

1. The forms and restrictions imposed by law on persons and ships proceeding to India; all of which are as inapplicable to the Indian trade as to that with any other part of the world, including the monstrous power of deporting European settlers without trial, or even reason assigned.

2. A power exercised beyond law by the Court of Directors, sanctioned by the Board of Control, in the licences which private merchants are obliged to take out with penalty bonds attached, and the difficulty, delay and expense of procuring the same. I have fully explained these processes in the evidence referred to in the margin.

Vide Evidence before Committee of Foreign Trade in 1821, and before Select Committee in July 1831, Ans. 2772, *et seq.*

3. The mode adopted by the Company's Government and servants abroad in providing investments for the Company's ships, from provinces or from manufacturers, subject to their direct authority as rulers of the country. The arbitrary exercise of power in monopolizing produce, and compelling individual labour, is exemplified in the transactions referred to in the Minutes of Evidence of July 1831, more fully detailed in Appendix 5, to a publication of mine entitled "Rickards's Speeches" in 1814, further confirmed in Lord Wellesley's well known letter to the Madras Government of 19 July 1804, and has been, I believe, the universal practice ever since.

Vide Evidence, July 1831, Ans. 2846, and the other Documents referred to.

4. The collection of transit and market duties on the internal trade of the country, the evil of which is greatly aggravated by the collection being entrusted to officers over whom all control is purely nominal, and who are supposed to collect to the full as much, if not more, for themselves, than that which they choose to return in their official accounts to the public treasury.

5. To these may be added, the taxes called in India *moturpha* or *veesabuddy*. These are personal or professional taxes laid on merchants, traders, manufacturers, craftsmen, houses, shops, looms, tools, instruments of labour and art, and even the implements of agriculture. The vexatiousness and oppression of this tax are greatly aggravated by its being imposed, not on the value of the article taxed, but on the supposed, *i. e.* arbitrarily computed gains or profits of the payer. For a description of this tax, and the singular mode adopted for arriving at the supposed profits of merchants, &c., I beg leave to refer to my work on India, vol. 1, p. 496; the detail therein given being taken from official documents.

6. All the monopolies of India may likewise be enumerated as so many obstructions to fair commercial enterprise and dealing; such as the salt monopoly, the opium monopoly, the tobacco and liquor monopolies, with other articles either monopolized, or so highly taxed as greatly to affect both the internal and external trade of the country.

The duties on many articles of East India produce are also enormously high, apparently rated on no fixed principle, and without regard to market price. For example:

Aloes, subject to a duty from	70 to 280 per cent.
Assafœtida - — - -	233 – 622 —
Cardamums - — - -	150 – 266 —
Coffee - - — - -	105 – 373 —
Pepper - - — - -	266 – 400 —
Sugar - - — - -	94 – 393 —
Tea - - — - -	6 – 100 —

These facts having been unnoticed throughout the present Charter, the East India houses of agency in London presented two memorials on the subject to the Lords Commissioners of His Majesty's Privy Council for Trade, in March 1831, praying for relief on both heads. To save the trouble of reference, a copy of both* memorials is annexed to this answer, in the hope that they may attract the attention of His Majesty's Government in the new arrangements about to be adopted for India. The rates of duty imposed on Indian imports into Britain, when compared with the exemption from duty of British staples into India (cotton goods being subject to a duty only of 2½ per cent.), constitute an important feature in the present question. Indians within the Company's jurisdiction, like English, Scotch or Irish, are equally subjects of the British Government. To make invidious distinctions, favouring one class, but oppressing another, all being subjects of the same empire, cannot be reconciled with the principles of justice; and whilst British imports into India are thus so highly favoured, I know that Indo-British subjects feel it a great grievance that their commodities when imported into England should be so enormously taxed.

Some modification has taken place of the custom-house duties in India, which the regulations of Government will show; but as regards the system of duties on British goods imported into India, compared with those on Indian goods imported into Britain, both being equally the property of British subjects, it is liable to this inconsistency, that British staples imported into India are admitted duty free, whereas Indian produce is charged with enormous duties in this country, many articles of ordinary consumption being subject to duties exceeding 100, and from that up to 600 per cent., with one article as high as 3,000 per cent., besides other unjust restrictions which will be noticed in a subsequent answer.

But

---

* These memorials and enclosures have been already printed in the Minutes of Evidence, Session 1830-31, p. 150 to 155.

But the greatest obstruction of all to the extension of Indian commerce, both internal and external, is the land-tax, *one-half of the gross produce of the soil*; an impost which paralyzes the energies of the great mass of the people by consigning them to irretrievable poverty; but this is far too wide a subject to be discussed here. I must, therefore, beg leave to refer to my late work on the revenue systems of India, where the evils of this tax, unavoidably aggravated by the mode of its collection, are fully detailed.

Had my health permitted, it was my intention to have closed my late work on India by a fifth part, to contain suggestions for a reform of the Indian administration, as regards the present system, both at home and abroad. I had reserved for this part some remarks on the inefficiency of the judicial system, and its total inapplicability to the state of society, civilization and knowledge existing among the natives; their notions of justice; their local usages, traditions or laws; together with its unsuitableness on the score of language, when considered in reference to the various dialects in use among the different inhabitants of our Indian provinces. Being compelled to abandon this portion of the work, perhaps I cannot do better than give, in reply to this question, a sketch or outline of what I originally intended to offer in greater detail; and, as a preliminary step to all others, I would recommend,

The *entire abolition of the Company's trade.* The India trade is now admitted to be a losing one in the Company's hands; the China trade asserted to be profitable; and so it may be to a limited extent; but a trifling profit to a company is no excuse for continuing a monopoly injurious to the country at large. If, however, there be truth in the printed official accounts now before the public, I am quite sure that every impartial man acquainted with figures will be obliged to admit that these accounts exhibit no symptom of a real exclusive commercial capital for carrying on this trade; that to be continued, it must be supplied with funds from the territorial revenues of India; and that if the Company are allowed to supply themselves, as at present, from India, the same mischiefs as now experienced will inevitably be perpetuated.

The Company's trade being wholly abolished, I should then consider them the fittest organs in England for conducting the political administration of India, under certain modifications of the system to be hereafter noticed; and I would accordingly suggest, as regards India,

That the three presidencies of Calcutta, Madras and Bombay, be placed on the same footing under an executive government, consisting of a governor, commander of the forces, and one member of council, a civil servant:

That the civil and military servants of the Company be attached to, and promoted at, each presidency respectively as at present; but that all allowances, civil and military, be every where equalized:

That His Majesty's courts of justice at the respective presidencies be maintained, as at present, quite independent of the local Governments, but with the jurisdiction of each court clearly and expressly defined; and whether the limits of that jurisdiction be, or be not enlarged, that it be relieved from all those doubts and difficulties which not unfrequently attend its powers of cognizance and the execution of its decrees:

That a central government-general be established for all India, to consist of a governor-general or viceroy with suitable rank, a commander-in-chief, and two civil servants, as members of council, with general powers of control over the inferior governments:

That all the current details of the civil and military business of each presidency be conducted by the local executive government of each, with the exception of matters of a political or diplomatic nature, all of which should be considered as exclusively appertaining to the government-general.

The inefficiency of our revenue, judicial and police regulations, being now generally admitted, I would propose that a legislative council of learned natives be assembled at each presidency, to consist of a deputy freely chosen from each zillah; and that to this legislative council be committed the duty of revising existing regulations, and of thereon framing a code of laws suited to the habits, local usages and institutions of the different classes at each presidency, together with a more efficient system for the administration of such laws in the Mofussil; and that each regulation or law, when settled by the legislative council, should be handed up to the governor in council of the presidency, to be duly considered by that board; and when approved by the governor in council, to be forwarded for the final decision or confirmation of the government-general.

The legislative council may, in its earliest stages at least, be aided by an European president, and by European secretaries and translators, to record and set in order its deliberations, so that the same may be submitted in due form to the governor in council, and ultimately to the government-general; and this aid or addition to the legislative council may be continued as long as the same shall be found useful or necessary.

That the more respectable and well-informed of the natives of India be also employed in high and responsible offices in the judicial, revenue and police departments, with suitable allowances attached to each office, and likewise be eligible to sit on all juries. The proceedings of these native functionaries might be made subject to the inspection or revision of European superiors, who would report thereon to the higher authorities; and it is conceived this duty might be performed by collectors, judges and registrars making periodical circuits within certain divisions or limits, if, by the proposed employment or substitution of natives, those officers were relieved, as they might be, from the details which they are now obliged personally to attend to. If confined to the purposes of general superintendence and revision, the number of those superior officers would, it is probable, be less than are at present employed, and the heavy expense of those establishments be proportionably reduced.

That provincial courts of appeal be continued as at present, but to consist of two European and one Native judge.

That a further appeal from the provincial courts do lie to a superior court of appeal, at the seat of the government-general; that this superior court do consist of a lord chief judge or chancellor, with a noble title, another professional puisne judge, the two civil members of council, and a native judge; and that appeals to this higher court, whether from the King's courts at the presidency or from the Mofussil, be in all cases final.

That to aid the government-general in their deliberations on the laws necessary to be enacted for the government of our Indian provinces, there be established at the seat of the government-general a superior native council, consisting of three members, one from each presidency, to whom every law handed up for consideration or confirmation be in the first instance submitted, and who will report thereon fon the final decision of the government-general; and that a law or regulation thus confirmed be, on promulgation, considered as in full force. Even if altered or modified on subsequent reference to England, it need not interfere with its being immediately acted upon in India.

I would also propose that one of the three Native councillors above mentioned be selected to sit as junior judge in the superior court of appeal.

As regards England, I would submit, that as the present Board of Commissioners for the Affairs of India is at present constituted, a cumbrous body, containing several useless members, this body be reduced, and replaced by the appointment of a secretary of state for India, with a suitable establishment, and power of control over the proceedings of the Court of Directors.

That the Court of Directors be reduced to 14 members, including chairman and deputy chairman; and that this body be divided into three committees, one for the business of each Indian presidency respectively, and a superior committee, to communicate directly with the government-general of India, and to have controlling power over the inferior committees; the whole to be regulated as follows:—

Bombay committee - - - - -	3 directors.
Madras - ditto - - - - - - -	3 ditto.
Bengal - ditto - - - - - - -	3 ditto.
Superior committee, to include chairman and deputy chairman, total - - - - -	5 ditto.

That the members of the junior committee (say Bombay) do succeed by seniority, as vacancies occur, to seats in the Madras, Bengal, and ultimately the superior committee; and that a member from the superior be always chairman of the inferior committees. The members of the inferior committees would thus attain a general acquaintance with the affairs of India before rising to the superior committee. A link of connection would be established between the superior and inferior committees, sufficient for all the purposes of information and control; and a better and a simpler link through a secretary of state (than at present exists) between the Directors and His Majesty's Government.

But the best, and, in my opinion, the only effectual check over the exercise of power, being publicity, or public opinion, I would further recommend, that facilities be granted to admit of all important questions regarding India, whether affecting individuals or the public generally, being brought before a Court of Proprietors for public examination and debate; and that all such questions (including the laws or regulations enacted for India) be as fully and freely debated, and papers and documents for the elucidation of each subject as readily furnished, as now takes place in the proceedings of both Houses of Parliament.

And on the great question of patronage, that it remain, where it now is, in the hands of the Directors.

This is a brief outline of my views on the subject of reform. To fill up the details of the plan could not be done, even if health permitted, within the limits of an answer to queries. But if the outline, or any part of it, shall be found to merit attention, the details, it is conceived, may be easily filled in, or the plan itself modified, if the principle be approved, for the plan is in fact rather a modification than a change of existing institutions, and therefore presenting no difficulties that might not be easily overcome.

The advantages likely to flow from the adoption of this plan are conceived to be the following; viz.

By the entire abolition of the Company's trade with India and China, and leaving the whole Eastern trade to be carried on in future by the skilful management and enterprise of individual merchants, free of all restraint, we have every assurance which experience ever since 1814 can afford, that this trade is capable of further *indefinite extension*. One great obstacle to its further extension, under existing circumstances, is the difficulty of making profitable remittances from India to Britain, and this arises from two causes; one is, the interference of the Company's agents in the purchase or production of Indian articles suited to the British market, by which their cost abroad is, as before explained, unnaturally raised to the great injury and sometimes ruin of those who embark therein; and the other is the monopoly of the China trade, by which the merchants of India are not only precluded from enjoying all the advantages which would result from a free intercourse between India and China, but they are also shut out of an advantageous channel of remittance to England, which would most assuredly be open to them if this branch of Eastern trade were left, as it ought to be, free of all interference and obstruction. The facilities and conveniences which Indian and British merchants could in such case contribute in aid of each other's operation, would, in my opinion, be so decided and exclusive, as in all probability to secure the whole or the greater part of this trade in their own hands, to the exclusion of foreign rivals, without the

Vide Answer to 4th Query.

Vide Evidence.

the needless intervention of a single restrictive enactment, and thereby verify, as I also firmly believe, the prediction of Dr. Adam Smith, when he asserted, that "the East Indies offered a market for the manufactures of Europe, greater and more extensive than both Europe and America put together."

It may next be observed, as regards the political modifications above suggested, that there are two ways of governing distant possessions inhabited by a race or races essentially different in caste, in manners, in religion and social institutions from the conquering or ruling power; the one is by the power of the sword, and the other by allowing the conquered to participate largley (under due control) in the immediate government of themselves. By the latter method, reasonable expectations may be entertained of a people (particularly if conscious of their own inferiority) being so satisfied, as to lead to the establishment between them and their governors of real attachment, and consequently of a solid, contented and durable union. But a government of the sword is a government of arbitrary power, and arbitrary power ever has been, and ever will be, a government of headstrong will and caprice, fraught in its exercise with oppression and wrong, with frequent acts of violence, and more frequent acts of injustice. In such a state of things, no real attachment, or bond of cordial union can possibly subsist between those who rule and those who are compelled to submit. The sword may hold its sway over nations (as we see in many parts of Europe as well as of Asia) where the human mind, still mired in ignorance and superstition, has scarcely made a step in advance beyond the mere instincts of animal nature, or can fancy any earthly good or benefit worth pursuing at the expense of its indolence and ease; all under such circumstances is consequently stationary, and the sword rules undisturbed. But where moral improvement, and a greedy thirst of knowledge have struck their roots deeply into the hearts of an acute people, arbitrary power may from that moment count the days of its wane. A far mightier power, by a slow and almost imperceptible progress, prepares its inevitable downfall. It may triumph for a season, and add victory upon victory to its former glories, but its fate is nevertheless sealed; and as "he that lives by the sword shall perish by the sword," so may we conclude it to be sooner or later the expiring scene of every existing military government.

These remarks are here submitted under the same impressions which induced a similar train of reasoning in my late work on India, viz. the *conviction of their being peculiarly applicable to the present state of our Eastern Possessions, and consequently deserving of serious consideration*; but whether this belief be concurred in by others or not, I presume there will now be no difference as to the policy as well as the necessity of employing natives far more extensively than has hitherto been the case in the local administration of India. When this idea was first broached by me in 1813, it was pronounced to be visionary; now, as the pubcil printed records show, including the Evidence taken in the last two years before Committees of the Houses of Parliament, there is scarcely a servant of any eminence in or out of India who does not warmly recommend its adoption. The necessity of the measure will be more apparent, if reference be had to the history of British India from the year 1765, and to the four folio volumes of Revenue and Judicial Selections, published of late years by order of the Court of Directors; for it will be seen throughout, that owing to the inapplicability of our systems, the unsuitableness of our European ideas to the state and institutions of Indian society, the inefficiency of our control in all matters of detail, our ignorance of the nature of tenures, our errors in respect to ancient rights, projects and schemes of every variety have been tried, modified, abandoned or repealed, and regulation on regulation enacted, all framed with the best intentions, and more especially to protect the rights and interests of the ryots; but all, it must be admitted, complete failures. Hitherto, moreover, the English in India have carried themselves so haughtily, so much in the spirit of proud superiors ruling submissive slaves, as never to have been able to possess themselves of that pervading influence which, penetrating through all ranks and grades of a community, is quite indispensable to the efficacy of the best laws; an ill-judged hauteur and distance, which has necessarily thrown this pervading influence into the hands of subordinate native agents, to be exercised by them underhandedly, and consequently in practices of the most flagrant corruption and abuse.

Another great advantage may be anticipated from this modified reform of our institutions abroad, and that is an immense saving of expense, as regards our Civil Establishments. There are now before the public printed lists of these establishments, and statements of annual expenditure at the different presidencies in India, the aggregate amount of which is equal (surprising to relate!) to the whole of our military disbursements *. If, therefore, any

---

* *Vide* Annual Accounts laid before Parliament, which contain Statements of the Ordinary and Extraordinary Receipts and Disbursements of India in each year. The only document I have at hand to refer to is No. 4 of Accounts and Papers appended to the Third Report of the Select Committee of the House of Commons, in which the Military Charges of India for 1829–30 are stated to be - - - - - - - - - - - - - - - £. 9,103,091
And the Civil Charges - - - - - - - - - - - 9,785,611

Total - - - £. 18,888,702

A reference, however, to the other accounts will, I am confident, confirm this fact, and this I take to be a matter of so much importance as to require the strictest examination and scrutiny at the present juncture.

The civil charges above mentioned are only ordinary disbursements, and do not include payments either for interest or principal of Indian Debt, advances to the Commercial Department, with various other items, which are classed under the head of "Extraordinary Disbursements."

any one would take the trouble of placing these lists or statements in juxtaposition with any other which might be framed on the principles above suggested, of reducing the three Presidencies in India to the same level, abolishing the whole of the Company's commercial establishments, and substituting respectable Natives for Europeans in a great variety of employments, he may easily convince himself that the present amount of Indian revenue would yield a surplus far beyond anything yet contemplated; probably sufficient, after defraying all other expenses, not only to pay the interest of, but eventually to redeem that debt which, however unjustly, has by various Acts of Parliament been legalized as a territorial charge.

But a signal benefit will be conferred on the inhabitants of India, by having justice administered at their doors; in which I include the establishment, as above mentioned, of a local court of *final* appeal, instead of appealing, as at present, to the King in Council in this country. The delay of appeals to England, a distance of 16,000 or 18,000 miles from the original source of action, is most vexatious and oppressive; the expense attending it ruinous, and the final decision submitted to judges wholly ignorant (more especially as regards matters of caste, religion, property, rights of inheritance, &c. &c.) of the laws, usages and local institutions of India. Suppose a case, too, where further information or the ascertainment of a particular fact might be desirable before a satisfactory judgment could be passed, additional years must pass away before the required information could be obtained. In fact, I have known so much injury, intolerable vexation, and overwhelming expense, incurred by rightful suitors or appellants in cases of this description, that I cannot too strongly recommend it to the consideration of the supreme authorities in England. To a court of final appeal so constituted as that above recommended, there can, I presume, be no objection to appeals from the King's Courts at the different presidencies, since all such will be decided by regularly educated judges, selected from the most eminent of the profession in England; whilst in causes from the Provincial Courts of India the Superior Court will have the aid of associates well versed in Indian usages and laws.

But as regards the King's Courts in India, it might greatly conduce to future concord, and good understanding in the general administration of our judicial system, if the jurisdiction of the King's Courts were now to be clearly and explicitly defined. In settling this important point, the opinions of the King's Judges, which have been fully given and are recorded in one of the Appendixes to a late Report of the Select Committee of the House of Commons, together with other papers on the same subject, may be consulted with great advantage; so that with the aid of these valuable documents, I should conceive a line might be drawn which should not only harmonize with the concurrent jurisdiction of the Country Courts, but preserve unimpaired that independence of His Majesty's Courts, which long experience of their influence and powers has proved to be fraught with many important local benefits.

Vide Appendix, No. 5 of 1831.

Finally, the establishment of a Native Legislative Council at the respective presidencies affords, I apprehend, the only chance of a code of laws being framed for India, suited to the general state and character of the natives, and to the different usages, prevailing customs or traditions, which will be found greatly to vary in various parts; whilst a *Committee from each Legislative Council* might have its sittings permanent, to watch over the operation and effect of existing laws, and to submit to the Council from time to time such modifications, alterations, or repeal thereof, as circumstances should appear to render advisable: thus providing, as I conceive, not only the most likely means of compiling a code of laws suited to our Eastern possessions, but the best checks that can be devised for a due administration thereof.

I am aware that the highest authorities in India have recommended a different description of legislative council, to consist of the members of Government and of the Judges of the Supreme Courts at the different presidencies. I hope it will not be considered as betraying a want of proper respect in me, if I presume to dissent from these opinions. My own is decidedly adverse to the employment of judges, or practical lawyers, in the business of legislation; the objections to it are in my mind altogether insurmountable; but in India more especially, where European ideas, forms and technicalities, have already produced so much disappointment, I should anticipate nothing but a repetition of past results; in other words, a code of regulations failing in almost every instance to accomplish their professed object. The only plausible reason that I recollect (for I have not the record here to refer to) to have been advanced for the employment of the Judges, is to guard against the enactment of regulations in India at variance with the primary laws of the United Kingdom, or perhaps affecting the rights of the Crown; but this objection is easily met, by causing all regulations to be registered in the Supreme Court, at the seat of the Government-general, with power to the said Court to reject such as may contain any such incongruities or violations; or they might be submitted in the first instance to the inspection of the Lord Chief Justice and Puisne Judge, previous to their being finally passed, and promulgated by the Supreme Government. A principal advantage of the plan I have suggested, I take to be that of having a *permanent legislative committee* to watch over the operation of existing laws or regulations, that is, to review, alter, modify or amend, as circumstances shall appear to require. This cannot be expected from a Legislative Council, consisting of the members of Government and the Judges of the Supreme Courts, whose peculiar duties and avocations are far too numerous and weighty to admit of undivided, or even the necessary attention to this *most important object*, whilst of the Judges in particular, I trust it will not be thought derogating from the respect justly due to their high station and character, to say, that it can hardly be expected of persons but imperfectly acquainted with the habits, usages and local institutions of the Mofussil, that they would be so ready as might be desired in cases of inapplicable or inefficient laws, to alter or amend what, after due deliberation, they had once recommended or confirmed.

Should these reforms be found to conduce to the internal prosperity of India, the objects desired in this question would be most fully accomplished; for by increased prosperity on the one hand, and the entire abolition of the Company's trade on the other, the most effectual measures, as well direct as indirect, would thus be adopted, to advance the interests of Indian commerce, and not only to increase the exportable productions of India, but those of Britain also.

Mr. Langton.

THE measures calculated to promote the general interests of commerce are too many and too important for me to do more than briefly advert to a few of those which appear to me the most prominent.

Encouragement and protection to Europeans possessed of property, (or without property, where well recommended, and no misconduct alleged,) to settle in India, with security to their persons and property.

Abolition of all transit and internal duties.

Cessation of all competition of the executive government with individuals; or of agents of the Company, or of Government trading with superior privileges.

The introduction of an uniform and unvaried currency.

The removal, wherever practicable, of all restraints on the exercise of lawful industry, of which in India as elsewhere there are only too many, but nowhere more than in India.

The abandonment of monopolies. The revenue arising from that of salt might be supplied by a tax on the commodity; and it may be worth observing, that, as an article consumed by the numerous classes, when the price is not too high, as largely as by the rich, no other affords so fair a prospect of increasing revenue, by keeping the cost to the consumer moderate. Substitutes for the revenue from opium may, no doubt, be found. And, generally, every measure that tends to the amelioration of the situation of the natives.

Were the East India Company to cease to carry on trade, the aid to the Indian finances, from the surplus profits and from the Board's rates, would of course cease with the trade; but there are strong grounds for supposing that the development of the resources of India has been checked by the system of the East India Company's monopolies to an extent for which the aid in question has been but a poor compensation.

The source of this aid is solely the tea monopoly, and a direct tax for this object would draw far less from the British public than what must be paid in an extravagant profit to the Company to afford the same amount of aid; but there is every reason to hope that the improvement of the country, by the application of British capital and industry, economy, by the employment of Hindoos, &c. and other measures for the amelioration of the condition of the Natives, which are now confidently looked forward to, will secure for India advantages far more than equivalent for those which may be sacrificed by the alteration.

Mr. Hill.

AUGMENTING the surplus produce of the country should be done, first, by every practicable measure directly tending to its prosperity; secondly, by economy in its public expenditure; and thirdly, by assistance in its foreign trade. It is contrary to the last of these three branches of policy to favour by our laws the export to India of articles with which she is able to supply herself, or to discourage the export from India of articles with which she is able to supply other countries. We have, in a great measure, succeeded in supplanting her cotton manufactures by those of England. I understand that the practicability of supplying her with salt from Liverpool is under consideration. We exclude East India sugar from the English market by means of high duties. If, in addition to all these disadvantages, any change of system were materially to diminish the tea trade from China to England, by means of which China is enabled to pay for the opium and cotton which she imports from India, it is probable that the demand for those articles would be proportionally reduced, and India would then be disabled from paying its tribute to England.

THE

Mr. Sullivan.

THE principle of this contract for realizing the investment is, I believe, the same as is followed in England, and surely there is no just cause for complaint. The manufacture and sale of salt is certainly a monopoly, as well was that of saltpetre when it was manufactured on the Company's account; but I believe this last has been discontinued some time. I may here observe that the trade of Southern India will never be very great until the Pass at Paumbum shall have been opened sufficiently to admit the passing of larger vessels than the country craft of India, and also until the range of rocks called Adam's Bridge, which crosses from Ramisserum to the small island of Manar on the opposite coast of Ceylon, is sufficiently removed to admit of large vessels; when this is done, and the current, which is very strong, allowed to have a free vent, the mud bank that has been forming for many years at Point Calymere, in the Tanjour country, will be swept away, the depth of water will then be sufficient to admit of Indiamen to have free ingress and egress into the Bay of Tondy, a safe anchorage, and no fear of being driven on a lee shore, coral rocks or sandbanks, and further of the utmost consequence to trade, as ships that are bound from the Bay of Bengal to Bombay, and *vice versâ*, in either monsoon will have a short and safe passage.

Mr. Lloyd.

THE annual tribute drawn from India by the payment of territorial disbursements made at home, and the annual remittance of private fortunes, require unremitting endeavours to improve the productive powers of that country; facilities of remittance can thus alone be created. As the Government is now carried on through the Company, a facility for remittance might be afforded by permitting the resources of India to subserve more extensively in the provision of the China investment; this facility, however, could alone be obtained by a sacrifice of the export to China from England of British manufactures.

Mr. Bracken.

LARGE as the increase of trade has been, I have no hesitation in recording my sincere conviction, that under the application of a different system to the internal resources of India, and with a reduction in the duties on her raw produce here, and other alterations more particularly alluded to in * two letters addressed by the merchants of London interested in the India trade, to the Lords Commissioners of His Majesty's Privy Council for Trade, dated the 8th and 31st March 1831, that increase wouldhave been much more considerable. The anticipated obstacles to any extension of the commerce between the two countries, "from the simple habits, the limited wants, and religious prejudices of the natives," have proved "airy nothings;" evincing either a lamentable deficiency of observation, or a deliberate intention to deceive the British nation for obvious purposes. I trust we shall not fail to profit by the past, and to scrutinize with due suspicion evidence on such matters proceeding from similar sources. We may be assured that in buying and selling, human nature is the same in Cawnpore as it is in Cheapside.

The first step to an improvement in the quality of Indian produce must be an entire change from the restrictive to the protecting policy in regard to the resort to and residence of Europeans in India. Skill, capital and enterprise should be invited with the utmost possible encouragement, instead of being checked by various regulations more or less repulsive. The power of transmission, unless by the sentence of the Supreme Court, should cease. The press should be entirely free; as free as in England. The institutions of the Supreme Court, divested of mere technicalities and modified by local usages, should be extended as far as practicable; and a code of laws, securing equal justice to all creeds and colours, but based on the principle of *elevating the Native* and not *depressing the European*, should be introduced into the Mofussil with all practicable dispatch. The existing judicial machinery, with some alterations and additions, might be adapted to the object in view.

Unless European settlers be thus protected, I dare not to predict any very favourable results to India or to England, by merely allowing them to proceed and reside there, with no greater facility and security than at present. So long as a liberal and enlightened policy, like that of Lord Wm. Bentinck's, exists, there may be no practical inconvenience; but his successor might be very different. The same act which was held indifferent by one Governor-general, or praiseworthy by another, might be thought criminal and dangerous by a third. It must not, therefore, be individual opinion, but the verdict of a jury which should determine such matters, if security of person and property be thought desirable. It is no argument to assert that comparatively few have been transmitted and ruined under the present system, and therefore it is not so very bad. How many abuses, and corruptions, and delinquencies have been known and suffered from the fear that urgent remonstrances might lead to total ruin!

The settler being placed in person and property under the protection of the law, and also subject to it, with equal facility in the Mofussil as in Calcutta, I am of opinion that an improvement would soon appear in the quality of the great staple productions of India; and by that improvement, accompanied with reduced duties here, particularly on sugar, the commercial relations of the two countries would be greatly increased. But an improvement more worthy of the British Government would follow—an improvement in the morals, habits, and intelligence of the people. I believe nothing will tend more to this object than the intercourse and example of respectable settlers; and such only, in the nature of things, could maintain a footing in the country. The objections, on an assumed invasion and colonization of starving European labourers, to the removal of the existing restrictions are idle.

---

* Minutes of Evidence, Sess. 1830–31, House of Commons, p. 150.

No reasonable man, acquainted with the climate and wages of India, indulged the expectation of a labouring class being able to exist, supposing even they could pay their passage out; and these physical obstacles existing, it seemed an absurdity almost to enact legal ones. This is not the class wanted, but all above it—the artisan, the engineer, the surveyor, the small farmer, the man of skill and science, and the man who possesses, or by his industry creates capital.

Mr. Crawford.

A FULL reply to this Question would lead me into a wider field than there is room for within the compass of a letter. I shall generally observe on this subject, that if the Government fulfil its duties, that is, secure an equal and efficient administration of justice, and forbear from imposing burthensome imposts, or throwing needless impediments in the way of private adventure and the free investment of capital, it may very safely and confidently leave every thing else to individual skill and competition. This country is rich in both, and India is a fair and legitimate field for their exercise. It has not heretofore been the policy of the Government of this country to encourage the resort of British capital and enterprise to India, but on the contrary, to fetter and restrain them in a manner equally prejudicial to the interests of England and of India. Three great and beneficial measures have been carried into effect by the British Government since the first acquisition of our territorial possessions, now near 70 years ago, and I am not aware of any other deserving this name, or which has produced any solid or lasting advantage. These, and they did not form part of the system on which the affairs of India had been administered, but were imposed upon it by public opinion and the interference of the Legislature, are the institution of King's courts with independent judges at the capitals; the fixing the land-tax in perpetuity in some of the most valuable of the provinces; and the opening of the trade with Great Britain in 1813. To these I think may easily be traced almost every valuable improvement which has taken place in the condition of India since its conquest; and I may add, that there is not one advantage originally anticipated from them that has not been more than fully realized. I shall touch slightly on one or two of the most prominent advantages which have resulted from them. The land worth nothing, or little or nothing, to the proprietor, has in less than 40 years come to be worth from 16 to 20 years' purchase; the present rental equalling or exceeding the original tax, computed at the exorbitant rate of 10-11ths of half the value of the gross produce of the soil. The public revenue within the same period has advanced from about four millions and a half to nine millions sterling. In almost every other part of India, except the territory in which the land-tax has been fixed in perpetuity, land is worth nothing, or next to nothing, and the public revenue has very generally declined, instead of advancing. The great staple of indigo has been called into existence nearly within the same period. The annual produce of this is about 9,000,000 of pounds weight, and the value of the exports from Calcutta not less than 3,000,000 *l.*, being in this single article, therefore, twice as much as the total exports and imports of the East India Company at the same place before the opening of the trade*.

I shall barely enumerate a few of the commodities for the production of which the soil and climate of India seem best fitted, and which appear most likely to reward the application of capital and skill. These are opium, raw silk, indigo, cotton, tobacco, coffee, tea, cocoa, sugar, rice, dyeing drugs, coals, salt, saltpetre and barilla. Many others might be pointed out, and indeed it would be rash to assign any limits to the list, after what has been already effected under very unfavourable circumstances. In illustration of this last point, I shall refer to two products now used to a considerable extent in the manufactures of Great Britain. These are lac-dye and shell-lac; the first at least a discovery originating in British ingenuity.

It is only necessary to cast the eye over a common London price current to be satisfied of the general inferiority of the commercial products of India, clearly originating in the rude and imperfect agricultural and manufacturing processes by which they are prepared. When the capital invested costs the miserable peasant who prepares them from 24 to 60 per cent. under the name of interest, no other result could be reasonably expected. India, with very partial exceptions, may be described as a country without enclosures, roads, bridges, or navigable canals. Even its artificial irrigation, upon which the very existence of the people depends, is in a most rude and imperfect state. One strong fact will place this last assertion beyond the reach of controversy. Throughout India, the largest source of the public revenue is the land-tax; and yet over a territory exceeding half a million of square miles in extent, the annual expenditure of the British Government in the construction of new or repair of old works of irrigation, does not exceed 70,000 *l.* I do not ascribe it as matter of blame to the existing government that it expends no more. The blame lies in its obstructing the application of private capital, and attempting that which is beyond the reach of any government, what no Government, and especially a needy government, has ever done well, but what the resources of private enterprise has never failed to accomplish when free and unobstructed.

One of the greatest inconveniences which the commerce of India sustains, arises from the absence of substantial banking-houses, and of a good paper currency. The greater part of the

---

* Total Exports and Imports of the East India Company at Calcutta in 1813–14, *Sa. Rs.* 1,52,87,220.—Wilson's External Commerce of Bengal, tables, p. 16.

the transactions of India are conducted in a metallic currency, the counting, guarding and transport of which are, both to the state and to private individuals, sources of much loss, delay and inconvenience. No treasure can, from the insecurity of the roads, be transported from one part of the country to another, without either a public or private escort. A return for a few years of the whole charges incurred for the transport of treasure on the part of the Government, would afford the most satisfactory data for judging of the extent of the inconvenience sustained from the want of a well-regulated paper currency.

The effect of the duty imposed upon salt has been to deprive the landholders, manufacturers and merchants of England of a wide market for a staple article, to deprive the inhabitants of India of a cheap and wholesome necessary, which their own soil and industry are incapable of producing; and in my opinion its operation has also been to depreciate an available resource of the public revenue. With respect to opium, the effect has scarcely been less prejudicial. No drawback being allowed on this article on re-exportation from a British possession, the duty is strictly a prohibitory one, and therefore a virtual departure from the principle of open trade, declared and intended to be secured by the provisions of the statute. Indian consumption of foreign opium is wholly out of the question, and no direct communication with China, the principal mart, being permitted to British merchants, the trade has consequently been almost entirely thrown into foreign hands, and is conducted for the most part from foreign ports. In fact, the Americans and Portuguese may be said to enjoy nearly an entire monopoly of the supply of China and the Eastern Islands with all opium not the produce of the British territories in India, and the sole value of which cannot well be estimated at a less sum than one million sterling per annum.

Another regulation of the Indian Government, injurious to trade, may be stated—the law imposing stamps on all commercial instruments, in 1827, at Calcutta, and which being deemed either illegal or impolitic at Madras and Bombay, is not in operation at these presidencies, nor at Singapore, Prince of Wales Island and Malacca, or indeed in any other British port in India, down to the present day. The tax, therefore, is a partial one, imposed at the busiest and greatest commercial mart in India, and there alone. The European and Native inhabitants of Calcutta petitioned both Houses of Parliament against the impost, as being both impolitic and unconstitutional; and the results, in a financial point of view, do not, as far as the public accounts show, appear to be such as to have warranted so obnoxious a measure; for the net stamp revenue of the Lower Provinces for 1827–28, when the tax was in operation, exceeded that of the previous year, when it was not in existence, by a sum of no more than 5,000 *l.* Later accounts, which I have not seen, may probably exhibit a somewhat more favourable result; but none, I am convinced, which can be a sufficient justification for the imposition of an unpopular tax, repugnant to the manners of the people of India, and, considering all the local circumstances of Indian society, burthensome to commercial intercourse.

The restraints imposed on the resort of British merchants to India, continue in law exactly what they were in 1814, and whatever relaxation may have taken place in practice, appears to have resulted from the force of public opinion, and not to have originated in the act of any public authority; for it appears that by law or compact, the East India Company are considered fully vested with the rights of resisting the recommendations of both Parliamentary Committees and the India Board, to make any change, and they have fully acted on it. The amount taken at the India House as fees for granting licences to private individuals, or in the shape of stamp duties which are incident to the covenants demanded, amounted in the 14 years ending with 1830–31, to very nearly 40,000 *l.* sterling. The penalty bonds demanded from the same parties, amounted from 1814–15 to 1830–31, to 2,514,500 *l.* for breaches of which it does not appear that a single prosecution has been instituted.

I may safely pronounce, that all the restraints and distinctions now enumerated are not only highly unjust and vexatious, but uncalled for by any public necessity whatsoever. The Court of Directors of the East India Company have, I believe, urged the necessity of their continuance as a measure necessary to the security and good government of the British possessions in India; but in the present state of public information, few will be found to support them in this opinion.

The duty on Indian barilla, estimated *ad valorem*, is from 30 to 40 per cent.; on shell-lac, 20 per cent.; on sal-ammoniac, from 40 to 50 per cent.; on turmeric, from 15 to 20 per cent., and on borax, 100 per cent., although all these articles enter largely into several of our manufactures. On medicinal drugs, as I conceive most unwisely, and, I must add, unjustly, the duties are exorbitant and at the same time unproductive, ranging from 150 to 400, 500, and even 600 per cent., as in the examples of gum-ammoniac, common rhubarb and assafœtida. Even in respect to articles now deemed necessaries or comforts among the mass of the people, the duties are extravagantly high. Black pepper, for example, whether the produce of a British possession or not, pays an *ad valorem* duty of from 270 to 400 per cent. Cloves, always a production of foreign settlements, pay at the same time, although more in the character of a luxury, from 170 to 240 per cent. only. The cheap article of cassia pays from 80 to 100 per cent., while cinnamon, a luxury, pays only from five to six per cent. Sago is perhaps a more striking example than any of these. Since 1814, a new and ingenious process for manufacturing a superior article was discovered in a British settlement, and the preparation is still confined to the British possessions. This commodity, known under the name of pearl sago, has by its superiority nearly driven the old article, always the produce of foreign countries, out of the market. Notwithstanding this, under our fiscal rules, the British production is charged with a duty which ranges *ad valorem* from 33 to 100 per cent., while the foreign one is charged with one not exceeding from 8 to 16 per

per cent. With respect to Indian articles which come into competition with colonial ones, the countervailing duties are nearly prohibitory in reference to domestic consumption, for those that are the production of a British possession, and strictly so for those that are of foreign production. Sugar is the most remarkable example. The duty on Bengal sugar, estimated on the price, ranges from 90 to 150 per cent. On China and Siam sugar it is from 250 to 400 per cent. On Mauritius or plantation sugar, it is only from 80 to 140 per cent. The great increase on the Indian revenue since 1814 has arisen on this last article; but this is a matter which has arisen wholly out of our own fiscal regulations.

Mr. Mackenzie.

THESE objects will, I conceive, be promoted by any additional facility given to the settlement of educated Englishmen in India, with the privilege of holding land like other classes; and by the instruction which the Natives are deriving and may hereafter be expected still more to derive from them through precept and example, it seems not unreasonable to expect a change for the better, independently of the natural effect on prices of the withdrawal of the precious metals. I need not, however, trouble the Board with any detail on this head, since there is easily to be had from many gentlemen possessing a knowledge of the details of Indian agriculture and trade, to which I cannot pretend, the information necessary to enable it to judge how far the cost at the place of production, and at the port of export of the main articles of commerce, (piece-goods, indigo, silk, cotton, sugar, saltpetre, grain, coffee, tobacco, spirits, drugs and dyes,) is likely to be affected by the influence of European management and example, on fertility of soil, on labour, on the habits of the labourer, on the interest of money, on risk, on exaction, on the charges of conveyance, or on any thing else that regulates price; and they will from the same source be able to ascertain how far it is likely that the quantity of Indian produce will be improved, and at what cost, or that new articles suited to the English market, or to markets that influence the exchange with England, will be added to the list of its exports.

Skill and capital, and character and credit which create capital, should be invited to the country, not repulsed from it. Every measure should be taken that is likely to promote the introduction of new articles of export, or the improvement of the existing productions of the country. The peasantry, who are the owners of their fields, should be secured against unjust disturbances in the possession of them. All classes of cultivators should be protected against undefined and illegal exactions; the government land-rent, where still variable, should be fixed for a long term of years; internal transit duties should be abolished; the useful appropriation of waste land should be facilitated; the usury laws, which aggravate the evil of excessive interest, should be rescinded; a prompt and cheap, and as far as may be a simple administration of justice should be established; the improvement of the means of internal intercourse by land and water should be sedulously pursued; the establishment of joint stock societies for beneficial ends should be encouraged; useful inventions should be rewarded, and inventors and authors secured in the reasonable usufruct of their ingenuity. Whatever, in short, has made England prosper, should, unless there be clear ground of objection, be given to India; and similarly, all taxes or restrictions which bar the market of England against the productions of India should be abolished, unless there be clear and strong reason for maintaining them.

Clerk of the Rates.

Appendix, No. 6.

Petition of Inhabitants of Calcutta respecting Duties on Sugar and Rum.

Appendix, No. 6.

PETITION from certain European and Native Inhabitants of Calcutta, to the House of Commons, relative to the Duties levied in Great Britain on East India Sugar and Rum.

To the Honourable the House of Commons of *Great Britain* and *Ireland*, in Parliament assembled.

PETITION of British and Native Subjects of *Great Britain*, Inhabitants of *Calcutta* and Places adjacent;

Sheweth,

THAT the duties levied in Great Britain on the Sugar and Rum of the Honourable East India Company's territories in India, are respectively 32 *s.* per cwt. and 15 *s.* per gallon; which at the ordinary market value (without duty) of 22 *s.* per cwt. and 2 *s.* per gallon, is equal to an *ad valorem* duty of 145 and 750 per centum.

That the duties on the sugar and rum of all other British settlements, including recent acquisitions of the Mauritius and Guiana, are respectively 24 *s.* and eight and a half shillings, equal as above to 109 and 425 per cent. only, independent of advantages from cheaper freight.

That your petitioners, not being aware of any just or politic grounds for the aforesaid preference and protection to their detriment in favour of other colonies, do humbly entreat of your Honourable House, that all such discriminating duties on the productions of their industry may be abolished, for the following, among other reasons, too obvious to be intruded on your Honourable House:

1. That the national revenue would not suffer but gain by increased importation of colonial produce into Great Britain, though at a lower duty.

2. That the increased consumption would be a benefit and relief to the people of Great Britain.

3. That the advantage of the augmented interchange of productions between India and the mother country would be reciprocal, and even greater for England; a position demonstrated by the prevailing rates of exchange.

When India sent cotton and silk manufactures largely to England, a pound sterling could be replaced to the British exporter by eight rupees realized in India.

Now that the cheaper manufactures of the mother country have superseded those of India, not only at home but on the spot, the British exporter must realize about 12 rupees here to replace one pound of his capital, because the means of furnishing returns in produce are now so scanty and out of proportion to the exports; and the balance must be provided in dear bills or bullion, the most disadvantageous form of intercourse.

Besides other disadvantages of this state of the exchanges, it will be sufficiently plain to your Honourable House, that India is thus prevented from taking off the large quantity of British manufactures she would otherwise do; whereby the home manufacturer is restricted from benefiting by the large field which would be open to him if India were enabled to buy what she cannot do, unless she can sell in return.

Therefore your humble Petitioners, craving speedy relief in the premises, will humbly pray.

Appendix, No. 7.

Letter from London Merchants to Court of Directors; 13 October 1832.

Appendix, No. 7.

LETTER to the Court of Directors of the East India Company, from the *London* Merchants connected with the *East India* Trade, dated 13th October 1832.

Honourable Sirs,

We beg leave to lay before your Honourable Court, a case which appears to us to be one of considerable hardship to the Indian manufacturers, and to the India export merchants, in order that your Honourable Court may examine into the same, and grant the relief we solicit on their behalf and our own, as connected with the India trade.

2. Piece goods manufactured in Bengal, pay upon their entrance into Calcutta an inland duty of 2 ½ per cent., and no drawback thereof is allowed upon exportation to the United Kingdom or elsewhere; whilst upon indigo, cotton, hemp and tobacco, the whole inland duties are drawn back on exportation to the United Kingdom.

3. It may be presumed that this distinction was adopted at a time when the latter articles were considered in some measure the staple productions of India, and it was deemed expedient to give encouragement to the growers, and when the justice and policy of protecting the native fabrics was not so apparent; few, if any, British manufactures being then imported into India.

4. But now, when the British goods are imported largely into that country, on paying a duty of 2 ½ per cent. only, and whilst the Indian manufactures are subjected to a duty of 20 per cent. on silk, and 10 per cent. on cotton goods, upon their importation into the United Kingdom, it does appear to us, not only reasonable and fair, but a measure of wise policy towards the natives of India, to reduce, as much as may be practicable, so great an inequality in duties, which give so marked a preference in favour of British goods; and no relief could be more immediately applied, with so little sacrifice, as the concession of the drawback of the inland duty of 2 ½ per cent. on piece goods exported from Calcutta to the United Kingdom.

5. In proposing this course to your Honourable Court, we beg leave to call its attention to the policy of the British Legislature, by which a bounty is allowed on silk goods manufactured in the United Kingdom (whether manufactured from raw, or from foreign or British thrown silk), upon their exportation, of 3 *s.* 6 *d.* per lb. on all articles valued at 14 *s.* per lb. and upwards, or say 25 per cent. on the 14 *s.*, being the supposed equivalent for the duties previously levied on the materials thereof: and we trust that the Honourable Court will see the justice, under the peculiar circumstances of India, of following the same policy towards the native manufacturers of India, that the British Parliament has adopted towards British manufactures.

6. An application to the British Government to reduce the duties on the cotton and silk fabrics of India imported into the United Kingdom has not been successful, though signed by a very numerous body of the most respectable natives; and this disappointment would, we think, tend to enhance the merit of the concession now sought for.

7. Having thus stated the chief points on which we rest the expediency of the measure we propose, we conclude by respectfully praying your Honourable Court to give early instructions to your Governments abroad, to allow the inland duty of 2 ½ per cent. on piece goods, the manufacture of British India, to be entirely drawn back upon their exportation to the United Kingdom.

We have, &c.

Appendix, No. 9 (1.)

Memorial of Mr. W. Felkin, relating to Bengal Silk.

MEMORIAL of Mr. *William Felkin*, addressed to the Right Honourable Lord *Auckland*, President of the Board of Trade, dated 7th December 1831.

A CIRCULAR of the Secretary of Government at Calcutta having invited communications tending to the improvement of the productions and manufactures of British Possessions in the East Indies, your memorialist asks permission to state the following facts, which he presumes will, on receiving your serious attention, appear to you to warrant the conclusions which he has drawn from them, and to merit further inquiry and proof, with a view that, if found to be correctly laid down, experiments may be made in Bengal upon the production of silk; so that, if possible, that which is exported from thence may be equal in quality to that which we import from Italy, or to that which is produced in the best silk districts of France, and is found so important in sustaining the character of the manufactures of Lyons. These statements are the results of your memorialist's personal observations in the departments of Languedoc, and the Cevennes, in France; and in Piedmont, Lombardy, and the southern States of Italy, where he was engaged during two or three years, in pursuing an inquiry into all the details of the growth of mulberry trees, care of silk worms, and modes of reeling silk, on behalf of John Heathcoat, esq. of Tiverton, in the county of Devon: as also of the personal observations of a gentleman who visited Bengal with similar views, and who was sent out by the same Principal. These observations have moreover been carefully compared with the statements of authors of standard works on the subject; as relates to the European as well as the Indian production of silk. Your memorialist further begs to mention, merely in proof of his having some experience in the art of preparing silk, that he procured a female to be instructed in reeling cocoons, in France, and having brought her to England, in the winter of 1825, she taught 24 others, and he superintended their reeling, at Tiverton, 35,000 lbs. weight of Florentine cocoons, which he had previously bought in Italy and shipped from Leghorn; and the silk produced in this first English filature was afterwards worked into bobbin-net lace, in Mr. Heathcoat's factory. Nevertheless, he is not at present in any way connected with, or interested in the production or sale of silk.

All persons who are conversant with silk, know that between the quality of the best and worst silks of Europe there is much difference, and that this chiefly results from greater or less care and skill in reeling; although it is in some part owing to the original difference in the cocoons. The same diversity exists in the silks of India, which explains the difference in the prices of silks of the Company's filature, and those of private reeled silk. But any one used to reeling silk, who has examined the cocoons of each continent, will at once see that the great reason why Bengal silk has been hitherto inferior to European is, the inferiority of the Bengal cocoons; they are much smaller, much more flossy, softer made, and of a much finer thread. All these are evil qualities in this affair; and as good cocoons are the basis of good silk, it is proposed to show, that,

Bengal cocoons *are* thus inferior;

They may, most probably, be produced equally good with those of Europe;

This being effected, they might, and doubtless would, be reeled into far superior silk to that at present produced in India; and

That the cost of such silk would be so much less than that at which silk can be produced *by the investment of capital in Europe**, as to lead, in the event of such amelioration, to our supplying silk to an immense amount to other nations.

The superiority of European cocoons will appear from the following details:—It takes on an average 250 French cocoons to weigh 16 oz.; 950 of Bengal. It takes of the worst kinds, in France, 14 lbs. of cocoons to reel into 16 oz. of eight to ten cocoon silk, and of the best, 10 lbs. for 16 oz.; of the Bengal worst, or rainy crop, it takes 22 lbs. to 24 lbs., and of the best, 15 lbs. to 16 lbs. to produce 16 oz. of silk. In France and Italy, the girls reel per day, of three to four cocoon, 10 oz. of silk; of eight to ten cocoon, 16 oz.; and of 18 to 20 cocoon, 24 oz. In Bengal, of fine silk they reel per day, 5 oz.; middle, 8 oz.; of coarse, 11 oz. a day, on the average, except in the rainy season, when the quantity is less. The English gentleman before mentioned, writing in 1827, from Santipore, says, "The exhibition of the parcel of Italian cocoons I brought out, I may truly say, astonished the natives." This difference in the weight of the Bengal cocoon, its unproductiveness in reeled silk, even in proportion to its diminished size, and in the quantity reeled per day, when every allowance is made for inferiority of work-people employed in reeling, can only be fairly attributed principally to the inferiority of the cocoons, and of the worms that produced them.

I go on to illustrate the practicability of substituting a production of equally good cocoons with those of the continent of Europe, for these inferior ones. There are four or five kinds of silk worms known to the silk producers in Bengal, each of which allows of reproduction every eight or ten weeks; and there is one annual silk-worm kept, but only to a small amount, and its cocoon is not better than that of the others. On account of the facility

---

* In France and Italy there are many cocoons produced by the peasantry, at no cost of capital or labour, but that of gathering the leaves of mulberry trees themselves have planted by the roads or on waste places, and superintending the worms. This circumstance renders the distinction made above necessary.

Appx. No. 9 (1.)

Memorial of Mr. W. Felkin, relating to Bengal Silk.

facility of reproduction, the mulberry tree admitting of so many crops of leaves annually, some one or other of the four or five first-mentioned species of worms are usually preferred there. In France and Italy, except in Naples, there is but one production or hatching of worms each year; at Naples there are two, but these are of eggs retarded in hatching for this purpose, produced by an annual worm. There are several species of worms known and kept in those countries, some making a larger and some a smaller cocoon, but all of them far superior to that of Bengal. Now your memorialist humbly presumes to recommend that an immediate trial be made in Bengal of hatching good French or Italian eggs; and as it is believed that the breed of worms kept at Novi, in Piedmont, cost no more than any other species in food, yet produce cocoons of which five will give as much silk as eight of ordinary French or Italian cocoons, (though this is not known to your memorialist from personal observation,) he would choose the eggs of that breed, in conjunction with those of the other most approved ordinary European kinds, and if the cocoons prove equally large and well made with those of France or Italy, he proposes to substitute them for the reproduction of eggs, until the whole production be of these superior cocoons. The food of the worms on the continents of India and Europe is the same; and although the difference in the care and skill of those who rear the worms will produce some difference in their health, and consequently in their cocoons, yet that is trifling compared with the difference which at present occurs in the cocoons, and which may be traced up to the fact that they are made by worms of very different species.

The following facts are cited in support of his view of this important subject:—Your memorialist brought over French eggs, in 1825, to Tiverton, where they were hatched in the factory of Mr. Heathcoat, and fed on the black mulberry leaf, which is not so suitable nor healthy food for them as that of the white mulberry, the ordinary and proper food for the silk-worm. They had only common attention, and were subjected to very various degrees and vicissitudes of heat; their course was somewhat protracted beyond the time they ordinarily live in the warmer climates, where, in exact proportion to the quantity of food they eat, and degree of heat in which they live, their course is prolonged or contracted, but their cocoons are not materially affected by these circumstances. The result was, that nearly as many lived and produced cocoons, as the average of Italy, and the cocoons (which were as good in all respects as those of Italy) I reeled into silk, with the ordinary facility, and subject to only the ordinary waste; and which was subsequently worked into bobbin-net lace, of clear, even and good quality. Again, this year, the undersigned hatched Italian eggs in his warehouse in Nottingham, and also those of the worm long known and acclimated in England. These were fed alike on the black mulberry leaf, the white trees not being within his reach, and alike exposed to the very various vicissitudes and degrees of heat which occurred during their course. They produced an average number of cocoons:—those of the English worm were larger, and rather heavier than those of India, but only about a fourth part as heavy as those he obtained from the Italian eggs, which indeed were as good and heavy as the ordinary production of Lombardy. These experiments have sufficed to convince him that the sentiments of a French writer, well versed in this production, are correct, viz.: "That, unexposed to the destroying influence or rigour of climates, as they affect the external air, by being kept (for all useful purposes) in houses or other enclosed places, it is a gross error to suppose that the health of silk-worms, and growth of good silk, depends entirely, or even mainly, on the recolt taking place in any particular latitude." And he would submit, that if, by feeding the worms upon comparatively inferior food, without taking any extraordinary pains, and in the more variable and uncongenial climate of England, he has experienced no failure nor difficulty in producing good cocoons and good silk, there is fair ground to expect the like results would follow the attempt in Bengal, if made by competent and unprejudiced persons. He will cite a case exactly in point, in further support of the above proposition, which cannot fail to have much weight in forming your judgment of its feasibility and importance.

Previously to the year 1802, all the white silk used in France was either reeled from the dingy white cocoons, always found in the yellow produce, and which is never a good colour, or imported principally from China, the colour of which is excellent, but irregularly reeled. The Lyonese silk manufacturers having represented to their government the importance of producing the really superior white cocoons, that would furnish them with the means of obtaining an even and clean, as well as fine and beautiful white silk, Napoleon caused a premium of 10,000 francs to be offered for such silk, the produce of worms bred in France, and capable of being reeled into three-cocoon silk. M. Bonnard, a silk grower of Alais, chief town in the department of the Cavennes, obtained the eggs from the east, bred the worms without any difficulty on his premises, and in 12 months received the prize. Since which time, many others having obtained the eggs from him, the product has become general, and the Lyons market is regularly supplied with three-cocoon silk, of colour, evenness and cleanness superior to any formerly known, and which has given those manufacturers a decided preference in the articles of white gauze, or others which require to be made of fine white silk. What M. Bonnard had done so successfully, and with such useful results, first led your memorialist to the plan he proposes,—just to reverse this operation; and taking eggs from France or Italy, to replace those ordinarily used in Bengal. There seems but one objection which may prove important, *i. e.* the European worm being annual, whereas the Bengal grower needs a succession of four or six hatchings each year; but this, it is apprehended, may be obviated by the practice of postponing the hatching of the eggs, by keeping them cool until the time they are wanted, as is done in Naples, for their second recolt.

If, then, such cocoons were produced in Bengal as are in the European silk districts, it is

proper.

Appx. No. 9 (1.)

Memorial of Mr. W. Felkin, relating to Bengal Silk.

proper to point out why it may be reasonably expected that they would be reeled into much better silk than that at present received from thence. The thread of each cocoon being thicker, would require fewer to make the requisite sized silk, and those would be more easily counted; for the same reason, each thread or end of silk from the cocoon would be stronger, and break less frequently; they would therefore run off with ease, as well as regularity; and the better made the cocoon, the less foul, knubby and liable to burs would be the silk. The attention of the reeler would be more efficiently directed, being less distracted by the greater number and more continued breaking of the ends in each thread, and the requisite throwing up of new ends to replenish it, and thus would be enabled to go on with much less waste of time and silk and labour than at present, and by consequence be able to increase the amount reeled. This would be a very important saving in reduction of the cost of Bengal silk; and when combined with that resulting from the difference in the cost of feeding the worms*, and an important reduction in the cost of the thicker silks, which may be realized by reeling them on Mr. Heathcoat's patent plan †, which ensures as perfect regularity and cleanness in a twenty-four as in a five cocoon silk, yet gives the extra quantity per day, and of course at so much less cost in the reeling,—it is humbly presumed bears out my last statement, that the cost of producing silk would thus be so much reduced in Bengal, and its quality so much improved, as that it would enable us to supply other nations with a vast amount of silk, instead of drawing so large a portion of our supply from them, as it is well known we are obliged annually to import at present.

When it is considered that the cultivation of the mulberry tree in Bengal, even under the existing discouragements of a high prime cost and a low selling price of the silk, is sufficiently profitable to allow of land thus employed being always let for a higher rent; in most cases double, and in some situations, proximate to extensive and favourite filatures, quadruple the common rent of land in the same neighbourhoods; that in rearing silk-worms all the peasant's family may be and commonly are employed; and that few situations, whether of mountain or plain, in India, but are eligible for the growth of the mulberry trees and rearing the worms, thereby offering unlimited means of increasing the quantity of silk that might be exported from Bengal, while the whole amount of the demand for silk is continually increasing in Europe: your memorialist hopes, that the importance of endeavouring to improve the quality and increase the quantity of Bengal silk, will justify his praying that inquiry may be made into the subject generally, and into the matter of this statement in particular; and he humbly offers, for the use of those who might be appointed for this purpose, a copy of his manuscript journal of facts and observations on the culture of the mulberry tree, care of the silk-worm, and process of reeling silk, daily made at Alais and elsewhere, in the years 1824–5–6; and he is desirous of communicating, if required, any further information he may possess upon these subjects.

And your Memorialist, &c.

Nottingham, Dec. 7, 1831. *William Felkin.*

Appendix, No. 9—(2.)

Appx. No. 9 (2.)

Note on Mr. Felkin's Memorial.

NOTE on Mr. *Felkin's* Memorial.

The white mulberry, which is alone ‡ used in France and Italy, grows in India, but is not used in feeding worms. That which is alone used for this purpose is in husbandry, and botanically, a distinct plant; it is the *Morus Indica*. The white mulberry takes 20 years to come to its full growth, and lasts 70 or 80 years; the leaves cannot be stripped with safety until it is five years old, and perhaps ought not until it is seven; the leaves are large and succulent. The Indian mulberry, instead of five or six years, may be stripped in six or

---

* The calculation of reduction in prime cost is thus made:—Of the best French cocoons there are used on an average 2,500, and of the worst 3,600, to reel therefrom 16 oz. of middle-sized silk. Of the best Bengal cocoons on an average 14,250, and of the worst 21,850, are used to produced 16 oz. of middle-sized silk.

The actual cost of French good middle-sized silk in 1825 was 16 *s.* 6 *d.* per lb. of 16 oz. This was exclusive of profit. It is not probable that the rent of land, price of cocoons, or rate of wages, could be materially reduced in those European districts where the mulberry tree is cultivated.

It is stated in a work printed in Bengal in 1803, that "the prime cost of filature silk, shipped for Europe, need not be above 10 *s.* 6 *d.* for 16 oz." In 1827 I learned the cost of Company's silk was supposed to be on an average 16 *s.* rainy crop for 16 oz., and 13 *s.* the best; and the native reeled silk to be 12 *s.* for rainy, and 10 *s.* for best, per pound.

The cost of feeding the worms which make the cocoons necessary to produce the 16 oz. of good silk, would be reduced to one fourth, each making a cocoon, after eating only as many leaves, such as would give the silk that four can now be made to produce. The saving in reeling the same sized silk would be, according to the season, from 6 *d.* to 1 *s.* the lb.; that process costing in Bengal from 1 *s.* to 2 *s.* the lb. Your memorialist has, therefore, no doubt that the best silk might be exported from Bengal in any quantity the European demand might require, at half the present cost of the worst we receive from thence.

† It is an important fact, that at present fine and costly silks are doubled into much thicker ones, at great expense and waste, merely to obtain regularity in the thread, for many purposes where the throw or twist is worse than useless.

‡ See the evidence of Mr. Saunders in the Report of 1831, p. 106 and the statements given in the same Report, respecting the species of mulberry which grow in India, or are used in feeding worms.

Appx. No. 9 (2.)

Note on Mr. Felkin's Memorial.

or seven months after the slips are planted; the leaves are comparatively small, dry and rigid. Five different kinds of silk-worms are fed in India, but chiefly one, supposed to be a native of the country, which breeds five times a year. One of the five worms is an annual, and supposed to have been originally imported either from China or Italy; most probably the latter. Both the mulberry and worm at present in use in Bengal are peculiarly suited to the petty capitals, and slothful habits and rude industry of the people: the great probability is that good large cocoons, equal to the French or Italian, will never be made from the Indian worm and Indian silk. Better cocoons are at present made by the annual worm than the common one, but still far inferior to French and Italian. I take it that the white mulberry must inevitably be cultivated before fine cocoons can be produced, and this can only be effected by the settlement of Europeans, and eventually, in imitation of these, as has happened with good indigo, by large native capitalists. It is quite hopeless to expect that an ordinary Indian peasant, who lives from hand to mouth, should be able to cultivate a plant which can afford him no return for five years, and breed a worm which produces but once a year, when he has one at hand which produces five times. The Indian peasant lives by no kind of husbandry that will not afford him a return in from six to ten months: even in this country, a market gardener, a man of a far superior order to an Indian peasant, must have all his fruit trees planted for him by the proprietor of the land. The East India Company has little or nothing to do with the production of silk, beyond making the advances to the cultivator or feeder of the worms, and the introduction of the Italian filatures, which, however, are entirely superintended by natives; for gentlemen of the class composing the Company's commercial agents cannot be possessed of the necessary skill, practice and diligence, for superintending the details of the business. It is sufficiently known that the production of silk is a complete monopoly in the hands of the Company; and the fact stated in the memorial, that the rent of mulberry lands is four times as great as that of ordinary lands of the same quality, is an incontestible proof of it. There could not be two rents for the same description of lands in the same country, without the existence of a monopoly. It is this high rent which has raised the price of Indian silk, without, as was shown by several witnesses before the Committees on Trade, in 1820-21, having improved its quality. A Calcutta price current of 1780, which is within eight years of the establishment of the Company's silk filatures, affords the following results, when compared with a price current of 1831:

	1780.		1831.			
Per Seer:	*Rs.*	*a.*	Nat.		Comp.	
Cossimbazar - -	7	4	12	0	—	
Radragore - -	8	12	10	1	10	12

There is no argument in favour of the absolute necessity of granting to Europeans the fee simple of the land more cogent than the present condition of the silk trade. Without this indispensable step, India will never be in a condition to afford a cheap and abundant supply of good raw silk, and without it, consequently, the silk manufacture of this country will never be in a condition to compete fairly with those of France and Italy. Such an experiment as that proposed by Mr. Felkin would be valuable as a trial; but what use would a mere experiment, however successful, serve, if the law interfere, as at present, to prevent its practical and extensive utility?

Appx. No. 9 (3.)

Appendix, No. 9 (3.)

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

LETTER from Mr. *W. Felkin* to the Right Honourable *Charles Grant*, President of the Board of Commissioners for the Affairs of India.

Sir,

Nottingham, 24th April 1832.

In availing myself of permission to address further communications to the Honourable Board over which you preside, upon the growth of silk, I shall notice some objections which Mr. Villiers did me the honour to communicate some time since, relating to my memorial presented to you on this subject; and I also propose, with your permission, to append certain remarks, which I think are calculated to illustrate and enforce some of the statements before made; and which, if transmitted to parties in India competent to enter into the details, may afford some useful hints towards improvement in this important branch of industry.

It is urged as an objection to making the experiment I have desired, viz. that of introducing European worms into Bengal, that, "although valuable as the means of ascertaining a fact, yet it would be useless, even if successful, while the existing law of India precludes Europeans possessing the fee-simple of the land, and thus interferes to prevent any extensive practical result in the case supposed."

It is also urged, "that the leaves now used in India are not those of the white, but of the Indian mulberry, and that the former must be used to obtain good cocoons; yet it is assumed that the latter only will admit of slip or layer planting, and early plucking; and as it is said that the former takes five to seven years growth before it could be plucked, it is beyond the means of the Indian peasant either to plant or employ." Upon these passages, which appear to be the substance of the objections alluded to, I would offer the following remarks for your consideration.

In my memorial I purposely avoided any reference to political impediments, as well as to those arising from the habits, character and circumstances of the natives of India, which might be supposed to stand in the way of improvement in the culture of Bengal silk: presuming then, and still believing, that none of these would prove more formidable barriers to

Appx. No. 9 (3.)

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

improvement, than they had been found to present in the growth of Bengal indigo. The Indian Government has invited suggestions of improvements, and has thereby virtually given a pledge to afford every facility for carrying them into effect, so far as can be granted consistently with the general good.

It is probable that the free settlement of Europeans, and the use of their capital and skill, will be necessary to ensure the highest amount of excellence in this or any other product of India. Nevertheless, if it were proved that as good cocoons could be obtained there as in Europe, and at much less cost, what is it that should impede an immediate effort to commence the course of improvement?

Although all the writers I have consulted [*] have made the assertion, that the white mulberry leaf was used in Bengal as food for the silk-worm, and not the Indian variety, yet it is probably true, as stated by Mr. Saunders [†], that the leaf of the latter is alone used. It must however be remarked, that the white mulberry grows in India; indeed it will grow very well in the hottest and in the coldest climates: and a multitude of French works prove, that for ages this species was often planted in France in somewhat the Indian manner, was cut annually to the ground, and plucked even the first year. It will bear this as well as the Indian (which with every other known variety of the mulberry is cultivated in the botanical gardens of Paris and Lyons), and the shoots of the white are, of the two, most rapid in growth, and equally garnished with leaves. I have therefore no doubt it might be substituted at once for the Indian variety, in the plantations of Bengal. But it is justly supposed in the objection, that the white would not bear much plucking before five or seven years of age, if intended for a standard tree; neither would the Indian; and it may well be queried if any species of trees would thrive and become standards if plucked very early. The French have found long since that standard mulberry trees are eventually more useful and economic than the bushes, hedgerows, or layers; they take up less ground, as they may be planted at certain distances in common fields or meadows, and the intermediate spaces (except plots of three or four feet round the bole) may be used for any other agricultural purpose: or, which is more important, they may be, and often are, planted in the mountains, where scarcely any other use can be made of the ground they occupy; or by the roads; and indeed in any vacant space. Thus, in a few years they become the means of subsistence to the poor, at a most trifling expense.

Now I humbly submit that it is quite as practicable, and would be found as profitable, for the Honourable Company to make an outlay, by causing white mulberry trees to be planted, as by making advances in money to the breeders of worms: and this is especially worthy its notice, because on this plan the hilly districts of India, where hitherto I believe this production has not been attempted, but which certainly are well adapted for its extension, might soon be stocked with trees enough to supply food for silk-worms for centuries to come. The first white mulberry tree ever planted in France flourished near Montelimart till towards the end of the last century: and they would grow with as much luxuriance and attain as great longevity, after yielding the same proportion of leaves, on the plains of Bengal as on those of Dauphiny.

It appears that for a series of years the price paid by the agents of the East India Company for cocoons, and by consequence the prime cost of their silks, have borne, in fact, no relative proportion to the cost of leaves or of rearing silk-worms. Such a state of things calls for, and admits of beneficial alteration. No production can ever succeed or extend as it ought while in such an extraordinary predicament. The Honourable Company will no doubt look to this; and any further reference by me to the question, would be, I conceive, impertinent to the present inquiry; which is simply to ascertain in what manner, with ordinary facilities, good cocoons, and of course good silk, may be produced in India. I shall merely add that it is uncertain from whence the annual worms came, which are said to have been recently introduced; but from an inspection of their cocoons I am fully assured they were not brought from Europe. I therefore still humbly hope for the approbation of your Honourable Board, to my first suggestion of an experiment, by the importation of properly chosen European eggs, and breeding worms from them. But I would prefer the supplementary request, that part of the worms hatched from the eggs, be fed on white, and part on Indian mulberry leaves.

I now respectfully offer the additional details in explanation and confirmation of my former memorial; being Remarks on the production of European Raw Silk, written in 1826; to which praying your attention, I am, &c.

W. Felkin.

REMARKS on the Production of European Raw Silk, written in 1826.

In inquiring into the production of raw silk, attention may be properly directed, to the cultivation of the mulberry trees; the care of the worms, and the amount and quality of their produce; the winding of the cocoons; ameliorations already introduced; existing prejudices and difficulties; and proposed improvements.

European

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

European silk may be properly classified as produced in the following districts, viz.:— Mountainous France; the plains of Dauphiny, &c.; Piedmont and Nice; the Milanese; Tuscany; Roman States; Neapolitan States; Spain.

The Morus Alba, particularly that preferable variety Morus Italica (Murier d'Italie), rose mulberry, is almost the only kind planted throughout Europe for producing the food of silk-worms. In its culture the principal objects are, the quality and quantity of leaves. The coldest districts seem, from various causes, to be most remarkable and appropriate for its growth, whether as it regards skill and care in planting and pruning the trees, or the relative quality and quantity of leaves produced. The greatest amount of success has attended the cultivation of the mulberry tree in mountainous, dry and barren districts. The following proportion may be stated as near the truth, in reference to the producc of the mulberry tree, in the following European silk districts: a given number of trees produce in

Mountainous France - - - -	100 lbs. leaves.
Piedmont and Nice - - - -	85 -
Plains of France - - - -	75 -
Milanese - - - - - - -	75 -
Tuscany and Roman States - - -	65 -
Neapolitan - - - - - - -	60 -

Of these, Mountainous France and Piedmont produce leaves in the highest degree nutritious. Those of the Plains of France, and of the Milanese, seem to possess the necessary silky aliment in ten or fifteen per cent. less amount than the former; while those of Tuscany, Naples, &c. are twenty to thirty per cent. less nutritious than the former. A certain proof of the difference in the quantity of leaves produced by trees in these respective districts, is found in the greater or less number of trees necessary to feed a certain number of worms: and we have a proof of difference in the quality of the leaves, in the greater or less weight consumed in producing a certain quantity of cocoons. The causes of these differences probably are, that trees succeed well in proportion to the purity of the air, the soil on which they are grown being more or less light and dry, and kept free from weeds or other vegetable matters. Each plucking of the leaves should be succeeded by careful pruning; and as standard trees are preferable, on account of longevity, productiveness, and the greater adaptation of their leaves to the health of the worms, they should be kept quite open in the centre of the head of the tree, by which mainly they are preserved from disease.

Human labour and skill are most easily obtained and applied to this cultivation, following the gradation above marked out in the respective silk districts.

France had, in 1825, sufficient young mulberry trees planted to double its supply, if necessary, in ten years. Piedmont might increase one half in ten years, and the Milanese the same, from trees already planted. The rest of Italy was stationary.

It is found in France, that the grafting on the wild stock tends much to the superiority of the leaf, both in respect of the health of the worm and the quality of the silk. The two most fatal diseases, with which when worms are affected, they are called the "Gras," or the "Jaune," may usually be traced to gross, overheated or damp leaves.

For every 1,000,000 lbs. weight of raw silk produced in France, it is calculated that 250,000,000 lbs. weight of leaves are consumed, and that 5,000,000 trees, of the average age of 30 years, are stripped once each year to furnish them.

In breeding silk-worms the essentials are, a sufficient supply of heat, fresh air, and recently gathered dry mulberry leaves. European recolts succeed best in the hands of persons who invest money in them for the sake of profit; but the largest proportion of the worms are fed by peasants on their own account, as an additional means of support; and owing to the little space their dwellings afford, they only get to spin, on an average, as follows, upon the scale of an ounce of eggs hatched, or 33,000 (more or less):—

		Worms spin.	Making cocoons.		In which worms spin.	Making cocoons.
In Mountainous France, in which ½ are chamber recolts, and in these for each oz. hatched - -		20,000 -	85 lbs.	and ½ cottage recolts,	12,500 -	55 lbs.
In Piedmont, in which	¼ ditto -	18,500 -	80 -	and ¾ - ditto -	11,500 -	50
Plains of France -	¼ ditto -	13,500 -	60 -	and ¾ - ditto -	10,500 =	45
Milanese - -	¼ ditto -	16,500 -	70 -	and ¾ - ditto -	10,500 -	15
Tuscany & Roman States - -	¼ ditto -	11,500 -	50 -	and ¾ - ditto -	9,300	40
Neapolitan States	0 -	-	- -	all - ditto -	9,200 -	40

The price of cocoons is highest in those countries where the recolt is best. The respective prices of the recolt of 1825 (which was below an average one), for ordinary fair parcels, Douppions and Chiques inclusive, were,

Mountainous France - - - -	for 16 oz. English -	1 *s.* 6 *d.*
Piedmont, Plains of France, and Milanese	- ditto -	- 1 *s.* 4 *d.*
Tuscany, Roman States, and Naples -	- ditto -	- 1 *s.* 0 *d.*
Calabria - - - - - - -	- ditto -	- 10 *d.*
Spain - - - - - - - -	- ditto -	- 1 *s.* 2 *d.*

The

Letter from
Mr. W. Felkin to
the Right Hon.
C. Grant;
24 April 1832.

The weight of silk produced in the year 1825, in the respective districts, and the average prices of fair silks, were as follows:

Mountainous France		750,000	lbs. of 16 oz. English	at 24*s.* per lb.
Piedmont		1,440,000	ditto	at 23*s.*
Plains of France		850,000	ditto	at 20*s.*
Milanese		2,652,000	ditto	at 18*s.*
Tuscany		100,000	ditto	at 16*s.*
Roman States	supposed	500,000	ditto	at 17*s.*
Ditto Eastern	ditto	500,000	ditto	at 24*s.*
Naples		100,000	ditto	at 18*s.*
Calabria		300,000	ditto	at 12*s.*

Spain, amount unknown to me.

In consequence of new light being thrown upon the management of recolts within a few years, those of Mountainous France, and of the Milanese, have been much improved, and are increased full one-third; those of Piedmont, and of the Plains of France, are stationary; the production of silk in the other districts seems to have somewhat declined, probably owing to political causes.

In the reeling of cocoons, care and skill produce the chief difference in the value of the silk; it is however to be remarked, that the best cocoons are certainly the Piedmontese; those produced in the mountains of France are scarcely inferior; the other districts produce them of nearly equal quality to each other, but all are inferior to the above. The excellence of the silk reeled in the higher districts of France has obtained for it a great demand in the French market, and this would probably be much larger, were the English market open for its sale. The nerve of Piedmontese silk, and that of Fossombrone, has mainly contributed to keep up their price: this quality is however shared by the silk produced in all mountainous districts. The high priced silks are principally reeled in filatures; the lower by the peasantry.

Improvements have taken place in reeling cocoons in the higher parts of France, within the last 20 years, which surpass the progress made in the previous two centuries: these consist principally in the increase of filature reeling, and carefully sorting the cocoons, and giving regular instruction to the hands. The reels are generally turned by power, and the water is heated by steam; double threads* are avoided, and thus regular fine silks are produced with great advantage.

Reeling is somewhat improved in the Milanese by the application, to a certain extent, of the same means as in France.

Improvements in the manner of cultivating the trees have been generally and effectively introduced in the mountainous districts of France, and in Piedmont, where they present a striking contrast to the ill-conditioned standard trees of Dauphiny, Lombardy, and the southern Italian States.

The peasantry engaged in breeding silk-worms in the various districts of Europe, have as yet made but little progress in improvement. The larger chambers often present great skill and attention in the requisite details; the rooms built for this purpose are now larger, more airy, and arranged so as to produce a great circulation of air suddenly. Great cleanliness, and giving the worms dry food, have been attended with the happiest results. The peasantry, however, living in the higher ranges of the hills, often bring down for sale excellent samples of cocoons.

The progress of the production of silk in France has been considerable:

In 1789 it was	1,000,000 lbs.
1820	1,350,000
1825	1,600,000

The consumption in 1825 was about 3,000,000 lbs.; which quantity, and of sufficiently good quality, she may probably have within herself the means of producing by the year 1840, if necessary.

Prejudices are very general on several important points; as, for instance, in favour of lopping off large branches from trees, instead of small and frequent prunings; to let the trees grow in grass meadows, or amongst corn, without digging around the roots as is necessary six or eight times during the year. The loss in leaves from these causes has been estimated by some so high as a third of what might otherwise be obtained. The poor suffocate often, and almost always weaken, the worms they breed, by subjecting them to an occasional close heat. It is difficult to make them understand that confined air may kill the insects at 70 degrees, but that they may remain healthy, if the air be in circulation, though the actual heat be 90 degrees; this accounts for a large proportion of the extra loss in the peasant's breed of worms. This class conceive they gain by reeling their own silk; they lose, in fact, 10 per cent. at least. The reeler by profession does not gain more than from 10 to 15 per cent. after he has paid all expenses and run considerable risks, although he produces from similar cocoons a far superior article.

The owners of filatures have a great prejudice against reeling longer than during the months

---

* This greatest evil in reeling silk is avoided by two knife-blades being so placed, as that the moment one thread breaks, and by consequence the other would pass on the reel double from the croisée, it must strike on the knife-edge on that side, and at sufficient angle to cut it ere any has got on the reel.

months of July, August and September; certainly this period might be considerably extended without injury to the cocoons or the silk, and with great advantage to the persons employed. It is possible also to reel at less speed than is usual, if increased care and time be desirable. But the most important error, and one that has hitherto universally prevailed, is that which supposes all coarse reeled silks must be necessarily irregular also. Now it is just as possible to produce a coarse even thread, as a fine one; and the advantage gained by reeling even thick silks must be apparent to those who know the waste and expense attending throwing fine silks to be used for various purposes, where even thick silks are necessary, and which must be superadded to the increased cost of reeling fine silks.

The following are some further particulars of this production, in the respective districts above named:

Good sorted cocoons have cost in France, on an average of years, 1*s.* 6*d.* per lb. English; the female who winds (fileuse) is paid 1*s.* 3*d.* per day; the girl who turns, 10*d.* per day; the universal hours for work are from four in the morning till eight in the evening, giving fourteen clear hours labour; 10*d.* per day each basin is about the sum commonly allowed to cover the other expenses of reeling.

These two last observations hold good throughout France and Italy. In France two skeins only are reeled at a time from each basin; the average weight produced is 18 ounces per day; about one-half the 1,600,000 lbs. is reeled by peasants, who produce one pound of silk from about 14 lbs. of cocoons; the other half is reeled in filatures, and one pound of silk is obtained from 12 lbs. of cocoons. The profit on reeling silk in filatures, in most parts of France and Italy, seems to be about 12 ½ per cent. The price of cocoons is regulated in each district by the price of the silk ordinarily produced therein; and which is of course controlled by its quality, and the character it bears in the market.

Those who reel silk largely generally deal in silk, and calculate their profit will arise from two sources; the purchase of the parcels of cocoons from the small breeders, and from their throwing their best silks themselves, and thus obtaining for them the highest price of the market. The import of silk into France in 1825, was 2,200,000 lbs. About three-fifths of the consumption of France is used in tram and singles, and two-fifths in organzine.

These calculations on the silk productions of France accord with the opinions and observations of M. M. Delon and P. C. Longue of Lyons, and Tessier of Vallerogue, dept. des Cevennes; who it is presumed are, from their long and extensive experience in reeling for, and selling silk in the Lyons market, unquestionable authorities.

A statement is herewith given of the prices paid for cocoons by M. Tessier, at Vallerogue, from 1798 to 1825, and their product:

Poid de Vallerogue, dont 150 lbs. font 62 kilogrames:

Années.	Qualités.	Prix, Sols.	Quantité de Cocons pour une Livre de Soie.
1798	grosse soie	18 at 19	10 lbs. 15 oz.
9	de 20/25 deniers	18 – 19	10 – 13 –
1800	chiques and douppions	22 – 24	11 – 6 –
1	compris	31 – 33	11 – 9 –
2	—	33 – 36	11 – 0 –
3	—	30 – 32	10 – 14 –
4	—	29 – 30	11 – 1 –
5	—	35 – 36	11 – 6 –
6	—	30 – 31	11 – 3 –
7	—	31 – 32	10 – 9 –
8	—	30 – 32	11 – 4 –
9	—	25 – 28	10 – 12 –
1810	—	35 – 37	10 – 11 –
11	—	22 – 24	10 – 8 –
12	—	25 – 27	11 – 0 –
13	—	26 – 27	11 – 0 –
14	—	29 – 30	10 – 13 –
15	partie grosse soie	29 – 31	11 – 8 –
16	partie soie fine	40 – 41	11 – 7 –
17	—	46 – 52	11 – 3 –

19	—	36 – 38	11 – 10 –
1820	—	32 – 34	11 – 12 –
21	—	33 – 34	11 – 12 –
22	—	36 – 40	12 – 3 –
23	—	27 – 32	11 – 10 –
24	—	29 – 32	11 – 14 –
25	—	36 – 40	L'on ne connoit pas encore le resultat de 1825.

En distrayant les douppions et chiques il faut alors 2 lbs. de plus de cocons par livre de soie fine.

En l'année 1824, 914 quinteaux, 4 lb. 8 oz. de cocon, ont produits de belles soies - - - - - - 6,770 lbs.
Douppions - - 794 lbs. 5
Chiques - - - 135 lbs. 13 } 7,700 lbs.

En divisant les 6,770 lbs. belles soies par la quantité de cocons achetées, alors il a fallu 13 lb. 8 oz. de cocons pour 1 lb. belles soies.

In

Appx. No. 9 (3.)

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

In Piedmont the cost of cocoons averages, as in France, 1*s.* 6*d.* per lb. English: fileuses and tourneuses are paid the same as in France, when they live at their own homes; but, as in France, they are sometimes provided with a rug and lodging room, and with very coarse food; in these cases the saving is not great, as they are not so expert and attentive; two skeins only are reeled generally from one basin, and the production averages 18 oz. per day. From the superior quality of their cocoons (which must doubtless arise from the great purity of the air, as their recolts are very ill managed), 10 or 11 lbs. will ordinarily give 1 lb. of silk; they reel principally from three to six cocoon silks. The raw article can only be exported from Nice. Piedmont silk must be thrown before exportation. This prohibition is unpalatable to the Piedmontese, as they seem to suppose that the demand and consequent production is thereby decreased. All the principal reelers have throwing mills, which, as the machinery and skill employed in the various operations were very imperfect, would easily admit of improvements; but the Government will not allow what it may suppose has even a remote tendency to decrease the demand for manual labour. Piedmontese silk is very unevenly reeled, but this disqualification is compensated by its extraordinary strength.

In the Milanese, sorted cocoons cost on an average, 1*s.* 4*d.* per lb. English, in the marshy districts, where the thicker silks are reeled; and 1*s.* 9*d.* in the higher parts. In the latter they generally wind ⅘ cocoons, say ⅗ of the weight produced,

	or 12,235	basins, each 24 oz. per day, for 15 weeks - -	1,651,000
2-5ths 8 to 24 cocoons	8,160	- - - 24 oz. - - - - - -	1,001,000
	Say 20,395	basins reel the annual amount of - - - lbs.	2,652,000

In the filatures of fine silk there are from 10 to 250 basins each; all reel four skeins at once from each basin. In reeling 4–5 cocoon silk they generally use 12 lbs. of cocoons for 1 lb. of silk. Steam is employed in most part of them to heat the water. In the coarse filatures, the number of basins seldom exceeds 20; they reel four skeins from each basin, up to 8 or 10 cocoons, but only two skeins generally for thicker silks. There are four great fairs in Lombardy, for the sale of this, which is their staple article, where prices are regulated, and the small reelers sell their parcels of silk.

An actual survey, assisted by the valuable statements of Signior Dominique Staurengo, an eminent reeler and vendor of silk at Milan, form the ground of this statement respecting Milanese silk.

In Tuscany, the average cost of cocoons is 1*s.* per lb. English. The whole production of silk, which is estimated at about 100,000 lbs., is of inferior quality. This is the only country in Italy from whence cocoons are permitted to be exported.

Cocoons cost in the neighbourhood of Fossombrone much higher than near Bologna and Rome: it is probable, however, that the average price is not above 1*s.* the lb. English. 14 lbs. cocoons are used to make 1 lb. of 3–4 cocoon silk, and 12 lbs. are used to reel into the thicker kinds, chiefly of 5–6 to 10–12 cocoons. The quantity produced in these States is not exactly known. Wages to reelers, &c. are low, as in Tuscany, where 12 to 14 lbs. of cocoons are reeled in 1 lb. of very inferior silk; and improvement is apparently improbable in either district.

In Naples, cocoons are sold at about 1*s.* the lb. English, and about 14 lbs. are used to 1 lb. of silk. It is of fair quality, and mostly of ⅘ cocoons. About half the annual production is reeled in the royal filatures. The Neapolitans have two recolts each year.

It is probable that the price of cocoons in Calabria is about 10 *d.* the lb. English, but how many are used to each lb. of silk I do not know exactly; most likely 15 or 16 lbs.; and after all, the silk is very rough, and in other respects inferior. Cocoons may be imported into Sicily from Calabria. I have no data on which to state anything as to the Sicilian product of silk.

In Spain cocoons cost about 1*s.* 2*d.* per English lb. and are reeled in the district of Valencia, into ¾ cocoon silk of excellent quality, where it is affirmed that they procure 1 lb. of silk from 9 lbs. of cocoons. This silk is worth 18*s.* a lb. In some other districts they reel as high as 24 cocoon silk, some of which is notworth more than 11*s.* the lb. They reel 3 lbs. of the worst, and 12 oz. of the best a day. The wages seem to vary as follows:

Men and women at the basins, from - 1*s.* to 3*s.* 4*d.* a day.
— at the reels - from - 8*d.* to 2*s.* 9*d.* ditto.

And the cost of charcoal 8 *d.* a day each basin.

Cocoons may be exported from Spain. The worms are fed on the leaves of black mulberry trees. Two recolts a year are obtained in Spain pretty generally.

OBSERVATIONS on the Product of a Recolt, superintended by the Writer, at Alais, Department des Cevennes, France, in 1825.

AT the end of 39 days from the time of hatching the worms, the cocoons were in process of formation, and the active part of this recolt was finished. The trees being pruned as the leaves were gathered, or within a day or two, they only needed a "labour" with the spade. The branches on which the worms had spun were laid by in bundles, after they had been cleaned from the outside filament of the cocoons, ready for the next recolt. The stages were taken down; the rooms cleared out (yielding an amazing quantity of the excrement of the

Appx. No. 9 (3.)

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

the worm), as it is dangerous to disturb the worm by cleansing the stages just when going up to spin; and the first fine day the cocoons were sent to the owner: he having a filature, reeled them himself. Throughout the Cevennes, the peasants' cocoons are sold to one or other of the great filatures, in the larger towns of the district. They either bargain for the recolt as it is going on, at the time's price, to be afterwards settled; or when the cocoons are spun, they bring with them one of the small branches, garnished with cocoons, and the silk-winder buys from that sample. Thus, on the 22d June, the town of Alais was crowded with those who brought their cocoons to be weighed and paid for in hard cash, by those to whom they had been previously engaged; or who brought their small sample branch to find a purchaser. The silk which is brought in this manner in the cocoon to Alais or its neighbourhood, on its distribution from their filatures, either in the raw or thrown state, to Lyons, St. Etienne, &c., according to the lowest estimation amounts to ten millions of francs annually, and probably a much larger sum would be nearer the truth: the proportion of this amount paid for the labour of reeling and throwing would not be one half, leaving at least the other for cocoons. The cocoons are always sold unkilled to the reelers. On weighing the product of our recolt, we found it to be as follows, when contrasted with the expenditure; or rather what would have been the expenditure, had the labour, &c. been paid for regularly, and the leaves bought at the usual average price.

The 11 oz. of eggs, when hatched, produced, at the usual calculation of 33,000 eggs to an ounce, 363,000 worms; these ate, according to the manager's weight, up to May 30th inclusive - - - - - - - - - - 10,600 lbs.

On May 31 - - - -	1,000
June 1 - - - -	1,500
— 2 - - - -	2,500
— 3 - - - -	2,500
— 4 - - - -	2,500
— 5 - - - -	2,000
— 6 - - - -	500
During the whole recolt* - - Amount	23,100 lbs.

There were supposed to be 1,000 trees plucked, therefore the average weight from each tree was 23 lbs: these trees were mostly small, and about 15 years old on the average. Say 2,100 lb. weight of leaves for each ounce hatched. There were 1,050 lbs. weight of cocoons produced in the whole; thus 22 lbs. of leaves were consumed to produce 1 lb. of cocoons*. Now this was rather a larger weight than the average of the better chambers, being about 95 lbs. of cocoons per ounce of eggs hatched; yet the profit was no great one; for at the low price of a sous a lb., the lb. of cocoons would cost in leaves alone 22 sous; and the average price for good cocoons was but 28 sous the lb. These 1,050 lbs. of cocoons were reeled into 7-cocoon silk, and produced 1⅓ oz. per lb. of cocoons, or 87½ lbs. of 16 oz., worth on an average 25 francs per lb.

The account of profits, both to the breeder and the reeler, may be thus stated, on an average year's prices; this year being high for the leaves and low for the cocoons.

Cost of 11 oz. of eggs, *i. e.* 11 lbs. of cocoons - - - - - - - -	15.0		
Rent of chamber fitted up, and the cost of coal for four fires, on an average for six weeks - - - - - - - -	120.0		
Expenses in labour or sustenance, and the pay of the people, for the recolt - -	100.0		
23,100 lbs. of leaves, or 231 quintals, at 5 francs - - - - - - -	1,155.0		
	1,390.0	† 1,050 lbs. of cocoons, at the ordinary average of 30 sous the lb. - - -	1,575.0
Profit to Breeder (nearly 12½) - - -	185.0		
	1,575.0		1,575.0
Reeling 1 lb. per day, at 30 sous the Fileuse — at 20 do. the Tourneuse	218.75		
	1,793,75		
Profit to filature on the price of the cocoons, of exactly 25; but has to pay risk and expense of cocoons, killing, sorting, attendance, and risk on the sale of the silk, which may be taken at about one-half, or 12½ per cent., and leave 12½ clear profit -	393.75	† Produced 87½ lbs. of silk, worth 25 francs the lb. (of 16 oz.)	
	2,187.50	Raw - -	2,187.50

---

* The ordinary rough calculation is, that an ounce of eggs will require 20 quintals of leaves, and will produce one quintal of cocoons, or 10 lbs. of silk of 12 ounces to the lb.

† The refuse or waste silk, which is gathered from the branches, and is sold to be spun, is a part of the profit which I have not taken into the account; it is calculated to be sufficient to pay the expense of gathering and preparing the branches. In like manner, the refuse in reeling is considerable, and is calculated by some to pay for the labour of both "fileuse" and "tourneuse;" but I am unable to state it exactly. This refuse is all carded and spun.

Appx. No. 9 (3)

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

I have submitted these calculations of profits, &c. to a very intelligent native, who, though not engaged in the recolt, has a very accurate knowledge of it in this district, from 20 years observation; and it is his decided opinion, that the average profit to the breeder who buys his leaves is about 12½ per cent., which is to pay him for his risk and labour in the recolt; and that 12½ per cent. may remain to the reeler, after covering his expenses and risk, to stand for his clear profit. This calculation will not be quite exact for the filatures in the low countries, nor yet for their recolts. The price of cocoons is lower in the plains than in the mountainous districts, and the price of labour is also less: there is also a considerable difference in the price, as there is in the quality, of the respective silks. The price of labour applied to this production (where it is paid for, as in the large recolts of cocoons, the reeling of them, and throwing the silk) is universally high where good silk is produced, and there is not one exception to the case in the Cevennes. 16 oz. of good silk is an excellent day's work for one girl who turns the reel, and one woman who keeps up the ends of the cocoons; the former receives 20 sous, the latter 30 sous a day. The children and others in the filatures are paid proportionately high wages.

I found 230 cocoons weighed a lb. on an average. There were 363,000 worms, it is calculated, when hatched; 241,500 only produced cocoons; the loss was therefore 121,500, or one-third of the whole.

Another recolt, superintended by a gentleman of great skill, was thought to have made a very unusual return. He hatched 1½ oz. and gathered 160 lbs. of cocoons. I believe there is seldom greater success known throughout the silk districts. At 230 to the lb. he had 36,800; he had hatched we suppose 49,500; the loss of 12,700 was one-fourth. The cocoons in this recolt were also superior, and sold for a sous or two a lb. more than ordinary.

A peasant who was obliged to trust to his wife and family to manage by day, and could only assist by night, bred 6 oz. in his cottage. Our former rate of calculation gives 198,000 as hatched. They produced only 355 lbs. of cocoons, which he thought a fair recolt: at 230 to the lb., 81,650 succeeded, and 116,350 were lost, or nearly three-fifths; but it is very probable that his cocoons were smaller, as is usual when there is deficient attention to the worms, so that he possibly lost only half the number hatched.

M. Bonafous calculates that Count Dandolo lost one-fourth of the worms hatched in his improved recolts. As this Italian nobleman was not only extensively conversant with the arts and sciences, but had applied his knowledge with distinguished success, amongst other things of general utility, to the production of silk, I shall briefly state some of those details which will place the Alais recolt in juxta-position with the results of his breeding worms. His recolts are spoken highly of by those who visited them while he managed them, but they have been abandoned since his death. Dandolo's error seems to have been his sacrificing popular usefulness to mere systematizing the minutiæ of the recolts: the half of his arrangements and suggestions in this instance were impracticable or useless.

In the Alais recolt 318 square ft. were allowed for each ounce of worms when at their full size; Dandolo states that he finds 239 square feet sufficient. We gave three meals a day; he recommends four. Our worms ate, during the whole time of the recolt, 2,100 lbs. of leaves for each oz. of eggs hatched; his spun after they had eaten only 1,840 lbs. Our worms lived 39 days before they were enveloped in their cocoons; his recolt was finished in 33 days. The heat of our rooms varied from 24 to 15 Rr. (86 to 66 Fahrenheit), while he speaks of 19 to 16 Rr. (75 to 68 Fah.) only. We lost one-third of our worms; he calculates he lost only a fourth. Of ours, 21,955 in each ounce of eggs hatched produced cocoons, according to our supposition of the number of eggs in each ounce; of his, 24,750. We had 95½ lbs. of cocoons per oz.; he had 107½ lbs. We expended 22 lbs. of leaves to each lb. of cocoons; he only needed 17 lbs.

The following particulars of an experimental filature at Tiverton, in the winter of 1825, and spring and summer of 1826, of about 35,000 lbs. weight of Florentine cocoons, growth of the year 1825, may be found interesting, and perhaps useful as a guide in any future efforts.

A small part of the cocoons were pressed into casks, to save expense in freight, but neither reeled well nor produced even silk. The remainder were put into chestnut-tree cases, without pressure; and as the freight was 1*s.* 10*d.* a foot, it raised the cost of the cocoons very materially. If this charge could not be considerably reduced, it would be a great drawback upon profit in an English filature to be supplied with cocoons of foreign growth. Some were eaten by mice before the liability to such depredation was perceived, and others were pierced by a black insect, which had found its way into the cases in Italy, and which sought to feed upon the chrysalis inside. The time of arrival in this country was so far in the decline of the year, that the atmosphere was always humid in the mornings and evenings, and the vapour from the basins was very great and troublesome; it was often with difficulty we could get the silk on the reel dry, and the atmosphere was very unhealthy. Of this we had proof in the tendency to rheumatism that prevailed amongst the children employed: two had serious attacks, and a third died of that disease. And the constant dipping of the hands in hot water soddened the fingers so much, that of the 12 girls most regularly at work, 11 had frequent and large formations of matter in the fingers; one had formations of matter in the arms, and another in the head. I trust every precaution that private attention or medical skill could suggest was taken to prevent disease or suffering amongst the children. My own health and that of my assistant was for the time considerably affected. Of course, means might in any future trial be made use of, so to heat reeling apartments as to obviate some of the difficulties we encountered.

Letter from Mr. W. Felkin to the Right Hon. C. Grant; 24 April 1832.

'The results were, that 28,000 lbs.* weight of cocoons were reeled into 1,850 lbs. weight of principally 15-cocoon silk, or 15 lbs. of cocoons to 1 lb. of silk; and the cost in wages to reelers, reel-turners and overlookers, was 2*s.* a lb., and the waste paid for the fire. Six of the reelers, when well taught and regularly at work, produced, on an average of six months, 20 oz. of silk a day of 10 hours clear work. The silk was not of a bright or good colour; and at the latter end of the time, in the summer of 1826, owing to the hardness of the cocoons requiring too much softening, a good deal of that part of the produce was foul; however, the great bulk was even, and answered the purpose of the bobbin-net lace manufacture very well: of course it was reeled on Mr. Heathcote's patent plan of separate original threads, but with an ultimate junction and heavy croisée to form one thread (say three of five cocoons each) of 15-cocoon silk, &c.; and by an arrangement of fileuses and guide plates circularly round a basin, I easily reeled a sample of 95-100 cocoons of perfect regularity, consistence, and roundness of thread, with the gum well driven out by a crossing of the thread on itself. By the same process a thread of any given number of cocoons may be safely and regularly reeled.

This attempt must be considered as on the whole unfavourable to the idea that a filature of foreign cocoons in this country can be worked to profit, as compared with those abroad: upon the grounds, that the freight of cocoons is too heavy; the season of the year is necessarily adverse and too advanced; the wages are too high; and the health of the females employed might probably in the majority of cases be materially injured.

In the course of superintending silk reeling, and many visits to French and Italian filatures, the following remarks have appeared to me worth preservation:

Filature reeling is always preferable to cottage reeling; the peasants should therefore be encouraged to produce cocoons, and reeling should be considered a distinct business.

---

* Of the remaining 7,000 lbs. part was employed in the commencement, without taking a strict account, because of their being used by the girls who were learning; and the rest at the end, consisting of double ones, of which every recolt furnishes a greater or less number, according to management.

Appx. No. 9 (3.)

Letter from
Mr W. Felkin to
the Right Hon.
C. Grant;
24 April 1832.

If cocoons are too highly dried before reeling, as is often the case when the chrysalis is killed by the heat of the sun or an oven, the silk is apt to come off foul. The steam baths therefore are preferable for this purpose, as is found by those French reelers who have used them.

Cocoons should be well picked as soon as they are cleared from the rods, and the "fondues" or other discoloured ones reeled at once, without killing. Encouragement should be given to breeding worms in hilly districts, especially for white recolts. The worm which produces the white cocoon is more delicate than other varieties, and pure air is essential to excellence of colour in its product. Also in reeling white silk, more care and skill are requisite than for yellow, the threads being finer, and more apt to come off in layers, and to be gouty.

It is of great importance that the superintendants be competent judges of silk, and masters of the hands. It is in exact proportion to the degree in which these two qualifications are found united in the management of any filature on the Continent, that the character of its silk is established as good, or otherwise. I never saw an exception.

Quality, and not quantity, from each reel per day, should be most sought after. And if each reel's produce be every evening hung apart or ticketed, and on a weekly inspection a small bonus be given to such reelers as have merited it, a stimulus is given to the exertion of care and skill, which I have seen profitably employed, resulting, as it has done, in an article that cost less and was worth more than silk reeled from cocoons of equal quality, but where no such plan was in operation. A high croisée is invaluable. The thread should be tied, not thrown on the reel, as is often done. The ends of the cocoons should be found by "batteuses" regularly employed in that part of the business only.

The complete union of the filaments from the cocoons in the first thread, and in Mr. Heathcote's plan the complete union of the threads separately formed from given numbers of the filaments, is in my opinion of the first importance; the silk is not fibrous, and every subsequent operation previous to boiling is attended with less difficulty and waste, where this preliminary has been well attended to.

The skeins should never be cleaned from burrs, either on the reel or afterwards, until they come into the hands of the throwster.

17 February 1829.

(signed) *Thos. Flower*,
Reporter General.

STATEMENT of the VALUE of the TRADE between *India* and the *Persian Gulf*; from the Year 1821–22 to 1827–28.

	BENGAL.		MADRAS.		BOMBAY.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
	Rupees.	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*	*Rupees.*
1821–22 -	36,25,178	47,40,902	92,862	20,90,821	33,85,197	33,59,384
1822–23 -	38,54,718	34,64,404	2,24,240	85,040	36,79,169	30,91,782
1823–24 -	24,18,321	34,15,597	1,98,144	54,156	39,44,529	41,59,485
1824–25 -	18,19,883	27,13,344	26,643	83,416	35,31,303	37,15,960
1825–26 -	22,53,338	31,47,972	66,326	3,67,802	31,78,411	43,43,780
1826–27 -	11,56,276	21,86,501	8,361	1,07,009	34,22,128	41,91,821
1827–28 -	21,27,048	22,54,434	17,960	4,25,975	32,05,662	33,66,175

From the above Statement it will be observed, that the average Value of the Trade between Calcutta and the Persian Gulf amounts annually to rupees 55,96,845; between the ports under the government of Fort St. George and those in the Gulf of Persia, to rupees 5,49,819; and between Bombay and the Gulf, to rupees 72,24,971. The amount of customs levied on the trade in question is small, owing to the exemption from duty which is allowed to the most valuable articles of import, such as Treasure, Jewels and Horses. The import and export duty at Calcutta, on an average of the above seven years, was rupees 1,05,705; at Madras, rupees 46,610; and at Bombay, rupees 39,777. The subjoined Statements show what portion of this trade is carried on in English and what in Arab ships:

Inspector-General's Office,
Custom-House, London,
28 December 1831.

William Irving.

Appendix, No. 16 (1).

Appx. 16 (1).

LETTER from G. G. de H. Larpent, Esq. to T. P. Courtenay, Esq., dated 28 May 1827.

Regulation of the Bengal Government detrimental to the Trade of individuals.

Sir,

By desire of the East India Trade Committee, I take the liberty of transmitting to you the accompanying copies of two applications, under date the 30th June and 1st November 1825, which were made to the Court of Directors of the East India Company by the merchants in London concerned in the trade of India. They relate to the disadvantages to which the private trade is exposed in competing with the Company for articles of the produce or manufacture of India, for the purposes of investment; and more particularly the article of silk, which has become an object of much importance in the trade between India and Great Britain.

The memorial fully explains the insurmountable nature of the difficulties which the private trader shave to contend with, and it was hoped that it would have received the early and favourable attention of the Honourable Court:

Having however remained unnoticed for so long a period, it has been deemed expedient respectfully to submit the same to the consideration of the Board of Commissioners for the Affairs of India, through whose intervention the East India Trade Committee trust they will obtain for the private traders in India that redress which, under the circumstances of the case, they may seem justly entitled to.

I have, &c.

Chairman.

(Enclosure No. 1.)

LETTER from certain Mercantile Firms in *London* to the Court of Directors of the East India Company, dated 30th June 1825.

Letter from Merchants in London to the Court of Directors; 30 June 1825.

Honourable Sirs,

We, the undersigned merchants and agents in London connected with the trade of the East Indies, beg leave to acquaint your Honourable Court that urgent representations have been made to us by certain British merchants in Calcutta, on the subject of the very serious disadvantages which the private traders have to encounter in their endeavours to procure articles of the produce or manufacture of the interior of India, for the purposes of a return investment, in exchange for the produce and manufactures of this country, in consequence of the existing commercial Regulations of the Bengal Government.

Impressed with the importance of these Regulations, we have comprised them in the following statement, to which we take the liberty of soliciting the attention of your honourable Court.

It may be assumed that the Act 55 Geo. 3, c. 155, by which the charter of the East India Company was modified and renewed, had distinctly for its object a separation of the several capacities of the East India Company, as ostensible sovereigns of India, and as a trading corporation. Any Regulations, therefore, of the East India Company, or its Governments in India, tending to render its political power subservient to its commercial interests may unquestionably be considered a contravention of the spirit of that Act.

It is the object of the present remarks to show, that so long as the 31st Regulation of the Bengal Government, of the year 1793, remains unrepealed, the East India Company avails itself of its political authority to increase its mercantile profits; and by narrowing, if not altogether excluding, competition, secures to itself an undue preference over the private trader. That Regulation is intitled as follows:—"A Regulation for re-enacting, with modifications and amendments, the Rules passed on 23d July 1787, and subsequent dates, for the conduct of the commercial residents and agents, and all persons concerned or employed in the provision of the Company's investment;" and the following is an analysis of its provisions, so far as the public is interested:—"No person in balance to the Company in any transaction connected with the provision of its investment, or under engagement, can withdraw from its employ until such balance be paid or goods delivered." Sec. 2.—"Persons who have dealt with the Company on account of its investment, must give the previous notice of two weeks before they can withdraw." Sec. 3, c. 3.—"The goods manufactured by persons under engagement or indebted to the Company, are liable first for the claims of the Company. The parties cannot work for themselves or others. Penalty." Sec. 3, c. 4 & 6.

"When a contractor has not performed his contract for delivery of goods he is to be put under the restraint of peons." Sec. 3, c. 5.—"List of persons employed in the Company's investment to be exposed in the Cutcherry of the Pergunnah, to be regularly corrected, and sent quarterly to the Court." Sec. 4.

"Penalty for persons who may buy of the producers with a knowledge of their engagements to the Company; the knowledge to be evidenced by circumstances, or the fact of the goods having the Company's mark upon them." Sec. 5.

"Persons not to interfere in any way to prevent people from treating with, or taking advances from the Company." Sec. 6.—"Officers of Government, landholders and others, are

are not to behave with disrespect to the commercial residents or their officers, and to afford assistance for the protection of persons employed by the Company, and the security of the investment." Sec. 7.

"No person employed in the provision of the Company's investment shall be liable to be summoned by a Zemindar, or his officer, on account of the ground-rent. The goods and advances belonging to the Company shall not be distrained for ground-rent." Sec. 9, c. 2.

"Persons prosecuting individuals employed in the Company's investment, must allege the fact. The prosecuted exempted from the ordinary process of the courts, and to be proceeded against through the commercial resident, or his deputy appointed by him. These may tender security themselves, or decide on the sufficiency of that tendered by the prosecuted." Sec. 10. c. 1.

"Persons employed in the Company's investment not liable to the ordinary criminal process." Sec. 10. c. 4 & 5.

"In cases where manufacturers are employed by several parties other than the Company, they shall deliver goods according to priority of engagement." Sec. 11.

"Where a decree may be passed against a person employed in the Company's investment, on an engagement subsequent to the origin of the party's dealings with the Company, it shall provide for the prior satisfaction of the Company's claims.

"Before execution of any decree against a person registered as employed in the Company's investment, the judge shall require the commercial resident, 1st, To state whether, at the time of the engagement decreed, the party were in the employ of the Company; 2d. To state whether the Company have any and what claim on him; 3d. To prove such claim. The claim of the Company shall be first made good out of the defendant's property, whose person shall not be liable to attachment for the claim of the individual." Sec. 12.

"The commercial resident, in dealing on account of his own private trade, shall not make the Company's prices the standard of his own." Sec. 15, c. 4.

When it is considered how strong the habitual feelings of deference to authority are in India, and the mode in which the raw goods or manufactured produce of that country are obtained, namely, that of advance, the character assigned to this Regulation in the preceding paragaph will not be thought too strong. By it, no persons in balance to the Company, or engaged in any way in the provision of their investment, can withdraw from their employ; they cannot work for themselves or others.

If they do not fulfil their contract, they are put under the restraint of peons, and the goods they manufacture or their articles of produce are liable first to the Company, although they may be indebted to others: thus, if a private merchant has contracted with a producer, and made advances, the moment the latter gets his name enrolled in the list of those employed in the provision of the Company's investment, the Company take precedence, both in obtaining his produce and preventing his working for any other person. Inducements are also held out, by certain immunities which are granted to those employed under the Company. Sec. 6 & 7 directs the officers of government, &c. to afford them protection; by cap. 2, sec. 9, no person so employed shall be liable to be summoned for ground-rent; and by sec. 10, such persons are exempted from the ordinary process of courts of justice, and can only be proceeded against through the commercial resident who has the charge of the Company's investment.

Whilst the Company in their commercial capacity enjoy the restrictive privileges which the Regulation in question confers, it can hardly be denied that they possess a virtual monopoly in every article of the internal trade of India which can be selected for investment.

Raw silk, saltpetre and cotton, are at present the principal articles of trade which the Company purchase in the interior through the agency of their commercial residents.

It has long been a subject of great complaint with the private merchant, that he was unable to obtain a sufficient supply of raw silk; and the relative proportions of the import by the Company and private traders of this article, now become of great importance to a rising manufacture in this country, will illustrate the correctness of the conclusions deduced from the provisions of the Regulation under examination.

The Company, under the exercise of this assumed authority, shut out the private trader from a fair competition in the purchase of this important article; and thereby securing to themselves a monopoly of the industry of the native population, they check that excitement to exertion, and consequently to production, which the simultaneous demands of the private merchants and the Company, if placed upon an equal footing, would necessarily create.

Muslins, piece-goods and other articles have been, and may be again, objects of the Company's investments, as their funds accumulate; and we have recently seen their attention directed to indigo; so that if they were to bring into general exercise the power assumed under the Regulation now complained of, they might effectually crush the enterprise of the private merchants, exclude them from the possibility of effecting returns for the increasing trade to that country in British manufactures, and curtail the general advantages which would otherwise be derived by Great Britain and India from the connexion subsisting between the two countries.

It ought also to be observed, that whilst the private trader is thus excluded from a fair competition with the Company, the Company's commercial residents are permitted to engage as agents in the purchase of goods, and derive from their official influence an obvious influence over any private competitor.

In forwarding to your Honourable Court the above statement, we cannot refrain from respectfully repeating that the principle on which it proceeds is, that the Regulation in question, by giving undue advantage to the Company in their commercial character over the private

Regulation of the Bengal Government detrimental to the Trade of individuals.

private merchant, is contrary to the spirit and letter of the Act by which the trade of British India was opened to the public, and opposed to the present liberal policy of the times. It appears to us it was not the intention of the Court of Directors, on the passing of that Act, that any existing Regulation having such a tendency should remain in force; and this may be inferred from the instructions transmitted by the Honourable Court to the Bengal Government, in their public letter under date the 6th September 1813, paragraph 23, wherein they observe, "We cannot omit, upon the present occasion, expressing our expectation that all our servants shall conduct themselves with liberality and candour, and act up to the full spirit of the Legislature; so that if the traders should be disappointed in their views, they may have no ground for imputing their disappointments to any deviation on our part from the principle on which the trade is opened to them."

It may, however, be alleged, that the Honourable Company, without contending for their rights to the powers enjoyed by them under this Regulation, for the purpose of commercial rivalry with the private traders, may fairly demand their continuance as indispensable to the regular and certain remittance of that part of the revenues of British India applicable to the payment in this country of territorial and political charges, which being connected with the sovereignty of the Company, the Regulation is considered justifiable, and consonant therefore to the provisions of the Act.

The question thereby assumes a new shape, and the parties at issue will be, not the East India Company as merchants against individual merchants, but the East India Company acting for the benefit of the people of India against merchants influenced by their own particular interests; and therefore that the private interests of the latter should be made to yield to the more extensive benefit to be reaped by the whole Indian community. If this argument were sound, it would be a conclusive bar to the prayer of the private merchants; but they contend that it is altogether untenable and incorrect upon general principles, and that the circumstances attaching to the particular case in question do not form any exception thereto. The object of the Company is, how best to supply funds in this country to meet their present and growing expenses of a political nature. Upon general principles it can scarcely be doubted that to enable this remittance to be made with the least possible burthen to the people of India, that the wisest plan would be to encourage the increase of capital in India, to ensure its distribution into the most natural and therefore the most beneficial channels, and by wise legislation to promote the cheapest cultivation of Indian produce and the best mode of its remittance to this country. To effect this, it appears to us expedient that the restrictions placed by the Regulation in question upon the industry of the native population should be removed, and a free and unshackled competition allowed to the private merchants, correspondent to the principles on which they were admitted by the Legislature into a participation of the trade with India.

LETTER from Messrs. *Fletcher, Alexander & Co.*, to *J. Dart*, Esq., dated London, 1st November 1825.

Letter from Messrs. Fletcher, Alexander & Co. to J. Dart, Esq.; 1 November 1825.

Sir,

IN conjunction with the other principal merchants of London connected with the trade of the East Indies, we addressed a letter, under date the 30th June last, to the Honourable Court of Directors of the East India Company, with a statement pointing out how the interests of private traders in India are affected by the injurious tendency of the existing commercial Regulations of the Bengal Government; and we solicited the attention of the Court to the same, with the view of obtaining a removal of the restrictions therein complained of.

Not having as yet been honoured with a reply, we are induced, on behalf of ourselves and the other parties to the letter in question, to request to be informed whether the subject has been brought under the consideration of the Honourable Court, and if it has been deemed expedient to refer the application to the Bengal Government; as, in the latter case, we shall apprise the parties in Calcutta with whom the representations originated, of the circumstance, in order that they may avail themselves of the opportunity of substantiating what has been alleged in respect to the practical effects of the said Regulations.

Letter from T P. Courtenay, Esq. to G G. de H Larpent, Esq.; 3 August 1827.

LETTER from *T. P. Courtenay*, Esq. to *G. G. de H. Larpent*, Esq., dated 3d August 1827.

Sir,

In reply to your letter dated the 28th May last, respecting the representations to the Court of Directors of the East India Company, from merchants in London connected with the trade with the East Indies, as to the disadvantage alleged to result to private traders from the existing commercial Regulations of the Bengal Government, I am directed by the Commissioners for the Affairs of India to acquaint you that a despatch to that Government has been prepared, directing modifications to be made in their commercial code, for the purpose of removing the grounds of complaint. I am, &c.

(signed) *T. P. Courtenay.*

Appendix, No. 16 (3.)

A. D. 1829. REGULATION IX.

A REGULATION for rescinding some of the Rules of Regulation XXXI. 1793, and the corresponding Rules for *Benares* and the Ceded Provinces, and for placing the commercial agents of the East India Company on the same footing towards Natives of the country as other persons.—Passed by the Governor-general in Council on the 9th June 1829, corresponding with the 28th Jeyte 1236, *Bengal* era; the 22d Jeyte 1236, Fusly; the 29th Jeyte 1236, Willaity; the 8th Jeyte 1886, Sumbut; and the 6th Zehijja 1244, Higeree.

Preamble.

Regulation XXXI. 1793, and the corresponding enactments for Benares and the Ceded and Conquered Provinces, were passed for the purpose of prescribing rules for the conduct of the commercial residents in their dealings with native weavers and others employed in the provision of the investment of the East India Company: those rules were then required no less as a safeguard against abuse of power by the commercial residents and agents for the Company, than for the protection of the commercial officers against fraud and embezzlement, and for ensuring the execution of the contracts entered into by these officers. At the present day the same reasons do not exist for prescribing by special regulation the course to be observed in respect to contracts entered into for the provision of articles of the Honourable Company's investment; it has accordingly been deemed expedient, in order to remove the appearance of favour and preference in the Legislature, which the existence of a special enactment of the kind is calculated to excite, to rescind the provisions of the existing Regulations giving such a preference, and to leave the commercial residents, and other agents of the Company, to follow the same process of law in the enforcement of contracts, and in their other dealings with the natives of the country, as individual traders. The following Rules have accordingly been passed, to be in force within the territories subject to the Presidency of Fort William, from the date of the promulgation of this Regulation.

Section II. to XVIII. of Regulation XXXI. 1793, and the corresponding rules for Benares and the Ceded Provinces, rescinded.

II. Sections 2 to 18 inclusive, of Regulation XXXI. 1793, with the explanatory Rules of sections 3 and 4, Regulation IX. 1801, extended to Benares by section 2, Regulation IV. 1805, also the corresponding sections of Regulation XXXVII. 1803, for the Ceded Provinces, are hereby rescinded.

Commercial residents to be subject to jurisdiction of courts civil and criminal, as other persons being British subjects.

Proviso for public suits.

III. *First.* Commercial residents and other officers providing articles for the investment of the Honourable East India Company, or otherwise employed in purchasing or procuring goods for purposes of trade, shall sue and be sued, and be subject to the process and jurisdiction of the civil or criminal courts of the country, in the same manner as the agents and factors of any other merchants, saving always the privileges and immunities they may enjoy as British subjects; and subject to the rules and restrictions contained in the general Regulations respecting suits conducted or defended on account of the Honourable Company, or otherwise in their public capacity.

Workmen, contractors, and others, to be served with process of civil or criminal courts, as other persons.

Second. Native workmen and other persons, weavers, silk-winders, &c., in the employ of commercial residents, also persons under engagement to deliver articles to the commercial officers of the Honourable Company, shall be and are hereby declared to be subject to the same process civil and criminal of the courts and public officers of the country, as other natives living within the jurisdiction of the said courts and public officers respectively, and no distinction shall be made in the form and manner of serving the process on them.

Plaint against commercial residents for official acts, when filed, copy to be sent to Board of Trade; who will inform the court within six weeks whether it is to be defended as a public suit.

Failing intimation of its being public, to be treated as a private action.

IV. In modification of the rule contained in Section 3, Regulation II. 1814, it is hereby prescribed and provided, that when a petition of plaint against a commercial resident or other commercial officer amenable to the jurisdiction of the court, shall be lodged in any court of civil judicature, notice of the same shall be sent in the manner prescribed by section 19, Regulation XXXI. 1793, to the said officer, and a copy of the same shall be forwarded to the Board of Trade; who shall inform the Court, within six weeks from the date of their receipt of the petition, whether the suit shall be defended as a government action, or at the risk and cost of the officer sued. If no intimation be received by the court within the period stated, due allowance being made for the period occupied in the conveyance of letters to and from by the public dawk, the case shall proceed, and be carried to judgment as a personal action against the commercial resident or other officer sued.

Appendix, No. 17.

State of the Trade of Prince of Wales Island.

Appendix, No. 17.

EXTRACT GENERAL LETTER from the Government of *Prince of Wales Island*, to the Court of Directors, dated 30th April 1830.

Trade Settlements.

Para. 38. A FULL and interesting Minute on the state of the trade of these Settlements is recorded by our President. It is much to be regretted that the various statements from which the report has been compiled have been found so defective; but the importance of more accuracy has been so strongly pointed out in the President's Minute, as well as on other occasions, that it is to be hoped more dependence may be put in them in future. The body of the Minute contains a full comparative statement of the imports and exports for the year 1828-29, and at the conclusion will be found elucidatory remarks on the system of mercantile transactions and relations of these settlements for the last three years.

39. Mr. Ibbetson having supposed that some remarks which the Honourable President thought proper to make on the careless nature of the statements reflected on him, recorded an explanatory Minute, which will be found with the other papers, as will also be one in reply by our President, in which he disclaims entirely any application of these remarks to Mr. Ibbetson in a retrospective view.

(Enclosure No. 1.)

(Enclosure No. 1.)—COPY MINUTE of *R. Fullerton*, Esq., President of *Prince of Wales Island*, dated 29th April 1830.

REPORT on the Trade of the three Settlements, Prince of Wales Island, Singapore and Malacca.

IT has always been my intention to enter into a complete discussion as to the nature and extent of the trade of these settlements, as it has stood during the last three years; various other important and constantly occurring duties have hitherto prevented my directing sufficient time and attention to the subject, rendered further difficult by the want of clear definite statements and reports from the different settlements. With the exception of this settlement (Prince of Wales Island), generally the seat of Government, and formerly of a custom-house, very little attention has been paid to the formation of these statements, they have been left to the clerks in the office, and the resident councillors at Singapore and Malacca seem to have signed without notice any statement put before them; the most glaring errors were discovered, an inquiry into which only brought to light further inaccuracies, and rendered the complete recapitulation of those for past years indispensable. I regret to say, therefore, that I am unavoidably compelled to confine my remarks to the statements for the year ending 30th April 1829, which having been compiled and re-examined, may be depended on, entering into retrospective observations only on reference to certain of the principal articles of trade, which have have been made the subjects of particular notice and inquiry.

It had previously been the practice to insert in the general statements the imports and exports at each Settlement, as well between each other as with places beyond their limits; the practice necessarily involved considerable repetition, and of course exaggeration, in the general statements. There is little produce at any of the settlements in the Straits; the trade consists therefore almost entirely of foreign import and re-export. Of the articles imported therefore at one settlement, many are supplied and landed at another, shipped again, and carried from port to port in search of a market: for example, out of 17,86,890 rupees of India piece-goods imported at Prince of Wales Island, by the general statement, the separate statement will show an export to Singapore of rupees 7,83,500, and an import of articles of the same description from the same place of 20,800. It was directed, therefore, that the general statements should include only the external trade, that is, the trade between the settlements respectively and places beyond their limits. For the showing of the intermediate trade between each relatively, it was directed that separate statements should be made, and on statements so made this report is prepared: they consist of three; for each settlement one of import, one of export externally, and one of the intermediate trade, with a general statement of the external trade, prepared under directions of Government. It must here however be generally observed, that no duty is collected, no regular custom-house established, nor any of those strict forms observed which fall necessarily to be observed where a revenue is to be received; the statements therefore are framed, it may be said, generally from the reports of the merchants themselves, as will appear by reference to the regulation for the registry of import and export; general permits are given, and merchants are allowed to land and ship from their own warehouse; the search of any is very slight. The strong objection made, and the clamour that is raised on any attempt at secreting, as interfering with the trade, and the absence of all revenue considerations, has induced the avoidance of all such secreting; so that, in fact, the report of the parties themselves forms the main source of our knowledge as to the extent and nature of the trade.

Trade of Prince of Wales Island. External.

The trade of Prince of Wales Island is carried on with the following places, as will appear in the statements, viz.: Calcutta, Madras, Bombay, England, China, Java, Ceylon, Siam, Coast of Tenasserim, Acheen, Dehli, Quedah, and a few petty native ports.

Calcutta, Imports from.

The imports for the year ending 31st April 1828-29, from Calcutta, amounted to sicca rupees 10,94,986, of which the principal articles were, opium, 7,10,400; India piece-goods, 1,84,500; rice, 82,750; wheat and grain 10,640; gunnies, 15,000; India sundries, 10,978; oil, 22,500. The balance being made up of sundry petty articles, of which we may notice only the few British articles travelling for a market, viz.: iron, 20,000; British piece-goods, 17,500.

Calcutta, Exports to.

The total exports to Calcutta for the same year amounted to sicca rupees 3,57,126, of which the following articles were, pepper, 1,14,121; tin, 1,11,740; gold dust, 51,600; beetel nut, 37,755; rattans, 19,400.

The balance consisting of sundry petty articles unnecessary to repeat, the imports therefore being as above - *Sa. Rs.*	10,94,986
The exports - - - - - - - - -	3,57,126
The difference is - - -	7,37,860

to be made out by bills or transmission of specie. It is to replace this difference that the Government bills on Bengal are punctually taken.

Madras, Imports from.

The imports for the year as above accumulated to no less than 16,95,850, of which the principal articles were as follows: India piece-goods, 14,44,000; oil, 53,400; spices, 18,000; salt, 17,500; rice, 13,200; India sundries, 19,130; European sundries, 13,800; cotton, 15,250; tobacco, 8,750. The balance being made up of sundry small articles, with the addition of a small quantity of British piece-goods sent for a market, 78,880.

Madras, Exports to.

The total exports to Madras during the same period in goods, were 2,38,765, of which the principal articles were as follows: pepper, 68,160; beetel nut, 40,716; metals, iron, lead and tutenague, 42,480; China camphor, 11,200; benjamin, 14,240; raw silk, 15,600; sugar, 10,500; tin, 13,320; sundries, China, Java, 10,364; besides sundry other petty articles.

The total imports being as above - - - *Sa. Rs.*	16,95,850
The exports in goods - - - - - - - -	2,38,765
The balance - - -	14,57,085

remained, of which has been sent in dollars a sum equal to 3,19,960; a certain portion has no doubt been met by Government bills drawn on Madras for payment of troops. The export and import of specie is seldom correctly reported, but it is generally understood that, excepting the sum remittable by Government bills, the whole amount of Madras piece-goods imported is returned in silver, first, in Madras rupees, as far as procurable, next in dollars, and lastly in sicca rupees; and this trade is reckoned one of the great drains of specie from the Straits.

Bombay, Imports from.

The total amount of imports from Bombay during the year 1828–29, were sicca rupees 2,65,290, of which the principal articles were as follows: brandy, 6,200; *cotton*, 27,600; wheat and grain, 8,700; opium, 36,000; India piece-goods, 93,100; salt, 21,700; India sundries, 45,700; with addition of a few minor items and of British piece-goods, sicca rupees 22,400, sent for a market.

Bombay, Exports to.

The total exports to Bombay during the above year amounted to sicca rupees 2,30,146, composed principally of the following articles: beetel nut, 22,792; benjamin, 18,000; brassware, 13,000; dameen, 14,600; pepper, 5,808; rice, 7,500; sago, 3,016; spices, 3,125; sticklac, 5,750; sugar, 16,800; tin, 97,680; China sundries, 2,950; Straits ditto, 15,020; with addition of minor articles, amongst which are British piece-goods to the amount of sicca rupees 2,000.

The total imports being as above - - - - *Sa. Rs.*	2,65,290	
The exports - - - - - - - - - -	2,30,146	
The balance is 35,144; but of silver coin there appears to have been an export to Bombay of a sum in dollars *Sa. Rs.*	68,412	
	14,834	
Sa. Rs. Mas. Rs.	12,806	
		96,052

England, Imports from.

The total amount from England during the year amounted to sicca rupees 1,67,670, the items being, beer, 9,280; brandy and gin, 4,800; iron, 5,830; sheet copper, 9,000; British piece-goods, 77,500; wine, 6,400; Europe sundries, 53,600; woollens, 1,260. The above compose the whole of the imports.

England, Exports to.

The total exports for the year to England in goods, amounted to sicca rupees 50,668, the items being as follows: ebony, 1,638; white pepper, 29,978; black pepper, 17,532; woollens, 240; China sundries, 1,288.

The total imports being as above - - - - *Sa. Rs.*	1,67,670
And the exports - - - - - - - - - -	50,668
The balance is - -	117,002

To which export, however, may be added silver, as follows:

In dollars - - - - - - *Sa. Rs*	38,858	
Sicca rupees - - - - - - -	4,105	
		42,963

The

China, Imports from.

The total imports from China amounted to sicca rupees 2,18,440, the articles being as follows: brassware, 4,100; camphor, 32,000; lutestring, 13,200; silks, 7,990; raw silks, 63,250; tobacco, 27,000; China sundries, 69,040.

China, Exports to.

The exports during the year amounted to sicca rupees 9,65,834, the principal items being as follows: beetel nut, 2,05,411; beech-de-mer, 77,820; birds' nests, 1,41,140; birds' feathers, 54,000; Malay camphor, 60,000; cutch, 6,400; ebony, 34,000; ivory, 5,680; opium, 55,605; pepper, 1,11,432; rattans, 14,140; rice, 15,015; spices, 48,375; tin, 86,321; tortoise-shell, 9,750; Straits sundries, 35,469; besides a few minor articles.

The total exports therefore being as above - - - *Sa. Rs.*	9,65,834
The imports being - - - - - - - - - - - -	2,18,440
The excess of exports is - - - - - - - - -	7,47,394

Nearly the whole of the exports are made on the Honourable Company's ships by the commanders: they are generally, it is believed, paid for in bills on Bengal: in former times, the practice used to be to pay in dollars, which tended materially to keep up the circulating medium for the general conduct of the trade. Since, however, the great alteration that has taken place in the exchange with England, instead of the import of specie from thence, it has become more advantageous to establish a credit on England, and through that medium on Calcutta, also drawing against it for the amount which the state of the markets may render it advisable to invest, thus saving the interest, which would be lost by bringing specie, the bills being drawn at such a run as to become due but a short time before the probable arrival of the ship in England with the China cargo, bought by the proceeds of the sale of the Straits produce. The trade, it will be observed, returns no specie to the Straits.

Java, Imports from.

The imports from Java amounted only in goods to sicca rupees 37,312, consisting principally of Java cloth, 14,100; rice, 9,720; tobacco, 4,400; sundries, 2,223, and a few minor articles of silver: there was imported in dollars to the amount of 30,522 sicca rupees.

Java, Exports to.

The exports amounted to 52,330 rupees, consisting principally of pepper, 18,000; India piece-goods, 29,500; sugar, 2,320, and a few trifling articles.

The exports being as above - - - - - - *Rs.*	52,330
And the imports - - - - - - - - - - -	37,312
The balance excess of exports is - - - - - -	15,018.

But little trade can be carried on between Java and Prince of Wales Island, Singapore intermediately situated affording a mart for exactly the same articles.

Ceylon, Imports from.

The whole imports from thence during the year amounted only to sicca rupees 56,206, consisting of arrack, 26,208; beech-de-mer, 4,000; ebony, 14,028; oil, 9,121; India sundries, 2,850.

Ceylon Exports to.

The exports amounted to sicca rupees 23,450, consisting principally of the following articles: India piece-goods, 3,500; British piece-goods, 3,000; sugar, 7,216; China sundries, 6,354. The imports being 56,206, and the exports only 23,450, the excess of imports is 32,756.

Siam, Imports from.

The total imports from Siam in goods amounted to sicca rupees 2,16,788, of which the following are the principal articles; beech-de-mer, 6,120; birds' nests, 13,080; oils, 1,843; paddy, 2,880; pepper, 4,810; India piece-goods, 4,800; rice, 4,800; sugar, 5,200; tin, 38,250; tobacco, 1,29,500; China sundries, 1,000; Siam sundries, 2,700; with a few minor articles of specie: there were imported in dollars to the amount of sicca rupees 6,315.

Siam, Exports to.

The exports amounted to 96,093 in goods, of which the following were the principal articles: beetel nut, 3,523; opium, 26,950; India piece-goods, 57,900; China tobacco, 7,360, with a few petty articles.

The imports being as above - - - - *Sa. Rs.*	2,16,788
The exports - - - - - - - - - - -	96,093
The excess of imports is - - - - - - - -	1,20,695

To the exports must be added dollars to the extent of sicca rupees 53,888. Considering that Singapore dealing in similar articles with Prince of Wales Island, and exactly between it and Siam, it seems rather surprising that this trade, small as it is, should continue.

Coast of Tenasserim, Imports from.

The total imports amounted to sicca rupees 1,77,010, the principal articles being, beech-de-mer, 9,000; birds' nests, 49,860; birds' feathers, 53,800; cutch, 9,280; Dhool wheat and gram, 7,500; ivory, 1,760; rice, 20,400; cardamums, 10,460; tortoise-shell, 3,480; Straits sundries, 9,960; besides a few articles.

Coast of Tenasserim, Exports to.

The exports amounted to sicca rupees 1,55,152 in goods, the principal articles being, beer 5,248; beetel nut, 8,109; brandy, 6,600; iron, 1,570; opium, 1,685; pepper, 1,044; India piece-goods, 11,500; British piece-goods, 21,600; raw silk, 12,000; spices, 1,812; sugar, 5,120; tobacco, 3,580; wines, 7,524; woollens, 12,815; China sundries, 30,265; Europe ditto, 14,698; India ditto, 8,313; besides a few minor articles.

The amount of imports being as above - - - *Sa. Rs.*	1,77,010
Exports - - - - - - - - - - -	1,55,152
The excess of imports is - - - - - - - -	21,858

to which must be added an export of specie as follows: in dollars, 10,525; in sicca rupees, 17,000.

The above are the recently acquired provinces. The Europe articles exported there, it will be understood, are for the use of the European officers and troops there stationed. India and British goods probably find sale there to a considerable amount; the returns are principally for the China market. The islands on the Mergui Archipelago are the principal places where the important article birds' nests is produced, and were these countries once settled under the British Government, and the islands duly protected from plunder, a very great increase of trade might be expected.

Acheen, Imports from.

The total imports from thence for the year amounted to sicca rupees 8,08,513, consisting principally of the following articles: beetel nut, 2,80,000; beech-de-mer, 18,120; bees'-wax, 2,465; benjamin, 34,000; birds' nests, 12,000; camphor, Malay, 88,000; coffee, 24,800; darumer, 21,800; paddy, 4,980; oil, 2,640; pepper, 2,21,448; India piece-goods, 37,500; rattans, 2,900; rice, 38,400; spices, 10,460; tortoise-shell, 9,000.

Acheen, Exports to.

The exports thither amount to sicca rupees 10,75,842, of which the following are the principal articles: brassware, 5,600; cotton, 34,200; iron, 8,700; lutestring, 24,000; opium, 3,74,070; India piece-goods, 3,62,500; British piece-goods, 74,400; raw silk, 4,200; salt, 6,120; sticklac, 90,550; tobacco, 10,240; woollens, 1,200; China sundries, 56,067; Europe sundries, 16,867; India sundries, 15,786; Siam sundries, 2,500; Straits sundries, 7,140; besides a few minor articles.

The exports being as above - - - - - - *Sa. Rs.*	10,75,842
The imports - - - - - - - - - - -	8,08,513
The excess of exports is - - - - - - - - -	2,67,329

To the imports must be added specie in dollars to the amount of sicca rupees 1,69,494.

Delhi, Imports.

This is a petty state on the Sumatra shore. The total imports from, were sicca rupees 2,04,905, consisting of bees'-wax, 1,625; pepper, 1,76,520; rattans, 25,000; Straits sundries, 1,440.

Delhi, Exports.

The exports of this port amount to sicca rupees 1,58,930, in goods principally as follows: iron, 3,020; opium, 34,542; piece-goods, Europe, 94,000; raw silk, 10,800; salt, 12,600; tobacco, 3,600.

The imports being - - - - - - - - *Sa. Rs.*	2,04,905
The exports - - - - - - - - - -	1,58,930
The excess of imports is - - - - - - -	45,975

To the exports must however be added specie in dollars to the amount of sicca rupees 73,675.

Quedah, Imports.

The total imports amounted to sicca rupees 2,21,200, composed of the following principally: birds' nests, 5,340; ghee, 2,000; paddy, 7,560; rice, 1,72,640; tin, 7,030; Straits sundries, 26,000.

Quedah, Exports.

The total exports from Quedah amounted to sicca rupees 1,35,930, in goods as follows: cotton, 3,960; iron, 1,600; sheet copper, 4,000; opium, 28,645; India piece-goods, 68,000; salt, 12,840; sugar, 1,275; tobacco, 6,240; China sundries, 2,520; India sundries, 2,600; Straits sundries, 4,250.

The total imports being - - - - - - - *Sa. Rs.*	2,21,200
And the exports - - - - - - - - -	1,35,930
The excess of imports is - - - - - - - -	85,270

To the exports however must be added specie in dollars to the amount of sicca rupees 96,341. The principal item of trade is the rice imported for the consumption of the island.

Other Native Ports, Imports from.

These imports amount in all to sicca rupees 60,741, consisting principally of rattans, 16,550; tin, 41,181; Straits sundries, 1,400.

Other Native Ports, Exports to.

The exports being 60,635, consisting principally of opium, 16,850; India piece-goods, 33,500; raw silk, 1,200; salt, 2,580; sugar, 1,008; tobacco, 1,800; China sundries, 1,180; India sundries, 2,167.

The imports being - - - - - - - - *Sa. Rs.*	60,741
The exports - - - - - - - - - - -	60,635
The excess of imports is - - - - - - - -	106

To the exports must be added specie in dollars to the amount of sicca rupees 6,315.

From

From the foregoing, it appears that the total imports of goods into Penang, as set forth by the general statement, amounted in 1828–29 to - - - *Sa. Rs.* 52,23,872
And the exports to - - - - - - - - - 36,00,900

The excess of imports being - - - - - - - - 16,22,972

Of this excess, the following compose the principal items, viz.: Dhall wheat and gram, 34,620; opium, 2,08,043; oils, 93,898; Europe piece-goods, 93,080; India piece-goods, 11,26,790; rice, 3,19,395. The Dhall wheat, gram and rice are for the consumption of the place; the other articles compose a balance on hand.

It will be seen, that of certain articles there is an excess of exports, and these are principally, beech-de-mer, 39,980; beetel nut, 38,306; birds' nests, 60,860; gold dust, 54,000; iron, 27,000; specie, 36,092; sticklac, 81,050; tin, 130,610. This probably is only the periodical adjustment, the excess being the store of the former year. Specie, pepper, nutmegs and cloves, are not produced on the island, and from this source the excess of exports may in a small degree proceed.

The import of specie amounts to - - - - - - *Rs.* 8,32,232
The exports being - - - - - - - - - 7,19,876

The excess of import being - - - - - - - - 1,12,356

But as far as commercial results are concerned, we must deduct from the imports no less than 5,94,620 imported by Government: taking this from the imports, the commercial import would be sicca rupees 2,37,612, which deduct from 7,19,876, leaving excess of exports of the precious metals 4,82,264. While the imports of goods from Bengal as well as Madras so far exceed the exports, and so large a balance remains returnable in specie, the Government bills are generally the medium of adjustment. The import of specie by Government arises only in some years from accidental circumstances, a public demand at times when commercial demand for bills does not exist, or the expediency of keeping up the circulation of a particular coin, the sicca rupee. There is no doubt the Government might, at a certain season, fill their treasury at a favourable rate; and this probably has not been generally done from an objection to draw at once, within a month probably, for the surplus expenditure of the whole year. It is evident that the course of trade must unavoidably lead to the exportation of the precious metals to a great extent: the only counteraction and consequent retention of the circulating medium arises from the great expenditure from the public treasury; up to this time seldom less than one lack of rupees per month thrown into the market, and the remittance by bills instead of specie, which retains so much in the place. When the projected abolition of the Government takes place, and the consequent reduction of public expenditure to a sum nearly within the regular receipts, the drawing of bills, as well as import of specie by Government will cease, and the counteracting principle being destroyed, a comparative deficiency in the circulating medium must be formed, to an extent probably to induce the same process of commercial dealings so observed at Singapore, the barter of goods against each other, instead of the more certain and substantial one of sale and purchase by the medium of actual cash. Of the statements of intermediate trade between Prince of Wales Island, Singapore and Malacca, little information can be added to the contents of the statements themselves; they contain merely the occasional import and export of the same articles, sent from one place to another in search of a market, according as the rise or fall of prices affords prospects of sale.

The total amount of imports into Prince of Wales Island from
Singapore is - - - - - - - - - *Sa. Rs.* 6,76,026
And from Malacca - - - - - - - - - - 1,12,117

Total - - - 7,88,143

The import of specie from the former is - - - - *Sa. Rs.* 1,17,522
And from the latter - - - - - - - - - 1,40,595

Total - - - 2,58,117

The exports are as follows:
To Singapore - - - - - - *Sa. Rs.* 11,47,535
To Malacca - - - - - - - 29,395

Total in goods - - - 11,76,930
And in specie - - - 29,395

The excess of the export to Singapore over the import, 4,17,509, is produced principally from the export of India piece-goods, to the amount of no less than 7,83,500, counterbalanced by import of British piece-goods, sticklac and sundry other articles. The export and import of the same articles to and for the same places, may no doubt excite some surprise; it can be accounted for only to the anxiety of merchants to get rid of the surplus goods. This transit keeps in constant employ country vessels, to the extent of from 600 to 800 tons.

The trade of Singapore is carried on with the following places; England, Foreign Europe, South

South America, Mauritius, Cape of Good Hope, and New South Wales; Calcutta, Madras, Bombay, China, Java, Rio, Siam, Cochin China, Ceylon, Acheen, and North Pepper Ports; Sumatra, East Coast of Peninsula, Straits, Celebes, Borneo, Balley, Manilla, Comboya, and neighbouring islands and other native ports.

England, Imports from.

The imports of goods from England into Singapore for this year, amount to sicca rupees 24,14,430, of which the principal items are, beer, 35,065; brandy and spirits, 22,740; cochineal, 5,262; copperware, 5,887; copper sheathing, 64,019; earthenware, 45,811; glassware, 12,897; gold thread, 3,789; iron, 1,35,791; ironware-mongery, 16,48,859; umbrellas, 1,593; wines, 50,541; woollens, 94,301; sundries, 2,66,202.

England, Exports to.
Specie in value, *Sa. Rs.* 37,014.

The exports to England amount to sicca rupees 66,02,716, of which the principal articles are, bees'-wax, 3,816; benjamin, 8,744; brandy and spirits, 4,319; camphor, China, 2,06,466; coffee, 5,41,123; dragon's blood, 3,435; earthenware, 10,339; gold dust, 1,263; hides, 2,589; ivory, 8,506; mother-of-pearl shell, 12,587; nankeens, 8,22,941; oil, 1,578; pepper, 2,04,595; piece-goods, India, 1,12,390; rattans, 27,009; raw silk, 32,71,565; saltpetre, 10,415; spices, 2,28,643; sugar, 4,08,894; tin, 43,431; tortoise-shell, 3,79,321; wood, sapan, 3,730; wood, bookoa, 3,648; woollens, 2,105; sundries, India, 1,07,961; sundries, China, 1,69,086; sundries, Straits, 1,300; exclusive of sundry small quantities of other articles, amounting to about rupees 900.

A comparison of the trade with England shows an excess of exports amounting nearly to sicca rupees 42,98,286; of this excess the principal article is raw silk, to the extent of rupees 32,71,565; this article is imported from China, landed and re-exported only in consequence of the law preventing its being carried direct from China. A few further articles imported also from China under similar circumstances: nankeen cloths amount to 8,22,941; spices, 2,28,643; China sundries, 1,67,961. The imports and exports of specie are scarcely worth notice. The great proportion of the funds for the conduct of this trade is probably derived from the proceeds of sale in India and Straits produce carried for sale to China, by the commanders of the Honourable Company's ships, the returns being in excess to their privilege tonnage, and of necessity sent by another ship. On this trade the Singapore merchants gain only the commission of one per cent. for landing and re-shipping.

Foreign Europe, Imports from.

The imports from Foreign Europe amount to sicca rupees 86,509, of which the principal articles are, brandy, 6,946; hides, 1,999; iron, 18,229; piece-goods, 6,315; wines, 14,676; woollens, 37,039; exclusive of small articles amounting to sicca rupees 1,203.

Foreign Europe, Exports to.

The exports to Foreign Europe amount to sicca rupees 2,20,988, of which the principal articles are, camphor, China, 6,567; coffee, 9,291; nankeens, 1,010; pepper, 15,740; rattans, 2,650; raw silk, 29,891; spices, 8,826; sugar, 81,362; tea, 17,050; iron, 34,124; wood, sapan, 10,392; sundries, India, 3,504; exclusive of other small articles amounting to sicca rupees 574.

A comparison of the trade with Foreign Europe, shows an excess of exports amounting to sicca rupees 1,34,479. From what source the funds are derived that pay for the excess, does not appear: the articles exported are in general China and Straits produce.

South America, Imports from.
Specie in value, *Sa. Rs.* 25,260.

The amount of imports is sicca rupees 80,108, of which the principal articles are, brandy and spirits, 3,157; copper, Peruvian, 23,243; glassware, 2,484; gold dust, 3,157; iron, 19,534; ironware and mongery, 4,073; piece-goods, 1,132; wines, 4,231; sundries, 18,841; exclusive of small articles amounting to sicca rupees 252.

South America, Exports to.
Specie in value, *Sa. Rs.* 21,050.

The amount of exports is sicca rupees 72,105, of which the principal articles are, bees'-wax, 1,088; gunnies, 2,050; nankeens, 7,074; pepper, 5,346; piece-goods, India, 20,850; rattans, 2,294; rice, 8,657; spices, 9,927; sago, 3,691; tortoise-shell, 1,155; wheat and gram, 1,105; sundries, India, 4,527; sundries, China, 2370; exclusive of small articles amounting to sicca rupees 1,985.

A comparison of the trade with South America shows an excess of imports amounting to nearly sicca rupees 8,003.

Mauritius, Cape of Good Hope and New South Wales, Imports from.

The amount of imports from these places is sicca rupees 43,868, of which the principal articles are, beech-de-mer, 17,004; ebony, 15,989; wines, 3,761; wood, sandal, 5,809; sundries, Europe, 1,134; exclusive of small articles amounting to sicca rupees 168.

Mauritius, Cape of Good Hope and New South Wales, Exports to.

The amount of exports to these places is sicca rupees 34,164, of which the principal articles are, copperware 1,684; copper sheathing, 6,315; earthenware, 1,082; pepper, 3,629; piece-goods, Europe, 2,178; rattans, 1,761; rice, 8,851; sugar candy, 1,578; tea, 1,263; wheat and gram, 2,886; exclusive of small articles amounting to sicca rupees 1,460.

A comparison of the trade of these places shows an excess in the imports of sicca rupees 9,705.

Calcutta, Imports from.
Specie in value, *Sa. Rs.* 7,542.

The imports from Calcutta for this year amount to sicca rupees 29,69,544, of which the principal articles are, benjamin, 6,315; cotton, 1,263; gold thread, Europe, 1,684; gunny bags, 44,179; hides, 1,202; opium, 17,75,445; piece-goods, Europe, 69,669; piece-goods, India, 7,82,260; saltpetre, 5,740; wheat and gram, 26,828; wines, 16,012; woollens, 1,86,608 sundries, Europe, 23,830; sundries, India, 27,596; exclusive of small articles amounting to sicca rupees 908.

The

Calcutta, Exports to.
Specie in value, *Sa. Rs.* 1,03,418.

The exports of Calcutta for this year amount to sicca rupees 22,55,476, of which the principal articles are, bees'-wax, 17,425; benjamin, 5,894; brandy and spirits, 17,229; brassware, 1,010; coffee, 1,069; copper, Japan, 4,81,720; copper, Peruvian, 23,997; gold dust, 5,54,480; hides, 5,999; ironware and mongery, 2,841; nankeens, 1,743; pepper, 2,06,100; piece-goods, Europe, 11,493; piece-goods, India, 1,841; rattans, 36,834; spelter, 80,011; spices, 25,582; sago, 1,806; sticklac, 3,728; tin, 5,89,507; tortoise-shell, 20,970; wines, 8,114; wood, sapan, 76,586; woollens, 19,366; sundries, Europe, 14,425; sundries, India, 40,563; sundries, Java, 1,052; exclusive of small articles amounting to sicca rupees 4,091.

A comparison of the trade with Calcutta shows an excess of imports, sicca rupees 7,14,063, nearly a balance met partly by bills drawn by the resident on account of Government, a part by export of specie, sicca rupees 1,03,418.

Madras, Imports from.
Specie in value, *Sa. Rs.* 5,683.

The amount of imports from this port is sicca rupees 10,84,595, of which the following are the principal articles: cotton, 9,472; ebony, 5,473; piece-goods, India, 10,59,141; sundries, Europe, 3,789; sundries, India, 5,292; exclusive of small articles amounting to sicca rupees 1,426.

Madras, Exports to.
Specie in value, *Sa. Rs.* 2,95,916.

The amount of exports to this port is sicca rupees 97,682, of which the following are the principal articles: beetel nut, 1,052; brandy and spirits, 2,620; copper, Japan, 16,800; gold dust, 2,917; iron, 3,831; ironware and mongery, 1,199; opium, 1,684; pepper, 10,386; piece-goods, Europe, 14,787; rattans, 11,676; raw silk, 7,156; tin, 2,987; wines, 1,263; sundries, Europe, 7,761; sundries, India, 6,862; sundries, China, 1,262; exclusive of small articles amounting nearly to sicca rupees 393.

A comparison of the trade with Madras shows an excess of imports of sicca rupees 9,86,913, met in part by export of specie to the amount of 2,95,916; the balance may be accounted for by the yet unsold piece-goods, the principal articles of import. The Madras merchants who generally return with their own goods, invariably carry away specie in return, Madras rupees if to be had, next dollars, and last sicca rupees.

Bombay, Imports from.
Specie in value, *Sa. Rs.* 2,105.

The amount of imports from Bombay is sicca rupees 3,80,144, of which the principal articles are, cotton, 14,781; opium, Malwa, 1,92,081; pepper, 14,053; piece-goods, Europe, 52,644; piece-goods, India, 72,864; spices, 3,098; sundries, India, 30,676; exclusive of small articles amounting to sicca rupees 942.

Bombay, Exports to
Specie in value, *Sa. Rs.* 81,377.

The amount of exports from Singapore to Bombay is sicca rupees 2,91,659, of which the principal articles are, benjamin, 5,153; brandy and spirits, 26,929; camphor, China, 3,725 ditto, Malay, 31,869; copper, Japan, 35,195; gold dust, 28,701; iron, 2,105; opium, 4,125; pepper, 2,039; piece-goods, Europe, 1,157; piece-goods, India, 3,178; spelter, 6,422; spices, 5,601; sticklac, 10,893; sugar, 33,143; tin, 46,834; wines, 1,494; wood, sapan, 18,372; sundries, Europe, 1,549; sundries, China, 17,757; exclusive of small articles amounting nearly to sicca rupees 5,106.

A comparison of the trade with Bombay shows an excess of imports amounting nearly to sicca rupees 88,485.

China, Imports from.
Specie in value, *Sa. Rs.* 31,311.

The amount of imports from China is sicca rupees 55,90,823, of which the principal articles are, benjamin, 2,105; brassware, 5,231; camphor, China, 2,52,593; dragon's blood, 2,020; earthenware, 1,06,414; ironware and mongery, 2,568; joss paper and sticks, 23,148; nankeens, 8,82,971; piece-goods, India, 1,17,810; raw silk, 34,96,701; spices, 3,39,206; sugar candy, 8,672; tea, 5,106; tobacco, 27,720; tortoise-shell, 3,732; umbrellas, 8,861; sundries, India, 5,828; sundries, China, 2,99,408.

China, Exports to.
Specie in value, *Sa. Rs.* 52,477.

The amount of exports to China is sicca rupees 17,60,251, of which the principal articles are, beech-de-mer, 1,01,517; beetel nut, 2,420; birds' nests, 1,81,598; camphor, Malay, 79,221; cochineal, 5,262; cotton, 9,990; ebony, 84,498; gold dust, 12,630; hides, 2,977; iron, 2,631; ivory, 3,999; opium, 6,24,862; pepper, 76,574; piece-goods, Europe, 41,655; rattans, 1,48,820; rice, 2,357; saltpetre, 5,430; sea weed, 20,746; spices, 1,157; sago, 4,986; tin, 1,11,411; tortoise-shell, 36,267; wares, 2,420; wood, jarroo, 5,287; wood, sapan, 4,597; wood, sandal, 4,403; wood, sakkah, 5,578; wood, canangee, 5,052; woollens, 58,177; sundries, Europe, 71,483; sundries, India, 31,263; sundries, Straits, 6,666.

A comparison of the trade with China shows an excess in the imports of nearly 38,30,572 rupees. The excess of imports finds its way to England as explained above.

Java, Imports from.
Specie in value, *Sa. Rs.* 2,94,207.

The imports from Java amount to sicca rupees 11,54,933, of which the principal articles are, beech-de-mer, 10,360; birds' nests, 16,840; brandy and spirits, 51,901; brassware, 11,221; coffee, 2,10,228; copper, Japan, 2,81,575; glassware, 1,599; nankeens, 2,037; oil, 2,856; pepper, 30,442; piece-goods, Europe, 14,981; piece-goods, India, 7,138; piece-goods, Malay, 65,953; rattans, 25,674; rice, 1,51,958; salt, 11,152; spices, 36,833; sugar, 1,153; tin, 35,237; tobacco, 1,08,389; tortoise-shell, 4,210; wheat and gram, 1,162; wines, 14,387; sundries, Europe, 9,049; sundries, India, 16,039; sundries, Java, 28,977.

Java, Exports to.
Specie in value, *Sa. Rs.* 51,157.

The exports to Java amount to sicca rupees 9,83,440, of which the principal articles are, bees'-wax, 22,188; beer, 3,848; benjamin, 1,246; copper sheathing, 3,797; earthenware, 30,628; iron, 5,919; ironware and mongery, 7,209; joss paper and sticks, 1,886; nankeens, 15,309; oil, 3,978; opium, 3,03,695; piece-goods, Europe, 47,840;

piece-goods, India, 3,31,403; piece-goods, Malay, 8,540; raw silk, 16,014; spelter, 2,926; sticklac, 12,684; sugar, 42,977; tea, 7,310; umbrellas, 2,477; wheat and gram, 8,268; wines, 2,147; sundries, Europe, 8,109; sundries, India, 45,953; sundries, China, 6,429; sundries, Straits, 6,080.

A comparison of the trade with Java shows an excess of imports of sicca rupees 1,71,493.

Rhio, Imports from. Specie in value, *Sa. Rs.* 13,193.

The amount of imports is sicca rupees 1,80,009, of which the principal articles are, beech-de-mer, 3,268; coffee, 9,283; opium, 4,631; pepper, 57,575; piece-goods, Malay, 1,064; rattans, 4,551; rice, 5,342; salt, 1,744; sea-weed, 4,731; sticklac, 1,578; tin, 5,525; tobacco, 10,640; wood, sapan, 18,618; sundries, Europe, 1,263; sundries, India, 47,539; exclusive of small articles amounting nearly to sicca rupees 2,650.

Rhio, Exports to. Specie in value, *Sa. Rs.* 41,135.

The amount of exports is sicca rupees 1,55,084, of which the principal articles are, copper sheathing, 2,227; earthenware, 3,193; iron, 1,936; nankeens, 1,494; opium, 1,254; piece-goods, Europe, 5,003; piece-goods, India, 50,391; piece-goods, Malay, 1,233; raw silk, 1,768; rice, 58,835; sago, 1,434; sticklac, 1,056; tobacco, 1,063; woollens, 6,163; sundries, India, 5,527; sundries, China, 1,743; sundries, Straits, 1,845.

A comparison of the trade with Rhio shows an excess in the imports of nearly sicca rupees 24,925.

Siam, Imports from. Specie in value, *Sa. Rs.* 21,192.

The amount of imports is sicca rupees 7,71,057, of which the principal articles are, brandy and spirits, 1,894; earthenware, 6,746; ironware and mongery, 14,741; ivory, 4,946; joss paper and sticks, 2,505; nankeens, 22,355; oil, 21,298; pepper, 3,641; piece-goods, Europe, 8,420; piece-goods, India, 4,536; rice, 79,095; salt, 42,967; sticklac, 74,748; sugar, 3,53,067; sugar candy, 1,305; tin, 19,323; tobacco, 8,493; wood, sapan, 72,633; woollens, 3,262; sundries, India, 22,687; exclusive of small articles amounting nearly to sicca rupees 2,380.

Siam, Exports to. Specie in value, *Sa. Rs.* 36,942.

The amount of exports is sicca rupees 6,03,246, of which the principal articles are, bees'-wax, 5,633; camphor, Malay, 3,725; copper sheathing, 3,447; earthenware, 3,578; glassware, 13,081; gold dust, 9,767; opium, 1,14,201; pepper, 1,263; piece-goods, Europe, 1,81,729; piece-goods, India, 1,86,274; rattans, 22,160; raw silk, 2,904; spelter, 2,105; sago, 1,317; woollens, 8,756; sundries, Europe, 26,170; sundries, India, 13,708.

A comparison of the trade with Siam shows an excess of imports of nearly sicca rupees 1,67,811.

Cochin China, Imports from. Specie in value, *Sa. Rs.* 263.

The amount of imports is sicca rupees 2,31,184, of which the principal articles are, oil, 2,518; opium, 2,210; piece-goods, India, 1,526; piece-goods, Malay, 2,797; raw silk, 1,715; rice, 1,54,191; salt, 24,195; sticklac, 6,904; sugar, 81,561; tobacco, 1,359; sundries, India, 19,422; sundries, China, 2,547; exclusive of small articles amounting to sicca rupees 3,290.

Cochin China, Exports to. Specie in value, *Sa. Rs.* 1,658.

The amount of exports is sicca rupees 1,06,252, of which the principal articles are, opium, 91,081; piece-goods, Europe, 1,269; rattans, 3,056; wood, sapan, 1,157; sundries, Europe, 2,757; sundries, India, 3,324; sundries, Straits, 1,368; exclusive of small articles amounting to sicca rupees 2,235.

A comparison of the trade with Cochin China shows an excess of imports of nearly sicca rupees 1,24,932.

Ceylon, Imports from.

The amount of imports is sicca rupees 28,002, of which the principal articles are, brandy and spirits, 15,078; ebony, 7,578; sundries, Europe, 168; sundries, India, 5,178.

Ceylon, Exports to.

The amount of exports is sicca rupees 2,315, consisting of sundry small articles, nankeens, spelter, and Europe sundries.

A comparison of the trade with Ceylon shows an excess in the imports of nearly sicca rupees 25,687.

Acheen and other Northern Pepper Ports, Imports from and Exports to. Specie in value, *Sa. Rs.* 105.

The only import from these places is specie to the amount of sicca rupees 8,420.

The amount of exports is sicca rupees 45,815, of which the principal articles are, copper, Japan, 1,389; earthenware, 12,731; opium, 3,157; piece-goods, Europe, 5,978; piece-goods, India, 10,104; sticklac, 3,957; woollens, 3,157; sundries, India, 1,116; sundries, China, 1,052; exclusive of small articles amounting to sicca rupees 3,060.

Other Ports on Sumatra, Imports from. Specie in value, *Sa. Rs.* 86,559.

The amount of imports is sicca rupees 4,39,238, of which the principal articles are, bees' wax, 13,281; benjamin, 1,738; beetel nut, 6,341; brandy and spirits, 1,814; coffee, 1,20,626; copper, Japan, 2,273; dragon's blood, 2,164; gold dust, 17,861; ivory, 2,204; opium, 2,105; pepper, 37,934; piece-goods, India, 7,788; rattans, 69,246; rice, 29,587; sago, 10,069; salt, 4,584; spices, 15,590; tin, 46,143; tobacco, 5,332; sundries, Europe, 7,883; sundries, India, 14,443; sundries, Java, 11,923.

Other Ports on Sumatra, Exports to.

The amount of exports is sicca rupees 3,77,709, of which the principal articles are, copper sheathing, 2,947; cotton, 14,718; earthenware, 5,091; iron, 6,392; ironware and

mongery,

mongery, 1,206; oil, 1,039; opium, 10,072; piece-goods, Europe, 33,745; piece-goods, India, 1,93,771; piece-goods, Malay, 15,504; raw silk, 8,687; rice, 2,127; salt, 31,653; sticklac, 13,688; tin, 1,162; tobacco, 8,072; sundries, Europe, 13,718; sundries, India, 4,214; sundries, Straits, 1,087; exclusive of small articles amounting nearly to sicca rupees 9,690.

Specie in value, *Sa. Rs.* 50,576.

A comparison of the trade with Sumatra shows an excess of imposts of sicca rupees 61,529 nearly.

East Coast of the Peninsula, Imports from.

Specie in value, *Sa. Rs.* 3,568.

The imports amount to sicca rupees 6,53,032, of which the principal articles are, gold dust, 2,12,443; nankeens, 8,630; opium, 9,809; pepper, 1,05,015; piece-goods, Europe, 1,315; piece-goods, India, 1,947; piece-goods, Malay, 2,050; rattans, 3,829; rice, 1,042; salt, 3,915; sticklac, 7,329; sugar, 7,809; tin, 2,79,193; tortoise-shell, 1,199; sundries, India, 4,063; exclusive of small articles amounting nearly to sicca rupees 3,430.

East Coast of the Peninsula, Exports to.

Specie in value, *Sa. Rs.* 73,080.

The exports amount to sicca rupees 5,93,423, of which the particular articles are, beech-de-mer, 2,315; brassware, 1,031; ebony, 1,052; iron, 6,340; opium, 3,69,222; piece-goods, Europe, 22,095; piece-goods, India, 46,385; piece-goods, Malay, 17,372; raw silk, 8,022; rice, 27,597; salt, 1,834; tobacco, 58,582; sundries, Europe, 20,043; sundries, India, 6,453; exclusive of small articles amounting nearly to sicca rupees 4,270.

A comparison of the trade with the east coast of the Peninsula shows an excess on imports of about sicca rupees 59,609.

Straits, Imports from.

Specie in value, *Sa. Rs.* 1,873.

The imports amount to sicca rupees 1,89,120, of which the principal articles are, ebony, 1,391; rattans, 2,373; sago, 1,079; tin, 1,74,033; sundries, Straits, 8,522; exclusive of small articles amounting nearly to sicca rupees 1,700.

Straits, Exports to.

Specie in value, *Sa. Rs.* 70,525.

The exports amount to sicca rupees 72,316, of which the principal articles are, nankeens, 1,012; opium, 15,221; piece-goods, Europe, 1,461; piece-goods, India, 9,057; piece-goods, Malay, 20,592; rice, 5,381; salt, 2,897; tobacco, 11,676; exclusive of small articles amounting nearly to about sicca rupees 5,020.

A comparison of the Straits' trade shows an excess in the imports of sicca rupees 1,16,804.

Celebes, Imports from.

Specie in value, *Sa. Rs.* 65,928.

The amount of imports is sicca rupees 4,02,157, of which the principal articles are, beech-de-mer, 15,835; bees'-wax, 3,717; birds' nests, 26,356; coffee, 7,579; ebony, 1,098; gold dust, 4,262; iron, 10,681; mother-of-pearl shell, 1,708; oil, 1,857; piece-goods, Malay, 1,42,145; rattans, 3,176; rice, 5,351; spices, 3,589; tobacco, 1,114; tortoise-shell, 1,69,241; sundries, 2,170.

Celebes, Exports to.

Specie in value, *Sa. Rs.* 15,577.

The exports amount to sicca rupees 5,03,248, of which the principal articles are, earthenware, 1,050; gold dust, 1,263; iron, 6,993; ironware and mongery, 4,143; opium, 1,89,692; piece-goods, Europe, 61,618; piece-goods, India, 1,37,814; piece-goods, Malay, 1,599; raw silk, 44,357; sticklac, 4,328; tobacco, 1,723; woollens, 14,168; sundries, Europe, 6,231; sundries, India, 19,971; sundries, Straits, 6,166; exclusive of small articles amounting nearly to sicca rupees 2,119.

A comparison of the trade with the Celebes shows an excess in the exports of sicca rupees 1,01,091.

Borneo, Imports from.

Specie in value, *Sa. Rs.* 27,565.

The imports amount to sicca rupees 4,28,722, of which the principal articles are, antimony oil, 1,416; beech-de-mer, 4,163; bees'-wax, 18,345; birds' nests, 63,347; brassware, 3,111; camphor, Malay, 33,787; ebony, 1,357; gold dust, 1,00,519; opium, 2,947; pepper, 32,148; piece-goods, Malay, 3,767; rattans, 93,301; rice, 4,665; sago, 3,420; tortoise-shell, 27,280; wood, garroo, 8,020; sundries, India, 20,945.

Borneo, Exports to.

Specie in value, *Sa. Rs.* 22,553.

The amount of exports is sicca rupees 3,46,122, of which the principal articles are, brassware, 4,658; earthenware, 1,330; iron, 15,189; ironware and mongery, 2,577; joss paper and sticks, 1,307; nankeens, 19,125; opium, 22,758; piece-goods, Europe, 8,100; piece-goods, India, 2,30,024; piece-goods, Malay, 8,385; raw silk, 9,645; suet, 1,684; sticklac, 1,187; tea, 1,084; tobacco, 5,092; sundries, Europe, 2,568; sundries, India, 7,805; exclusive of small articles amounting nearly to rupees 2,820.

A comparison of the trade with Borneo exhibits an excess of imports amounting to sicca rupees 78,600.

Bally, Imports from.

Specie in value, *Sa. Rs.* 45,110.

The amount of imports is sicca rupees 75,279, of which the particular articles are, bees'-wax, 2,841; birds' nests, 6,555; ebony, 1,435; piece-goods, Malay, 16,911; rice, 19,232; tobacco, 2,096; tortoise-shell, 21,035; sundries, India, 1,589; exclusive of small articles amounting nearly to sicca rupees 4,878.

Bally, Exports to.

Specie in value, *Sa. Rs.* 969.

The exports amount to sicca rupees 1,79,568, of which the principal articles are, iron, 2,125; ironware and mongery, 1,368; opium, 1,39,217; piece-goods, Europe, 4,759; piece-goods, India, 20,412; raw silk, 1,199; woollens, 1,172; sundries, India, 4,144; sundries, China, 1,344; sundries, Straits, 1,174; exclusive of small articles amounting nearly to sicca rupees 2,660.

A comparison of the trade with Bally exhibits an excess of exports amounting to sicca rupees 1,04,289.

The

Manilla, Imports from.
Specie in value, *Sa. Rs.* 39,026.

The amount of imports is sicca rupees 2,21,546, of which the principal articles are, coffee, 1,473; copper sheathing, 5,953; hides, 1,330; mother-of-pearl shell, 8,510; oil, 3,144; piece-goods, Europe, 33,928; rice, 1,063; spices, 6,315; sugar, 69,846; tea, 1,578; wood, Japan, 16,686; sundries, India, 68,396.

Manilla, Exports to.
Specie in value, *Sa. Rs.* 39.995.

The amount of exports is sicca rupees 3,10,891, of which the principal articles are, bees'-wax, 18,077; beetel nut, 5,262; earthenware, 23,874; glassware, 4,294; iron, 9,897; opium, 3,704; pepper, 25,965; piece-goods, Europe, 1,33,943; piece-goods, India, 32,059; rattans, 12,617; sago, 4,435; woollens, 14,130; sundries, Europe, 14,307; sundries, India, 6,544; sundries, China, 1,553; exclusive of small articles amounting to sicca rupees 260 nearly.

A comparison of the trade with Manilla exhibits an excess of exports, amounting to sicca rupees 89,345.

Comboja, Imports from.

The imports from Comboja amount to sicca rupees 8,051, of which the principal articles are, piece-goods, Malay, 1,684; rice, 1,431; tobacco, 1,578; exclusive of small articles, making up the above amount.

Comboja, Exports to.

None. Excess of imports, sicca rupees 8,051.

Neighbouring Islands and other Native Ports, Imports from.
Specie in value, *Sa. Rs.* 16,976.

The amount of imports is sicca rupees 2,12,614, of which the principal articles are, beech-de-mer, 9,653; bees'-wax, 4,616; birds' nests, 1,210; brandy and spirits, 21,165; coffee, 3,021; oil, 5,486; pepper, 18,477; piece-goods, Malay, 8,978; rattans, 12,998; rice, 1,597; sago, 2,061; sea-weed, 10,378; tin, 67,208; tobacco, 7,176; tortoise-shell, 23,976; sundries, 10,262.

Neighbouring Islands and other Native Ports, Exports to.
Specie in value, *Sa. Rs.* 46,826.

The amount of exports is sicca rupees 2,11,625, of which the principal articles are, earthenware, 4,394; iron, 2,119; ironware and mongery, 4,083; ivory, 1,052; nankeens, 3,510; oil, 1,395; opium, 61,658; piece-goods, Europe, 8,626; piece-goods, India, 51,963; piece-goods, Malay, 9,432; raw silk, 7,708; rice, 15,263; salt, 8,978; sago, 1,180; sticklac, 1,173; sugar, 4,277; sugar-candy, 3,410; tobacco, 3,532; wood, garroo, 4,736; wood, sapan, 2,947; woollens, 3,307; sundries, Europe, 1,254; sundries, India, 3,531; sundries, Straits, 1,185.

A comparison of the trade with the neighbouring islands and native ports exhibits an excess of imports amounting nearly to sicca rupees 989.

From the foregoing it appears, as detailed in the general statement, that the total imports into Singapore in goods, during the official year 1828-29, amounted to

	Sa. Rs. 1,76,40,969½
And the exports to - - - - - - - - -	1,58,25,997¾
The excess of imports being - - - - - - - - -	18,14,971¾

Of this excess, the following compose the principal items, viz.: brandy and other spirits, 73,313; copper sheathing, 50,923; earthenware, 60,252; iron, 1,17,172; British piece-goods, 12,40,821; India piece-goods, 6,15,871; Malay piece-goods, 1,61,933; rice, 3,25,741; spices, 1,23,368; tobacco, 82,244; wines, 88,006; woollens, 1,51,899; sundries, Europe, 1,76,461; sundries, China, 1,13,669.

The above may be considered as the balance of the respective articles remaining in store, the rice and wines probably reserved for consumption. Of certain articles there appears an excess in the exports, as follows: beech-de-mer, 42,516½; bees'-wax, 28,085¼; birds' nests, 64,240¾; camphor, Malay, 80,650¾; coffee, 1,97,579¼; copper, Japan, 2,51,256¾; ebony, 49,289; gold dust, 2,72,972¾; pepper, 2,51,238½; rattans, 53,839; spelter, 92,512½; sugar, 1,30,357¼; tin, 2,02,483½; tortoise-shell, 1,86,611¾; sundries, India, 35,477½; and the excess of export within the year is the periodical adjustment from year to year; for it is always to be held in mind, that these settlements have no produce of their own, and the trade consists entirely of importation and re-exportation.

The import of specie being - - - - - -	*Sa. Rs.* 7,08,093
The export being - - - - - - - - - -	10,42,337
The excess of exports is - - - - - - - -	3,33,344

In considering the extent of the trade at Singapore, rated not in goods but in money, some reference must be had to the peculiar method in which all commercial dealings are there conducted: the unceasing drain of specie leaves not any scarcely in the place. Specie, therefore, never enters into any common transaction. All goods are disposed of on credit generally for two months, and to intermediate native Chinese merchants, and those at the expiration of the period deliver in return, not money, but articles of Straits produce, adapted to the return cargo: the value on both sides of the transaction is rated from 25 to 30 per cent. beyond the sum that would be paid in ready cash. And as the price current from which the statement is rated is the barter, and not the ready money price, the real value of the trade may be computed 30 per cent. under the amount stated. In what manner the consignee of the distant constituent states his account sales, it is not for us to say; but if stated at barter prices without explanation, he must be considerably misled, and imagine a much more favourable sale than actually takes place. In reality, he can only know the actual out-turn of his adventure when the return goods are sold, and the sale price in Eng-

land

Appendix, No. 17.

(Enclosure No. 1.)

State of the Trade of Prince of Wales Island.

land of the India cargo compared with the prime cost of the outward one. If, indeed, there be any truth in price currents, the profits after all must be very inconsiderable, as will appear by comparison of the Indian with the Europe price of the homeward cargo; the home price of the outward one we have no means of calculating; but the main item being piece-goods, considering the immense stock unsold, we must conclude the sale price cannot afford much profit. Of the statement professing to show the intermediate trade between Singapore and Prince of Wales Island, it is useless to make any further remark, than to point out the obvious discrepancy between it and the one made out at the latter. If both were correct, the imports from one should be the exports to the other, with the difference only of the goods in transitu at the date of the statement; but the exports from Prince of Wales Island to Singapore are stated at sicca rupees 11,47,535, while the imports admitted in the statement amount to 8,16,526. The exports to Penang, in the Singapore statement, are put down 4,78,154; the imports admitted at Penang are 6,76,026: as far as general results are concerned, those statements are not important, the whole material of the intermediate trade consisting of the external imports, and the interchange between the one and the other to find a market.

Malacca Trade.

The trade of Malacca must of course be inconsiderable; situated between two places of depôt, one at the north-west and the other at the south-east end of the Straits, its trade is confined to its own consumption and produce. Malacca in former times under the Dutch Government, and before the existence of Penang and Singapore, was the grand emporium at which was carried on the trade now conducted at the two. To counteract the commercial influence and monopolizing spirit of the Dutch rulers of the day, Penang was established in 1786, and in due time drew to it a great portion of the entrepôt trade of the Straits: the restoration of Java and of Malacca at the conclusion of the war, rendered the establishment of a southern depôt most expedient. Singapore was selected, and was, after some political discussion, confirmed to the British Government; more conveniently situated, it has annihilated the trade of Malacca, and certainly already much reduced, and bids fair to annihilate that of Penang also.

The trade of Malacca is carried on with the following places: Calcutta, Madras, Bombay, England, China, Java, Ceylon, Siam, Coast of Tenasserim, Acheen, Delhi, Quedah and other native ports.

Calcutta, Imports from.

The amount of imports is sicca rupees 1,12,565, of which the principal articles are, wheat and gram, 5,945; gunnies, 2,852; opium, 89,240; piece-goods, India, 5,553; rice, 6,329; India sundries, 2,492; exclusive of small articles amounting to about rupees 130.

Calcutta, Exports to.

The amount of exports is sicca rupees 17,830, of which the principal articles are, pepper, 3,721; spelter, 9,472; tin, 2,781; India sundries, 1,370; exclusive of small articles amounting nearly to sicca rupees 484.

A comparison of the trade with Calcutta exhibits an excess of imports of nearly sicca rupees 94,735.

Madras, Imports from.

The amount of imports is sicca rupees 2,43,178, of which the principal articles are, piece goods, India, 2,38,293; India sundries, 4,858; exclusive of small articles about 25 rupees.

Madras, Exports to

Specie in value, *Sa. Rs.* 31,573.

The amount of exports is sicca rupees 53,573, consisting of gold dust, 22,000.

A comparison of the trade with Madras exhibits an excess of imports amounting to nearly sicca rupees 1,89,605.

Bombay, Imports from.

The imports consist of sundry small articles amounting to sicca rupees 1,349.

Bombay, Exports to.

Specie in value, *Sa. Rs.* 7,367

The exports amount to sicca rupees 1,799, of which the principal article is, rattans, 1,799; exclusive of small articles, amounting to about sicca rupees 768.

A comparison of the late trade with Bombay exhibits an excess in the exports of about sicca rupees 4,501.

England, Imports from.

The imports amount to sicca rupees 1,01,664, of which the principal articles are, iron, 10,804; piece-goods, British, 59,350; spelter, 9,472; spirits, 4,317; wines, 4,598; Europe sundries, 8,032; exclusive of small articles amounting to nearly sicca rupees 1,177.

England, Exports to.

There are none.

N.B. A comparison of the trade as per statement, exhibits a total excess of imports of 1,04,664; but on adding up the different items, they amount only to sicca rupees 97,754, to which add dollars 1,400, or sicca rupees 2,947, making a total of sicca rupees 1,00,701; difference, sicca rupees 3,910.

China, Imports from.

Specie in value, *Sa. Rs.* 2,340.

The amount of imports from China is sicca rupees 32,240; of which the principal articles are, piece-goods, India, 2,990; raw silk, 8,235; tea; 2,200; tobacco, 6,040; China sundries, 11,170; exclusive of small articles amounting nearly to sicca rupees 1,600.

China, Exports to.

The amount of exports is sicca rupees 64,550, of which the principal articles are, beetel nut, 1,040; birds' nests, 16,500; ebony, 1,050; gold dust, 2,200; pepper, 6,850, rattans, 21,600; tin, 8,780; India sundries, 6,520; ivory, 8.

A comparison of the trade with China exhibits an excess in the exports amounting to sicca rupees 32,310.

Java, Imports from. Specie in value, *Sa. Rs.* 4,210.

The amount of imports from Java is sicca rupees 11,710, of which the principal articles are, oil, 3,400; piece-goods, India, 24,420; rice, 65,330; salt, 1,925; spirits, 6,330; tobacco, 23,355; Java sundries, 8,195; exclusive of small articles amounting to nearly sicca rupees 2,045.

Java, Exports to. Specie in value, *Sa. Rs.* 23,575.

The amount of exports to Java is sicca rupees 63,000, of which the principal articles are, bees'-wax, 2,590; iron, 1,495; piece-goods, India, 38,160; piece-goods, British, 6,250; raw silk, 1,265; India sundries, 13,000; exclusive of small articles, about sicca rupees 240.

A comparison of the trade with Java exhibits an excess of imports amounting to sicca rupees 51,290.

Ceylon.

The only trade with Ceylon is an import of spirits, amounting to sicca rupees 6,690.

Siam.

The only trade with Siam consists of the following import of articles: oil, 11,035; paddy, 2,725; rice, 76,685; salt, 25,680; sticklac, 2,460; sugar, 11,975; tobacco, 1,500; Siam sundries, 8,500; exclusive of small articles amounting to about 380 rupees.

Coast of Tenasserim.

No trade.

Acheen, Imports from.

The amount of imports is sicca rupees 21,510, the principal articles of which are, beetel nut, 1,040; piece-goods, India, 2,925; rice, 16,910; exclusive of sundry small articles amounting nearly to sicca rupees 635.

N. B.—By the statement, the total imports is made rupees 20,510, but the addition of the item gives 21,500; difference, less 1,000 rupees.

Acheen, Exports to.

The amount of exports is sicca rupees 14,945, of which the principal articles are, opium, 10,270; piece-goods, India, 3,500; exclusive of small articles amounting nearly to rupees 1,175.

A comparison of the trade with Acheen exhibits an excess in the imports of sicca rupees 6,660, taking the total as per correct addition, not the statement.

Delhi, Imports from.

The amount of imports from Delhi is sicca rupees 16,116; the principal articles are, pepper, 16,044; bees'-wax, 72.

Delhi, Exports to. Specie in value, *Sa. Rs.* 21,050.

The amount of exports is sicca rupees 9,610, of which the principal articles are, gold dust, 2,100; piece-goods, India, 3,725; salt, 2,440; exclusive of small articles amounting to sicca rupees 1,345.

A comparison of the trade with Delhi exhibits an excess in the imports of sicca rupees 6,506.

Quedah.

The only trade with Quedah is an import of rice amounting to sicca rupees 6,950.

Other Native Ports, Imports from. Specie in value, *Sa. Rs.* 4,15,163.

The amount of imports is sicca rupees 2,98,591 nearly, of which the principal articles are, bees'-wax, 4,100; birds' nests, 23,275; daunner, 1,090; gold dust, 6,240; paddy, 1,940; piece-goods, India, 79,410; rattans, 32,575; rice, 2,240; sago, 3,410; tin, 73,375; tortoise-shell, 1,476; India sundries, 29,646; Straits' sundries, 3,510; exclusive of small articles amounting to nearly sicca rupees 1,300.

Other Native Ports, Exports to.

The exports amount to sicca rupees, 4,71,346, of which the principal articles are, beetel nut, 2,195; bees'-wax, 2,770; daunner, 1,110; dholl wheat and grain, 1,350; ebony, 1,340; gunnies, 2,715; iron, 3,785; ivory, 1,165; opium, 60,810; pepper, 36,050; piece-goods, India, 1,46,470; piece-goods, British, 21,430; rattans, 9,070; raw silk, 7,830; rice, 14,260; salt, 6,440; spices, 1,210; sticklac, 1,880; sugar, 4,735; tin, 78,125; tobacco, 24,675; tortoise-shell, 1,580; wine, 2,850; Europe sundries, 1,835; India sundries, 35,130; exclusive of sundry small articles amounting to sicca rupees 6,390.

A comparison of the trade with other native ports exhibits an excess in the exports of nearly sicca rupees 172,755.

The total imports in goods in Malacca being - - *Sa. Rs.* 10,81,782
And the exports - - - - - - - - 6,72,211

Excess of imports is - - - - - - - - 4,09,571

of which the following are the principal items: beer, 2,990; birds' nests, 6,373; brandy and spirits, 16,526; dholl wheat and grain, 5,215; iron, 5,503; oil, 14,113; opium, 18,159; paddy, 5,223; piece-goods, Europe, 31,149; piece-goods, India, 1,62,118; rice, 1,60,050;* sago, 2,989; salt, 18,920; sugar, 8,069; tea, 2,002; tobacco, 6,217; wines, 1,748; sundries, Europe, 6,196; sundries, China, 9,576; sundries, Java; 7,488; sundries, Straits, 3,510; sundries, Siam, 8,063. Most of these articles are for the consumption of the place, and the interior dependency, Nanning. The aggregate population exceeds 32,000; but there is also an excess of exports of certain articles, the principal being as follows: bees'-wax, bees'-wax, 1,031; beetel nut, 2,196; ebony, 2,671; gold dust, 20,059; pepper, 30,583; tin, 17,165; sundries, India, 18,892: of these the bees'-wax, ebony, gold dust, pepper and tin are probably the produce of Malacca.

---

* The extension of the cultivation now in progress will soon probably render this import unnecessary.

The import of specie amounts to sicca rupees 4,19,717, the exports to 2,65,239, the excess of imports being 1,94,478; but of this the Sicca and Madras rupees, as well as copper cash pice were imported on account of Government to the extent of sicca rupees 1,70,000. It is here to be noted, that the statements of this settlement are so extremely erroneous and defective and so carelessly drawn up, that little reliance can be placed on them.

Having now gone through the statements of trade at each settlement, I now proceed to remark on the general statement of trade at the whole three. From the statement, it appears that the import of goods at the whole four places beyond their limits, amounted, in the year 1828-29, to - - - - - - *Sa. Rs.* 2,39,47,623

And the exports to - - - - -	2,00,99,109	
The excess of imports being - -	38,48,514	
The import of specie amounted to - - - -		*Sa. Rs.* 20,00,940
And the exports to - - - - - - - - -		20,27,452
The excess of export being - - - - - - - -		26,512

but of the import of specie not less than sicca rupees 5,94,620 being imported by Government, the real commercial excess of exports must be taken at 4,21,130.

Of the excess of import of goods, 38,48,513, two articles make up no less than - - - - - - - - - - - - -	32,78,829
Viz. British piece-goods - - - - - - - - - -	13,74,050
India - - - - - - - - - - - - - -	19,04,775
	32,78,825
The total imports of British piece-goods during the year amount to	20,92,894
The exports to - - - - - - - - - - - -	7,18,844
	13,74,050

The excess of import being very near equivalent to two years export at the rate of the year.

The total import of Indian piece-goods amounted to no less than -	41,95,947½ *
The exports to - - - - - - - - - - - - -	22,91,168
	19,04,779½

The imports of India piece-goods are, therefore, double those of British, and the exports threefold. It may not be improper to make a few retrospective remarks on the state of those rival manufactures. The following is the Table of comparative Import and Export of those articles for four years.

—	British Piece-Goods.		India Piece-Goods.	
	Import.	Export.	Import.	Export.
Year 1825-26 - - -	13,18,759	7,87,742	17,22,487	17,44,878
— 1826-27 - - -	13,38,769	9,64,583	20,22,266	18,22,383
— 1827-28 - - -	15,29,658	9,96,380	40,96,629	34,48,995
— 1828-29 - - -	20,33,544	6,90,643	38,41,971	20,99,310
	67,20,730 34,39,348	34,39,348	1,16,83,353 91,15,566	91,15,566
Excess - -	32,81,382	Excess -	25,67,787	

The above statement is made exclusive of Malacca, the state of the records there not admitting of comparison. From this it would appear that the imports of British piece-goods for the four years at Prince of Wales Island and Singapore, amount to 67,20,730, the exports to 34,39,348, leaving an excess of import of 32,81,382, which at the rate of annual export is nearly four years' supply, and it is known that a very heavy balance remained in 1824-25. The imports of India piece-goods amount to 91,15,566, leaving an excess of 25,67,787, not much more at the average rate than one year's supply; and the statement in respect

---

* Of this, about 3,12,936 are of Eastern manufacture.

Appendix, No. 17.

(Enclosure No. 1.)

Minute of R. Fullerton, Esq.; 29 April 1830.

respect to the state of British piece-goods accords with the general opinion. I have myself heard expressed by the merchants, that goods more than equal to three years' demand have long been on hand: should the imports continue, and they seem rather to be on the increase than diminution, a heavy loss to the importers must ere long unavoidably ensue.

These Eastern countries originally drew their supplies of piece-goods entirely from the continent of India, principally the coast of Coromandel, and the place of import was Penang. The vast import of British piece-goods into the Straits, that followed the establishment of the new emporium of Singapore, interfered considerably with this trade, and we find the import and export for some years very materially reduced: the beauty of the colours and general appearance, added to their extreme cheapness, gave for a time a decided preference to British piece-goods; but the British manufacturers appear to have adhered to a principle diametrically opposite to that which used formerly to regulate the provision of goods in India, more particularly the Company's investment; standard quality, dimensions and strength of fabric were then the main considerations, whereas cheapness seems now to be the only object attended to. The inferiority in the fabric and the flimsy texture, which scarcely bears washing, has now been discovered, and appears to have entirely destroyed that preference for British piece-goods. If we look at the exports of piece-goods to the native ports and islands, we shall scarcely find that a single piece of British manufacture has gone there of late; the export invariably consists of India piece-goods. To Siam and to Manilla the British seem still to be sent, to the latter only in greater proportion; but a ship went this year to Siam direct from the coast, and sold their cargo to great advantage; and some of the Madras merchants have found their way to Manilla also. There are many circumstances peculiarly favourable to this trade: the proximity of the place of manufacture to the place of sale admits of better means of adapting supply to demand than can exist where more than a year must elapse before the state of the market can be known; the native merchants of the coast of Coromandel are moreover their own agents, they come regularly with their goods by the Indiamen, and either return in January with the proceeds (invariably in specie, dollars or rupees), or leave some of their relations to sell during the year. The commercial factories of the Honourable Company on the coast have been gradually discontinued, and with the cessation of the trade, the price both of labour and material must have very considerably fallen; there seems, therefore, every prospect (unless the manufacturers of Great Britain attend more to the fabric and durability of their goods being entirely excluded from use in these Eastern regions, by the more substantial manufacturers of the continent of India.

It is impossible to conclude this Report without referring to the great advantage which India derives from these settlements.* It appears that of the article of opium, from the sale of which so much revenue is derived at Bengal, there has been here imported for sale in these settlements a quantity not less in value that 28,24,864 rupees; of piece-goods to an aggregate amount not less than 38,83,011, of the latter not less than 27,41,334 from the coast of Coromandel. If the customs and duties, land and sea, on export of the articles remain as fixed in 1812, an aggregate at eight per cent., the duties amount to 2,19,306, and if to this be added the revenue resulting from the sale of opium, the duty on goods imported, and the benefit of so great an import of the precious metals into India, the gain to India is surely equivalent to the expense of troops for defence, which I have on another occasion remarked should not be set exclusively against these settlements, from which other Presidencies derive so great an advantage, so long at least as no duty is here charged for the use of the depôt and the protection afforded to the passing trade.

In writing this voluminous report, I have had two objects in view; the first, to convey such information on the subject as the very imperfect documents and information admitted; secondly, to serve in some degree as a guide to the resident councillors, to show the nature of the annual reports henceforward required from them, and such as should all along have been transmitted, either by them or the officer in charge of the department. The report is, however, the proper duty of the resident: unless men are required to write on particular subjects, they will not inquire, and if they do not inquire, they are not likely to be informed. The main point is the correct compilation of the statements of imports and exports, and this can only be ensured by the constant superintendence of a covenanted servant over the book of daily entries, which ought to be kept of every article imported and exported, whence from and to what place; the articles so put down should be set out regularly in their places, and with their amount, at least once in every month in due form, and from such monthly detail the annual statements to be transmitted to higher authority should be made out: there is reason to fear this has not hitherto been done. It would appear that the whole daily entries here remained unnoticed and unarranged until the period arrived when the annual statements were to be made, too late for the discovery and rectification of errors and discrepancies. The statements of imports and exports having thus been carefully made up, the resident should then frame his report therefrom; the trade between the settlement and every place respectively trading with it, except the two other settlements in the Straits, should be minutely examined article by article, the variation, increase or decrease in each article ascertained,

---

* Stated in the Reports at 41,95,947 ½, but of these 3,12,936 are of Java and Malay piece-goods.

At Penang	*Rs.* 14,44,000
Singapore	10,59,141
Malacca	2,38,293
	Rs. 27,41,434

Appendix, No. 17.

(Enclosure No. 1.)
State of the Trade of Prince of Wales Island.

tained, and the cause of such increase and decrease inquired into and reported along with any observations that occur as to apparent inconsistencies, as well as on the best means (as far as public arrangements are concerned) of improving the trade: by apparent inconsistencies is meant the re-export of goods to the places of their known produce; the import of goods from places to which the same are in general course of trade exported, and *vice versâ*, of which instances appear in the statements, and which must arise from some peculiar or temporary cause. A figured statement comparative of the increase and decrease in each year will not be required, as such should form the subject of express explanation in the body of the report. It will be seen as before, that the general statement should contain only the trade with places beyond the limits of Penang, Singapore and Malacca; the reason is, that the internal trade is composed almost entirely of the articles imported from other places, and the insertion in the general statement would only be a repetition and exaggeration of the general trade. The statements showing the intermediate trade, though not generally of importance, are useful however in showing the ultimate destination of goods imported to any one, and general disposition of the balance, that is, the excess of import over export, and may therefore be continued. The import and export of specie should, as at present, be kept distinct; but a separate note should be made of imports or exports of specie on account of Government.

In framing the statements of the last year, but little discretionary consideration is shown. In fixing the forms, the names of all and only the articles which happened to be enumerated in the statement of the day, when the form was made, were inserted in the alphabetical list. It was meant as a guide, not as a limitation of articles which depend on the trade. In the Malacca statement, all the articles are unnecessarily enumerated in the alphabetical list, although the column of some are blank, none having been exported or imported. At Penang, the list is strictly adhered to, although other articles appear to have been imported: for example, opposite the head of iron are interpolated, in the inner column, a quantity of lead, copper and tutenague, and in like manner arrack and gin opposite brandy; these articles should all have been inserted in their alphabetical places. The draft of regulation for ensuring the correct registry of the imports and exports of the three settlements having been returned unsanctioned by the Honourable Court, in consequence of its containing a clause subjecting opium, the produce of countries other than the British territories in India, to the duty for protecting the Bengal monopoly, the insertion of which has not been deemed advisable, the preparation and transmission of a new draft has become necessary. Should the provisions of that regulation appear to the resident councillor to require any alteration, they should submit an amended draft with any observations they may have to offer, in order that the draft ultimately determined on may be forwarded as soon as possible. I conclude this report with the expression of my hopes, that after the discussions which have taken place during the year, the statements of imports and exports will be made up for the year ending 30th instant, in perfect form, and accompanied by a report of the resident Councillors respectively, in the manner here pointed out.

(signed) *R. Fullerton.*

(Enclosure No. 2.)
Minute of R. Ibbetson, Esq.; 29 April 1830.

(Enclosure No. 2.)—MINUTE of *R. Ibbetson*, Esq., dated 29th April 1830.

I HAVE perused with considerable interest as well as benefit the Honourable the President's report of this date, upon the trade of these settlements, not unmixed, however, I regret to observe, with considerable vexation, at the gratuitous reflections I am there subjected to. To remain altogether silent under such reproach would, I fear, argue a wilful acknowledgment that it was deserved, but feeling otherwise, and that it is unmerited, I may be excused in offering such observations as the attack appears to call for.

In some of the President's minutes and memorandums he will himself, I believe, admit having frequently denominated this island "the seat of government," and in consequence, that the establishments, &c. here have ever been maintained upon a scale at least double those of the sister settlements in the Straits. All records and accounts are here collected and finally prepared for transmission to the authorities at home. The secretary only when absent hence receives his travelling expenses. The office of general account and audit is fixed here; and only lately on a revision of establishments, in August last, were any of the forms in use at the larger governments in India ever dispensed with here. Heads of offices under such a system are always expected and required to make their own reports, and I believe the present is the first deviation that I have read of expressive of the contrary; I doubt indeed whether my interference with the heads of offices would not be considered entirely as an act of supererogation on my part, and remonstrated against accordingly. They have always received their orders in writing from the secretary direct; and in regard to their very statements, I observe that the individual in charge of the import and export office is expressly desired to furnish them, although I am, for the first time, told they should have emanated from myself. Since September 1824 to the present date, the Honourable the President, in the aggregate, has not been absent from this island above 9 or 10 months. The resident Councillors (particularly here) have little, if any, discretionary power; they cannot make or amend an order to any subordinate, and his interference even in any way might be construed into unnecessary intermeddling. My signature to these statements, it is also to be observed, was never within the line of my duty. But as the President has now expressed a hope that reports from the resident should accompany them in future, I can have no possible objection, however hurt I may feel at the manner of the request.

(signed) *R. Ibbetson.*

Appendix, No. 17.

(Enclosure No. 3.) Minute of R. Fullerton, Esq.; 29 April 1830.

(Enclosure No. 3.)—MINUTE of *R. Fullerton*, Esq., dated 29th April 1830.

THE first paragraph of my Minute of 29th April, will show that this Settlement is expressly excepted from the general remarks, because it has been considered the seat of government. No order that I am aware of was ever sent to Mr. Ibbetson to prepare these statements, they have always been prepared at the Custom-house, but with the duty as done at Penang no fault has been found. None of the remarks in the foregoing Minute were ever intended to apply to Mr. Ibbetson retrospectively, and they can only apply prospectively with reference to the now contemplated arrangement; and I must confess, I am surprised that any Minute or observation in this case was thought necessary.

Appendix, No. 18.

Appendix, No. 18. Letter from Court of Directors to *Bengal* Government, on Nitrate of Soda; 30 May 1832.

EXTRACT of LETTER in the Commercial Department, from the Court of Directors to the Governor-general in Council, dated May 30th 1832.

Para. 31. A NEW source of supply for the market of Europe has been lately resorted to: some quantities of nitrate of soda have been imported into France from South America, and one or two cargoes into London, and also into Liverpool. This commodity is becoming an object of attention; but our present information respecting it is limited. We have reason to believe that it will not answer so well as saltpetre (nitrate of potash) for making gunpowder, but it is equally applicable to the uses of most of the manufacturers, and for the curers of provisions, and is said to afford a greater proportion of nitric acid than saltpetre; we send a sample of nitrate of soda in the packet, for the inspection of the Board of Trade.

Appendix, No. 19.

Appx. No. 19. (1.) Mr. C. R. Read's Memorial on Export of Military Stores to Singapore.

(1.)—MEMORIAL of Mr. *C. R. Read* to the Right Honourable *Charles Grant*, dated 13th July 1831.

Sheweth,

THAT on the 7th April last your memorialist petitioned the Honourable the Court of Directors of the East India Company, for permission to export to the settlement of Singapore 1,000 stand of muskets with bayonets, and 300 barrels of gunpowder, and further to permit the trade in these articles to be carried on at Singapore, under such regulations as will secure the Company's Indian interests from suffering therefrom.

On the 6th of May your memorialist received an answer to such petition from the secretary of the Honourable Company, refusing compliance with the tenor thereof.

Your memorialist takes leave to annex a copy of the said petition and answer thereto; and as he feels convinced, that at the great distance at which the settlement is situated from any of the Honourable Company's Indian possessions, no possible harm or detriment can accrue to their interest, from the trade in them being permitted at Singapore, more than is now the case, from the commerce carried on in them by the French and Americans;

Your memorialist prays that the Honourable the Board of Control will take the subject into their consideration, and that through their interference orders may be transmitted to the proper authorities in India, to permit the free and uninterrupted trade in these articles at Singapore and the adjacent islands, including the west coast of Sumatra, and at all places laying to the eastward of the Straits of Singapore, which limitation your memorialist conceives will effectually prevent any ill consequences to the interest of the Honourable East India Company, and will enable the merchants of Singapore to participate in a lucrative trade, which is at present monopolized by foreigners.

And your momorialist as in duty bound will ever pray, &c.

(signed) *C. R. Read,*
Of the Firm of A. L. Johnstone & Co.

(Enclosure No. 1.) Letter from Mr. C. R. Read to the Court of Directors; 7 April 1831.

(Enclosure No. 1.)—LETTER from Mr. *C. R. Read* to the Court of Directors of the East India Company, dated 7th April 1831.

Honourable Sirs,

BEING desirous of shipping a small quantity of arms and ammunition to Singapore, I take the liberty of requesting the permission of your Honourable Court to export to that settlement 1,000 stand of muskets with bayonets, and 300 barrels of gunpowder, in whole, half, or quarter barrels.

I am perfectly aware it is contrary to the regulations laid down by your Honourable Court that arms and ammunition should be, in any way, introduced into your Indian possessions, but I beg to submit that the permission to trade in them at Singapore would not at all add to your insecurity, but on the contrary would enable you to check the introduction at any time when you might deem it advisable to do so.

The situation of Singapore, so distant from your Indian possessions, renders it impossible to convey arms and ammunition from the former to the latter in native boats or prahus, and the exportation from Singapore in vessels bound to any part of India, might be prohibited, thereby confining the trade to countries laying east of the Straits of Malacca, and the islands in the vicinity of the settlement.

A considerable trade in both arms and ammunition is at present carried on by the French and Americans with both sides the Gulph of Siam, Cochin China and the Eastern Islands; the

Appx. No. 19 (1.)

(Enclosure No. 1.)

Letter from Mr. C. R. Read to the Court of Directors; 7 April 1831.

the British and Dutch only being excluded from participating therein, and there can be little doubt that if a trade in these articles were permitted at Singapore, all foreign competitors would soon be driven from these markets, and thus the supply might be checked whenever the Government of India might deem it advisable, should they find the trade in them in those countries detrimental to your interests.

The existing prohibition to trade in them at Singapore operates only in favour of foreign nations, without curtailing the supply to the natives of the countries alluded to, as both French and American vessels annually visit them with cargoes, of which these articles form a considerable portion.

Under these circumstances, I trust your Honourable Court will see fit, not only to grant the permission I now solicit, but also to direct that in future the trade in these articles at Singapore may be permitted, under such regulations as will insure its not having any more injurious effect on your Indian interests than the trade now carried on by foreigners.

I have, &c.
C. R. Read,
Of the Firm of A. S. Johnston & Co. of Singapore.

(Enclosure No. 2.)—LETTER from *Peter Auber*, Esq. to *C. R. Read*, Esq., dated East India House, 6th May 1831.

(Enclosure No. 2.)

Mr C. R. Read's Memorial on export of Military Stores to Singapore.

Sir,

THE Court of Directors of the East India Company have considered your letter requesting permission to export to Singapore 1,000 stand of muskets with bayonets, and 300 barrels of gunpowder, requesting also, that in future the trade in these articles at Singapore may be permitted, under such regulations as may guard the Company's interests; and I am commanded to inform you, that it would be contrary to the Court's practice to allow military stores to be exported by individuals to any of the Company's possessions in India, and that the Court must decline to depart from that practice as respects the particular Settlement to which you have referred.

I am, Sir, &c.
(signed) *P. Auber*, Secretary.

(2.)—LETTER from *Thomas Hyde Villiers*, Esq. to *Peter Auber*, Esq., dated India Board, 16th July 1831.

Appx. No. 19 (2.)

Letter from T. H. Villiers, Esq. to P. Auber, Esq.; 16 July 1831.

Sir,

THE Commissioners for the Affairs of India having had under their consideration a Memorial from Mr. Read, of the firm of Messrs. Johnston & Co., of Singapore, respecting the refusal of the Court of Directors to allow the exportation to that island of certain military stores, have directed me to request that you will represent to the Court that it appears to them doubtful, on a reference to the Act 4 Geo. 4, c. 80, s. 5, whether the East India Company's licence be requisite for the legal exportation of such articles to Singapore, and that it is therefore desirable that the opinion of the Company's counsel should be taken upon this subject. The Board desire to be favoured with a copy of the opinion which Mr. Serjeant Spankie may give.

I am, &c.,
(signed) *T. Hyde Villiers.*

(3.)—LETTER from *Peter Auber*, Esq. to *Thomas Hyde Villiers*, Esq., dated East India House, 22d July 1331.

Appx. No. 19 (3.)

Letter from P. Auber, Esq. to T. H. Villiers, Esq.; 22 July 1831.

Sir,

WITH reference to your letter of the 16th instant, I am commanded by the Court of Directors of the East India Company to transmit to you, for the information of the Commissioners for the Affairs of India, copy of a case submitted to the Company's standing counsel, respecting the exportation of military stores to Singapore, together with a copy of his opinion thereon.

I am, &c.,
(signed) *P. Auber*, Secretary.

(4.)—COPY of a CASE for the East India Company.

Appx. No. 19 (4.)

Case of the East India Company submitted to Mr. Serjeant Spankie; in July 1831.

BY this Act* which is intituled " An Act to consolidate and amend the several laws now in force with respect to trade, from and to places within the limits of the charter of the East India Company, and to make further provisions with respect to such trade, and to amend an Act of the present Session of Parliament for the registering of vessels, so far as it relates to vessels registered in India," it is enacted† " That so much of the Act (therein recited) of 53 Geo. 3, as authorizes His Majesty's subjects to carry on trade and traffic to and from the ports and places within the limits of the said Company's charter, with all the provisions, restrictions and limitations in the same Act contained for the regulation of such trade, and for the disposition, in the United Kingdom, of all articles manufactured of silk, hair or cotton, wool or any mixture thereof, imported under the authority of the said last-mentioned Act, from any port or place within the limits of the said Company's charter; and that the whole of the Acts (therein recited) passed in the 54th, 55th, 57th and 59th years of the reign of his then late Majesty, and the said Act passed in the 2d year of the reign of his then present Majesty be repealed, except as to such voyages and adventures as should have been actually commenced under the authority of the same Acts, or any of them; and except as to any suits or actions commenced or then depending relative to the provisions thereby repealed, or any of them:"

Sec. 5.

Provided " That it shall not be lawful for any person or persons to carry any military stores to any place upon the continent of Asia, between the river Indus and the town of Malacca or the peninsula of Malacca inclusive, or to the said Company's factory at Bencoolen in the island of Sumatra, or its dependencies, save only the said United Company, or such as shall obtain their special leave and licence in writing, or a special leave and licence in writing under their authority, for that purpose."

---

* 4 Geo. 4, c. 80:

† Sec. 1.

Appx. No. 19 (4.)

Case of the East India Company submitted to Mr. Serjeant Spankie; in July 1831.

By this Act*, which is intituled "An Act for transferring to the East India Company certain possessions newly acquired in the East Indies, and for authorizing the removal of convicts from Sumatra," after reciting the Act of the 53d Geo. 3, c. 135, and reciting that the island of Singapore in the East Indies had, since the passing of the said Act, been occupied by the said United Company; and reciting, that by a treaty concluded between his Majesty and the King of the Netherlands, on the 17th day of March 1824, the King of the Netherlands had agreed that all his establishments on the continent of India, and also the town and fort of Malacca and its dependencies, should be ceded to His Majesty; and it was by the said treaty further stipulated, that the factory of Bencoolen and all the English possessions in Sumatra should be ceded to his Majesty the King of the Netherlands: it is enacted "That the said island of Singapore, and also all the colonies, possessions and establishments ceded to His Majesty by the said treaty, shall be transferred to the United Company of Merchants of England trading to the East Indies, and holden by the said Company in such and the same manner to all intents, effects, constructions and purposes whatsoever, and subject to the same authorities, restrictions and provisions as the factory of Bencoolen, and the possessions in the island of Sumatra, were vested in and holden by the said Company immediately before the conclusion of the said treaty."

On the 7th April last the following application was made to the Court of Directors of the East India Company.

[*Vide* preceding letter from Mr. C. R. Read to the Court of Directors, dated 7th April 1831.]

In reply to the above application, the Court of Directors on the 6th May 1831 informed Mr. Read, that "it would be contrary to the Court's practice to allow military stores to be exported by individuals, to any of the Company's possessions in India; and that the Court must decline to depart from that practice, as respects the particular Settlement to which he has referred."

It appears that Mr. Read subsequently laid a memorial before the Board of Commissioners for the Affairs of India, on the subject of his application; the Court of Directors having received the following communication from the Board.

[*Vide* preceding letter from Mr. Villiers to Mr. Auber, dated 16th July 1831.]

Your opinion is therefore requested, "Whether any person may lawfully export from Great Britain to the island of Singapore any military stores, without the special leave or licence in writing of the East India Company?"

Opinion.

The 4th Geo. 4, c. 80, s. 5, by itself does not impose any prohibition as to the exportation of military stores from Great Britain to Singapore, nor require any licence from the East India Company.

It appears to me, however, that the 5th Geo. 4, c. 108, s. 1, intended that the system of regulation applicable to the factory of Bencoolen, &c. should be extended to Singapore, and the possessions, &c. ceded by the King of the Netherlands, as fully as if the whole detail had been enumerated. The words are sufficiently comprehensive to embrace every kind of authority, restriction and provision under which the factory of Bencoolen was held by the Company. The title, the authorities, the restrictions, the provisions, as they existed in the old establishment, accompany the exchange, and, as usually happens in exchange, are declared to attach upon the exchanged and substituted possessions. It is enacted "That the said island of Singapore, and also all the colonies, possessions and establishments ceded to His Majesty by the said treaty, shall be transferred to the United Company of Merchants of England trading to the East Indies, and holden by the said Company in such and the same manner, to all intents, effects, constructions and purposes whatsoever, and subject to the same authorities, restrictions and provisions as the factory of Bencoolen, and the possessions in the island of Sumatra, were vested in and holden by the said Company immediately before the conclusion of the said treaty."

It is clear that military stores could not have been exported from Great Britain to the factory at Bencoolen in the island of Sumatra, or its dependencies, without a licence from the Company, as provided by 4 Geo. 4, c. 80, s. 5; and I am therefore of opinion, that under the operation of the 5 Geo. 4, c. 108, s. 1, applying the regulations of 4 Geo. 4, c. 80, s. 5, by substitution to Singapore, no person can lawfully export from Great Britain to the island of Singapore any military stores, without the leave or licence, in writing, of the East India Company.

Temple, 19 July 1831. (signed) *R. Spankie.*

* 5 Geo. 4, c. 108. Sec. 1.

Appx. No. 19 (5.)

Letter from T. H. Villiers, Esq. to P. A. Auber, Esq.; 30 July 1831.

(5.)—LETTER from *T. Hyde Villiers*, Esq. to *P. Auber*, Esq., dated India Board, July 30th, 1831.

Sir,

I HAVE to acknowledge the receipt of your letter of the 22d instant, transmitting the opinion of Mr. Serjeant Spankie with respect to the exportation of military stores to Singapore.

Without calling in question that opinion, I am directed to observe, that it by no means follows necessarily, that the objections of a political nature which are taken to the export of arms to the continent of India, should also extend to their exportation to Singapore. The Commissioners for the Affairs of India have therefore desired me to request, that you will move the Court of Directors to take into their consideration, whether, in a commercial point of view, it would not be well to comply with the request of Mr Read, to be allowed to participate in a trade which it appears is already carried on by foreigners.

I am, &c.

(signed) *T. Hyde Villiers.*

Appx. No. 19 (6.)

Export of Military Stores to Singapore.

(6.)—LETTER from *William Carter*, Esq. to *T. Hyde Villiers*, Esq., dated East India House, 1st September 1831.

Sir,

THE Court of Directors of the East India Company have considered your letter dated 30th July last, acknowledging the receipt of Mr. Auber's letter of the 22d of that month, and copy of the opinion of Mr. Serjeant Spankie, with respect to the exportation of military stores to Singapore, and submitting to the Court whether, in a commercial point of view, it would not be well to comply with the request of Mr. Read, to participate in a trade which it appears is already carried on by foreigners.

In deciding upon the request of Mr. Read, and upon other applications to the same effect, the Court were influenced by considerations of a political nature; but having reviewed all the circumstances of the case, and being of opinion that it is impracticable to prevent the introduction of military stores into Singapore whilst the trade in those articles is carried on by foreigners, and that in a commercial point of view there are no objections to allowing British subjects to participate in that trade, the Court have been induced to comply with the application of Mr. Read, who has been informed accordingly.

I have, &c.
(signed) *William Carter*,
Assistant Secretary.

Appendix, No. 20.

Appendix, No. 20.

Letter from Dr. Wallick to H. St Geo Tucker, Esq. on Productions &c. of India; 12 October 1828.

EXTRACT of a LETTER from Dr. *Wallick* to *H. St. George Tucker*, Esq., dated 8 Turnham-green Terrace, 12th October 1828.

WITH regard to the article of tobacco, I have not the slightest doubt that the very best sorts might be grown in India, provided properly-qualified lands were appropriated to their cultivation; and, above all, if the proper mode of reaping and preparing the leaves were to be adopted. The kind grown at Belda is inferior, probably, to none in the world, and I know that the late Mr. Glos, of Bhaqualpore, used to rear the Havannah kind with very great success some 8 or 10 years ago. I have brought musters with me for the India House of the Martaban species, which is the one exclusively used in the Burmah territories, and may, perhaps, be approved of in London. It is susceptible, however, of much amelioration.

That there is a sort of cotton, the produce of the West Indies, rather of Barbadoes, which has been cultivated with complete success in the Company's territories, I can assert with confidence, because I am in possession of an extract of a general commercial letter from the Court, transmitted to me officially from the Board of Trade at Calcutta, in which it is pronounced equal, if not superior, to any kind procurable in the London market. I cultivated it in the garden at Tittygheer (near Borrackpore) during several years, in which that establishment continued attached to the botanic garden at Calcutta. This fact, if unknown to you, will, I have no doubt, prove gratifying; more especially when I venture to assure you, that in my humble opinion it is the inferiority of the machinery employed by the natives for cleaning the wool from the seed, which has hitherto most effectually stood in the way of the Indian sorts competing successfully with those that are imported from the Western hemisphere.

Believe me, dear Sir, the man does not live who desires to speak with greater caution on matters connected with the agricultural capabilities of any country than I do. It will not answer to theorize on such occasions; and people who, sitting snugly within the *otium* of their learned study, pretend to dictate as to what must and ought to grow and prosper in distant countries, because, as they commonly reason, soil, climate, latitude, &c. *appear* to be in some as in others, are, in 99 cases out of 100, wofully mistaken in the end. Nature is bountiful and profuse in her gifts, but she will not, do what we may, be dragooned into the rank and file of our European polished sciences. If, therefore, it should appear to you that I am, perhaps, too sanguine in respect to what I have mentioned on the subject of cotton and tobacco, as articles of high improvement in the Company's territories, I beg you will take it for granted that experience, *and not theory*, is the ground on which I have proceeded.

May I be permitted to ask, if you are aware of the new and very important article of cultivation that has within these six years been brought into the field in Bengal—coffee? I can speak with much confidence on this point; for, under the specific leave of the Supreme Government, I led the way as a coffee planter in 1822, and, in compliance with my application, a most liberal and hitherto I believe unique privilege was granted in 1824, to all those engaged in that particular branch of industry—permission to hold extensive tracts of land in their own names on long leases. This subject is of very deep interest, and ought, for the honour and credit of the Company, to be made widely known, because I find that people are utterly unacquainted with the fact. Will any one, after it shall have been made known, presume to deny that every facility and advantage is readily and munificently granted, on a fair and proper representation being made to the lawful authorities, to all persons who may wish to invest their capital in India on subjects of agricultural speculation?

While at Glasgow, I ascertained that a set of spinning and weaving machinery, worked by steam, had been sent out to Bengal, under charge of properly instructed people. This

Appendix, No. 20.

Letter from Dr. Wallick to H. St. Geo. Tucker, Esq. on Products &c. of India; 12 October 1828.

I had heard reported before, but I would not credit the thing. What extraordinary revolutions may we not expect to be effected in cotton fabrics from that source alone! But again this proneness to doubt comes over me: are we quite positive that European machines, European minute attention to saving of time and manual labour, may not powerfully counteract the well-known durability of our Indian routine made stuffs? The Nipal paper, so valuable for its durability, being absolute proof against insects, nay, against *the white ant* even, which devours every thing that is or has been organic, (provided it be not fossil) loses all its virtue as soon as it is produced by means of European paper mills, and blanched by European art. I much fear that Indian muslins and yarns will lose their proverbial durability in proportion as they are *too much* meddled with by European hands.

Appendix, No. 21.

Appendix, No. 21.

Cultivation of the Tea Plant in Hindostan.

OBSERVATIONS on the CULTIVATION of the TEA PLANT for Commercial Purposes, in the mountainous part of Hindostan. Drawn up at the desire of the Right Honourable *Charles Grant*, President of the Board of Control for Indian Affairs, by Dr. *Wallick.*

IT has been usual to look upon the tea plant in the light of one of those vegetable productions of which the natural growth is limited within narrow geographical boundaries, and to imagine that, like the nutmeg, the clove, the cinnamon, camphor, and other trees of extensive commercial importance, its native country occupies but a small and confined spot on the surface of the globe. Without entering in this place into any unprofitable discussion as to its probable origin in one particular spot in China or Japan, it may be fairly assumed that the tea plant has, from time immemorial, continued the very reverse of being circumscribed or local in the geographical extent of its distribution, inasmuch as it grows wild, or at least in a perfectly naturalized state, and maintaining all the properties of the genuine plant, on a vast space, comprising not less than 30 degrees of latitude, and 35 degrees of longitude. But although the shrub is thus widely dispersed, although it is found within the tropics as far south as the 17th degree of north latitude, in Cochin China, and beyond the equatorial regions so far north as 45 degrees, in Japan, it will be proper on this occasion to consider the plant only with reference to its existence in China, since it is the commodity as obtained exclusively from thence which forms the basis of the present inquiry. By far the most important cultivation of the plant is carried on in the provinces of the Chinese empire situated between the 27th and 30th parallels of north latitude, where the black teas are almost entirely produced; but it is also reared in vast quantities to the south, nearly as far as the sea-shore of Canton, and to the north as far as 40 degrees, in the mountainous regions beyond Pekin.

There is a remarkable circumstance, connected with this part of my subject, which is deserving of attention. Unlike a great many other objects of great agricultural interest or general utility, the botanical genus to which the shrub yielding the tea leaf belongs, consists of no more than one single species; and the small natural group to which it appertains comprises only one other genus, namely the Camellia. This genus, together with its near ally, the tea shrub, belong exclusively to the eastern hemisphere: it consists of several species, which have been found wild in Japan, China, Cochin China, in Nipal, and on the mountains bordering on the north-east frontiers of Bengal. Neither of these two genera have ever been met with in any part of the western hemisphere.

With respect to the natural character of the tea plant, it is altogether foreign to my plan to enter into any great detail. It is a hardy, evergreen shrub, attaining a man-height, easily raised from seeds, and multiplied by cuttings or layers. It endures the vicissitudes of widely different foreign climates so well, that it has been ascertained by experience it will grow luxuriantly within the Tropics; and even in this country it will bear the winter in sheltered situations in Devonshire and Cornwall, although it rarely blossoms except in the stove or conservatory. It requires but little care during its tender age, except what is called for by the perishable nature of its seeds, on account of their oiliness, and by the ordinary precautions of manuring and protection of the young plant. Few plants are more indiscriminate in their localities of soil and climate, for it is cultivated on comparatively low and depressed situations, as well as on the brows of rugged hills. The plant, generally speaking, is contented with a gravelly or sandy soil, mixed with a scanty proportion of vegetable mould; but it delights most in shady declivities of hills, in moist vallies and the banks of rivers; situations which are peculiarly favourable to the luxuriant growth of the superior sorts of teas, being temperate and mild in their alternations of heat and cold and other atmospherical changes, exposed to the sun of a genial summer during one half of the year, and sheltered from intense degrees of frost and snow during winter. It may therefore be safely assumed that the shrub is cultivated to the greatest advantage in a temperate climate, where the thermometer ranges between 30° and 80°, where the heat in the summer season is never scorching or dry for any length of time, and where the winter is not marked by any very severe frost or snow.

The introduction of so valuable a plant into countries foreign to its own, must always have been an object of anxious solicitude; and we find accordingly that various attempts have been made to accomplish it. The ultimate results, however, have always been extremely unsatisfactory, owing to circumstances which could have produced no other consequences, and which, as will be presently seen, have entirely vitiated every practical inference to be deduced from the experiments themselves. The shrub has indeed become naturalized in several

Appendix, No. 21.

Cultivation of the Tea Plant in Hindostan.

several remote and dissimilar countries; but the quality of its produce has invariably proved greatly deteriorated, or altogether changed from that of the parent plant. Before I proceed to give some particulars of the experiments that have been made, it may be proper to premise a few observations on the conditions which ought at all times to regulate our attempts at naturalizing, for any useful purposes, the vegetable productions of one country in another.

An exact conformity of soil and atmospheric phenomena constitute the obvious data by which we are to be guided on such occasions. But since it does not often happen that accurate or sufficient information can be obtained upon those points in remote parts of the world, we must have recourse to the general laws that have been found to prevail in the distribution of heat and the other conditions of the atmosphere, with regard to latitude and other well-known circumstances; and a judgment has to be formed from a calculation of probabilities, instead of from a comparison of exact data. In all cases where a favourable combination of both the direct and the collateral arguments forms the basis of an agricultural undertaking of this nature, the result of it cannot fail to be successful.

The first point which must be ascertained is, how far the countries are likely to correspond in the degree of their temperature. The probability of a conformity in this respect may, as a general rule, be judged of by the agreement or disagreement of their latitudes, provided the countries in question are both situated in the same hemisphere; for although latitude does not go along with temperature, if we compare the eastern with the western hemisphere, the latter being generally colder than the former on the same parallels, both south and north of the equator, the mean temperature of 40° north latitude in the old world being 63°, while in the new world it is only 54°, and that of the Mauritius in 20° 9′ south latitude, being 80° 4′, while that of Rio Janeiro in 20° 59′ south latitude is only 74° 3′, yet in the same hemisphere the isothermal lines (or imaginary lines connecting places in which the mean temperature of the year is the same) do nearly accord with the parallels of latitude, with a few exceptions. This, however, is very much regulated by the geological formation of a given country: mountainous districts being much colder than low, flat regions, situated to the northward of them. It has been calculated that in the tropical countries the decrement of caloric, as we ascend in the atmosphere, is equal to 1° north latitude for every 396 feet of vertical elevation, so that the temperature of land 4,512 feet above the level of the sea, in 10° north latitude, would approximate that of open, flat countries on a level with the sea in 22° north latitude: but beyond the tropics, in Europe at least, it is supposed that the reduction of temperature is nearly equal to 1° north latitude for every 540 feet of perpendicular height.

But as vegetation is less influenced by the mean temperature of the year than by the heat of summer and winter taken separately, it often happens that corresponding mean temperature will not prove a sufficiently accurate guide to forming an opinion upon acclimating; for a plant produced in a country with an exceedingly high temperature in the summer may be able to bear very severe cold in winter, and yet when transferred to a country where the mean temperature of the year is higher, but in which the winters are milder and the summers cool, may be found incapable of being cultivated. Hence our second inquiry should be directed to the mean temperature of summer and winter, considered respectively of the countries whose productions it is wished to assimilate.

A third condition necessary to render success probable is an identity of the atmosphere in regard to humidity, pressure, prevailing winds, &c. Unfortunately the state of our meteorological knowledge is, in general, not such as to furnish us with exact information on all these points, and therefore the only other method of judging that is open to us consists in a comparison of the floras of the two given countries. If it should appear that there is an identity, or a considerable similarity in their vegetable productions, it is probable that any plant taken from one will thrive in the other; and in proportion as the vegetation of the two countries differs, does the probability diminish of any useful object being attained by endeavouring to exchange their species.

A very slight acquaintance with the character of the countries where the attempts were made to introduce the cultivation of the tea plant, is sufficient to account for the total failure of them. At Penang, the late Mr. Brown, misled by the unconnected fact that the shrub stood well the climate of the island, conceived the project of cultivating it on an extensive scale as a commercial speculation. He accordingly established a large tea plantation at Glugor, and even took pains to procure several Chinese from Canton, on purpose to superintend the undertaking. Upon the whole the plants grew remarkably well; but when the period arrived for commencing to reap the harvest of all the labour, time and expense that had been incurred, the quality of the produce was found of a very inferior description, and the infusion of the leaf had moreover acquired the very appalling property of a nauseating, and even slightly emetic drug; as if the identical variety possessing this effect, which the Jesuit missionaries pretend does exist in certain parts of the Chinese empire, had unfortunately found its way into Penang, and become the parent stock of Mr. Brown's plantation. However, if we recollect that Prince of Wales Island is situated between 5° and 6° north of the equator, that its highest hill does not exceed 2,500 feet in elevation, that in short every feature of the climate is tropical, we cannot be surprised at the result of the attempt; and it is hardly necessary to add, that all further idea of cultivating the plant for the sake of its leaf has been long abandoned in that quarter.

In Java similar trials, made under very similar circumstances, have proved equally fruitless, and have, in consequence, been given up. I am informed that no better success has attended some experiments which were made many years since by the Dutch Government in the southern parts of Ceylon.

About

Appendix, No. 21.

Observations by Dr. Wallick on Cultivation of the Tea Plant in Hindostan.

About 20 years ago the cultivation of the tea plant was commenced on a large scale at Rio Janeiro, and as far as concerns the naturalization of the shrub, a certain degree of success attended the measure; but the produce proved to be so bad in its flavour, that the plantation has of late been nearly relinquished. I have had an opportunity of examining a sample of tea produced in the Brazils; in appearance it resembled the finer sort of green tea, but the taste of the infusion was exceedingly bad, and unlike that of the common article. It is needless to dwell on the cause of the failure in this instance.

From what has been advanced in speaking of the general rules that are to be observed in all our endeavours to naturalize the plants of foreign and distant climates, it is obvious that we cannot expect to succeed, unless we pay strict attention to those laws of nature in the distribution of the plants on the surface of the earth, which have been traced by the labours of some of the first naturalists and agriculturists; and on the other hand, it must be allowed, that vague and unsatisfactory experiments, such as those were which have been enumerated above, ought not to have any weight in the solution of the problem, whether the tea plant admits of being advantageously cultivated in foreign countries for commercial or agricultural purposes. The time has arrived when this question has assumed a more than ordinary degree of interest; and there exist territories within the British dominions in the East Indies, agreeing so perfectly with those of the tea provinces, that no doubt can be entertained of their being capable of producing tea equal to the best kinds ever obtained from China; unless, indeed, it should be contended, that the plant differs from all others on a point in which the whole vegetable kingdom has been found to agree, and that it forms an exception to one of the most beautiful laws of nature.

The provinces of Kamaon, Gurnal and Sirmore, contain situations corresponding entirely with what we know of those of China and Japan, in which the cultivation of the tea shrub is carried on to the greatest extent and perfection, not only in the characters of soil and climate, but likewise in all the collateral conditions of naturalization pointed out in a preceding part of this Report. They constitute the western and northern corner of Hindostan, and are subordinate to the Presidency of Bengal, being situated within 28° and 31° north latitude, and 76° and 81° west longitude, and extending from the plains of the adjoining provinces to beyond the snowy mountains. In regard to climate and elevation, they are extremely diversified, possessing all degrees of temperature, from the scorching heat of a tropical sun or the temperate atmosphere of the tea provinces, to the severe winter of Chinese Tartary, and the eternal snow of the Himalaya, with all the intermediate gradations; and rising from the level almost of the sea to the height of the loftiest peaks in the world. They are watered by the Sutlej, and the Ganges, and by the countless tributary streams of both these rivers, and finally they possess every variety of soil. To all these advantages must be added the very striking and almost exclusive similarity of their general flora with that of China and Japan, amounting to absolute indentity of species in some instances, and close similarity in many others. I have already had occasion to observe that a species of camellia grows wild in Nipal, and in publishing an account of it in 1818, I noticed that a tea shrub was thriving vigorously in a garden at Katmandu, 10 feet in height, and producing plentiful flowers and fruits during the last four months of the year. During my visit to that capital some years afterwards, I saw the shrub, and I ascertained that the seeds of it had been brought from Pekin by the return of one of the triennial embassies, which are sent to China by the Goorka government.

If we take all these concurring circumstances into due consideration, we may surely entertain sanguine hopes, that under a well-directed management the tea plant may at no distant period be made an object of extensive cultivation in the Honourable East India Company's dominions, and that we shall not long continue dependent on the will and caprice of a despotic nation for the supply of one of the greatest comforts and luxuries of civilized life.

Appendix, No. 22.

Minute of Sir J. Malcolm on Products of India; 30 Nov. 1830.

Appendix, No. 22.

EXTRACT from Sir *John Malcolm*'s General Minute of 30th November 1830, on his administration of the *Bombay* Government.

Cotton Improvements.

Vide Minute, 16 July 1829.

191. THE despatch of the Honourable the Court of Directors of the 18th February 1829 having called the attention of this Government to the importance of improving the quality of cotton grown in India, and having suggested, with this object in view, that an experimental plantation should be established at the expense of Government, I recorded my opinion as to the mode in which the instruction of the Honourable Court on this head should be carried into execution.

192. In the despatch of the Court it is observed, that their attention has been directed in a special manner to this subject, and to look to India for the means of rendering Great Britain independent of foreign countries for a considerable portion of raw material, upon which her most valuable manufactories depend. But it is not as relates to England alone that this country is one of paramount interest. Cotton is the staple produce of some of our most valuable districts, to the improvement of which we must look in a great degree for any addition to the agricultural resources of our possessions, and consequently to any increase of the public revenue.

Appendix, No. 21.

Minute of Sir J. Malcolm on Products of India; 30 November 1830.

193. In execution of the measure proposed by me, a farm of 200 acres in extent was established in the vicinity of Broach, and was placed under the management of Mr. Finney, a gentleman who had been brought to my notice, as being, from residence and occupation in an indigo plantation in Bengal, well qualified to superintend a farm. An allowance of 500 rupees per mensem, and 40 rupees for house-rent, was granted to Mr. Finney, and he was placed in correspondence with and under the general control of the collector of the districts in which the farms are situated. He was furnished also with instructions founded on the information and observation contained in the Court's despatch, and also several important suggestions from Mr. Romer.

194. In further attention to the objects of the Court's despatch, several farms in the Southern Mahratta country and the Deccan were entrusted to Dr. Lush, the superintendant of the Botanical Garden at Daporee, who was likewise authorised to carry into execution a plan suggested by himself for introducing the cultivation of the Bourbon cotton into the garden of Daporee.

195. Under the impression that the scientific knowledge of Dr. Lush might be rendered further instrumental in promoting the success of the proposed experiment, he was directed to establish a correspondence with the collectors and with Mr. Finney, on all points connected with the process of culture, supplying each other with seeds, &c. &c.

196. With reference to the last paragraph of the Honourable Court's despatch, and with reference also to what had recently been done in Bengal, and to the benefits to be expected from the application of skill and capital to the improvement of the soil, letters were sent to all the principal houses of agency, announcing to the members of them, that both for the establishment of cotton plantations, and for the purpose of raising indigo, or any other particular kind of produce, Europeans would be allowed to hold land on leasehold tenure. Almost exclusively occupied as the small European community of this presidency is with mercantile transactions, it is probable that few of its present members will be desirous of embarking in agricultural speculations; but still I considered it advisable that they should know that Government is not averse to their undertaking them.

Sugar Mill at Bassem.

197. A sugar-mill has been erected at Bassem, to which Government has given every support, and I cannot doubt but the example of Mr. Surgard, to whom it belongs, will stimulate many to follow his example.

Cultivation of Silk. *Vide* Minutes August, No. 30, October, No. 19, October, No. 28.

198. The success with which the culture of silk has been introduced in the Deccan will be seen in my minutes. Several Italians, particularly Mr. Multo, have shown a zealous skill which has met with the most liberal encouragement; and natives of capital have come forward to support speculations which they perceive must be attended with success *.

199. Mr. Graham, the civil surgeon at Ahmednuggur, has had a lease for 15 years of several hundred acres of ground granted him, which, from being capable of easy irrigation, is most favourable to the plantation of mulberries, with which he has filled it. From his science, the money he embarks, and the ready sale there is for the produce in the flourishing town of Ahmednuggur, there can be little doubt of his success, and wealthy natives will by that be stimulated to imitate his example. Mr. Owen, the surgeon at Seroor, has commenced to manufacture upon a more limited scale; but the growth of his mulberries, and the firmness of the soil and climate of that place, are most favourable to the object; but this appears the case with many parts of the Deccan and the Southern Mahratta country. At the gaol of Poonah, as well as that of Dharwar, excellent silk is produced, and in the latter collectorate several natives have established manufactories upon a small scale; but the demand there is for this produce shows that the speculation is profitable, and is only prevented from being extended by the poverty of the inhabitants, and the want of enterprise, or perhaps of credit. As, however, the fact seems perfectly established that the silk produced in this country and in the Deccan will soon, with proper encouragement, drive both the China and the Persian out of the market, and as the consumption of this article will be great when the interior of the southern parts of the peninsula can be supplied with silks produced in our provinces, it is worthy of the most serious attention of Government. The opinion of the principal collector at Dharwar should be required as to the degree of encouragement he deems necessary to promote this object. If my information is correct (and it is derived from a source on which I have every reliance †), the attainment of this object will be secured by a lease for nine or 10 years, on liberal terms, of grounds favourable for mulberries, and a moderate advance of money in the first instance to men of respectability, who have proved their knowledge of the culture and manufacture of silks. I must add, that it is only by the introduction of produce like silk, by our improvement of the staple of cotton, and the success of our recent efforts to make and refine sugar, that can restore heart to many of our districts, and maintain our territorial resources.

200. The machinery in England has greatly lessened manufactures in cotton cloths, commerce is languid, and a state of internal peace prevents employment of men, as well as extra demand. From this combination of causes the population has become almost wholly agricultural, and the supply of grain (which is the principal produce) so far exceeds the consumption, that there has been a glut in the market for the last two or three years in this quarter of India. To that cause is chiefly ascribed the alarming failure of our territorial revenue

---

* Surabjee, a respectable Parsee inhabitant of Poona, having built some public works, and advanced upwards of 1,500 rupees in joining Mr. Muth's silk manufactory, has been raised to the third class, an honour which, as elevating him in the community, he highly prizes.

† I derived my information from Mr. Stevenson, late Sub-collector at Dharwar.

Appendix, No. 22.

Minute of Sir J. Malcolm on Products of India; 30 November 1830.

revenue last year, which exceeded thirty lacs of rupees. The accounts of the collectors have not been received for this year, but I am led to hope the deficit will not be above half as much as it was in 1829. Still it is only by encouraging richer produce, such as that to which I have alluded, and other articles besides grain, reviving commerce, and inducing men of wealth and enterprise to remain or settle in the interior, that we can give heart to the country, and enable it to pay its revenue. There is no want either of talent or spirit among the native population subject to our rule and control to accomplish this object; but it requires to be drawn forth; and to effect this it is necessary to exert all the activity, energy and enlarged policy of a Government which understands how to combine its own prosperity with that of the community subject to its authority.

Appendix, No. 23.

Resolutions of London Merchants, 1830.

Appendix, No. 23.

RESOLUTIONS OF LONDON MERCHANTS, 1830.

AT a Meeting of the Merchants and Agents in London, connected with the Trade of the *East Indies*, held at the Office of the East India Trade Committee, Broad-street, on Tuesday, March 2, 1830,

RICHARD CAMPBELL BAZETT, Esq. in the Chair.

THE Report of the Committee, appointed at a previous Meeting, consisting of the following Gentlemen:—Edward Fletcher, Esq., David Clark, Esq., William Crawford, Esq., G. G. de H. Larpent, Esq., and James Mackillop, Esq., having been read and discussed,

It was Resolved unanimously,

1st.—That the time has arrived when it has become advisable that the opinions and views entertained by the East India Merchants and Agents, resident in London, in relation to the inquiries now pending in both Houses of Parliament, as connected with a renewal of the Charter to the East India Company, should be publicly declared.

2d.—That it is the opinion of this Meeting, from the experience obtained since the opening of the Trade to the East Indies, by the 53 Geo. 3, and subsequent Acts, that the manufacturing, shipping and commercial interests of the United Kingdom have derived very important advantages therefrom.

3d.—That this Meeting confidently relies that, in any renewal of the Charter to the East India Company, due provision will be made to allow such free intercourse of British subjects with India, and to give to them such right of settling therein, as shall (consistently with the security of the British Government, and the welfare of the Native population) be best calculated to promote the full development of the internal resources of that country, and, by the application of British skill and capital, improve its various products, especially those of sugar, cotton, silk and tobacco: these being the principal means by which, in the opinion of this Meeting, a further extension of the valuable trade with India, now obstructed by the difficulty of obtaining returns, may be facilitated.

4th.—That, adverting to the fact of the Government of India having recently imposed a heavy and most vexatious burden on the commerce of that country, through the operation of the "Stamp Regulation," it is, in the opinion of this Meeting, due to the commercial interests of India that the trade should be at once relieved from that regulation, and protected against the imposition of any tax whatever by the local government, without a fair opportunity being afforded to all parties affected thereby of canvassing its merits and provisions, and of submitting to the Government such objections as they may entertain to the measure, previously to its acquiring the force of law.

5th.—That it is the opinion of this Meeting, and is supported by the personal experience of many of the members now present, that commercial dealings, on the part of the Government of India, whether as merchants or manufacturers, are destructive of fair competition, and are, in consequence, calculated rather to depress than excite commercial enterprise through the countries subject to their dominion. It is, therefore, most important to the mercantile prosperity of India that the government of that country should be entirely restricted from all commercial dealings, save and except, in reference to the export trade from India to Europe, it be absolutely necessary to buy produce in open market, for the purpose of remittance in aid of the territorial demands on the London treasury, when no other means of supply can be obtained.

6th.—Whilst this Meeting expresses this opinion as to the bounds which should be set to the commercial interference of the Government of India, it desires to be distinctly understood not to uphold the usefulness or necessity of even such limited transactions, believing, as it does, that the condition of India will, under a free and open competition of commerce, afford further proof to the experience furnished by all other countries in the world, that the work of remittance can be best performed by means of the industry, intelligence and economy of merchants individually interested in the result of their undertakings.

7th.—That this Meeting refrains, at this time, from making any declaration on the important question of the monopoly in the supply of tea to this country now vested in the East India Company, because, in the opinion of this Meeting, that subject is interwoven with various other considerations, beside those purely commercial, which render a full investigation indispensably necessary, for establishing a fair and just decision as to the

course

Appendix, No. 23.

Resolutions of London Merchants, 1830.

course which it may be wise to pursue in furtherance of the common interests of our country.

8th.—But, pending the consideration which is now giving to this most important subject, this Meeting cannot withhold the expression of its opinion that the interests of British merchants, shipowners and manufacturers ought not to be any longer disregarded in relation to the commerce of China; nor the expression of its hope, that merchants of this country shall be no longer excluded from the exercise of their skill and the employment of their capital in a lucrative branch of the commerce of the world, open to all other nations of Europe and America, whilst the exclusion of the private merchants of the United Kingdom has, without producing any corresponding benefit to the East India Company, had the direct effect of checking the general commerce of the country, and narrowing the consumption of its manufactures.

It was further Resolved,

That the foregoing Resolutions be embodied in petitions to the two Houses of Parliament respectively; and that the same be prepared for presentation with as little delay as possible.

R. C. Bazett, Chairman.

Appendix, No. 24.

Appendix, No 24.

Considerations relative to the applicability of Canals and Rail-roads to India.

CONSIDERATIONS relative to the applicability of Canals and Rail-roads to *India*.

1. THE first point to be ascertained is the expense of constructing such works.
2. The returns which they would make.
3. The difficulties that might be expected, considering the present state of the arts in that country; and,
4. It may be considered what particular lines there are in which such works would be most likely to be beneficial. These remarks will apply only to the Madras Presidency.

We may arrive at a pretty correct conclusion as to the expense of such works in India, by ascertaining their expense in England, and making allowance for the different price of labour, &c. It has been found, taking the average of a vast number of works that have been already executed, that double rail-roads cost about 5,000 *l.* a mile. Of this sum about one-third is for the purchase of land, for fencings, for parliamentary and law proceedings, and other things which would either not occur at all in India, or would cause very little expense; the remaining 3,300 *l.* may be divided into two portions, viz. the price of the rails and the expense of cutting, embanking, bridges, laying *the* rails, &c.; the *former in* a double railway is about 1,500 *l.* (viz. 7,040 yards lineal of iron rail, 40 lbs. to the yard at 12 *l.* per ton), leaving the sum of 1,800 *l.* for the latter; as however these rails are calculated for bearing waggons of six or eight tons, we should allow a less weight for rails intended for India, where it could not be necessary to use such large conveyances; and as, from the probable smallness of the traffic, a single rail-road would be sufficient, the calculation would be 3,520 lineal yards of rail, 24 lbs. to the yard, at 12 *l.* per ton, 450 *l.*; and allowing for passing places, 500 *l.* per mile, the price of the rails in England, which, allowing for the difference of exchange, freight, landing, &c. would amount at Madras to 7,500 rupees; or, omitting freight, as they might be carried out in the Company's ships as ballast, 6,500 rupees. For the remaining 1,800 *l.*, the cost of embankments, &c.; after comparing the prices actually paid for that kind of labour in England with those in India, it appears that the proportion is about eight to one, or that 1 ¼ rupee would pay for as much as 1 *l.* in England; so that this part of the expense may be taken at 2,250 rupees, making a total of 8,750 rupees per mile for a single rail-road in India.

A canal, using the same calculation, would be about 9,000 rupees per mile, so that we may consider the immediate expense of the two works as equal. The canal must, however, be provided with a reservoir to supply it with water, which would probably increase the expense by 500 rupees per mile. There does not seem much room for doubt in the correctness of these calculations, supposing of course that the same means are used for diminishing labour as are commonly adopted in England for lines of considerable length, but doubtless there may be found short lines on which the expenses would be much less.

2dly. Respecting the probable returns from such works.

The present rate of carriage in India is I believe about 2 annas (3 *d.*) per ton per mile. The proportion of goods that can be moved at the same expense in England on a common road, canal and rail-road, as found by fact, is about 1, 24 and 8 respectively*; and the roads in India being so greatly inferior to the roads in England, we cannot take the proportions at less than 1, 30 and 10 for that country; hence the prices would be 2 annas $\frac{1}{15}$ *a.* one-fifth of a penny, and $\frac{1}{5}$ *a.* three-fifths of a penny. Now, in England, it is reckoned that such works ought to yield at least eight per cent., the interest of money being 3 ½ per cent., on account of the risk and the time that the sums make no return while the work is constructing; the return in India therefore should not be less than 15 per cent., taking into consideration the ordinary

---

* That is, that a horse can move 24 times as much on a canal as on a common road, and eight times as much on a rail-road as on a common road.

Considerations relative to the applicability of Canals and Rail-roads to India.

ordinary interest of money there, and to this must be added five per cent. for repairs. A rail-road then should pay annually $\frac{8750}{100} \times 20 = 1{,}750$ rupees, or 175 *l.* per mile, and as the saving on each ton of goods that passed along it would be 1 $\frac{4}{5}$ anna (nearly 3 *d.*), 15,552 tons must pass along it annually, or 50 per day in both directions, or 120 of the ordinary bandy loads. A canal should pay $\frac{9500}{100} \times 20 = 1{,}900$ rupees, or 190 *l.* per mile, and as the saving on each ton of goods would be 1 $\frac{14}{15}$ *as.* or 2 annas (nearly 3 *d.*), 15,200 tons must be conveyed by it annually, which is the same as the rail-road. This, however, is on the supposition that the tolls on the rail-road or canal were equal to the present expense of land carriage, in which case nothing would be gained but the interest of the money at 15 per cent.; the tolls should not, certainly, exceed half that sum, and therefore the result is, that on any line such works would not answer as a mere speculation, omitting the considerations of general public benefit by reduction of expense of carriage, increased value of land, &c., where there was a less traffic than 100 tons or 300 bandy loads per day. If the traffic much exceeded this, the canal would in this respect have a decided advantage over a rail-road; for if the traffic was as great as 200 tons per day, or 60,000 tons per annum, then at half the rate of carriage on the common roads, the returns would be nearly 4,000 rupees (400 *l.*) per mile, and deducting 250 rupees (25 *l.*) for the expense of conveyance at $\frac{1}{15}$ *a.* (one-fifth of a penny) per mile per ton, and 475 rupees (47 *l.* 10 *s.*) for repairs at 5 per cent., the net returns are 3,275 rupees (327 *l.* 10 *s.*), or 35 per cent. upon the first cost; or, if only 15 per cent. interest is demanded, the tolls might be reduced to $\frac{1}{2}$*a.* ($\frac{3}{4}$*d.*) per ton per mile, being one-fourth of the present rate, and so in proportion if the traffic was still greater. If it was a rail-road, the deductions for the expense of conveyance and repairs would be 750 rupees (75 *l.*), and 440 rupees (44 *l.*); these sums taken from the 4,000 rupees (400 *l.*) (the gross returns as mentioned above) would leave 2,610 rupees (261 *l.*), or 30 per cent. upon the first cost; or limiting the interest to 15 per cent. the tolls must be $\frac{2}{3}$ anna per ton per mile, or one-third of the ordinary expense of carriage.

The expense of repairs has here been estimated at 5 per cent. on both kinds of works; in England it is reckoned to be less on a rail-road than on a canal; but as in India the rails would be dearer, while earth-work and masonry are cheaper, it is probable that this would make the annual expense equal.

As to the difficulties that would be met with in works of this nature in India, they would not be greater than those that have been met with in England, and that they are not such as the Natives under European superintendance (or without it, if the nature of the works was explained to them) could not overcome, is perfectly evident, from the vast embankments, irrigating canals, &c. which have been executed both before and since the Europeans have established themselves in the country. A canal would require works which are not required in irrigating channels, but not works of a very different nature. But a rail-road for conveyances drawn by animals is one of the simplest works that can be executed, and would present much fewer obstacles than the various works now used in irrigation. The rail-roads would also be preferable to canals, as requiring no water, which is so valuable in the Carnatic. A canal of 50 miles in length would probably require a tank containing three million cubic yards of water to repair the loss by evaporation and by locks; and that quantity would be sufficient to water 300 cawnies of land, the revenue of which would thereby be increased by 2,000 rupees a year. But the main question seems to be whether the same money and skill expended on works of irrigation, whether those now in use or new ones, would not upon the whole improve the country more than if expended in improving the means of internal communication; and supposing that the latter was most required at present, whether the money and skill had better be employed in canals or rail-roads, or in improving the common roads. These might not perhaps be easily answered by any general knowledge of the state of the country; but if the probable returns in money actually received, or indirectly saved to the country, were made the criterion, it could easily be decided; and that this is a fair criterion in general in all works of this sort is very probable, for the object of them is to economize the labours of the inhabitants, considered as one body, in any way, and the saving in money is the exact measure of the labour saved; but then the returns to Government or the projectors must not be considered alone, but also the saving to the various individuals who lie within the influence of each work*. This view of the subject seems to bring the answering of the question within the compass of any man's judgment. There are of course particular cases in which the safety of the country is concerned, either with relation to the movement of troops, or the providing the necessaries of life, that would require to be judged of by other principles. How far there is a probability of the irrigation and internal communication being both improved by the same works will be considered in the next paragraph. It may be proper here to mention that all the above calculations and remarks respecting rail-roads refer only to those intended for animal power, for the use of locomotive engines alters the nature of the work materially, and increases the expense prodigiously, because in the latter case neither such great inclinations, nor such sharp turns can be allowed as in the former. Thus the Manchester and Liverpool rail-road cost 25,000 *l.* per mile, while the average of double rail-ways throughout England is about 5,000 *l.* per mile. That an ordinary rail-road may be made to adapt itself to the form of the surface of the country in a considerable degree,

---

* It is usual, in estimating the expense and advantage of new works, to state only the actual returns in money to Government; but, to form a correct judgment, the money to be saved to the public should also be estimated and separately stated, as well as those peculiar advantages which could not be mentioned by a sum of money.

Considerations relative to the applicability of Canals and Rail-roads to India.

degree, may be seen by the following table, showing the proportional draught on different slopes, allowing that on a level a power of 1 lb. is necessary to save 200 lbs.:

1 in 1,000 - - - - - -	$1\frac{1}{5}$
1 in 600 - - - - - -	$1\frac{1}{3}$
1 in 400 - - - - - -	$1\frac{1}{2}$
1 in 200 - - - - - -	2
1 in 100 - - - - - -	3
1 in 50 - - - - - -	5

that is, that in a rise of 1 in 1,000, the power required to move any weight would be one-fifth more than on a level. On a common road a rise of 1 in 20 doubles the draught, and 1 in 10 trebles it, and as these inclinations are easily surmounted by an animal that usually exerts a force of only one-half or one-third respectively, a rail-road may be made with the corresponding inclinations of 1 in 200 and 1 in 100 for a moderate distance without its being necessary to have another animal to assist.

It is probable that there are very few lines on which there is sufficient traffic in the Madras Presidency for it to be either profitable to construct works of this kind, or possible to combine the means of internal communication with those of irrigation. The only ones that hold any prospect of these are, 1st, the line from the coast of Tanjore through the towns of Combaconum and Trichinopoly (each containing 200,000 inhabitants), and the great grain districts of Tanjore and Trichinopoly to the province of Coimbatore; 2d, the line through Coimbatore along the irrigating channels of the Bhowany river; 3d, that along the irrigating channels of the Noel, which passes directly through the centre of the same district; 4th, those of the Ambravatty, which skirts the south-east part of the same district; and, 5th, the line from near the town of Coimbatore to the Western Canal.

The first line follows the course of the River Cauvery, which is made use of for the conveyance of goods at present, but it has sufficient water in it only for short and uncertain periods, and goods are only conveyed down the stream; it is too rapid, and the deep channel winds too much for tracking vessels up it. There are in this line peculiar facilities for a rail-road, there being an almost uninterrupted embankment by the side of the river from Cauverypatam, on the coast of Tanjore, nearly to Caroor, in the province of Coimbatore, a distance of 150 miles. The embankment would require but little labour to prepare it for laying rails, and there would be very few bridges required, so that the expense of a rail-road on this line would be little more than the cost of the rails and the laying them. On this line the cloths, cotton and saltpetre of Coimbatore, and the grain of Trichinopoly and Tanjore, might be conveyed to the coast, and salt would be taken from the coast to the interior. The latter article would doubtless be brought into the interior in great quantities if the expense of carriage was materially reduced. The carriage of a ton of salt from the coast to Coimbatore costs at present about 25 rupees; the increased consumption of salt would both increase the revenue and promote the general health and comfort of the people. There must also be a considerable traffic between the coast and the two large towns of Combaconum and Trichinopoly (each of them as above stated containing 200,000 inhabitants) in various commodities, and also between them and the interior.

The second line is in the province of Coimbatore, the most flourishing and populous of the dry grain districts of the Madras Presidency. There is a chain of canals of irrigation, running parallel with the rivers Bhowany and Cauvery, which form, excepting some intervals, a line of water communication about 100 miles in length. They are from 15 to 25 yards broad, and from six to nine feet deep. In their present state they would be of little use for the conveyance of goods, as each channel extends only about 50 miles, and they are full of water only during a part of the year. In order to unite them into one line, cuts must be made from the beginning of one to the end of another, with a considerable number of locks in them, for the fall of the country thereabouts is very considerable. This alone would render them available during a portion of the year; but to render them capable of containing water throughout the year, a great deal of fresh embanking and many additional locks would be required, for they have a declivity of about five feet per mile throughout their course, which must be divided into separate levels by means of locks, to make them navigable at all times. There would also be some cutting necessary to straiten them in particular places, for their course is exceedingly devious. Perhaps about 500 feet of locking would be necessary in all, which, at 300 rupees per foot, would cost $1\frac{1}{2}$ lacs of rupees, and this would be the principal part of the expense. Such a sum would be very trifling, compared with the advantages of such a length of water communication, if the traffic on it was at all considerable. No water would be wasted in this project.

The third line crosses the district from near Caroor, on the east side, to the Neilgherry Mountains; the works necessary to complete this line are similar to those last mentioned.

The fourth line extends from Caroor to the foot of the Delhi Mountains, which bound the province on the south, near where the rivers that flow into the sea on the west coast take their rise, and with which they might be connected by new cuts.

The fifth line is along the course of the Paulaur and Penang River, from the foot of the Delhi Mountains to the sea; this river must be rendered navigable by embanking and locking. This last would be a most valuable line of water communication, uniting the province of Coimbatore with the west coast. It is very probable that if anything of this kind was to be undertaken, this would be the best line for the first experiment. But if it would answer as a separate work it would certainly be much more profitable, as forming part of a longer line.

The first, second and fifth of these lines would together form a very complete project, crossing the Peninsula from sea to sea, and passing through the largest towns and the most populous and prosperous districts of South India.

From the data abovementioned a rough estimate may be formed of the expense of this work, as follows: 150 miles of rails to be laid along the embankment of the Cauvery from Cauverypatam to Caroor at 8,000 rupees per mile, 12 lacs of rupees: 200 miles of river and irrigating channels to be rendered navigable from Caroor to Penang at 7,000 rupees per mile, 14 lacs; total 26 lacs*. There are no data by which to judge of the probable amount of traffic on this line, but this might be estimated with sufficient accuracy, after making minute inquiries on the spot among the European and Native Government servants and merchants. This is one of the great lines pointed out by Major De Havilland in his report upon inland navigation.

Having so far considered the subject of permanent rail-roads, &c., it remains to be examined what benefit may arise from the construction of temporary works of this nature to diminish the labour in particular public buildings, &c. To judge of this a comparison should first be made between the prices of carriage in England and India, making allowance for the difference in the value of money in the two countries: perhaps about one-half of all the money expended in the Tank department in India, or about four or five lacs of rupees annually, is for the removal of earth in excavations and embankments, and therefore the comparison will best be made in the prices of that kind of work. The usual price when the earth is to be raised 15 or 20 feet, and carried 30 or 40 yards, is 1 anna or 1 ½ *d.* per yard; the same work is executed in England, allowing for the contractor's profit, at 4 *d.* or 5 *d.* at the most, that is, at three times the price paid in India, while the daily wages of similar classes of labourers in the two countries is about in the proportion of 12 to 1; so that supposing a native of India does only half of the work performed by a European, the price in India is double that in England, solely in consequence of the disadvantageous way in which it is performed. This is an example taken in the least favourable circumstances, viz. where the distance to which the earth is to be carried is small; for in greater distances, the difference is greatly increased; thus in one case the contract price of earth to be conveyed 900 yards was only 4 ½ *d.* per yard, which in India could not have been done for less than 6 *d.* per yard, which is four times as dear, allowing for the different rate of wages. This is not owing to the want of complicated machinery, or great science, but to the neglect of very simple means. A tank digger in India removes all the earth by baskets full, carried on his head, containing from 40 lbs. to 50 lbs.; in England it is removed either by wheel-barrows containing 300 lbs. or 350 lbs., or by waggons running upon rails, containing from 2,000 lbs. to 3,000 lbs. and drawn by a horse, or pushed by men. In the first case one man does the work of six or seven, and in the last of 40 or 50; or one bullock, at 5 rupees a month, would do the work of 50 men at 1 ½ rupees per month per head. The rails are generally of wrought iron, so that they are nearly as valuable after being used for a long time in this way, as at first; and they are laid in rough wooden sleepers at a very trifling expense. Their first cost is about 15 *l.* per 100 yards, so that their expense may be reckoned at 3 *l.* or 30 rupees per annum, allowing for interest and wear; the waggons cost about 6 *l.* each, but would of course cost less in India. Where the quantity of earth to be removed was very small, wheel-barrows would answer best; but where it was greater, rails and waggons would be found cheapest. It is perfectly absurd that large sums should be annually wasted, which might all be saved by the adoption of expedients that are as well known as those that they ought to supersede. What would be said if men were employed carrying earth on their heads in baskets in England; and why should it not be equally ridiculous and absurd in India. It may be imagined that some difficulty might be experienced in getting the natives of India to use barrows, but this has been already tried in a work in the Neilgherries, where not the slightest objection was made to the use of them, and after a few hours practice, they preferred them greatly to baskets.

The bulwark at Madras, constructed about 10 years ago, was one of those works in which the use of rails would have caused a prodigious saving. It was composed of large loose stones, and extending nearly two miles along the beach. There were perhaps 500,000 tons of stones in it, and they were brought from a distance of about eight miles; probably the carriage of them cost about five lacs of rupees. Now the construction of a perfect rail-road on this line would have cost about 70,000 rupees according to the data above mentioned, and reckoning the expense of waggons and repairs for three years at 50,000 rupees, there would be an expenditure of 1,20,000 rupees, exclusive of the expense of conveyance. The difference of level between the place from which the stones were brought and the beach at Madras gives a rise of about 1 in 350; and it will appear by the calculation† given below, that a horse

---

* Supposing the expense to be 26 lacs, the daily traffic should be not less than 60 tons, which would allow of a return of 15 per cent. clear upon the first cost, and there would be a saving to the public of one anna upon every ton conveyed a mile, or four lacs of rupees per annum upon the whole line.

† The force necessary to draw a given weight on a level rail-road is $\frac{1}{200}$ of that weight; in this case the fall being 1 in 350, the tendency by gravity for the load to descend of itself would be $\frac{1}{350}$ of its weight; the difference between these two, viz. $\frac{1}{200}-\frac{1}{350}=\frac{1}{470}$ is the force necessary to draw the loads down the plane; and the sum of them, viz. $\frac{1}{200}+\frac{1}{350}=\frac{1}{130}$ the force requisite up the plane. Thus if the waggons weighed 1,500 lbs., and the load 6,000 lbs., the force to draw the loaded waggons would be $\frac{7500}{470}=16$ lbs., and the force for the empty waggons would be $\frac{1500}{130}=11\frac{1}{2}$ lbs.; and supposing a horse can exert a force of 110 lbs. for a distance of 16 miles daily, he could draw eight waggons, which would contain 22 tons of stones.

Appendix, No. 24.

Considerations relative to the applicability of Canals and Rail-roads to India.

a horse could have brought down 22 tons of stones, and have taken back the empty waggons once a day; and reckoning the horse and his driver cost one rupee per day, 500,000 tons might have been brought down for 22,700 rupees. Thus the expense of constructing the rail-road and conveying the stones would have been 1,40,000 rupees; to which may be added the cost of 20 horses at 500 rupees, 10,000 rupees, making a total of 1,50,000 rupees; from which should be deducted the value of the rails after the work was completed, which would be about 40,000 rupees, leaving the sum of 1,10,000 rupees for the ultimate expense of carriage, instead of 5,00,000, which is supposed to have been the amount really expended, showing a saving of 3,90,000 rupees. This is a case which is not likely to occur again*, but it is a good example of the advantage that might be gained by adopting the commonest expedients used in England.

It seems very advisable to send out a small quantity of rails and waggon wheels, to be ready for any of the works that are constantly executing in the Tank department. About 1,000 yards of light rails, such as are used for temporary purposes in England, and wheels for 40 railway waggons, might be sent out for about 250 *l.*† The rails should be plain square bars, and would cost nothing more than other malleable iron, and would always be available for ordinary purposes. Some other things, such as small cast iron cranes and windlasses, &c. should also be kept at Madras, and some of the principal stations up the country, for the general use of the department, by which a great deal of money might be saved.

COAL IN INDIA, Papers respecting;—Commons' Report 1831, Appendix I. No. 46.

BENGAL.

(1.)—EXTRACT PUBLIC LETTER from *Bengal*, dated 31st December 1823.

(1.) Public Letter from Bengal; 31 December 1823.
Cons 30 October, No. 51 to 53;
20 November, No. 20 to 23;
4 December, No. 41 to 43;
11 December, No. 54 and 55;
23 December, No. 58.

Para. 108. WE solicit the attention of your Honourable Court to the Papers recorded on the Consultations of the annexed dates, relative to a meeting of the British inhabitants of Calcutta, and the formation of a committee for establishing a communication between England and India, by means of steam navigation.

109. The

---

* It has often been proposed to construct either a pier or breakwater, or both, at Madras, for the protection of the shipping, and facilitating the communication over the surf between the shore and the shipping. Should such a work be undertaken, the expense of it would be prodigiously reduced by the rail-road from Madras to the Mount, as above suggested.

† Thus 1,000 yards of rail, 1 ¼ in. square, at 18 lbs. per yard, about eight tons, at 9 *l.* per ton, 72 *l.*; and 160 wheels, each 2 cwt, 16 tons, at 10 *l.* per ton, 160 *l.*

Appendix, No. 25.

(1.) Public Letter from Bengal; 31 December 1823.

109. The committee submitted their proceedings to the Government, and solicited its patronage of the undertaking, and a pecuniary contribution from the public funds.

110. We directed the committee to be informed in reply, that we were fully impressed with the importance and value of the advantages which would result to the State, to the mercantile community, and to individuals, if a communication, by means of steam, between the mother country and India, could be established on a secure, efficient and permanent footing; and we applauded the public spirit of those gentlemen who had come forward to promote so desirable an object. At the same time it was observed, that we could not relinquish the conviction that the undertaking was fraught with difficulty and danger. It was not unreasonable to apprehend that in unsuccessful attempts to achieve this most arduous enterprize many lives might be lost, or if such extreme calamity should be avoided, the failures might involve severe pecuniary distress, and even tend to the ruin of individuals.

111. Influenced by these considerations, we felt it incumbent upon us not to hold out the encouragement of Government to the *commencement* of an enterprize of which the practicability and ultimate success appeared in our judgment very doubtful. It was signified to the committee, therefore, that we were under the necessity of at present declining to grant to the undertaking that sanction and pecuniary support which they had solicited. It was added, however, that the subject of their representation would be communicated at an early period of time to your Honourable Court, with the recommendation of the Government, that in the event of the project of steam navigation between Great Britain and this country being securely and efficiently established, your Honourable Court would be pleased to bestow such a donation on the successful adventurers, in addition to the contributions which might be raised by the Indian public, as the value and merit of the service might seem to you to deserve.

112. The committee, however, in a subsequent address afforded such explanation as tended to remove the apprehensions relative to the apparently extreme hazard attendant on the attempt to establish a communication between Great Britain and India, which we justly entertained before the receipt of the committee's satisfactory exposition. We consequently became willing to indulge our cordial disposition to promote an enterprize promising so much benefit to the State and to the community, divested in a great degree of those scruples which a tenderness for the interest of individuals first prompted us to form. We accordingly resolved to place at the disposal of the committee the sum of 20,000 rupees, as a contribution towards the attainment of the object in question, subject however to the following conditions.

113. Adverting to the Act of Parliament which provides that no vessel shall be licensed to proceed to India under 350 tons burthen, we stated our opinion that it would be obviously desirable that the clause in the resolutions inviting vessels not under 300 tons burthen to make the experiment of steam navigation between the mother country and India, should be altered to 350 tons. It had certainly been rumoured that the above restrictive clause in the Act of Parliament was likely to be rescinded, but while it was actually in force there was a manifest irregularity in framing a public procedure inconsistent with its purview. Again, we stated our opinion that the premium should be limited to the sum of 100,000 rupees; should it exceed that amount, the object of permanent advantage would, we observed, be in our judgment liable to be defeated. If the bonus should be on a larger scale, the adventurer who might become entitled to it by the performance of two voyages, might consider himself so amply remunerated as to relinquish all further experiment; thus the public would lose all the benefit of his successful experience, and though the practicability of the communication would be proved, the permanent establishment of it would be left to the doubtful perseverance and unaided exertions of less competent speculators. It was therefore intimated to the committee, that it appeared necessary to guard, if possible, by a special resolution, against the chance of the premium being claimed as the reward of one or two successful enterprizes, rather than as a remuneration for the accomplishment of the great object of the committee, a regular and permanent intercourse between the two countries.

114. The committee in reply, after expressing their acknowledgments for the liberality of Government, and their satisfaction at the impression which their explanation relative to the risk of the undertaking had made on our minds, observed, that in providing that steam vessels should not be of a less burthen than 300 tons, the committee had in view the safety of the vessels, and the accommodation of passengers, by guarding against the possibility of vessels of a smaller size being used after the expected repeal of the Act of Parliament adverted to by us, the enactments of which, so long as they remain in force, could not of course be affected by any resolutions of the committee. They had, however, readily adopted the suggestion of Government on this point, and had resolved to add the following words to the third resolution contained in their proceedings of the 10th ultimo; viz. "Or 350 tons, whilst the Act of Parliament which requires that burthen for British ships proceeding to India shall remain in force."

115. The committee stated that they had no reason to expect that the subscription which had been opened for a bonus or premium, would considerably exceed sicca rupees 100,000, at which amount it was originally computed; but in compliance with the further suggestion of Government on this subject, they had agreed that the second resolution passed by the committee on the 10th ultimo, should be modified, so as to limit the amount of the premium to the sum of one lac of rupees, leaving any surplus which might be subscribed beyond that sum, to be disposed of at a general meeting of the subscribers for any purpose connected with the object of promoting steam navigation between Great Britain and India, either by a partial reimbursement of expenses incurred in a meritorious, though unsuccessful, attempt to establish

Steam Communication with India, and on the Rivers of India.

establish steam packets as proposed, or by any other application of the surplus collected to the purpose above stated, that might appear just and proper.

116. The committee expressed their hope, that the resolution to limit the premium to one lac of rupees would sufficiently obviate all risk of its being obtained by any person contemplating the subsequent abandonment of the speculation; for, as far as the case admitted of calculation, after the necessary excess of charge and abatement of profit incident to the commencement of every such undertaking should have been met, there would not remain to the successful candidate such a clear gain as would at all compensate for the relinquishment of an established concern; and, on the other hand, it could never be desired to force the continuance of the attempt if, contrary to all just expectation, it should be found unprofitable, and likely to be attended with permanent loss.

117. The above explanations being satisfactory to us, we issued orders for the payment of the sum of 20,000 rupees to the steam committee.

(2.) Letter from the Court of Directors to the Governor-general, Bengal; 11 May 1825.

(2.)—EXTRACT LETTER (Public Department) from the Court of Directors to the Governor-general in Council at *Bengal*, dated 11th May 1825.

50. WE highly applaud the zeal and public spirit which have been manifested by the originators and promoters of this subscription, and we sincerely hope that it may be attended with the desired success.

51. The mode which they have selected for encouraging enterprizing persons to make the attempt, viz. by offering a premium to the first successful adventurer, appears judicious, and we sanction the donation of 20,000 sicca rupees which you made to the fund.

(3.) Letter from H. Prinsep, Esq. to J. Dart, Esq.; 10 August 1828.

(3.)—LETTER from *H. T. Prinsep*, Esq., to *J. Dart*, Esq., dated 10th August 1828.

Sir,

1. I AM directed by the Right Honourable the Governor-general in Council to forward, for the purpose of being laid before the Honourable Court of Directors, the enclosed copy of a note on the subject of steam navigation, as applicable to the rivers of this country, and of some other papers on the same subject*, which were laid before his Lordship in Council on the 7th instant, together with copies of the orders and instructions issued in consequence, for the purpose of causing an experimental voyage to be made with the Government steamer Hooghly to Allahabad and back.

2. The results of the voyage will be reported to the Honourable Court on the return of the steamer, together with such observations and recommendations on the subject of steam navigation as the Governor-general in Council may think proper to lay before the Honourable Court.

I have, &c.
(signed) *H. T. Prinsep.*
Secretary.

(4.) Note on the introduction of Steam Navigation in Bengal.

(4.)—NOTE by Mr. Secretary *Prinsep* on the introduction of Steam Navigation on the Rivers in *Bengal*, dated 31st July 1828 and PS. dated 7th August.

THERE is no river in the world, unless those of China be exceptions, on which there is so large a navigation as on the Ganges and its tributary streams. Major Rennell, writing in 1780, reckoned that no less than 30,000 boatmen found their livelihood from this source, and as that was a time when trade was far less flourishing than at present, when Upper Hindoostan produced little or nothing for external commerce, and its communications with Bengal were much restricted, a time indeed when all India was suffering from misrule, and Hindoostan in particular was a scene of anarchy and violence, it might not be too much perhaps to assume the number of boatmen in the present day to be double that estimate. No attempt has yet been made to take a census of the class, or even to count the number of boats on the different rivers. Every body, however, that has lived on the banks of the great Ganges has been struck by the constant succession of boats moving up or down, the river never appearing for a minute altogether clear; and as this is nearly the same at all seasons and in all places, it leaves an impression of the extent to which this magnificent stream subministers to the wants of commerce and of the traveller, such as defies the attempt at computation. It is not the Ganges only, as a single stream, that confers these benefits, all the larger rivers that bring down the waters of the northern hills are navigable more

---

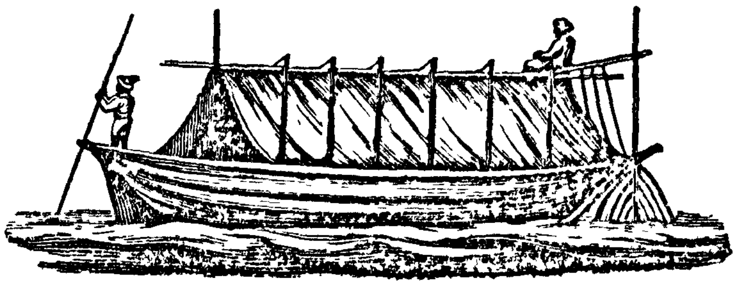
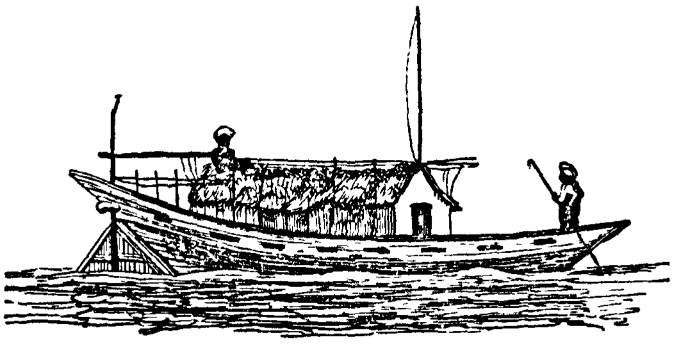
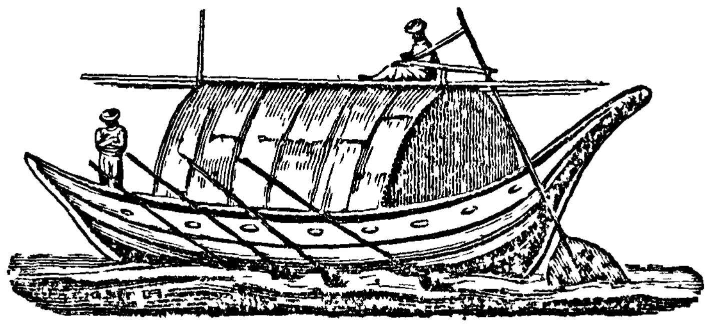
2. Note by Captain Forbes, Engineers, dated 27 July.
3. Letter from Captain J. H. Johnstone, with its Enclosure, dated 22 July.
4. Letter to the Marine Board, dated 7 August.
5. Letter to Captain J. H. Johnstone, dated 7 August.
6. Letter to Captain T. Prinsep, Engineers, dated 7 August.
7. Letter to Captain G. I. Smith, Engineers, dated 7 August.

more or less throughout the year, and almost to the foot of the first range*, these too are sufficiently numerous to sweep the commercial produce of all that tract without its needing any land transportation except to the Ghauts, where it is embarked, and to which the agricultural cattle suffice to convey it. The rivers that flow into the Ganges or Jumna from the south, have not the same character; they are formed from mountain torrents, dry for the larger portion of the year, and even the Soane, the largest of them, is not navigable much above Daodpoor, which is but 20 miles from its confluence with the Ganges. The rivers of Bundelkhund and of Malwa have rocky beds and frequent waterfalls, so that the Chumbul, which is the largest, is scarcely serviceable for navigation at but a very short distance from the point where it falls into the Jumna. Taking the limit of the Ganges and Jumna to the west and south in Hindoostan and the Burhampootur and Megna to the east, the country completely intersected with navigable rivers, and within which both trade and travel are mainly carried on by water, may be computed to cover an area of not less than 40 square degrees.

The boats used in this large space are very various, and there is a distinctive character in their build, corresponding with the local circumstances of the districts where they are constructed. The patella or baggage boat of Hindoostan is of sal wood, clinker built, flat bottomed and scarcely more manageable than a punt, yet through its great breadth it has of all the smallest draught of water, and is, therefore, admirably calculated to bring down the cotton and other products of Hindoostan, which need little better than a dry and secure raft to float them down the stream.







The oolak or common baggage boat of the Hooghly river and of Central Bengal has a sharp bow and rounded smooth side; in tracking or sailing before the wind it has no equal, besides being tolerably manageable with the oar in smooth water. The dacca pulwar is much more weatherly, and though like the rest flat at bottom, that is without keel, on account of the frequent shallows of the navigation, it is altogether the swiftest and most handy boat in use for the purposes of commerce. Besides these principal classes there are boats of a particular construction used for the conveyance of particular articles, as the salt boats, the wood boats of the Sunderbund, the light boats which convey the beetel leaf to the cities, and various others which it is beyond the purpose of this paper to recapitulate. For the accommodation of travellers the same boats are ordinarily used as for merchandize. A native traveller, according to his substance and the degree of accommodation he requires, fits out a dingee or a panswee, or a pulwar, or an oolak, if more wealthy he takes these for his baggage and attendants, and provides a budgerow or a ketch-rigged pinnace of European build besides for his personal accommodation. European public officers proceeding to their stations by water, have ordinarily boats of various descriptions, according to the quantity of baggage and of establishment with which they travel; a civil officer of standing seldom has less than five or six, and sometimes he has as many as fifteen, when the materials of house-keeping, with horses and equipages, accompany his route. The hire of each description of vessel is noted below†, with the time allowed for a voyage to Allahabad, that is, the period for which it is necessary to engage the boats in order to make such a journey.

These

---

* The Ramgunga and Gurra, in Rohilcund, are comparatively small, but still navigable for more than half the year. The Goomtee Chowka and Gogra in Oude; the Raptee Gunduk and Bagmutee in Gourukpoor and Behar; the Koosee, Mohanudee and Teesta; and so to the Burhampootur and its branches in Assam; and the Soorma and Megna, which flow from Kuchar through Sylhet, are navigable throughout the year.

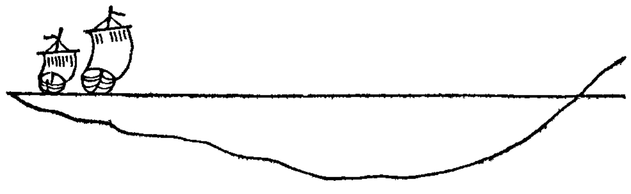
		For voyage to Allahabad 2 months and 15 days.
† Dacca Pinnace, 1st class, per diem	*Rs.* 18 to 20	1,200 or 1,400
— Lowest class	12 to 14	900 or 1,000
Budgerow, 1st class		650
— Last class		450
Patella, of 500 Maunds		150
Oolak, of ditto		150
Pulwar, ditto		150

These details may be deemed superfluous, but it is essential, before entering on the consideration of the benefits to be derived from the substitution of another process of navigation, that the modes in use should be brought distinctly under view.

It will be seen from the above short notice, that the navigation up the stream is dilatory and, as a necessary consequence, expensive. It is also not free from danger. The rate of insurance for merchandize from Calcutta to Allahabad is the same as that upon a voyage to England*. Down the stream there is of course no delay and little expense, but the danger is at least equal.

The principal sources of danger are, first, the rapidity of the current which, averaging five miles per hour in the rains, is increased to six and seven, and even eight at places where the stream is checked by rocks, as at Moongeer Colgong (Kuhulgaon) and Jangeera, or by hard konkur banks, as at Pointee and various other places; or by the buildings and artificial defences of a city or large town, as at Patna and Rajmuhal. If the wind is strong and blows the same way with the stream, a boat coming down is driven with such force by the united action of it and the current, as to be staved in and sunk on striking against the rock or bank, or against some other boat, if there be a fleet. If, again, the wind blow against the stream, it raises a considerable sea, and the native boats attempting to sail up, find a difficulty of steering, and sometimes meeting an eddy, or through the mere effect of the waves on the rudder, are turned sharp round and upset; or, as is by no means uncommon, when too heavily laden, fill and founder from the mere action of the waves on the bows and gunnel.

The second source of danger is from shallows and concealed sand banks. The manner in which these are formed and the rapidity with which they shift with every change in the set of the current, preclude the possibility of providing against the danger by a survey, howsoever accurate. As observed by Captain Johnston, an experienced eye can generally tell where the deepest channel is to be found, by the appearance and strength of the current†. In dropping down the stream the manjees of course attempt to keep this; but even the most experienced are sometimes deceived, and a wind on the beam will drive them on a sand-bank before they are aware of the existence of danger. The river rises and falls sometimes very suddenly, and after striking on a bank, if the boat cannot quickly extricate itself, there is some risk of the water failing. In sailing up (and the same course would be followed by steamers) the centre of the main channel is always avoided, for the strongest wind barely suffices to enable a boat to stem it; the object is to seek that part of the stream where the water is comparatively slack, and this is found always on the shelving side up which the vessel makes its way, crossing over immediately when in the alternation of the river's course the shelving bank becomes again precipitous, and the current strong. Without local pilots (and fishermen may generally be found for the duty) it would scarcely be possible in such a navigation to avoid frequently striking on banks, but in proceeding up with boats of the common description there is little danger in this. The crews jump into the water and commonly lift the boat or pinnace off in a few minutes. Thirdly, the falling in of the banks is a more serious danger than would readily be supposed; for in tracking up when there is no wind, the boats must sometimes be dragged under a precipitous bank of 20, 30 and even 50 and 80 feet perpendicular height, and if this has been undermined or loosened by recent rain, the earth falls in large masses, the wave of which is enough to upset a small boat, and the largest would be sunk if struck by the weight of earth‡. It is particularly necessary to be careful of this danger in putting to shore for the night, but even the best selected spots are liable, through a change in the set of the current, or from some protection above being washed away, to be brought suddenly under the operation of this evil. The rapidity with which the loose soil yields under such circumstances defies description, and in a large fleet made fast to the shore half the boats are often cast loose, huddled together and driven by the current upon those below before any precautions can be taken for their security. A steam vessel never tracking and having the choice always of the two sides of the river (which, without a wind blowing directly up the stream, is not the case with common boats), would be less liable to accidents from this cause than any description of craft now used. Such a vessel might always depend on finding good anchorage for the night.



The fourth and only remaining danger arises from sunken trees, which, falling and becoming fixed in sand-banks, present jagged points frequently below the surface of the water, on which boats striking are staved in. A floating tree is less dangerous than a fixed one, for it may generally be seen above water, and if it should strike a boat, the part that first comes in contact with it yields to the shock, and the worst that generally happens is that the tree carries the boat along with it down the stream, until cleared away.

It must be evident that the dangers and difficulties above described cannot be peculiar to the Ganges: the same precisely must be experienced in the Mississippi, which like it is subject to freshes, and like it runs through a long course of low alluvial soil. The rapidity of of the current of this river in the height of the freshes, that is in the spring season of Europe, is stated in geographical books at six miles per hour, but in the dry season it is but one and a half and two miles, which is much less than the Ganges, whose lowest rate is three miles. Again, the sources of the Mississippi not being liable to the influence of tropical rains, the rise of that river in its freshes cannot be compared with that of the Ganges, which even at its broadest point, that is at the head of the Jellingee, where the soil being light on both sides, there is nothing to check or unnaturally swell the tide, is stated by Major Rennell at 32 feet of perpendicular height, and the fact is confirmed by subsequent measurements of recent date. I know of no river within the tropics on which steam navigation has been introduced extensively, and none therefore preferable to the Mississippi for comparison with the Ganges, when the possibility of introducing steam navigation in the latter is the question. It would seem that the difficulties, from the above circumstances, and the dangers also of the Ganges, are likely to be greater than in the Mississippi, but not dissimilar in kind, and therefore, considering the eminent success with which steam has been introduced in the latter, there is no reason to think they would prove insuperable, nor ought they to be deemed conclusive against an attempt being made to introduce steam here. In the Great Ganges, the simple fact that the river is no where fordable for an elephant below Allahabad in the dryest season, is proof enough that there is every where sufficient depth of water for any description of steam-boat, if only the main channel is followed. Major Rennell, indeed, states the average depth of the stream in the dryest season at 30 feet; good management and good pilotage therefore, in one word, experience, seems all that is wanted to ensure that a steam-boat shall make a safe and speedy passage up to that station. In what time, with what gain upon boats having only the oar, the sail and track-rope, is an important point that can only be settled by repeated experiment. Whether it is worth the while of Government to make these experiments and to incur charges for the purpose, is another branch of the subject that will be discussed presently.

---

* River Insurance Company's rates to Allahabad, 3½ per cent., to London from 3 to 4 per cent. according to circumstances.

† Mr. May who has filled the situation of Superintendant of Rivers for nearly 10 years, is now at my suggestion making up a map showing the course of the Great Ganges from the head of the Bhagurettee to that of the Joliuyee, as it has varied each year of his examination of it, and as compared with Major Rennell's Survey of 1780, and Colonel Colebrooke's of 1793. The map, with this gentleman's observations on it, will be a valuable addition to Major Rennell's ingenious essay upon this subject.

‡ Under the High Bank just below Bhagulpoor, Lord Hastings lost 14 baggage boats at once from this cause, assisted by a squall and strong current, which huddled the boats together.

What is stated above leads to the conclusion, that there is nothing in the character and condition of the rivers to prevent an experiment, if not on other accounts unadvisable. Calcutta, indeed, labours under a disadvantage in not being washed by the main stream of the Ganges. In the dry season, the communication with the great river by the three channels that when united form the Hooghly, cannot be depended upon, for the water falls to within a foot of the bed of these channels, closing generally one or two of them altogether, and leaving in the third but a foot or 18 inches water during the two months of March and April, and in the beginning of May. This circumstance appears to render it indispensable that any experiments that may be made should be commenced immediately, and conducted in the rains, or soon after their close, during the period when there is still sufficient water in these channels for the steam vessels to be used. It is true that if the cold season be preferred for an experiment, access to the great river might be found through the Sunderbuns; but for this a long detour would be necessary, making to ordinary boats a difference of at least seven days, in the general voyage. Besides, the prevalence of easterly winds during the rains is an advantage, which more than compensates for the increased celerity of the stream; and the inundation and plenty of water, gives the means of making frequent short cuts to avoid difficult places, and greatly expedites the period of arrival. The same reasons, indeed, which induce individuals to prefer this season for the voyage up, point it out for the time of an experimental steam voyage, should such be determined upon.

1. Bhageruttee or Cossimbazar River.
2. Jellinghee.
3. Mata Bhanga.

I shall now proceed to inquire, with a view to what objects Government should entertain the desire of eventually introducing steam navigation; putting out of view the commercial transactions of the Company, with which we of course have nothing to do, the river navigation is used at present for the following Government purposes:

First. To transport treasure: 38 lacs of rupees of the Gwalior loan were last year brought by water from Agra to Calcutta, and fortunately arrived safe; but instances of the boats sinking and of the loss of treasure are by no means rare occurrences, and as the treasure has to be conveyed in the common native boats above described, it may be assumed liable to the ordinary risk represented by the rates of insurance stated. But for the transport of treasure under the present system, a very large proportionate escort is always required. The 38 lacs of rupees above adverted to were brought down by an entire battalion, so as to employ a large fleet of boats, and the same, or nearly so, would have been the case if a similar amount of treasure had been sent up. For the protection of any amount of treasure that a steamer might be able to carry, a common havildar's guard added to the crew, commander and passengers, would be ample escort; for no band of robbers could follow it or waylay it, as they could not know where the steamer would put in to for the night, or what progress it might make each day.

The treasure of Chittagong and Balasore is now always brought to Calcutta in sea-going steamers, without any guard in addition to the crew, and by arming a river steamer with swivels, and enjoining that it should always lay at anchor by night at a considerable distance from the shore, there can be no doubt that equal security might be provided for an up-river voyage, even without a guard; but it will of course be preferable to have one.

If treasure can be carried by steam more rapidly than by land, as well as more securely, all native and other mercantile remittances would be made by the Government steamers, and should experiment show the plan to be practicable, the item might be made a source of emolument in this way, as well as through the saving of the boats, batta and other allowances to the escorts now employed in the transport of public treasure. But there are other ways in which the plan, if completely successful, would be made to answer: a mint is provided at Benares to coin bullion for merchants there, and also to re-coin the bad and short-weight rupees received by collectors in payment of the land revenue. If Government could depend on the means of forwarding treasure from Benares for coinage in Calcutta, and of

receiving

receiving coin back in exchange in 20 days, the necessity for the mint and its establishment would be entirely superseded, and all that would be required would be an assay master attached to the collector's treasury at the station, upon whose report bullion should be received.

It is not possible to say what might be the saving and what the gain upon the complete establishment of steam navigation for the transport of treasure up and down the rivers: the object is surely sufficiently important to warrant an experiment, in order to determine how far the navigation is practicable for vessels of this description, and within what period the voyage can be performed.

Secondly. Every King's or Company's officer proceeding up the country to join his regiment, or otherwise travelling by water on duty, receives a monthly boat allowance at the rates given below,* and for a journey to Allahabad the period authorized is three months. Now, though it would of course be out of the question to deprive the higher grades of officers of allowances which have been fixed on a scale enabling them to carry up their families and baggage; the junior officers would prefer to have a speedy passage found them by Government on board a steamer, and in the case of cadets and others recently arrived, it would be a great advantage to have the means of forwarding them by such a conveyance: the Government would thus gain so much the more of their services in lieu of the time being wasted unprofitably in the progress to their corps, besides the positive saving in expense, through diminution of the period occupied in the voyage, and by accommodating several in a single vessel. It is true that the present river steamers of Government are not calculated to carry many passengers, but if it be established by experiment made with them that the voyage to Allahabad can be performed in a fortnight or 20 days, the construction of others, or the adaptation of the present vessels to the purpose would follow in due course; the object is certainly well worth the cost of an experiment to ascertain within what time the voyage can be made by steam.

The sums annually paid by Government as boat allowance to officers are noted below†, and from the largeness of the amount an estimate may be formed of the diminution of charge that would result from providing a conveyance to Allahabad for the juniors, who are of course the most numerous, and whose boat allowance forms the bulk of the expenditure.

Thirdly. Analogous to the above is the transport of European troops and stores to the Western Provinces, which is always now done by water: the boat hire paid on this account in the years 1825–26 and 1826–27, appears on reference to the military accountant, to have amounted to no less than 572,422 *l.* in the former, and 456,922 *l.* in the latter year‡. The allowance is stated by Captain Johnson to be 50 maunds per man in the common river boats.

‡ The following statement is from the Military Auditor-general's Office:

Charge of sending an European regiment to Cawnpore by water:	
Commissioned officers, boat allowance, assuming the number of officers now serving with His Majesty's 31st Foot	23,310
Tonnage for 1,000 rank and file, 120 women, 100 children, and 190 followers; also for hospital and commissariat	22,677
TOTAL Charge of Transport by Water	45,987

boats. Now, with steam vessels fitted out for the purpose, and making the passage up and down to Allahabad, say in one month, a regiment would be transported in successive trips with a security, comfort and healthiness to the men, much superior to anything obtained under the present system. In the case of stores, the knowledge that anything required on emergency could be furnished in a month, would materially diminish the necessity of keeping the depôts always so fully supplied. The whole quantity of stores required for the different stations of the army could not probably be conveyed to Allahabad by steam, but all the most valuable and most important might, which would be a considerable gain. Whether it is worth the while of Government to make an attempt to apply steam navigation to such purposes, must depend on the result of experiments to ascertain the period within which the voyage to Allahabad, and eventually to Cawnpore, can be made by such agency: if the result shall justify expectation in this respect, it will then be a question to which of the above objects to apply the improvement first, and in what form to extend it.

Fourthly. Although the voyage by steam can never be made with sufficient rapidity to be applied to the conveyance of the letter mails or dawks, it may yet be exceedingly serviceable in carrying the bhangee or parcel dawk, which is now a large and is likely to be an increasing concern. Upon a rough estimate obtained from the Postmaster-general, it appears that the monthly receipt at the Calcutta post-office for bhangee postage*, being taken at 11,047 rupees, which is the amount realized in June upon eight dispatches, the proportion that would be assignable to steam, supposing all the bhangees up the river as far as Allahabad to be conveyed in that manner, would be about 7,000 rupees. The saving of establishment that would result would be sicca rupees 899 per mensem, supposing the communication to be sufficiently frequent to warrant the exclusive use of steam for this purpose; but as at present there are eight bhangee mails dispatched per mensem, and Government have as yet but two steamers adapted to river navigation, this saving cannot be reckoned upon, except as a prospective advantage. Nevertheless, if experiment shall prove that the passage to Allahabad can be made as rapidly by water as the bhangee mails travel by land, a separate mail might be established in the first instance by such vessels, and the great security of the method of conveyance, the immunity from theft or robbery, and from injury, from weather or accident of any kind, added to the power of carrying larger parcels, must insure an increased resort to this means of transport and thence an increased revenue. The application of steam navigation to this purpose must depend of course on the time within which the passage to Allahabad can be made by steam. Bhangee parcels would require to be conveyed to that station in about 15 days, before such a mode of conveyance could be admitted to supersede the present system; for the bhangee mails carried by relays of men, arrive generally within that time, though not with any regularity.

Fifthly. There is at present an establishment of four expensive boats kept up for the transport of stamped paper to the different district stations. The majority of these are accessible by steamers, and the whole, or the greater part of this establishment, would be saved by employing steamers instead to carry the stamps. The cost of the four boats was about 16,000 rupees, and the permanent charge of each per mensem is rupees 118, or, for the four, rupees 472. Stationery and medical stores are similarly articles of a description that might at once be sent by the steamers to all the river stations, by which a very considerable present saving would be made in the charge of their conveyance by the present plan, or rather the amount of this charge might be transferred to meet in part the expense of the steamers which did the work. These objects are of secondary importance only; still they afford so many additional motives for making a sufficient number of experimental voyages to enable Government to ascertain within what period the passage can be assured, and they help to show that if the experiments are successful, there are abundance of useful purposes which steamers may be made to answer as well immediate as prospective.

With respect to the description of steam vessels best adapted for river navigation, with reference to the different purposes for which Government would eventually require them, the subject is foreign to the immediate purpose of this note. Captain Forbes has, however, furnished a Memorandum, which is annexed, containing some valuable hints, and discussing the question with his usual judgment and professional skill. To that paper the members of Government will of course refer when the question shall be, in what manner to apply steam to any of the purposes required; but preliminary to this is the ascertainment by experiment whether through the application of steam the full desired benefit, or what proportion of it, can be expected. For such experiments the present river steamers of Government appear amply sufficient. Improvements may be made in future vessels, calculated to increase speed or diminish the draught of water, or to extend and improve the accommodation afforded. Every thing of the kind would of course be so much gain; and possessing a perfect knowledge of the capacity, draught and power of the boats, we have, through the result of experiments, actually

actually made with them, the effect of each improvement may at once be calculated. The most important point of all is to ascertain as nearly as can be done what precise gain of time over vessels ordinarily used for the transport of goods, treasure, public stores or travellers, can be reckoned upon with a steam vessel of a given power and draught, and likewise whether the navigation of the Ganges presents such difficulties as must prevent or discourage the hope of ever successfully applying steam.

The Hooghly and Burhampootur have been built especially for river navigation, and the whole cost of their build will be thrown away if the desired experiments be not made with them. Their dimensions, power of engine and draught of water are given below*, together with the more important particular, viz., their capacity for carrying their own fuel. Assuming the consumption at 100 maunds of coals per day of 12 hours, which I am assured is an outside calculation, six or seven days is the interval at which fresh relays of coal would be indispensable, and the question arises at what distances to make the provision. For the first experiments the safe side must of course be taken, and three if not four relays should be provided for the voyage to Allahabad, assuming the distance to be about 640 miles. This allows 213 miles for each coal station at three, and 160 at four divisions. To accomplish these distances in six or seven days, a rate of from 25 to 35 miles per day of 12 hours must be reckoned upon against the current. These are distances which the river craft continually exceed when they have a fair wind; and assuming the steam-engine to be in place of such a wind, giving as it must a choice at all times of the most favourable channels and parts of the river for upward navigation, it would be to assume a necessary failure to take a shorter distance for the daily progress. For three relays at a distance of about 200 miles from each other, depôts of coal would be required at Rajmuhal, Dinapoor, Benares, and at Allahabad for the return voyage: 800 maunds at each station is an abundant supply. The return voyage would not probably occupy much more than seven days, and the necessity of using at most but half the steam power, would allow the seven days' provision to be husbanded for at least 12 days' use if necessary. If four stations be deemed indispensable, Moorshedabad, Moongeer, Chupra and Benares would seem the most appropriate, or, to relieve the length of the first stage to Rajmuhal, a boat-load of coals might be forwarded to Cutwa, to enable the steamer to proceed from thence with a full supply.

The Diana steamer, which was so useful in the Burmese war, carried the British Resident with his suite up to Umrapoora, on the Irrawaddy, within a month, during the September freshes, stoppages included, and with the disadvantage of using wood instead of coal fuel. The journey is as compared with the Ganges to the height of the city of Benares. There is unfortunately no record of the progress the Diana made *per diem* against the stream of the Irrawaddy, nor of the stations at which the depôts of fuel were established for that voyage †; otherwise that expedition might be assumed to afford useful data for calculation in respect to the proposed experiments, for the Irrawaddy, except that it is not so large, and has consequently less depth of water than the main stream of the Ganges, must be similar in all other respects to this latter river; and it is worthy of remark that the draught of water of the Diana exceeds that of either of the new river steamers lately built, by a foot and a half or two feet, so that the successful trip she made on the occasion alluded to is very encouraging to an experiment with these. On her return, indeed, I have been informed that owing to the subsiding of the inundation and the general shallowness of the river, the Diana had very great difficulty in making the voyage, and that on one occasion she stuck so firmly on a sand bank as not to be extricated without landing every thing of weight and obtaining the aid of several hundred of the Burmese inhabitants in the neighbourhood to lift her off. This, however, occurred in the month of December; and considering the difference in the draught of water of the new steamers, the circumstance should be no argument against dispatching them to Allababad on the experimental voyage proposed, more especially at the present season of the year.

† Doctor Stewart, who accompanied Doctor Crawfurd as surgeon, and to whom I have caused application to be made on the subject, writes, that nobody kept a journal, "but in going up we experienced no difficulty whatever in September (except for supplies of fuel) and travelled generally 30 miles a day. Coming down, the river had fallen and several banks had shifted, so that we always had the jolly boat a head, and often from ignorance of the channel had to kedge along; when we could procure a pilot to point out the channel from one town to another, we got on very well; we drew never less than six feet."

Appendix, No. 25.

(4.) Note on the introduction of Steam Navigation in Bengal.

In addition to the dispatching of coal, it will be necessary for the success of the proposed experiments as well to secure the services of an experienced manjee, well acquainted with the river, (which is by no means difficult, for there are many men whose whole life has been spent in making voyages up and down), as to provide local pilots at all the different points. Precautions of this kind can always be taken by notice beforehand to the local functionaries and police daroghas; and in case of any unforeseen emergency, these will readily provide any extra assistance that might be necessary to extricate the vessel and save the property of the State.

With respect to the expense: in an experimental voyage of this description it is only of importance to notice the item for the calculation of future results. Exclusive of the ordinary establishment and wear and tear of the steamer, the charge is confined to the coal and contingent expenses. For the voyage up and down at 800 maunds for each station, as above assumed, the total expenditure of coal, supposing the vessel to arrive always with none left of the preceding supply, and supposing also the entire supply sent to Allahabad to be consumed in the voyage down, would be 4,000 maunds. The best coal is now put on board at Calcutta for seven annas a maund: unfortunately none is to be found at any point of the voyage except such as may be forwarded from Calcutta. This is certainly a great drawback, and perhaps were the banks of the Soane explored, a coal similar to that found near the Dumoodur in Burdwan might be discovered, for there is no great dissimilarity in the character of the country through which the two rivers run. At present, however, the cost of coals for the depôts must be taken at the Calcutta price *plus* the charge of conveyance to the desired station. At Allahabad coal has been delivered to Government on contract at a rupee per maund: taking 12 annas therefore as the medium charge per maund for all the stations, the total expense of the voyage would be 3,000 rupees for coal. For pilots, additional crew and contingencies 500 rupees more might be added, making 3,500 rupees the total charge to be placed to the account of the experiment. The risk, wear and tear, and ordinary charges of the vessels dispatched must of course also enter into any calculation that may hereafter be made for the purpose of showing that steam navigation can or cannot be applied beneficially to any given public object; but such items are foreign to the determination whether an experiment shall be made or not. The extra expense that it will occasion to Government is all that has at present to be considered; in other words, whether it is worth 3,500 rupees to ascertain with what gain in time, over the ordinary boats of the country, steam navigation can be introduced up to the station of Allahabad. I have named this station, and confined my observations to it, because immediately beyond the navigation is exceedingly difficult. For the five miles between the fort of Allahabad and the village of Popamow the river falls in a race over loose sand with a velocity not equalled in any other part of the stream, and the nature of the soil keeps it perpetually shallow, more especially during the rains, when the width is very great. This is decidedly the most dangerous and difficult point of the entire navigation of the Ganges; and it is customary for travellers to disembark, and for boats with merchandize to lighten their draught before they encounter its dangers. The river steamers now belonging to Government have neither sufficient power, nor is their draught sufficiently small to be able to make a certain passage of this rapid; consequently it is best not to attempt it, or at least not to include it in the calculations of the first experiment. The cause of steam navigation will suffer nothing by being first considered with reference to the result that may be ascertained by an experimental voyage to Allahabad. Cawnpore being the principal station of the army of Hindoostan, is doubtless a most important place to be reached by steam: it is 120 miles, or one coal relay, beyond Allahabad; and if the latter station can be brought within the influence of the improved system, its eventual extension to Cawnpore would soon follow.

To conduct satisfactorily an experimental voyage of the kind proposed requires something quite distinct from nautical skill: indeed for the mere command of the vessel in the daily progress, a manjee would be the most efficient captain; Government will require, however, that the route followed should be noted and laid down, that the nature of the difficulties experienced, and the manner in which they are overcome, should be distinctly registered, for a warning and instruction to others; and that a particular set of observations should be made in regard to the power of the steam and the strength of the current, and the manner of advancing against the latter, and the fitness of the vessel under all circumstances of current and wind to make way. All these questions require a man of scientific and observing habits, and above all things a person on whose judgment in such matters it would be safe to rely.

(signed) *H. T. Prinsep*,
Secretary.

Calcutta, 31 July 1828.

P. S.—I have been reminded that in the above paper, which has been prepared for the information of the Governor-general, agreeably to his command, I have omitted to explain sufficiently for what purposes, and with a view to what objects the Hooghly and Burhampootur steamers have been built; and hence that the question is argued as if the matter for Government to decide were purely how to render serviceable vessels which have been constructed at considerable expense, but would be useless unless a mode of employing them experimentally could now be devised. It certainly was far from my purpose to give to the question such a turn; but the two vessels having now been so recently launched, I conceived all that had passed when it was determined to build them, was already so fully known and familiar as to render any special advertence to that part of the subject unnecessary. In order to prevent misconstruction, however, and complete the *exposé*, the following notice

Steam Communication with India, and on the Rivers of India.

notice is added of the circumstances under which the two river steamers in question were constructed.

Soon after the conquest of Assam, the difficulties of the navigation of the Burhampootur, from the strength of the current and prevalence of east winds, and the want of any ready means of communication by land with the upper parts of the valley, suggested to Mr. Scott the expediency of applying steam to secure the desired facilities. It was reckoned both that the troops in the valley might be more easily supplied in this manner, and that a great reduction might be made in the number kept up, if through the use of steamers the means were obtained of moving them quickly in every direction. The secretary in the Secret and Political department brought these circumstances under the notice of Government, in a Note recorded in the Political Proceedings of the 30th September 1825; and it was resolved, with reference to the opinion of Captain Forbes and other intelligent persons cited by Mr. Swinton, to request the Honourable the Court of Directors to forward two pair of boat engines capable of being applied to vessels adapted to the navigation of rapid rivers. The power stated as requisite for the purpose was two 20-horse engines for each vessel to be built, and it was at first contemplated that both the steamers should be employed in the Assam Valley.

The Honourable Court, in compliance with the application so made, forwarded the engines now in the Hooghly and Burhampootur, but instead of 20-horse power engines, they are all of 25, being made by Mr. Maudsley, one of the first machinists of England, who, justly reckoning that the powers of steam in vessels of the description required had been somewhat overrated, thought it better to exceed the indent. Along with the engines, plans were forwarded from England of the vessels to be built for them; and the Burhampootur, both in build and dimensions, corresponds as nearly as can be with these plans.

Upon the arrival of the engines in 1826, Mr. Seppings, the Company's marine surveyor, observing that the vessels were comparatively small, and incapable of affording the accommodation desired for any number of troops, thinking likewise that by widening the beam and adding to the length, a less draught of water would be secured, proposed to alter the plan to obtain these advantages. He further stated, that to furnish crooked timbers for the sides of the vessels, according to the English plans, would add greatly to the expense; he proposed therefore to make the floor or bottom quite flat, joining the sides on at a right angle, whereby a greater capacity of stowing coal would, he conceived, be obtained with less draught of water. These alterations were recommended to Government by the Marine Board, whereupon Mr. Swinton laid a further note before the Government, pointing out that the deviation from the English plans would require the main shaft of the paddle-wheels to be cut and lengthened; that this was a hazardous operation, and, with the other alterations, might endanger the success of the whole design, if both vessels should prove unserviceable in consequence. He accordingly urged that one at least should be built upon the European plan, which was clearly the safer. On this occasion Mr. Swinton represented that one boat only might suffice for service in the Burhampootur, under the commissioner on the north-eastern frontier, and that the other might be made applicable to general service on the Ganges, or elsewhere, as Government might find occasion to employ it. In order to overcome the difficulty about crooked timber for the sides, a tender was presented by Mr. Swinton from Mr. James Kyd, who offered to build a vessel exactly according to the English plan for 85,000 rupees. Yielding to Mr. Swinton's arguments, Government determined that one of the two vessels should be built on the English plan, though at a somewhat increased charge, and though at first authority was given to increase the beam of the other, that scheme was ultimately relinquished, and the Howra Company tendered to build the other boat for 65,000 rupees, with beam and length according to the English plan, but without crooked timbers, and with a rectangular section across. The Burhampootur is the vessel built by Mr. Kyd, the Hooghly that of the Howra Company, and both are declared to be equally well executed according to the contracts.

When the Burhampootur was finished it was determined to assign her for service in the Assam Valley, and relays of coal having been forwarded, she was to have started about the middle of the past month. The Hooghly was to be retained for general service at the Presidency, where there is employment for a vessel of the kind in conveying troops to the Chinsurah depôt, and in other duties, for which the sea-going steamers are not so well adapted.

The dispatch of the Burhampootur to her destination in Assam has been delayed in consequence of its being the wish of the Governor-general that the question of steam navigation should be first taken up as a general one, and be considered with reference to all the purposes to which vessels propelled by steam may eventually be made applicable in this country, leaving the local appropriation of one of the existing boats to the particular purposes contemplated in Assam, to stand over until experiment shall have been made on which to form a determination as to how far it is worth the while of this Government to apply steam more extensively in place of the common river craft, now of necessity used. The above Memorandum has been prepared by the Governor-general's direction, in order to bring this question forward.

Secretary.

7 Aug. 1828.

(5.) Extract Public Letter from Bengal; 31 March 1829.

(5.)—EXTRACT PUBLIC LETTER from *Bengal*, dated 31st March 1829.

131. WE approved the proposition for letting out to hire the Government steamers, as a means of reducing the charge of maintaining them. The Marine Board were accordingly desired to fix a rate for each vessel, including the new steamer Hooghly, and to give public notice that they would be for hire at any time when not actually engaged on the public service; but we cautioned the Board against entering into engagements of a nature to embarrass Government in case of any sudden call for the services of a steamer.

(6.) Extracts Report on proposed establishment of Steam-tugs on the Hooghly.

(6.)—EXTRACTS REPORT of COMMITTEE appointed by Government for the purpose of discussing in all its bearings the proposed Establishment by Government of a sufficient number of Steam-tugs to insure the more speedy and safe navigation of the River Hooghly.

1. THAT the introduction of steam-tugs is desirable in the highest degree, and that the adoption of such a measure will afford facilities in the navigation of the river, hitherto but very partially known, your Committee have no hesitation in saying the primary advantages to be derived are self-evident; but there are others of collateral bearing, the limits of which cannot be defined but by mature experience; amongst the former, the most prominent are: 1st. Expedition in the passage up and down the river; 2d. The ability to move up and down at a greater draught of water than at present; 3d. Less risk of grounding, from the ship being under greater command; 4th. A saving in anchors and cables; and the value of each of these advantages to the shipping interests varies according to circumstances, besides which, when the fact has been once established that the risk of this river has actually been reduced, much of the present prejudice existing among shipowners and underwriters to the river, will gradually wear away, and the consequence will be an increase of shipping in the river.

2. Your Committee cannot avoid stating, that the interests of the Honourable Company are likely to be more promoted by the adoption of the proposed tugs, than any other party concerned in the shipping of this port, particularly as respects their China ships, and the trade carried on by their regular and extra ships; the two latter descriptions will in future be brought off town and laden, by which measure demurrage, sloop hire, and the heavy losses sustained by disaster and plunder at the lower stations of the river will be prevented; in fact, so much will be gained by the change of the system, that it will be the interest of Government to bring up their trading ships and take them down by steam free of all charge against their owners.

3. Your Committee conceive it undesirable to attempt, in the first instance, to establish the full number of tugs to conduct the whole navigation of the river; they think it would be far more advisable to try the experiment on a small scale, by which means the advantages and disadvantages of the system would be sufficiently developed to afford much more sure grounds for the foundation of a full and efficient establishment than can possibly be obtained at the present time, and with this view of the case, your Committee beg to observe that Government have the means already at command to commence the dispensation of the many advantages we have pointed out in favour of all parties concerned, by equipping the Enterprize, Irrawaddy and Ganges as steam-tugs, which measure we are assured will equally promote the shipping interests of this port and the best interests of the Honourable Company.

13. Your Committee have great satisfaction in submitting to the notice of his Lordship in Council a very comprehensive Memorandum of the results likely to appear by the adoption of steam-tug in aid of the navigation of the Hooghly, from the pen of their able and intelligent colleague, Mr. James Mackenzie, which document they deem equally conclusive and convincing.

14. Should his Lordship in Council not be disposed to employ the three Government steamers as proposed, your Committee would recommend that immediate steps be taken to establish two tugs of the following burthen and power; one of about 270 or 280 tons burthen, and furnished with two engines of 80-horse power each, and copper boilers; the other to be from 200 to 250 tons burthen, with two 60-horse engines, the first to ply below Mud point, and the other all above that place.

(7.) Memorandum relative to Steam-tug Establishments.

(7.)—MEMORANDUM by *James Mackenzie*, Esq. relative to the Advantages likely to result from attaching Steam-tug Establishments to the existing Pilot Service, dated 20 December 1827.

IN 1822-23, 219 private vessels arrived at and 215 departed from Calcutta, none of which experienced any detention on the passage from or to the Sand Heads, except what attended the navigation of the river. In some cases, the progress of those ships would not have been facilitated by the assistance of steam-tugs, but in most instances a material saving of demurrage would have been effected by such assistance, and the extent of the accidents experienced from the usual navigation of the river would have been materially reduced. It will no doubt be admitted, that the use of steam-tugs would reduce the average passage of ships arriving in February, March, April, May and June, to three days, in July, November, December and January, to four days, and in August, September and October, to five days; also, that the average passage of ships outward bound would be thereby similarly reduced, in November and December, to three days, in October, January, February, March and April,

April, to four days, and in May, June, July, August and September, to five days; with reference therefore to the actual passages of the above vessels that arrived and departed in 1822-23, between Calcutta and the Sand Heads, the following results of comparison show the demurrage, calculated at eight annas per ton per day, which would have been saved by the assistance of steam-tugs, in all cases of protracted passage:

ON ARRIVAL.		Number of Ships.	Tons.	Demurrage.
Ships that would have had their passages shortened by the aid of steam-tugs.	Ships of 500 tons and upwards - - - -	36	21,467	57,770 2 11 –
	Ships from 300 to 500 tons	64	25,253	60,454 82 6 3
	Ships under 300 tons -	55	10,903	18,404 8 1 11
		155	57,623	1,36,629 2 5 11
Ships that would not have required steam-tugs -		64	22,944	
TOTAL - - -		219	80,567	

ON DEPARTURE.		Number of Ships.	Tons.	Demurrage.
Ships that would have had their passages shortened by the aid of steam-tugs.	Ships of 500 tons and upwards - - -	45	26,628	1,12,106 4 3 4 –
	Ships from 300 to 500 tons	94	37,459	1,07,626 2 13 11 –
	Ships under 300 tons -	74	14,323	35,646 8 2 7 9
		213	78,405	2,55,078 8 3 4 1
Ships that would not have required steam-tugs -		2	718	
TOTAL - - -		215	79,103	

But in the same year there were 29 ships besides that experienced extra detention on the inward or outward passage; and five more ships that were so detained on both passages, so that, allowing the demurrage attending the extra detention to be balanced by the extra expenses attending its causes severally, and considering the demurrage for the whole detention would have been saved by the tugs, the above calculation, adding those 44 ships, will stand thus:

ARRIVALS.	Number of Ships.	Tons.	Demurrage.
Ships of 500 tons and upwards - - - -	62	37,717	1,40,343 – 3 11 6
Ships from 300 to 500 tons - - - - -	75	29,773	85,508 8 2 13 3
Ships under 300 tons - - - - - -	56	11,223	20,164 8 1 13 –
Ships that would have had their passages shortened by the aid of steam-tugs - - -	193	78,613	2,46,016 – 3 2 –
Ships that would not have required the steam-tugs	70	25,752	
TOTAL - - -	263	1,04,365	

DEPARTURES.	Number of Ships.	Tons.	Demurrage.
Ships of 500 tons and upwards - - - -	72	42,015	2,54,487 6 – 10 –
Ships from 300 to 500 tons - - - - -	109	43,579	1,52,691 3 8 – –
Ships under 300 tons - - - - - -	75	14,543	35,976 8 2 7 6
Ships obtaining benefit from steam-tug assistance - - - - - - - -	254	1,00,137	4,43,154 8 4 6 9
Ships that would not have required the tugs -	2	718	
TOTAL - - -	256	1,00,855	

Appendix, No. 25.

(7.) Memorandum by James Mackenzie, Esq. relative to Steam-tug Establishments.

Aggregate Number of Ships arriving and departing, with their Tonnage and Demurrage:

—	Number of Ships	Tonnage.	Demurrage.
Arrivals - - - - - - - - - - -	263	1,04,365	2,46,016 -
Departures - - - - - - - - - -	256	1,00,855	4,43,154 8
	519	2,05,220	6,89,170 8

Giving an average Demurrage per Ton on arrival or departure - *Rs.* 3 5 8

In the same year also of the Honourable Company's ships, the cargoes of which were comprehended in the Government accounts of the year, there were 13 arrivals, and the same number of departures; and supposing that steam-tugs would have brought them up to Calcutta at once, and taken them down loaded, or made an approach to such an object, according to the expectations expressed in the Board's letter, with a saving in demurrage equal to the average above stated for ships exceeding 500 tons, the calculation on this account would stand thus:

HONOURABLE COMPANY'S SHIPS.

—	Number of Ships.	Tonnage.	Demurrage per ton.	Entire Demurrage.
Arrivals - - - - - - -	13	14,451	3 11 6	53,739 10 6
Departures - - - - -	13	14,502	6 - 10	87,767 5 -
	26	28,953	4 14 2	1,41,506 15 6

The estimate of demurrage therefore that might have been saved in the above year by the employment of steam-tugs, in all cases of arrivals and departures of trading ships, is as follows:

ARRIVALS AND DEPARTURES.	Number of Ships.	Tonnage.	Demurrage.
Honourable Company's trade - - -	26	28,953	1,41,506 15 6
Private trade - - - - - - -	519	2,05,220	6,89,170 8 -
	545	2,34,173	8,30,677 7 6

There were besides, in the same year, the arrival and departure of other Government vessels, as the Ernaad, &c. which would have been equally benefited by the assistance of tugs, but are not included in the above.

The data for the above estimate has been drawn from the account of the Master-Attendant's office; but to estimate the value of the property affected in the calculation, I have taken from the Government records, the account of imports and exports for the same year, distinguishing the Company's from the private trade, as follows:

—	Honourable Company's Trade, Number of Ships.	Tonnage.	Valuation.	Valuation of Cargo per Ton.
Imports - - - - -	13	14,451	13,68,381	94,69
Exports - - - -	14	14,943	1,81,12,755	1,212,12
		29,394	1,94,81,136	662,75

Private

Private Trade, deducting the Tonnage and Cargoes of Dhonies:

—	Private Trade, Number of Ships.	Tonnage	Valuation.	Valuation of Cargo per Ton.
Imports - - - -	271	1,08,687	4,24,88,031	390,92
Exports - - - -	278	1,08,881	4,85,00,327	445,44
		2,17,568	9,09,88,358	

Honourable Company's imports and exports - - -	Sa. Rs.	1,94,81,136
Private imports and exports - - - - - - - -		9,09,88,358

Estimating the value of the Honourable Company's ships at 200 rupees per ton, and considering the private ships as insured at the same rate, then

Honourable Company's ships, arrivals - *Tons* 14,451
— departures - - 14,943
29,394÷2= 14,679 a' 200= 29,39,400

And private ships arrived - - - - 1,08,687
— departed - - - - 1,08,881
2,17,568÷2=1,08,784 a' 200=2,17,56,800

Amount value of ships and cargoes - - - - *Sa. Rs.* 13,51,65,694

In 1822-23 there were three vessels lost going out, viz. the Liverpool, Oracabissa and Helen; and it may be presumed that had steam-tugs been then in full employment, no such catastrophe would have occurred, as they would have been either at sea when the gale came on, or the steamer in charge of each could have taken her to a more sheltered situation on its approach.

According to the preceding estimate of value, this loss will stand thus:

				Sa. Rs.
Liverpool - -	*Tons* 527	Total Tonnage 975	a' 200 rupees per ton for the hulls	1,95,000
Oracabissa - - -	280		a' 44,544 rs. per ton for the cargoes	4,34,304
Helen - - - -	168			
				6,29,304

making, with the above estimated demurrage, a sum of sicca rupees 14,59,981. 7. 6. loss from demurrage and shipwreck in the river, during 1822-23, or more than one per cent. on the entire value of the ships and cargoes, both Company's and private.

The use of the steam-tugs would be also attended with a material saving in anchors and cables, as few of these in comparison to what are at present lost, would remain subject to the liability of loss, when a constant choice of anchoring ground existed. I should consider this saving to be perhaps under-rated when estimated at one anchor and cable, value 1,600 rupees, for every four ships, or 1,600 rupees on every eight of the arrivals and departures, (545) equal to 200 rupees for each arrival and departure, viz. sicca rupees 1,09,000. In 1823 when my attention was first directed to the subject, I estimated the amount of loss under this head at a considerably higher rate, from the knowledge of very extensive losses of this description that had taken place; but the increasing use of chain cables must have tended to diminish such loss, although it has increased losses of another kind, from the additional damage thereby occasioned to the hulls of vessels obliged to anchor in unfavourable situations.

Another head of expense would be greatly reduced by the use of steam-tugs, viz. the charges incurred in consequence of vessels grounding on the passage up or down, for docking, unloading and reloading, damage sustained by the cargoes, demurrage, &c. This I should conceive to be under-rated at another lac of rupees; and I am of opinion that the charges resulting from the loss of anchors and cables and from grounding, beyond what the use of steam-tugs might have been unable to prevent, must have been sufficient in 1822-23 to increase the above estimate of demurrage and actual loss from shipwreck to sicca rupees 18,00,000.

I apprehend also, that the risk attending the conveyance of cargo to and from ships at the lower stations in the river, is considerable at certain seasons, and that the damage and loss resulting therefrom, the weather and the misconduct of boat's crews both considered, might be deserving of separate estimate; but connecting these with the demurrage, above stated, and viewing the whole amount with reference to the combined interests of owners and shippers, I should not consider it as over the mark for general calculation, although in

II.
FINANCE (Trade).

Appendix, No. 25.

(7.) Memorandum by James Mackenzie, Esq. relative to Steam-tug Establishments.

individual cases many might estimate their demurrage at less, and some few, from particular circumstances, might reckon their own at a greater rate; it may be sufficient, however, to show when the risks of entire loss, of loss from grounding, of losing anchors and cables, &c. with which the underwriters are immediately concerned are added to the account, that there is sufficient reason for all persons interested to desire the establishment of steam-tugs in direct aid of the pilot service.

As the expence of providing and employing steam-tugs would be necessarily great, the requisite charge for their assistance would be in proportion compared with the existing pilotage charges; but as it would be clearly for the interests of owners, shippers and underwriters that the intended assistance should be obtained in perhaps a majority of cases, I have no doubt that the wishes of Government with regard to diminishing the expenses of the pilot establishment, and at the same time improving the navigation of the river, would be fully answered by creating the proposed establishment of steam-tugs, and leaving their employment entirely optional on the part of owners and commanders of ships.

Supposing that, with regard to arrivals, a number of ships equal to those on which demurrage has been above calculated for the six months of 1822-23, from July to December, both inclusive, were to use the steam-tugs when inward bound, the charge being for ships above 750 tons three rupees per ton, and for those from 500 to 750 tons, 2 rupees 12 annas, or at an average of 2 rupees 14 annas for those above 500 tons, for ships from 300 to 500 tons at an average of 2 rupees 8 annas, and for those under 300 tons, 2 rupees, the results of actual payment compared with demurrage would be as follows:

—	No.	Tonnage.	Demurrage.	Steam-tug Charge per Ton.	Entire Steam-tug Charge.
				Rs. As.	
Ships of 500 tons and upwards	42	25,446	1,08,637 –	2 14	73,157 4
– from 300 to 500 - -	51	20,393	58,876 8	2 8	50,982 8
– under 300 tons - -	29	5,769	12,646 –	2 –	11,534 –
	122	51,608	1,80,159 8	- -	1,35,673 12

And the results of actual payment compared with demurrage for the similar departures in the other six months of the same year, would be

—	No.	Tonnage.	Demurrage.	Steam-tug Charge per Ton.	Entire Steam-tug Charge.
				Rs. As.	
Ships of 500 tons and upwards	37	22,537	1,63,706 –	2 14	64,793 14
– from 300 to 500 tons -	56	22,055	90,678 8	2 4	55,137 8
– under 300 tons - -	43	8,605	22,806 8	2 –	17,210 –
	136	53,197	2,77,191 –	- -	1,37,141 6

Thus 258 arrivals and departures (less than one-half of the whole) liable to an aggregate expense of demurrage of sicca rupees 4,57,350. 8. would pay for the aid of steam-tugs - - - - - - - - - - - *Sa. Rs.* 2,72,815 2 –

Add to this a charge on Honourable Company's ships a' 4. 14. 2. per ton for steam-tug assistance, as above stated on 28,953 tons and 26 ships - - - - - - - - - - - 141,506 15 6

Estimated steam-tug charge on 284 arrivals and departures within the year - - - - - *Sicca Rupees* - 4,14,322 1 6

I am of opinion that three steam-tugs, two of 160-horse power each and one of 120-horse power, would be found sufficient to answer the wants of the port, considering their employment to be optional with the public; that they could be prepared complete for service at an entire cost of sicca rupees 7,00,000; that they would render three pilot vessels unnecessary, and that the officers and crews of these pilot vessels would be sufficient for the navigation of the tugs. In this view the ordinary sailing expenses of the tugs would remain comprehended

Steam Communication with India, and on the Rivers of India.

hended within the existing charges of the pilot establishment, and the extra expenses might be estimated as follows:

—	FOR ONE VESSEL		FOR THREE VESSELS.	
	Per Month	Per Annum.	Per Month.	Per Annum
Engineer Department - - - -	600	7,200	1,800	21,600
Coals for 25 days, at 12 maunds per hour, and 10 hours each day - -	1,500	18,000	4,500	54,000
Interest on cost of the vessels, 7,00,000, at 12 per cent. - - - -	- -	- -	7,000	84,000
Wear and tear, say 12 per cent. - -	- -	- -	7,000	84,000
Superintending Engineer at 800 rupees per month - - - - - -	- -	- -	- -	9,600
Excess of Annual Charge to the Pilot Establishment for three tugs - -				2,53,200

This hasty estimate may be found defective, but should it come near the truth, as the amount of estimated additional charge to the pilot service is less than two-thirds of the above estimated steam-tug charge in 284 arrivals and departures, it might be found that two rupees per ton on every inward or outward passage of ships above 500 tons, 1/8 on those from 300 to 500, and 1 on those under 300, with 3 on the Honourable Company's ships, would more than cover the additional charge, as the steam-tug receipts on the above 284 arrivals and departures would at these rates amount to sicca rupees 2,60,869, and the comparative lightness of the rates would be attended with an increased employment of the vessels.

Many ships would under such circumstances use the steam-tugs at all seasons, whether inward or outward bound, and if the steamers which would be capable of bringing up or taking down ships of 1,200 tons, were found equally capable of bringing up or taking down at once two vessels (each) from 350 tons downwards, the charge to small vessels might be thereby lessened further, with an increased certainty in regard to the sufficiency of the receipts.

The above charges are considered as distinct from and beyond the usual pilotage charges, and not applicable to vessels declining the assistance of the steam-tug establishment, but should they after so declining require subsequently partial assistance, they ought to pay the whole inward or outward charge, as the employment of the tugs sent purposely to their aid would, unless in some casual cases, occupy nearly the same time.

As the expense of the tugs would eventually be shared by owners, shippers and underwriters, indirectly if not directly, they ought to be left to settle it among themselves according to their estimate or experience of risk and demurrage.

The tug should be adapted as much as possible for the exclusive purpose of towing with the best effect, having only the means of accommodating such pilots as might require to proceed to or from the pilot station beyond their own officers.

I consider (as above alluded to) that the proper parties to superintend and conduct the navigation of steam-tugs would be (eventually, if not from the commencement,) one active branch or master-pilot for each, and some junior officers of the pilot establishment, changed occasionally in individual cases, to give all the service the opportunity of becoming acquainted with its general details. It would, in my opinion, be indispensable to have an able, active and responsible individual, thoroughly acquainted with the nature and management of steam machinery, to inspect the vessels daily when at Calcutta, and to keep a vigilant eye over the conduct of the working engineers.

By making steam-tugs an integral branch of the pilot establishment, the Government would be eventually enabled to make very considerable retrenchments in the existing scale of their marine expenditure: for if any row-boats would be required, six pilot vessels or fewer might be found sufficient for the duty of the cruizing station, allowing one to be always at or on the passage to or from Calcutta. A less establishment of pilots would be ultimately found as efficient as the present. It might be however injudicious to proceed to retrenchment until the steam-tugs had come into complete operation, and had shown by experience, the expediency of dropping whatever should be found superfluous. In lessening the number of pilots, the interests of the parties could be sufficiently provided for by Government in many ways, so that no individual injury might be sustained, that the service remain the same as to allowances and prospects, on a reduced scale only as to numbers.

The abolition of any existing port charges, or the reduction of the steam-tug charge eventually to a *minimum* rate, would of course merit and obtain the consideration of Government. After the new establishment had come into complete operation, and had shown how far an increase of aggregate receipts could warrant reduction in a description of charges, which must under any circumstances press heavily on the commerce of the port.

Howrah, 20 December 1827. (signed) *James Mackenzie.*

(8.) Letter from Bengal Government; 18 May 1830.

(8.)—EXTRACT LETTER (Public Department) from the *Bengal* Government to the Court of Directors, dated May 18, 1830.

2. We propose in this communication to state what has been done and what is proposed to be done in respect to the introduction of steam navigation into the rivers of this country.

Cons. 3 Jan. 1828,
No. 38 to 40.
Cons. 27 March,
No. 11 & 12.
Cons. 10 April,
No. 42 & 43.
Cons. 17 April,
No. 31 to 35.
Cons. 24 April,
No. 7.
Cons. 15 May,
No. 29 to 31.

3. The two steamers, Hooghly and Burhampootur, were launched in the beginning of the year 1828, and on our proceedings, noted in the margin, will be found some correspondence respecting the naming and appointing establishments and commanders for both vessels; also touching their draught, consumption of fuel, capabilities, and eventual employment.

4. It was at first proposed that the Burhampootur should proceed to the river Burhampootur, to be at the disposal of Mr. D. Scott, the political agent in the eastern frontier, so as to afford him the means of prompt communication with the posts of Upper Assam, which are accessible only by water, and for a great part of the year with extreme difficulty, owing to the strength of the current and the prevalence of easterly winds blowing the same way with the stream. The Hooghly was to have remained at the disposal of Government at the Presidency, and to be there made applicable to any service that might arise.

5. Very soon after the arrival of the present Governor-general, his particular attention was given to the subject of river steam navigation, and the prosecution of the Burhampootur's voyage to Assam was for the time suspended, it being his Lordship's desire that before either of the vessels should be appropriated to any particular service, the question of steam navigation upon the rivers of India should be considered as a general one, with reference to all the purposes to which vessels propelled by steam might eventually be made applicable in this country.

Cons 12 June 1828,
No. 28 to 30.
Cons. 15 Aug. 1828,
No. 7 to 15.

6. By his Lordship's desire our secretary prepared and laid before us a Note describing the manner in which the navigation of the rivers was at present conducted, and the dangers, delays and accidents to which it was liable, and pointing out the objects to which, in his opinion, the propelling power of steam could be applied with advantage.

7. This paper, with other memorandums bearing on the question, was forwarded to the secretary at the India House in a letter dated 10th August 1828, and will doubtless have been laid before your Honourable Court. It was resolved to order an experimental voyage to Allahabad with one of the new river steamers as a preliminary measure to any further consideration of the subject. We selected two intelligent officers, Captain Johnston, of the Enterprize, and Captain Prinsep, of the Bengal Engineers, to superintend the experiment, and report upon the results. Copies of the instructions issued to them, and to the Marine Board, upon the occasion, were forwarded to England in the packet, addressed to the secretary at the India House, above referred to.

No. 50 & 51.
Cons. 14 July 1829,
No. 44 to 46.

8. The voyage to Allahabad was accomplished, including stoppages, in 24 days, and 14 days were occupied in the return, including two days' delay at Benares to repair and refit. From Captain Johnston and Captain Prinsep we received full reports upon the state of the river and incidents of the voyage, and from the latter officer we further received a corrected survey of the Ganges and Hooghly rivers, as traversed by the steamer; we obtained also a particular report from Captain Smith, the engineer officer at Allahabad, upon the state of the Ganges at that place. This had been called for in consequence of its being represented to us that the navigation was more difficult and dangerous at that point than at any other in the whole course of the river. We beg to solicit the attention of your Honourable Court to these reports, which are replete with important and valuable information on the subjects discussed in them. We ordered Captain Prinsep's map of the rivers to be lithographed, for the use of the department, which having been done under Captain Prinsep's superintendence, 20 copies have been already forwarded to your Honourable Court.

Cons. 22 Sep. 1829,
No. 51 to 54.
Cons. 7 Nov. 1828,
No. 77 (A).

9. We further called upon the Board to report upon the expense and the practicability of making the alterations suggested by Captain Johnston in the rudder and other parts of the Hooghly steamer, so as to fit her for a second experimental voyage, which we desired to be made when the river should be at its lowest.

Cons. 10 Dec. 1828,
No. 71 to 73.

10. Our final resolution upon the subject of this first voyage, and the results it had elicited, including the Board's reply to the reference above cited, is recorded as per margin. It was to the following effect:

11. It seemed that the Hooghly steamer, labouring under the disadvantage of a defect either of construction or in her rudder, which made her very difficult to steer, had nevertheless performed the voyage to Allahabad, in the most unfavourable season, in 20 days of 12 hours steaming, without hazard or injury, and without meeting any obstacle not easily surmounted. It was the opinion of the officers employed that with better arrangements to obtain pilots, or with what must of course be the necessary consequence of prosecuting these experiments, more knowledge of the channels of the river in those conducting the the Enterprize, the time of the upward voyage might have been very considerably abridged, we were indeed led to hope that with these advantages it might in the rainy season be accomplished in 15 days by the route followed on this occasion; the voyage down occupied 10 days, which was evidently much more than would have been necessary if the channels had been well known so as to have admitted of the power of the steam being freely used. The caution most properly employed by Captain Johnston on this first occasion will be superfluous hereafter, and a gain of at least two days will then probably be made in the return voyage. Thus it appeared that, including stoppages for coal or from accident, the Government could reckon upon being able to make the voyage up and down in the rainy

season,

Steam Communication with India, and on the Rivers of India.

season, between Calcutta and Allahabad, in one month, with either of the present river steamers: so far, therefore, the important question as to the possibility of applying such vessels on the Ganges for purposes of internal navigation had been set at rest, and the probable gain of time over the craft of the country with vessels of their dimensions and power of engine had also been ascertained.

12. The officers employed on the expedition had rightly given their attention to the accumulation of information respecting the state of the river, and their reports did them great credit. The facts collected by them in regard to its rise and the rapidity of the current at different seasons and at different places were curious and interesting; the observations forwarded by Captain Smith from Allahabad, as to the state of the channels above the junction of the Ganges with the Jumna, afforded results novel and unexpected. The map that had been prepared by Captain Prinsep of the present course and channels of the Ganges, as found during the voyage in the months of September and October, being on a scale to show the principal sand-banks, was calculated to be extremely useful in subsequent voyages of the same kind, and was, as above stated, ordered to be lithographed, in order to be put into the hands of those employed on them. The expense of this, with any other incidental charges incurred during the voyage, we directed to be submitted in a contingent bill, and passed in the usual form. It remained for us to determine in what manner to follow up the experiment that had been made, and how best to direct its results to ends of practical benefit to the country or to Government.

First. With respect to the construction of river steamers adapted to the navigation of shoal-water channels, there seemed reason to apprehend from the reports both of Captain Prinsep and Captain Johnston, and especially from the concluding observations in the report of the former officer, that a less draught of water than four feet could scarcely be hoped for with vessels of manageable dimensions, using low-pressure engines, and carrying their own coal. It seemed probable that even with this draught of water a vessel of a lighter description and of a different construction might be made to possess greater capacity for stowage and accommodation than the present steamers; but all the objects we had in view seemed hardly attainable, except by the use of high-pressure engines. Under the impression that in the progress of modern discovery in Europe means might perhaps have been devised of preventing the danger hitherto attaching to the use of this description of engines, we determined to solicit information upon this important point from your Honourable Court. There seemed to us to be no objection whatever on this score to the employment of a high-pressure engine in a separate vessel to be used as a tug, by which plan, while all apprehension for the safety of the crew and cargo of the principal accommodation vessel would be averted, the division of the burden would remove the obstacles to complete success presented by the deficiency of room for both fuel and for passengers in the same boat. In the second experimental voyage we proposed to ascertain the practicability of tugging, and if established, it was resolved that no time should be lost in begging your Honourable Court to send out the necessary high-pressure engines.

Secondly. With respect to the accommodation of the Hooghly steamer for passengers, and the means of improving that afforded by her original construction, Captain Johnston had offered several valuable suggestions on this point, and the Marine Board, and those consulted by them on the subject, had also submitted propositions which were fully considered by us with reference on one hand to the objects in view, and on the other to the expense of carrying each into execution. It seemed to us that the vessel, laid out as she then was, could not be applied to convey either troops or passengers; for the former she was much too confined in her accommodation, besides wanting the tonnage for the requisite stores and provisions, independently of that required for the coal; for the latter, her cabins, besides being heated by the proximity of the boiler and chimney, so as to be scarcely bearable in the hot months, were ill adapted, from the manner in which they were laid out, as well as from insufficiency of space. It appeared indispensable, therefore, if it were desired to apply the Hooghly to such purposes in future voyages, and we were then of opinion she might very advantageously be used for the conveyance of cadets and junior officers to their stations, that a light poop should be added so as to afford a double tier of accommodation, and we preferred that this should be constructed of timber rather than to adopt the Board's recommendation, and provide the desired accommodation above by means of canvas enclosures, conceiving that besides being liable to injury from weather, such an awning would be more in the way than a poop capable of bearing the weight of passengers, and of the crew to work the vessel. The poop was ordered to be built in the cheapest possible form, and we thought the expense of cutting down the present deck, and adding sponsings, as proposed by Captain Johnston, might well be saved. With the addition thus determined upon, accommodation might be afforded for six or eight officers of the junior ranks, and any future voyage made would combine the advantage of providing them a passage at a saving to Government of the boat allowance to each, with any other objects, experimental or real, that might be proposed to be attained. We directed that no time should be lost in putting in hand this addition, and that the poop should be similar to that built on other steamers of the river, care being taken to extend the accommodation as much as could be done with due attention to the strength of the beams, and to the necessity of keeping the upper works light.

Thirdly. With respect to the next point, viz. the best means of remedying the serious inconvenience and the delays experienced from the bad steering of the vessel, we had made inquiry to ascertain to what this defect could be ascribed, and to what circumstances the Burhampootur, which was of nearly similar shape, was indebted for her superiority in this respect. It appeared that while plying on the river, before proceeding on the voyage, the rudder

Appendix, No. 25.

(8.) Letter from Bengal Government; 18 May 1830.

rudder of the Hooghly was of a form reaching several inches below the level of the vessel's bottom, consequently, although this was flat, and wholly without keel, still that part of the rudder which protruded below had considerable hold on the water. The rudder of the Burhampootur was of this construction, and to this principally was owing the superiority of that vessel in the command over it possessed by the helm. Captain Johnston, before proceeding on his experimental voyage, judging very rightly that in unknown channels, with continual danger of grounding, it was of the first importance that the rudder should be kept clear, caused the projecting part to be cut off and added to the width, in order to make up thereby for the loss of power in depth. To this mainly was the extreme unmanageability of the vessel during the voyage to be ascribed, and it occurred to us that the most natural remedy would be to provide a rudder capable of being raised clear of the bottom in shoal water, but with the power of being let down like a sliding keel, to exert greater power over the vessel when making way amongst the rapids and whirlpools of the main current. We had been given to understand that a rudder upon this construction could be made and fitted at comparatively small expense, and we were accordingly disposed to prefer that this plan should first be tried before any of the other methods, such as the alteration of the sternpost, the adaptation of a rudder to the bows, or the scheme for using a double rudder affixed to each quarter, was attempted. Any of these might hereafter be resorted to in case the more simple alteration above explained should be found to fail.

13. Having thus decided as to the improvements to be made in the Hooghly, in order to remedy the defects pointed out, and fit her for further voyages with greater advantages than those under which the last had been performed, we proceeded to explain the manner in which we thought it would be expedient to pursue the measures commenced for ascertaining how far steam navigation could successfully be applied to the purposes of Government or of the public at this presidency.

14. Of the objects in the view of Government, as capable of being promoted by steam navigation, the conveyance of public and private treasure, and of valuable, not bulky, articles on freight, together with the providing accommodation, according as the poop might be fitted up, to six or eight junior officers, were the only ones to which the Hooghly and Burhampootur could then, we thought, be adapted; unless, indeed, and the matter seemed to deserve experiment, the power of their engines, compared with the diminished rapidity of the stream in the dry season, should enable these vessels to take a second vessel in tow.

15. It was our opinion that a second experimental voyage should be made for the purpose of more fully ascertaining the capabilities of the vessel in these respects, after the alterations above determined upon had been made in the Hooghly's rudder and accommodation. An experiment might be tried with the Burhampootur in the interval of the preparation of the Hooghly, to ascertain the difference of speed consequent upon taking a large budgerow, or other accommodation vessel, in tow; and if this was found not to retard the vessel more than two miles an hour, which was the assumed difference of velocity in the stream of the Ganges in the rains compared with the dry season, the Hooghly might proceed on her second voyage with a vessel of the kind in tow, so as to afford accommodation and the means of rapid conveyance to twice the number of officers above contemplated as capable of being furnished with a passage.

16. The Marine Board were ordered to make the requisite arrangements for the transmission of coal to the places where the same might be required, and it occurred to us that, with judicious management in the time of dispatching each boat, the coal might be so forwarded as to be found at the required distances in separate boats, which would be more convenient than by lodging it in larger depôts. In like manner when the day might be fixed for the departure of the Hooghly, we ordered notice to be issued by advertisement, inviting tenders for freight of treasure, or of other valuable articles of small bulk, on such reasonable terms as the Board might deem likely to induce native and other merchants to offer articles for conveyance to the different stations that would be passed in the voyage.

17. It seemed to us, that in consequence of the lateness of the season it would be necessary on this occasion to dispatch the Hooghly, when ready for the voyage, by the way of the Sunderbuns. The Marine Board were desired to ascertain from Mr. May, superintendant, the quantity of water in the channels of the Nuddea rivers, and to regulate their proceedings accordingly. Should the Hooghly be compelled to take the line of the Sunderbuns, the Board were referred for information as to the best route to Captain Prinsep.

Cons. 28 Aug. 1828, Nos. 63 & 64.

18. We here notice incidentally some correspondence we had with the Marine Board as to the method of docking and examining the bottoms of vessels of this description; also the reports on two trials of speed between the Hooghly and Burrumpootur.

Cons. 18 Sept. 1828, Nos. 13 to 18.
Cons. 21 Nov. 1828, 31 (A) to 31 (C.)
Cons. 6 Jan. 1829, Nos. 8 & 9.

19. After some delay in building the poop, and making the other alterations ordered by us, the Hooghly was at length reported to be nearly ready for her second voyage, and we ordered advertisements to be issued for the conveyance of private treasure to places on the route, preparatory to the voyage being made in the course of the month of March.

Cons. 29 May 1829, Nos. 22 & 23.
Cons. 6 Feb. No. 15.
Cons. 17 February, Nos. 10 to 13.
Cons. 26 February, Nos. 16 & 17.
Cons. 14 Apr. 1829, Nos. 20 & 22.
Cons. 23 June 1829, No. 9.

20. We gave the command on this occasion to Mr. Warden of the pilot service, late commander of Neræa yacht, who had conducted the Soonamookee to Anoopshuhur on the occasion of Lord Amherst's tour to the Western Provinces, and who, on the previous voyage of the Hooghly steamer, acted under Captain Johnston. The voyage was made through the Sunderbuns by the Doagra Passage, in Channel Creek, the rivers communicating between the Hooghly and the Ganges being too shallow at the period of the year to afford passage for a vessel of the draught of the Hooghly. Having reached Benares in 21 days, not without considerable difficulty, Mr. Warden carried the Hooghly 37 miles further,

further, but was finally stopped at Betoulee on the Kuchliwa Ghat, where, from the shallowness of the water, it was found utterly impossible to pass in any part of the stream. Mr. Warden's return from Benares, after a delay of 17 days there to refit, was effected in 14 days by the same passage, through the Sunderbuns. The Hooghly reached Calcutta on the 12th May.

21. This result in the months of April and May, when the water of the Ganges is of course at the very lowest, was not unfavourable. We beg to refer your Honourable Court to Mr. Warden's report of the voyage, recorded as per margin, and which is an interesting document.

Cons. 23 June, No. 10.

22. Our orders on the result of the second experiment so made, expressed some disappointment at finding the depth of water in the Ganges reduced, in the months of April and May, so much as to preclude the hope of carrying steam navigation, with the vessels at the command of the Government, beyond Benares and Chunar, in those months; still it was satisfactory to have ascertained the real state of things at the most unfavourable period of the year, and we thought the manner in which this had been done by Mr. Warden left nothing to be desired, and was highly creditable to his skill and intelligence.

Cons. 23 June 1829, No. 11.

23. We were determined to prosecute further experiments of the same description, and ordered depôts of coals to be formed at Patolee, Burumpore, Rajmuhal, Mongeer, Danapoor, Ghazeepoor, Benares, Mirzapoor and Allahabad.

Cons. 9 June, No. 10.

24. The reports on some experiments made under our orders for ascertaining the power of the river steamers as tugs with other vessels in tow, will be found recorded in the margin; and we beg to draw your Honourable Court's particular attention to a voyage made by Captain Johnston under our orders to Burhampoor, with the two steamers, one taking the other in tow, and the engines of the tugged vessed being unused.

Cons. 5 May 1829, Nos. 28 to 33.

25. The result of these experiments encouraged us to believe, that with low-pressure engines, of the description of those now belonging to Government, it might prove advantageous to employ the steam power by fixing these engines in separate vessels as tugs rather than as now in the vessels of accommodation themselves, where they occupied much space, increased the draught extremely, and produced a degree of heat nearly insupportable at the season when the state of the rivers affords most opening for their employment.

Cons. 12 May, Nos. 26 & 27, Cons. 16 June, No. 14.

26. Entertaining this impression, we instructed the Marine Board to give their particular attention to the determination of the best form and construction for a river tug capable of taking in tow large accommodation vessels, and drawing of course the smallest possible quantity of water.

27. It was our wish that the question should, in the first instance, be considered with reference to the steam engines then available to Government, viz. those of the classes employed in the Ganges and Irrawaddy, and in the Hooghly and Burhampootur.

28. If it should be established that either of these descriptions of steam engines could be employed advantageously in a vessel of any description with sufficiently small draught and with power adequate to tow an accommodation vessel of the kind and dimensions proposed, we then desired the Board further to take into consideration whether there was any useful purpose to which the one of the present vessels, which might be stripped of its engines, could be devoted. If, for instance, the engines of the Ganges were thought fit to be used in a river tug, whether that vessel, deprived of its engines, could be employed as a pilot vessel in lieu of any one of the present establishment that might be condemned. So, if the engines of the Hooghly were transferred to a tug, whether the hull of that vessel could conveniently be converted into an accommodation boat to be taken in tow by the tug.

29. We directed the Board to consult the best informed officers of the Marine department on these subjects, particularly Commodore Hayes, Captain Ross, and Captain Johnston, with Captain Forbes, and Messrs. Seppings and Kyd. We also desired that the Board would endeavour to obtain any information procurable at this Presidency regarding the power and properties of high-pressure engines, and to avail themselves of the assistance of the above-named or any other individuals whom the Board might think fit to consult, in order to ascertain what kind of engines of this class were best adapted for the purpose of being employed either in tugs or in the body of accommodation boats, as we understood to be done with so much success in America; we, in short, directed that the Board would submit this branch of the subject to full investigation, with a view to a special indent being forwarded to England for high-pressure engines of the most approved kind, for the purposes above explained.

30. We followed up these orders by shortly after inviting, by public advertisement, the transmission of plans to the Marine Board, with the offer of a reward of 1,000 rupees for that which should be most approved. The plans were to be of two descriptions; first, of vessels capable of being used as tugs, with engines on the low-pressure principle, of the power, weight and description of those in the Hooghly and Burhampootur; and, secondly, of similar towing vessels with engines on the high-pressure principle. We offered rewards for the best of both descriptions, fixing, as the test of excellence, adaptation for speed, manageability, and a small draught of water; the plans were to be given in by the 1st of August 1829.

Cons. 7 July 1829, Nos. 14 & 15.

31. Under the notice issued conformably to these orders, several plans were sent in to the Marine Board, and forwarded to us on the day prescribed. We thereupon appointed a committee, consisting of the gentlemen named below* to report upon the plans in question.

Cons. 23 June 1829, Nos. 45 to 47. Cons. 4 Aug. 1829, Nos. 26 & 27.

32. The

---

* Captain Ross Bell, Captain Hutchinson, Engineer, Captain T. Prinsep, Engineer.

(8.) Letter from Bengal Government; 18 May 1830.

*Cons. 1 Sept. 1829. Nos. 39 to 47.

32. The report of these officers is recorded, as per margin*, and is deserving of your Honourable Court's particular notice. Upon receipt of it we again took up the subject with reference to all that had passed connected with the object of applying the power of steam to the river navigation of this country. Our resolution was to the following effect:—

First, With respect to the plans and specifications given in under the notice published by the Marine Board in conformity to the orders of this department, dated the 3d July last; the Committee appointed to report thereon, having declared their opinion that the plan sent in by Captain Cowles was the best of those presented as designs for a tug adapted to the engines of the Hooghly and Burhampootur, and that with reference to the conditions of the notice, Captain Cowles was therefore entitled to the sum of 1,000 rupees for the same, we ordered payment of the amount to be made to Captain Cowles, through the Marine Board.

33. None of the plans submitted conformed exactly with the conditions under which a similar sum had been offered for the best plan of a tug with steam engines on the high-pressure principle, including a description of the engines. This reward, therefore, had not been earned by any of the gentlemen whose ingenuity was exerted in preparing the plans before Government. Nevertheless, the design of Mr. M'Naight was favourably reported upon by the committee, and though not exactly answering the terms of the advertisement, we resolved, in order to testify our approbation thereof, that the sum of 500 rupees also shall be paid to Mr M'Naight through the Marine Board.

34. We had not received from the Marine Board the information which, by the instructions of this department, dated the 16th June last, the Board were desired to collect from professional persons and others acquainted with the subject of steam river navigation. But our attention had been uniformly directed to the matter, and our means of arriving at correct results had been improved by inquiries made in various quarters, as well as by an attentive perusal of the papers and plans above referred to, and, in particular, of the report upon the experimental voyage made by the two steamers to Berhampore, one steaming with the other in tow; and on the whole we saw reason to be confirmed in the opinion before stated; viz., that in order successfully to introduce the power of steam into the river navigation of this country for the purposes of Government, vessels must be provided of very small draught capable of being used as tugs with considerable power. The Hooghly and Burhampootur, though well constructed vessels and capable of being employed, to a certain extent, both for accommodation and as tugs, were nevertheless defective, as well from their draught exceeding three feet, whereas more than two is undesirable, as from the confined accommodation they afforded.

35. Vessels with the same or with superior power of engines, but of greater length and beam, appeared indispensable for the purposes contemplated, and we accordingly resolved to put one immediately in hand, to be constructed on the principle which had been approved in the design of Captain Cowles; that is, with the engine resting on beams so trussed and put together as to combine the advantage of distributing the weight and action of the engines over the whole length of the vessel, with the important consideration of preserving by the same means its shape under the liability to hog or to sink in the centre, to which vessels of this construction must, without such preventives, always be liable.

36. The Marine Board were accordingly instructed to procure estimates and put immediately in hand the construction of a vessel of the description alluded to, but we did not wish that the plan of Captain Cowles should be implicitly adhered to; on the contrary, considering the dimensions in length and breadth necessarily given in order to procure the required draught, it appeared to be extremely desirable to make use of the whole space for purposes of accommodation, in lieu of leaving it unemployed, as had been done in the plan. In like manner we doubted the expediency of adopting rudders of the construction given in the design of Captain Cowles, and were not disposed to require the same precise lines to be followed for the bottom and sections of the vessel. Leaving these points to be settled by the Marine Board, in consultation with the builders and professional men whose services were at their command, we contented ourselves with requiring the Board to invite tenders to build a vessel of nearly the dimensions of that of Captain Cowles, and with the same principle of trussing beams for the support of the engine, &c., but with such improvement of form, &c. as the experience and professional information at the command of the Board might enable them to suggest. The Board were, however, in determining on these improvements, to bear in mind that it was desirable the work should be put in hand without more delay than might be unavoidable for consulting those in whose opinion on such subjects they had confidence.

37. With respect to the engines to be used in the vessels so constructed, it was our intention when the construction of the vessel might be sufficiently advanced for the purpose, to transfer the engines either of the Hooghly or Burhampootur into her, unless your Honourable Court, acting upon the communications heretofore made, or those intended to be addressed to you, should determine to send out engines of equal or higher power, for the specific purpose of adaptation to tugs of larger dimensions and less draught than the two river steamers now in use.

38. In order to enable ourselves to submit a specific indent for steam-engines adapted to such vessels, we ordered the Marine Board to communicate to Captain Forbes, superintendant of steam-engines, the substance of our resolution, and to consult with him as to the plan upon which the vessel ordered to be put in hand should be constructed, so as to enable that officer to furnish a distinct report or memorandum, specifying the power, description and dimensions of the engines to be obtained from England. But we desired the Board to bear in mind, that if not received in time the vessel must be so constructed as to admit the engines of one of the present steamers, altered of course so far as might be necessary, that is, in the length of the paddle, shaft, &c. Of the expense of such alterations

tions Captain Forbes was to submit an estimate, to be included in that of the expense of constructing a new vessel on the principle described, and to be forwarded by the Board, with the tenders that may be received for the work.

39. In conformity with these orders the Marine Board appointed a committee to consider the propriety of putting in hand a river steam-tug, upon the model of Captain Cowles's plan. Their deliberations ended in a request made to Captain Cowles, that he would construct a model, which was readily undertaken by that officer, and in the meantime the attention of other gentlemen of science and ingenuity was invited to the subject.

Cons. 29 Sept. 1829, No. 12.

40. On our proceedings, recorded in the margin, is a report from the Marine Board, forwarding various opinions on some of the principal questions involved in the discussions which had taken place, they were chiefly given by professional gentlemen consulted by the Board; viz. Messrs. Kyd and Mackenzie, ship builders; Mr. Seppings, marine surveyor; Captain Forbes, engineer and superintendant of steam engines; Messrs. Jessop & Co., iron founders; Commodore Hayes and Captain D. Ross of your Bombay Marine; Captain Johnston, late commander of the Enterprize, and Captain Collie of the Master-Attendant's office. These documents will be found at length on the proceedings of the Marine Board, the abstract of them only being recorded on our Consultations. As we had determined to wait for the construction of Captain Cowles's model, we did not deem it necessary to take any immediate measures upon these reports.

Cons. 20 October, No. 8 to 11.

Cons. 20 October, No. 12.

41. In the interval of the model's preparation, the Governor-general having determined to make a short excursion towards Benares and Goruckpoor, the steamer Hooghly was a third time ordered on a voyage up the river, it being his Lordship's intention to make use of her for his conveyance back, so as to give him the opportunity of ocularly witnessing her qualifications for river navigation as well in the great river as in the passage of the Sunderbuns. The Governor-general embarked in the Hooghly, with a pinnace in tow, at Mongeer, on the 7th of March, and arrived at Calcutta, without any material accident, on the 8th day, viz., on the 15th of March last. The official report of this voyage, just received from Mr. Wall, is annexed as a number in the packet.

Cons. 18 April 1830.

42. Very shortly afterwards Captain Cowles's model being ready, was submitted by the Board to our inspection, with the opinions of the committee who had before been assembled to examine the plans after the reward had been adjudged to Captain Cowles.

43. With reference to the letters of the Marine Board, recorded on our Consultations, as noted in the margin, the Governor-general laid before the Board a plan by Captain Forbes, with estimate by the master-attendant, for a steamer with one engine, of smaller dimensions than before contemplated. In explanation of the reason for so material a change, the Governor-general further submitted a memorandum from Captain Johnston, of the result of two experiments made by his Lordship's orders with the Hooghly steamer, working with one only of the engines with which she was provided.

Cons 27 April 1830.

44. The experiments affording reason to believe that the power of the double engines of the Hooghly and Burhampootur exceeded what, with allowance for the lighter vessel and smaller draught of a tug with a single engine, would need to be applied, his Lordship gave encouragement to the idea of constructing an experimental vessel on this principle. The plan and estimate laid before the Board were prepared in consequence, and submitted for our approbation.

45. Amongst the arguments in favour of an experiment of this description, in preference to constructing a larger vessel adapted to the present double engines, were the following, which appeared to us conclusive:

First. That any vessel working with a single engine will, if successful, be smaller, more manageable, of less draught, and better fitted for the narrow channels of the Sunderbuns and other rivers than the much longer and broader vessel required for two engines.

Second. The cost of the experiment will be not much more than half the charge of constructing the larger vessel.

Third. If successful, Government will have double the number of vessels with the same engines, and the two present river steamers may be converted into accommodation vessels, to be towed. If not successful, the single engine taken out for the present experiment can be replaced, leaving the existing steamers as they are, and converting the new vessel into an accommodation boat.

46. Influenced by these considerations, we resolved, at the recommendation of the Governor-general, to order the Marine Board to put in hand a vessel of the reduced dimensions, and according to the plan prepared by Captain Forbes. We also desired, unless upon examination of the estimate the Board should see reason to think the terms extravagant, or should find the calculations and rates assumed to be incorrect, that Mr. Kyd should be instructed to build a vessel thereon with the utmost dispatch, so that the same might be completed in three months from the date of commencement.

47. A subsequent communication from the Marine Board informed us, that Mr. Kyd had undertaken to build the experimental vessel (stores and fittings not included) for 25,000, in three months; and on these terms we ordered an engagement to be concluded with him for the work.

Cons. 11 May 1830.

48. Copies of the correspondence here alluded to, and of the other papers referred to in the above letter, which are recorded on our proceedings of dates not already forwarded, are transmitted in the present packet.

49. Your Honourable Court will perceive, that the result of our measures in respect to river steam navigation, so far as they have yet gone, has been to determine on the construction of a light tugging vessel, drawing not more than 18 inches water, and working with one only of the low-pressure 25-horse power engines, now employed in pairs in the Hooghly and Burhampootur. We look upon this experiment as promising, if successful,

Appendix, No. 25.

(8.) Letter from Bengal Government; 18 May 1830.

to extend our existing means with most advantage, and economy will be perceived to have influenced mainly the determination to prosecute the measure in this form.

50. The information we possess regarding improvements making in Europe in steam engines is too limited, and of too old date to warrant our submitting any specific indent for machines of a different kind from those now in our possession; but we beg of your Honourable Court to cause intelligent professional men to be consulted as to the most proper engines for the purposes we have in view. They must be such as combine power with lightness, and a comparatively small consumption of fuel, so as to be available for tug or other vessels, drawing little water in a voyage of considerable length on the rapid rivers of the country. Should any machines of superior construction to those we have in use be invented, or be otherwise procurable in England, we hope your Honourable Court will accede to our request, that we may be furnished with several of them at an early date.

Fort William,

(9) Letter from Capt. J. H. Johnston to H. T. Prinsep, Esq.; 24 November 1828.

(9.)—LETTER from Captain *J. H. Johnston* to *H. T. Prinsep*, Esq., Secretary to the Bengal Government, dated 24 November 1828.

Sir,

IN a letter, dated the 17th instant, I had the satisfaction to report to you the safe arrival off Calcutta of the Honourable Company's steam-vessel, the Hooghly, from the experimental voyage to Allahabad, in prosecution of which she had left the Coolie Bazar at 8 A. M. on the 8th September.

I have now the honour to submit to you a report of the circumstances of the voyage, with remarks on those points to which my attention has, in obedience to your letter of the 7th of August, been directed, and in general upon whatever has appeared to me to be worthy of notice as connected with the object of the voyage.

On the morning of the 8th September the Hooghly started from the Coolie Bazar. The coal-boxes, containing 504 maunds, were filled, and there was stowed on deck 302 maunds of coal; the stores, and the weight of provision, ballast, &c. was estimated at 20 tons, and the draught of water was, aft, 3 feet 10 inches, forward, 4 feet 6 inches, an excess beyond her best trim of 10 inches, causing a diminution of her speed of at least one mile per hour, a consideration of vast importance, as it bears a proportion of one-third nearly to the average rate of our progress up the Ganges; nor were we completely relieved from this excess of draught during the voyage to Allahabad, for on the third day I found it necessary to purchase wood, though the boxes were still full of coal; and after leaving Rajmahl, from the short intervals at which we overtook the coal-boats, our deck was constantly loaded with that article, and we arrived at Allahabad with the boxes nearly full.

The Hooghly had not passed Fort William ere we discovered that much annoyance and anxiety would arise from the insufficient command of the helm over the vessel, and the difficulty of steering her at all times: in the hope, however, of remedying this evil by the adaptation of a rudder similar to that used by the budgerows, we proceeded, and took the earliest opportunity of putting this means into practice, which although when adjusted it had all the effect we could expect, was, from its liability to get out of order, the cause of much delay during the voyage.

Vide Note (B.) p. 703.
Note (D.) p. 704.

We left Calcutta on the 8th September, and arrived on
the 11th ditto - - - at Moorshedabad,
14th ditto - - - Rajmahal,
18th ditto - - - Mongher,
22d ditto - - - Patna,
26th ditto - - - Ghazeepore,
28th ditto - - - Benares,

having steamed a distance of 798 miles in 239 hours and 57 minutes, making an average progress over the ground of 3⅓ miles per hour, nearly the average rate of the current, and I think six miles per hour below Ghazeepore, and above that place a little more than five; our progress through the water was about seven miles per hour.

The quantity of fuel consumed was, of Burdwan coal -	2,245
Of wood, 408; equal to coal - - - - -	80
Total consumption of fuel - - -	2,325

Having experienced some difficulty in finding our way to Allahabad from the village of Lohoin, about six miles below the fort, Lieutenant Smith, of the Engineers, kindly offered to send a sergeant, who had been previously employed on a similar service, to sound through the proper channel. His report of the depth of water (given to inches) was extremely favourable, and on the 8th we weighed on our return to Calcutta, Lieutenant Smith's sergeant leading in a boat a-head.

At a distance of nearly six miles from the fort, the signal was made from the sergeant's boat for being in shoal water, and the Hooghly presently took the ground; the anchor was, by my direction, let go, and the vessel swung with her head up the stream, being in her own water nearly, and the cable a-head preventing the ship from driving further on the sand.

I left the ship in search of a channel, and during my absence the sergeant made a signal for deep water. The Hooghly was got under weigh, and in trying to close with the sergeant's boat, got on the spit of a sand and hung there. On reaching the vessel again, I put every means in practice (as detailed in a note at the end of this report*) to get the ship off, and at two o'clock on the 4th we were again able to proceed on our voyage; and to prevent as much as possible future accidents it was made a standing order that the moment the water should be under two fathoms the anchor should be dropped and the boat sent to lead the ship, when however the boat was a-head showing the water, she might be followed at discretion.

With this precaution we reached Calcutta, touching only once more; it was in passing between two sands, when seeing the strong current close to us, in the hope of deepening the next cast we hesitated one minute dropping the anchor, and the next were carried on the spit of a sand; the anchor was instantly let go, and in sounding in the boat we found three fathoms water within 20 yards of the vessel. Preparations were instantly made to carry out an anchor, which was rendered unnecessary by the vessel sheering into deep water, on bringing that anchor a-head which had been previously let go.

After leaving Allahabad we found that one boiler would supply as much steam as we could with safety venture to use, ~~it was sufficient to work from~~ 16 to 18 strokes continually, and from our imperfect knowledge of the river, even this rate was sometimes found too great.

After entering the Bhagiratta, from the facility of the navigation in that river and the Hooghly, we were enabled to put on the full power.

From the village of Lohoing, six miles below Allahabad, where the vessel on her return voyage had first taken the ground, we started on the fourth October at 2. 35. P. M. being six miles, or one hour and 25 minutes below Allahabad.

We left on	And arrived on	Distance.	Hours Steamed.	
			Hours.	*Minutes.*
Oct. 3 Allahabad -	Oct. 5 at Chunar - -	119	15	20
— 6 Chunar - -	— 6 at Benares - -	22	3	20
— 8 Benares - -	— 8 at Ghazeepore -	66	9	52
— 9 Ghazeepore -	— 10 at Dinapore -	259	20	13
— 11 Dinapore -	— 14 at Rajmahal -	99	39	25
— 15 Rajmahal -	— 15 at Moorshedabad	89	12	30
— 16 Moorshedabad -	— 17 at Calcutta - -	161	20	15
		815	121	35

Having returned at an average of less than seven miles per hour; on some occasions we went at the rate of 10 and 12 miles per hour, on others, as in cases of shoal water, narrow passes, &c. we were obliged merely to drop at the rate of one or two miles per hour.

The experience of the voyage leaves me confirmed in my belief that the Ganges may be advantageously navigated by steam vessels. Much however has been said to me on the difficulty of finding a channel in the dry season, and though I believe that like other obstacles this one would vanish before perseverance, I think it very desirable to make another experimental voyage in the driest season, and being experimental, it may be made with advantage through the Sunderbunds.

The difficulties, fewer and of less magnitude than I had been led to expect, arose principally from a want of knowledge of the river and the channels. From the great strength of the current we generally managed to escape by going along the edges of the sands. Had our knowledge of the river been more perfect, we should have avoided it more effectually. The eddies and whirlpools were the second and last source of difficulty, and from these, with a vessel under better command of the helm, we should have experienced much less inconvenience. The voyage was undertaken at the most desirable time for experiment, at the least so for facility and expedition; it was commenced at a period of the year when the current is said to run at its greatest rate, though after passing Ghazeepore, the rapidity of the current was on an average less by at least half a mile per hour than we had experienced it below that place.

The return voyage was performed during the most unsettled state of the river, at a time when the waters had began to subside, but before they had fallen into and formed a regular channel.

At Rajmahal and Colog the river had risen 28 feet, and within a foot and a half of its greatest height. At Benares it had risen 34, but had not attained within 11 feet of the maximum; at Allahabad the rise had been 29 feet, 13 short of the greatest height; and supposing the velocity of the current to be uniform throughout the river when the rise has at all places attained its greatest height, and the plane of its surface to decline regularly towards the sea, it will be represented by a line thus, ______________________ whereas under the irregular rise of the present year it would be represented by a line thus, ______________________ Gh. which would readily account for the diminished velocity of the current above Ghazeepore; and I regret that from the same reasoning it must follow that in a year of great rise the current would be generally stronger than we experienced it.

---

* Note (A.) p. 699.

Appendix, No. 25.

(9) Letter from Capt. J. H. Johnston, to H. T. Prinsep, Esq.; 24 November 1828.

Supplied as the Ganges is by many tributary streams, whose contributions must depend so much on local circumstances, its peculiar irregularities are easily accounted for; notwithstanding these a registry of the rise and fall of the river at many different stations may, after some years' observations, afford the means of calculating what will probably be the rapidity of the current between given places under known circumstances, a knowledge which on many occasions would be useful, as, for instance, serving to regulate the stations and distances of the floating depôts, which should extend or decrease with the changes in the velocity of the current, so as to be as nearly as possible a day's journey apart.

During the passage to Allahabad the S. E. wind prevailed, and sometimes blew very strong; but, although a fair wind, it impeded rather than aided our progress, making the ship less manageable, and increasing the strength of the eddies and the turbulence of the waters.

The S. E. wind blew very fresh during our return also, and it generally prevails until the end of October, when the equinox passes without a strong gale, otherwise the westerly winds set in towards the end of September.

The river is said to rise with westerly and to fall with easterly winds.

In considering the establishment of an extensive and efficient communication between Calcutta and the Upper Provinces by steam vessels, adapted to the various purposes of the Government, and to a passage at all seasons through one of the Nuddea rivers, the adoption of the high-pressure boiler connected with engines of the lightest description occurs as the only means of uniting in the same boat the three indispensable qualities, lightness of draught, speed and capacity.

From all that I have read on high-pressure engines, from their general use with the Americans, and from the various means that are employed to prevent fatal occurrences, I see in them little liability to accident beyond that to which all steam vessels are through carelessness and inattention exposed.

Without any practical knowledge of high-pressure engines or boilers it would be vain in me to attempt to suggest the employment of any particular one rather than another. The question of preference must be decided by the first machinists in England; and perhaps Mr. Gurney's boiler may be deemed worthy of patronage.

Leaving to the wisdom of Government to decide on the expediency of adopting high-pressure engines, I will venture to offer my opinion on the employment of the means already in its possession, and the time that must elapse before vessels can be procured in a manner calculated to advance in a very considerable degree the main object in view.

And, first, it will be necessary to make some considerable alteration in the Burhampooter and Hooghly, which, as they have already had the approval of scientific gentlemen, I shall not hesitate to suggest.

Improvement in the steering of these vessels, a consideration of the first importance, may easily be accomplished either by adding to the sternpost, or by two rudders on the quarters, and perhaps by fixing a small rudder on the bow of the vessel, but for many very obvious reasons it is desirable that the vessels should be made both ends alike, and be capable of riding at their anchors with equal safety by the head or stern. Should such an alteration in the present boats involve too great an expense, the means of anchoring by the stern may be provided by an out-rigger from one or both quarters, and the cable may be confined within a trunk, and lead along the deck to the windlass forward. In like manner, for the tiller ropes may be substituted long iron rods running outside the ship on friction rollers, and leading in upon the forecastle, where the wheel should be placed; this arrangement would leave the whole space abaft the chimney to the uninterrupted occupation of passengers, whilst this additional advantage would be gained, that the helmsman would command a much better view of the river before him, and of any object to be avoided or steered for.

The accommodation, at present untenable and insufficient, may be relieved from the inconvenience of heat by reversing the boiler and bringing the fire-places abaft; a fire-room would then be formed distinct from the engine-room, and the draught being from aft to the chimney, little or no heat would be communicated to the cabin, more especially if double air-tight partitions were built, with one or two inches space between them.

The back of the boiler being brought nearly in contact with the cylinders, a saving of fuel would result from a much less quantity of steam being condensed than now is in its way to the cylinders, and the engines would be kept free from the dust of the ashes and coals, which is now a considerable inconvenience.

The after accommodations may be very much improved by making the height of the strength of the vessels abaft the main-beam to terminate at a line struck at five feet nine above the upsides of the floor-timbers, and by carrying at this height the beams of the main-deck across to project three feet beyond the side of the vessel, thus increasing the breadth six feet, or from 18 to 24.

Above this deck, or platform, a poop might be constructed of the lightest materials, similar to the cabin of a budgerow, which would still be considerably below the line of the paddle-boxes, and only five feet above the present deck, the dimensions of the accommodations under this poop would be 34 by 24, the space below would form a hold of 30 by 16 by six high, capable of receiving 60 tons of measurement goods, and in cases of emergency of accommodating troops.

Note (C.) p. 704.

With respect to a space for an airy cabin, and for a voyage of no very long duration, 15 or 18 single officers might perhaps be accommodated thus:

* * * (Map.) * * *

If the accommodation be deemed sufficient for 15 single officers, with not more than four or five servants between them, (and it is, I believe, quite as spacious as in general allotted in an

an Indiaman), supposing it to be occupied by cadets going as far as Allahabad, and calculating the established rate of travelling time and money for that voyage at 80 per mensem for three months each, the vessel would earn - - - - -	*Rupees*	3,600
And allowing each officer 10 cwt. of baggage, say 8 tons, there would remain available for hire 12 tons, which at 300 per ton would yield - - -		3,600
Total for the voyage - - - -	*Rupees*	7,200

However high the charge may at first appear, when it is compared with the rates of heavy waggon charges in England, it will be found moderate. Between Plymouth and London the charge is, if I recollect right, 5 *d.* per pound, the distance 280 miles.

Bullion, both gold and silver, when it can be procured, would pay well at a freight of 1 per cent. and would be a saving to the merchant of 1 per cent., but to what extent this article is exported to the Upper Provinces I have not yet been able to form an estimate; it is usually collected in small sums from different persons by the native insurance brokers, who forward it at a charge of 1½ per cent. to Benares by land or water according to the season, and in both cases the voyage occupies from 35 to 40 days. The steam vessel would perform it in 10 or 12, which, calculating the interest of money at 12 per cent. would make a saving of at least ½ per cent. on that occasion.

The monthly expense of either vessel will be nearly as follows:

Fifteen per cent. per annum on the first cost of the vessel, for wear and tear and interest of capital sunk, assuming the original cost to have been 1,40,000 rupees, 15 per cent. 21,000 rupees per annum; but as the vessel will probably be two months in each year under repair, the expenses must be calculated on 10 months, which will make wear and tear per month - - - - - - - - -	*Rupees*	2,100	–
Stores, not including coal - - - - - - - - -		300	–
Commander's pay 150, provision 60 - - - - - - -		210	–
Officer's ditto 80, ditto 60 - - - - - - -		140	–
Chief engineer's at present paid 250 and 60 - - - - - -		310	–
Assistant (two engineers are not required) - - - - - -		140	–
Crew of 12 men at 12 rupees per month, including their provisions - -		144	–
Supposing a voyage to Allahabad and back to be performed, 25 days' fuel will probably be expended, at 100 maunds per day, at 10 annas per maund		1,562	8
		4,906	8
